DOCUMENT RESUME

ED 340 655	SO 021 943

AUTHOR	Schroeder, Fred E. H., Ed.
TITLE	Humanities Education, 1984-1991 (29 Issues).
INSTITUTION	National Association for Humanities Education, Duluth, MN.
PUB DATE	84
NOTE	1,691p.; "Dedicated to the teaching of integrated studies among the humanities, arts and related fields in schools, colleges, and cultural institutions." Name to be changed to "Interdisciplinary Humanities" in 1992.
AVAILABLE FROM	Interdisciplinary Humanities, 365 A. B. Anderson Hall, University of Minnesota-Duluth, Duluth, MN 55812 ($20.00 year).
PUB TYPE	Collected Works - Serials (022)
JOURNAL CIT	Humanities Education; v1-8 1984-1991
EDRS PRICE	MF14/PC68 Plus Postage.
DESCRIPTORS	Fine Arts; Humanities; *Humanities Instruction; *Interdisciplinary Approach

ABSTRACT

This document consists of the first eight volumes, 1984-1991, of the serial "Humanities Education". During this period, the serial was issued 3-4 times a year for a total of 29 issues. Typical issues are around 60 pages in size. Beginning with 1992, the name is projected to be changed to "Interdisciplinary Humanities". (AA)

BEST COPY AVAILABLE

HUMANITIES EDUCATION

Dedicated to the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions.

Here is your copy of the first issue of HUMANITIES EDUCATION. To insure that it is not also the last issue that you receive, take the following four steps right now:

Step one. Look through the pages to see if there is anything you would like to read and keep. In addition to the two lead articles, one of which discusses the opportunities for exciting humanities teaching in a technical school and the other of which speculates on what is truly unique about interdisciplinary humanities learning, you will find a section of ABSTRACTS of articles relating to humanities teaching in elementary, secondary, university and adult education in schools, museums, media— and in the streets. In the section called CONNECTIONS, you will find shorter articles with practical ideas, resources and opinions. In HumaNews, you will read about the National Association for Humanities Education, of which you will be a member if you go on to step two.

Step two. Fill out the application form for membership-subscription, and mail it with your check for twelve dollars payable to NAHE.

Step three. Find a three-ring looseleaf binder and start your own volume of HUMANITIES EDUCATION, made up of the articles and features most valuable to you. But don't throw the others away! Use the enclosed Routing Slip to send the features that don't interest you to others who will be able to make use of them.

Step four. Start thinking about how you can help to make future issues even more useful and responsive to your needs and concerns in interdisciplinary humanities education. On a following page you will find statements of editorial policy and suggested topics. We particularly want brief pieces about classroom strategies, new uses for vital humanistic works, ways of connecting learners of all ages to intellectual and aesthetic riches of our human cultural heritage.

HUMANITIES EDUCATION is published by the National Association for Humanities Education

with editorial offices at the Department of Philosophy & Humanities

University of Minnesota, Duluth, Duluth, MN 55812

The University of Minnesota is an Equal Opportunity Educator and Employer.

WHAT ABOUT FUTURE ISSUES OF HUMANITIES EDUCATION MAGAZINE?

The intent is to publish at least three issues per academic year, fall, winter and spring. But when we say on the cover page that it is up to you as to whether this is going to be the last as well as the first issue, we are quite serious. Academic and educational professional publications come and go. As a rule, few last without considerable underwriting by outside agencies. Our aim is fund the basic issues out of membership funds, with occasional special features that might be supported by special grants. We also plan to include advertising in the magazine.

But neither foundations nor advertisers will support a magazine with no readers. The future begins with you and with your subscription.

The contents of future issues also depend upon you. The National Association for Humanities Education continues to serve educators in all kinds of institutional settings, but our contents obviously will tend in the direction of the greatest number of members and contributors. We wouldn't condone a "takeover" by liberal arts college professors, or by secondary art educators or by Great Booksers, but we certainly won't shortchange the majority of subscribers in the interests of "equal time."

Deadlines for material for the next three issues are Washington's Birthday, Independence Day and Columbus Day.

VOLUME ONE: NUMBER ONE: JANUARY, 1984

STAFF

EDITOR: Fred E.H. Schroeder, Professor of Humanities, University of Minnesota-Duluth

ASSOCIATE EDITORS: Sharon Scholl, Professor of Humanities, Jacksonville University; Susan Coultrap-McQuin, Assistant Professor of Humanities and Women's Studies and Director of Women's Studies, University of Minnesota-Duluth

ASSISTANT EDITOR: Avis Hedin, Senior Word Processor Operator, College of Letters and Science, University of Minnesota-Duluth

Assistance for the production of HUMANITIES EDUCATION has been provided by the College of Letters and Science, UMD, George Rapp, Jr., Dean. The distribution of complimentary copies has been funded by the current members of the National Association for Humanities Education with additional seed-grants from the Graduate School of the University of Minnesota and the College of Letters and Science of UMD with inkind assistance from the Association for Integrative Studies, the Popular Culture Association and the American Culture Association.

THE HUMANITIES AND THE HUMANIST IN A CHANGING WORLD

A Philosopher in a Technological Institute Discusses the Pros and Cons of Humanists in Career Education

HEINZ C. LUEGENBIEHL

According to some, the humanities are today in a state of crisis, not only because a general aura of disinterest in the work of the humanities seems to be developing in society as a whole, but also because humanists are in disagreement as to how they should respond to that disinterest. A number of reactions on the part of humanists to this state of affairs seems possible. Some might just wish to close their eyes, stick with their work, and hope that the world will change to suit their inherited model of the humanities. Some might seek actively to change the attitudes of society toward the humanities. Some might advocate having the humanities adapt to suit the current conditions in society.

Each of these points of view, and probably a number of others, has its supporters and detractors. It is not my intention here to enter into the debate over which of the positions is the one that is most in accord with the essence of the humanities, a task which would be far too challenging for me. My aim is a lesser one, namely to help clarify the situation by pointing out some of the advantages and difficulties inherent in the third approach, that of having the humanities adapt to societal circumstances. For many humanists this is the most unfamiliar possibility and they, therefore, might find themselves opposed to it simply by virtue of their ignorance and due to the specialized nature of their own education in the humanities.

In the course of this essay I will deal with the role of the humanities on two levels: 1) in terms of the implications of the third position for the nature of humanities education in general, and 2) in terms of the implications for the activities of the individual humanist. Due to the exploratory nature of this discussion, I will concentrate on my own activities as a humanist in an engineering school. However, although I am using an institute of technology as my primary example, I should point out that analogous claims can be made about colleges of medicine, law, business and all sorts of environments directed primarily toward professional education. The intended audience of the discussion is neither humanists in these types of environment, for it can be assumed that they must to some extent take a position of adapting the humanities to their constituency if they are to survive, nor is my audience those humanists in large research universities where the humanities in their traditional form will undoubtably be able to survive, but rather it is the great majority of educational institutions and the humanists employed there, because it is the recent thrust toward professional education there, combined with a potential drop in enrollments, which will make the issue of the future of humanities education a relevant concern.

THE FUNCTION OF THE HUMANITIES

At a great many educational institutions the future vitality of the humanities disciplines seems to be in doubt. Fewer and fewer students are majoring in the humanistic disciplines in college and fewer students are choosing the humanities as elective courses. One possible response to this situation is to prepare for the worst, to cut down the size of the humanities departments, to refuse to tenure any more people in these departments, and to cut down the number of courses offered. Another possible response is to offer "popular" courses such as philosophy of sex and love, science fiction, foreign literature in translation, the history of rock and roll, and soap operas as literature. While such courses can probably attract students and may be perfectly legitimate, they are also liable to arousing the suspicions of more traditional colleagues that an individual or a department has sold out to the desires of students to "make it through" a particular set of requirements the easy way.

A different kind of adaptation, one which seems to avoid the pitfalls of the preceding two approaches, is to introduce an emphasis in the curriculum which preserves the integrity of the humanistic disciplines while it at the same time is attractive and interesting to just those students who have fled the humanities. However, in order to put forward a sound proposal in this regard, one must first provide an adequate answer to the question: What is the function of courses in the humanities?

I take the function of the humanities to fall within the scope of a liberal education in general. The concept "liberal education" originated with the Greeks and for them signified that education which is proper to a free person. Over the centuries the actuality has moved away somewhat from the etymological origins in that we now think of liberal education as that education which helps to make people free. Implicit in the idea of freedom as it is related to human beings is thus the belief that through liberal education they will learn to be able to think for themselves, that they will be able to take their place in a society of equals. Two elements are of prime importance in this regard: the transmission of the inherited knowledge and wisdom of previous generations, and the capacity to interpret, modify, or reject part of the knowledge base when it is inappropriate to a present situation. All courses in the tradition of liberal education, whether they be in the humanities, social sciences, engineering or whatever, if they are to contribute to the liberalizing experience of the student, should contribute a twofold dimension: transmittal of knowledge and the raising of the critical spirit.

Courses in the humanities then, in particular, should add to the core of humanistic knowledge of the student. However, because the proper concern of the humanities is all of human experience, the knowledge component of the humanities collapses more into an insight into their methodologies than it does in other disciplines. In my view, it is not the subject matter, as such, which primarily places a course within the framework of the humanities; it is rather the approach which is used in such a course which gives it disciplinary credibility. This is a point which has often been neglected in the drive toward increased specialization which has occurred within academe in the last hundred years. To paraphrase Robert Hutchins, after all the information which has been learned in college is forgotten, education is that which remains.

It is thus perhaps not so vital to the mission of the humanities that their courses deal specifically with the history of western art, the metaphysical mind-body problem, or the structure of Shakespearean sonnets as has been thought. Perhaps the preservation of the humanities means primarily the preservation of the "spirit" rather than the mundane content of the humanities. It is perhaps only thus that students in other fields can be motivated to develop an interest in the approaches and styles of thought of the humanities.

A SAMPLE COURSE

What I propose, in other words, is that to some extent the content of humanities courses can be adapted to the changing interests of society, while the essential methodologies are preserved. From my own experience such courses could be: Technology and Culture, Business and Engineering Ethics, Industrial Culture, Literature of the Machine, the History of Technology, Computers in Society, and so on. Because of the nature of the subject matter these courses are attractive to engineering students who perceive an explicit relationship to their later professional lives. Moreover, I think it is important that the students have some acquaintance with their disciplines beyond a narrow, technical understanding of them. But most important, I believe that the mission of the humanities can be preserved within these contexts. To illustrate this, a brief presentation of the methodology of a course in "Technology and Human Values" which I teach will be helpful.

The three basic questions which are raised in the course are: 1. What is technology? 2. What are values? and 3. What is the connection between the two? As a whole, the three questions are intended to illustrate the interplay between the given and the normative in our judgments and thereby to raise the issue of the metaphysical concerns which we all face in our daily lives. By raising the question as a triad, it is also clearly indicated that it is not simply the interplay between technology and values which is an issue of concern, but that the very nature of technology and of values seen independently cannot simply be assumed as givens in this course.

The class begins with an attempt to characterize the nature of technology. What easier question to ask of a group of people whose aim in life is exactly to work with technologies? And, indeed, it is not difficult to get students to give examples of technologies and to move to the rather common conception of technology as a tool of humans to influence their environment. But even in this simple move certain philosophical issues, such as the question of definition, the question of abstraction from totalities, and the question of generalization, already come to the fore. All this also leads immediately to the issues of what concretely is meant by "tool," and further, what is the relation of tools to humans? This, in turn, means asking "what is a human being?" Is technology innate to man's being human? Therefore part of the human being? How and when does technology arise?

To this point the class has looked at technology as a neutral phenomenon. But clearly a number of people have argued that technology is more than this. We therefore ask: Does technology have a nature of its own? Is it good or evil? This sort of question often overwhelms the students. In fact, they tend to see it as an attack upon themselves. In this way the issues of distance and objectivity can be raised, ideas which they initially do not see as relevant to the humanities. They have always seen the humanities as spreading the gospel of emotion, personal involvement, and subjectivity. But these are actually the wrong kinds of messages which have been sent—inherited beliefs such as this is what has led to what C. P. Snow has called the Two Cultures dichotomy where one makes judgments about the good and the bad from a self-contained perspective. One of the most important lessons that humanists have to teach in this regard is that there is validity and objectivity to their disciplines, that humanities do not deal with their subject matter on the level of "mere opinion."

Without attempting to resolve fully the question "what is technology?", the class then moves on to the question "what are values?" This would initially have seemed to be the move from the empirical to the philosophical. But after the experience of the students in relation to the first question, they already realize that the answer cannot be so simple. And indeed, the same type of tension is reflected. On the one hand, we look at studies which claim that values can be discovered empirically, i.e., that values are deeply ingrained beliefs people actually hold; but on the other hand, (and this is the position most students end up advocating), we propose that there are certain values which ought to be held, that is, eternal and immutable values. What are these? How are they discovered? What is their source of justification? Posing these questions forces us to delve into the role of religion, the nature of human beings, and the status of the social sciences.

The general response at this point is that the students react against the imposition of values. The themes of individual choice and autonomy and freedom thus become relevant concerns. The discussion of values then has to be brought back to a concrete context. This is accomplished by making the students work through an issue individually, first in terms of class exercises and then in terms of an oral report and a written project.

The point of these is to bring to the students' awareness that they must perform their own integration between technology and values, that values and technological development reverberate against each other, that the students at every moment are themselves involved in that interplay, that they must assume a personal perspective on the development, a perspective which is based on a basic position on reality that they are being forced to adopt. In other words, that they must assume a critical perspective on their own lives' work. Above all, it means to take a philosophical perspective on an issue that they had taken as a given, as a value-free activity.

The course thus makes the students aware that not only are the humanities related to what they do, that they raise relevant questions, that they have their own methodologies to contribute, but also that the humanities are "practical" in the sense that neither technology nor the humanities can in truth be worked on independently of each other in the framework of this course. The whole point of raising "deep" philosophical questions is to see what kind of impact they have on our actual lives and, by the same token, dealing with technology justifies the thesis that humanistic issues must be raised in order to confront the problem of technology. It is in this sense that this course and the humanities in general can contribute to the ideal of liberal education in a changed environment; namely by increasing the awareness of the critical, self-determined dimension of activities involving the professional lives of the students, by raising humanistic issues in a concrete context to which the students can relate, and by showing that in the end there exists a real difference of approach in the humanities, a methodology which will help them to better be able to exist in our society as "free men or women."

A PLACE FOR THE HUMANIST?

Even if the above example has been somewhat illustrative of a much broader thesis regarding the role of the humanities in contemporary society, it will still be necessary to find people who can and are willing to teach such courses. Given the current job market in the humanities, this is in one sense not a problem. On the other hand, it is not at all clear that for a young Ph.D., trained in one of the traditional humanities disciplines, commitment will go beyond the surface, or that he or she will see such activity as doing more than merely providing a holding pattern until a more mainstream position becomes available. I think it is important that the neophyte humanities instructor recognize that this kind of adaptation can be a self-interested one, and more important, that it can be, in the long run, both professionally and personally rewarding. However, because this course of action is not yet a common one, it also has a number of dangers associated with it. In the remainder of this discussion I will, therefore, briefly consider some of the potential benefits and some of the corresponding pitfalls which await the humanist willing to consider departing from the traditional path laid out for the humanities educator.

The possible benefits to humanists in committing their careers to a different vision of the humanities are many. Of course, not all will apply equally to all possible employment situations, and their development depends on the specific interests of the individual. The following are provided only as examples of possibilities which could lead to a more firmly founded interest on the part of the humanities educator.

Perhaps deserving first mention, given its close relationship to the course example discussed earlier, is the opportunity to apply the knowledge gained in graduate school to concrete problems. One of the pleasures the humanities provide is to allow the distancing from everyday concerns, the seeking of that which is more eternal. There is also satisfaction to be gained, however, from relating one's work to everyday life and to what one reads about in newspapers and magazines. At one time I envied colleagues who were able to bring the nightly news to bear on class discussion. Now, in teaching courses like engineering ethics, I am able to arouse the interest of my classes by dealing with an airline crash or a construction disaster. As the previous discussion showed, this does not mean giving up doing philosophy rigorously, but it does mean that the battle to have classes pay attention to philosophical material is won.

Once one begins to deal with timely questions in classes, one soon begins to recognize that new areas for *research* are opened up. Many contemporary issues have not yet had the humanistic perspective brought to bear upon them adequately. There is a special pleasure in dealing with an area of inquiry in a way no one else has done before. While this is of course possible in more traditional fields as well, it clearly takes a great deal more effort, ability, and often luck as well.

Attendant to these new areas of research is also a greater possiblity to *publish* one's work. The competition in less traditional areas is not yet overwhelming, and all sorts of new journals in nontraditional areas have been started in the last few years. In addition, one can publish in journals of the concrete activity one is examining. There is a different, but perhaps not lesser, sort of satisfaction to be gained from publishing an article which will go to 200,000 engineers, from that gained in publishing a paper in a philosophy journal with a circulation of 500.

Not only is the product of one's work easier to place, it may also be easier to gain *funding* for one's research activities. For the humanist it may be possible for the first time to turn to an agency other than the NEH. The National Science Foundation, The National Institutes of Health, NASA, and even corporations can often be interested in work by humanists when it is related to contemporary problems. Furthermore, on a more direct level, the types of environments in which the applied humanist will work are often more financially healthy than the typical liberal arts college. Professional schools, given the current orientation of students, often exhibit a positive outlook toward the future, rather than looking toward a time of retrenchment. The effect of such a situation on the individual humanist's morale should not be underestimated.

The climate in society which has a positive effect on professional schools is also reflected in the *caliber of students* choosing such programs. The same bright students who thirty years ago would have chosen a humanities major are today seeking a professional school education. This means, for example, that the average engineering school has the kind of selection pool which is available only to the very best of the liberal arts schools. While the students in such a situation do not have a natural inclination toward the liberal arts, once their interest has been caught they can provide the humanist with an extremely rewarding teaching experience, one which can generate many new insights for the instructor as well as for the students.

The stimulation for the humanist comes not only from the students, but also from other faculty members. In a professional school the possiblity for day-to-day contact with professors from other disciplines is readily available. The teaching environment by its very nature becomes a force for interdisciplinary activity. Faculty members from different disciplines tend to focus on the same sort of issues, although from different perspectives, since their work will center on the mission of the institution. This environment allows for innovation for the individual humanist both inside and outside of the classroom, because his or her mode of thought is constantly being challenged. Of course, interdisciplinary activity is possible in any kind of educational environment, but in traditional educational organizations it depends a great deal more on individual initiative and effort.

For the young humanist all of the above benefits, and others as well, can be products of teaching in what for him or her would be a nontraditional educational environment. Perhaps they can all be summed up as providing the possibility of a tremendous learning experience as a result of which the horizons of one's professional and personal life can be broadened. However, a consideration of the benefits should not obscure the dangers associated with such a situation, for only thus can an open-eyed decision regarding the future be made by the individual humanist.

AND A FEW CAUTIONS...

Younger humanists must first of all recognize that commitment to a nontraditional environment will have long-term effects on their mobility. Once they begin to take advantage of the benefits, they will also be committing themselves to a form of specialization, although not of the usual type. Consequently, they might have mobility between institutions, but probably only in similar positions. If one's long-term goals are to be involved at the core of one's discipline one should be careful of even a short-term commitment, because one can get typed through one's work very rapidly. It can easily become a catch-22 situation where one either takes advantage of the situation and thereby loses the chance to move back to the mainstream, or one works on developing one's mainstream credentials and thereby perhaps loses the sole academic position one might ever have.

Simply being in a nontraditional environment works against ever gaining a mainstream position, because the humanist is going to be relatively isolated from other people in his or her own discipline. There will be relatively few people in one's own discipline in the same setting, and other scholars in one's own discipline nearby are not likely to share one's research interests. One, therefore, has to make a special effort at developing a farflung network of colleagues who share one's interests and has to gain financial support from the institution to support this effort. This requires convincing the administration (which probably does not share one's disciplinary interests) that as a humanist in a nontraditional setting one has special professional development requirements, perhaps even greater than those of professors in the mainstream discipline at the institution.

The tendency of the administration will in any case be to view the humanist as performing a purely service function. Therefore one should be prepared for a heavier-than-average teaching load. Because the humanist may be the only representative (or one of a very few) of a discipline, he or she should also be prepared to offer a greater than average variety of subjects. This is especially true if one is attempting to offer traditional disciplinary courses while at the same time developing those cross-disciplinary subjects which make the position initially attractive. Since the courses are offered as a service, the humanist should also be prepared for relatively large enrollments and the attendant grading. This can become especially burdensome to those who had expected to teach with the help of teaching assistants.

Given the preceding factors, the humanist's workload in the nontraditional environment can be relatively heavy. This brings with it the further danger that the disciplinary material one presents can become stale over time. It is likely that interaction with other members of one's discipline will be restricted to those who share one's research interests. Furthermore, the little reading time one has will probably be devoted to those areas tied to one's research. Yet one is expected to continue to teach a variety of traditional courses.

While the potential staleness of one's teaching can be damaging to students, perhaps the gravest danger of the humanist's situation is that over time he or she will unconsciously begin adopting a technical mode of thought, will stop thinking like a humanist. This is, however, as the first part of the paper attempted to show, the central contribution which a humanist can make in a nontraditional environment. Thus one's entire justification for being in the nontraditional environment can inadvertently be destroyed.

The pitfalls mentioned above are real dangers which the humanist faces. Sufficient awareness of them ought to help in overcoming them. On balance, I believe that the opportunities can outweigh the dangers, that the humanist can find life in a nontraditional environment to be a rewarding one and that the humanities have a significant contribution to make to such environments. However, the decision must finally be that of individual humanists. "Adapting" can today still easily be read as "selling out." No vision can be universal. Thus, the cautionary discussion was intended only to point out some of the factors relevant to one perspective on the humanities.

EPISODES OF LEARNING

Interviews with Humanities Teachers in High Schools and Colleges Reveal Underlying Concepts Reminiscent of John Dewey

GARY D. D'LAMATER

Consider how you conceptualize your interdisciplinary humanities course. How do you set about collecting and organizing the materials and activities that make up the classes? Do the lessons you teach constitute a continuous flow of content material from one day to the next? Or can they be characterized as consisting of a series of individual, disconnected experiences? Does the conceptual structure of your humanities class differ from that of the single-discipline English, history, art or music classes you teach?

These questions are some of those that were addressed to a selected group of high school teachers of interdisciplinary humanities courses and college professors of freshman seminars of an interdisciplinary humanities nature. They represent an attempt to better describe the distinctive character of courses included under the general label, "humanities education": courses interdisciplinary in form and established to investigate the worth of humankind as reflected in our creative acts. Through a method of comparative analysis, the in depth interviews revealed a recurring pattern of description. This report presents the recurrent conceptual pattern or framework as a means of describing and understanding the unique contributions of this type of humanities course.

In describing their interdisciplinary humanities courses, the teachers usually began by establishing the limits of the courses with references to their subject matter. For one high school American humanities course, the themes of "Man and Nature," "Man and Society," "Man's Inhumanity to Man," "Man as Creator," and, "Man in Transition" were listed. A chronological listing of the great epochs of Western Civilization was provided for a college freshman seminar focusing on humankind's search for knowledge and meaning. Typically, however, little further discussion of subject matter occurred without placing it in an experiential context. When speaking of their interdisciplinary humanities courses, most of these teachers promptly moved from an overview of content to descriptions of "episodes of learning." They conceptualized their humanities courses as consisting of a series of individual, yet interconnected, instructional events.

The episodes of learning described by the teachers should not be interpreted as common daily lessons. The teachers were describing events that were neither daily nor seriatim, neither routine nor repetitively structured. They were individual units of experience that seemed self-contained. The teachers' descriptions were of occurrences which included such activities as student research projects on the folk art of the American frontier, guest lectures on the role of the chorus in Greek drama followed by student participation in these dances, a written assignment relating Paul Tillich's definition of symbol to a field trip to an art museum with connections to an earlier geology field trip, or a four-day mock trial of characters from Arthur Miller's play, The Crucible. These units of instruction were comprised in a particular form which moved beyond the normal daily lesson in conceptual scope, as well as time. From the comparative analysis of the interviews, five characteristics of this particular form emerged.

First, as discussed above, these humanities units of instruction were described as experiences, not as lessons of content coverage. In these experiences content and process were totally integrated, inseparable. The subject matter provided the substance of the experience, the process of the structure. Rather than being incidental to the coverage of content, the process constituted an intentionally planned unfolding of awareness in conjunction with acquiring and manipulating content knowledge. The second characteristic is contained in the first. The students were active in the experiences. This is not to mean physical activity, but they were always confronted with some issue that demanded an active response to the material at hand. Third, these instructional units had internal integrity, they possessed completeness. They were not mere means to a future learning end. Rather, they were self-contained experiences that were planned to move from an explicit beginning through an interactive activity to a meaningful response by the student. They had a purposive conclusion that resulted in immediate reinforcement. For those courses which succeeded in creating these series of meaningful units of experience, there was of course the fourth characteristic of memory. Students remembered these finite experiences. Their cohesive character created a sense of immediacy and closure that created for most students a lasting thought, and, often, a motivational inducement.

Yet, even with this emphasis on discrete units of experience, the humanities teachers normally spoke of the interconnected nature of these units of learning. With this as a fifth characteristic, a cumulative effect seemed to be at work with present experiences growing from past experiences while providing foundations for others in the future. These connections were of course often a result of the interdisciplinary content of the humanities class and the intentional efforts to teach students to integrate disparate ideas and disciplines. But as importantly, and at times quite unintentionally, they were based upon an emerging attitude of significance, a sense of purpose in this study of human acts and creations which moved beyond simple content. Though often vague, this interconnective force was variously described as an accumulating sense of awareness, an attitude of concern, or as feelings of joy that permeated the learning experiences.

At this point in their descriptions, many of the humanities teachers expressed a frustration in attempting to articulate clearly this interconnected dynamic, this sense of purposefulness. They often resorted to a statement of, "Oh, you know what I mean!" Well, yes, but those outside humanities education normally do not. Nor do other skilled teachers one hopes to attract to the field. Nevertheless, the combined interviews indicate that there is more concreteness to these course descriptions than many humanities teachers believe. Throughout the discussions of their courses, these teachers repeatedly used the word "quality" or words to that effect. For them, the combination of the five characteristics listed above results in experiences of quality. They are qualitatively different learning experiences than these teachers normally have with students in their single discipline courses. They have a coherence and meaningful quality that is not typical of regular courses which focus primarily on the coverage of subject matter, vocabulary, and the acquisition of methodological skills. This notion of quality offers a significant way to talk about the interdisciplinary humanities experience for it is very similar to those learning experiences described in the writings of John Dewey, the American philosopher and educational theoretician. Such a definition of quality, with accompanying elaboration by Dewey, provides a useful basis of comparison for considering one's own humanities courses.

In his theory of experience, Dewey depicted life as a series of random, overlapping, interpenetrating experiences that generally are not purposive or even planned--they simply happen and take us along in their flow. And yet, he argued that there are occasions when individuals do take charge of events, order their pattern, and with reflection build the basis for future experiences of similar purpose. When such an occasion takes place, Dewey contended, one has had _an_ experience. Affairs have ceased being random experiences and have become _an_ experience; a formal pattern of inception, development and consummation has been established. Such a pattern gives an experience quality, "its close is a consummation and not a cessation. Such an experience is a whole and carries with it its own individualizing quality and self-sufficiency." As viewed by Dewey, _an_ experience is embodied with an aesthetic that is a result of the quality, the interconnectedness, the self-sufficiency of that experience. Very importantly, to possess this "aesthetic," the experience must be felt, must be had. This subjective reaction of the individual to the aesthetics of an experience seems to be the "stuff" of which many teachers of interdisciplinary humanities courses are speaking. For example, one teacher spoke of such a quality experience when she described a unit of instruction in which students had read the play, _The Crucible_, discussed the dramatic intent of Arthur Miller, proposed alternative set designs and blocking, presented a scene, developed a critical appraisal of its artistic effect, and, finally, reconsidered the play's artistic statement concerning the human condition by means of a mock trial. In considering these activities, however, one may ask how this set of lessons is different from any other study of _The Crucible_ in a regular English class.

The interdisciplinary humanities _Crucible_ unit differed from the English course study on two separate levels. As seen as a single series of lessons, the humanities class read the play as an expression of human creation in its entire context; it was not read as literature. Rather, an interdisciplinary analysis of the entire play and its artistic statement was made by considering not only the script, but, as well, the art of stagecraft and acting. Additionally, the political and philosophical statements of Miller were analyzed and the students were forced to grapple with these statements through their own actions in the mock trial.

Although not all English classes would read The Crucible strictly as literature, most do differ from the humanities class in the role the Crucible unit played in the development of the entire course. At this second level, the discussion of the play in an English class would likely be but one of many in a list of literary works discussed. On the other hand, as described by the humanities teacher, the play served an interconnective function in the interdisciplinary course. It not only possessed internal completeness and quality, but, as well, it consciously built upon earlier discussions and activities concerning issues such as "human beings and truth," and "humanity in a social setting." Likewise, it consciously set the basis for units of experience to follow. The entire course took on an interconnective dimension that increased its qualitative aspects. As Dewey explains, "Everything depends upon the quality of the experience which is had. The quality of any experience has two aspects. There is an immediate aspect of agreeableness or disagreeableness, and there is its influence upon later experiences.... Wholly independent of desire or intent, every experience lives on in further experiences. Hence the central problem of an education based upon experience is to select the kind of present experiences that live fruitfully and creatively in subsequent experiences." Indeed, as he also maintains, "For some experiences are mis-educative. Any experience is mis-educative that has the effect of arresting or distorting the growth of further experience."

It is significant to understand that neither Dewey nor the humanities teachers interviewed are speaking of only an aesthetic reaction or a good feeling that has resulted from a novel experience. Rather Dewey, and seemingly the teachers, are depicting both "structural or formal properties of the experience itself and qualities of the subjective reaction of the individual having the experiences." In effect, by creating units of instruction embodying Dewey's characteristics of an experience, the humanities teachers have united content and process, the cognitive and affective domains. "In final import," Dewey explains of quality experiences, "They are intellectual. But in their actual occurrence they were emotional as well; they were purposive and volitional."

It is important to note that most of those teachers who spoke of the qualitative and episodic nature of their courses also remarked that these experiences were not typical of their standard, single discipline courses. To what factors can this difference be attributed? Could it be merely a change in the instructional objectives for a humanities approach? Comparisons of expressions of human concern could now be made across all the arts. History could provide a social, and at times political, base for discussing a work of literature. But of equal importance, an increase in the degrees of freedom tended to greatly alter a humanities teacher's sense of time. The removal of content coverage pressures often allowed for greater thoroughness of study in some units. It also encouraged a more varied and creative use of activities. The Crucible unit discussed earlier is one such example.

Most of the teachers in this study had taught their interdisciplinary humanities courses with colleagues from other disciplines. Many of them remarked that teaching in a team also increases the degrees of freedom for planning humanities courses. The multiple content background and styles of teaching of the team members provide a critical mass for generating new ideas for the curriculum mix and instructional strategies. It additionally adds the very important encouragement and support needed by traditionalists to break out of their assumptions about what constitutes a unit of instruction.

It should be pointed out that the interdisciplinary team-taught nature of these humanities classes did not allow the teachers to feel free to combine and teach any content material or to sacrifice great amounts of content for student activities. For most of them, their disciplinary training and sense of self as a representative of their field provided an important guide for the appropriateness of their course planning. And for a few, their sense of responsibility to their disciplinary field forced them to return exclusively to the single discipline classroom.

This study raises several questions that need further investigation. For example, the question can be raised as to whether teaching a course that is interdisciplinary in nature really "frees" one to conceptualize the lessons differently. Perhaps, it actually "forces" such a change due to the impossibility of covering topics so broadly conceived. Such a distinction in describing motivational factors may seem inconsequential to those teachers who teach humanities courses and see them as liberating experiences for themselves, as well as for their students. Yet in attempting to attract other teachers to humanities education, a sensitivity to the potential psychological struggle of a tradition-bound teacher entering an interdisciplinary format should prompt us to give support that might make the difference between success and failure.

This study made the assumption that the essence of humanities education is an attitude—an attitude that embodies a concern, a care, for the human condition and a desire to investigate the worth of human kind through its creative works. It must be understood that its findings have not said that making a course interdisciplinary creates this humanities education attitude. Rather, it reports that the interdisciplinary nature of a course frees some teachers who are bound by training, tradition, and curricular pressures to alter their conceptualization of their teaching so they can better approach the humanities attitude. The assertion has not been made that it cannot occur in regular English, history, or arts courses. But according to most of the teachers interviewed, it is not likely to happen in these courses because of the internal and external constraints the teacher feels. If this be true for most teachers who teach single discipline courses in the humanities, then a strong argument can be made for the place of interdisciplinary humanities courses in the curriculum. At a time when other courses are required to focus on basic content material, humanities courses may be our best way to explore the human condition in a manner that not only praises our accomplishments and criticizes our failures, but also engages the students in units of experience that cause purposeful reflection that may contribute to the development of the "humanities attitude."

As a step to reach such lofty goals, this report has put forward a conceptual model for analyzing the process of course planning and presentation you use. It does offer a more substantive way to describe some of those courses that fall within the field called "humanities education." Using John Dewey's concepts of experience, quality, and aesthetics, we may be better able to define our purposes and explain the distinctiveness—therefore worth—of what we do. We who teach and research interdisciplinary humanities courses are too often confounded when asked to justify our field. We can describe the interdisciplinary nature of the content which provides a clearer sense of reality. We can also discuss our concern for the study of those acts of creation that ennoble the human condition. We have difficulty, however, speaking of the process of attitude formation and the hoped-for emotional commitment of our students. We all know of those feelings of experiential quality, those occasions of effective insight that characterize the humanities experience. But in these times when clear articulation of one's value to the educational curriculum is demanded from all quarters, we must be able to unite our description of the content and process of our courses, their cognitive and affective objectives. One way to describe these courses is to think of humanities education as courses with discrete but interconnected units of experience that engage students to see and experience other persons through their own experiences—experiences that are so conceived that they logically grow out of former intellectually active experiences and establish the springboard for further experiences of insight about the worth of our being. John Dewey provided the model; some colleagues have issued its verification.

HUMANITIES EDUCATION ABSTRACTS

Summaries of significant articles and reports about interdisciplinary humanities education.

EDITOR'S NOTE: There is no shortage of articles and reports relating to the teaching and learning of humanities in interdisciplinary and integrated programs and courses, but they are scattered among the journals of the various disciplines, hidden in publications of lesser-known associations and buried in the filing cabinets of foundations and agencies. In HUMANITIES EDUCATION: ABSTRACTS we will bring some of these to the notice of readers by means of non-judgmental abstracts. We need NAHE members as abstracters. If you would like to apply, take note of the format and style of the abstracts below, and send your abstract along with a copy of the article for our consideration.

SOCRATES IN CONTEXT

"An Interdisciplinary course on Classical Athens" by J. H. Lesher in *Teaching Philosophy* (July, 1982), Philosophy Documentation Center, Bowling Green State University, Bowling Green OH 43403 ($14/yr).

Purist philosphers might scorn participation in a team-taught undergraduate course on Athens of the Fifth Century BC, while the extra preparation for a class that will probably be impractical to repeat may bring cost-effectiveness into question; yet James H. Lesher of the Philosophy and Classics Department at the University of Maryland concludes that there are real benefits for philosophers who take on such an assignment. Generally philosophers confine their teachings to the analysis of philosophical arguments of recounting the evolution of philosophical ideas, but, Lesher says, "even the latter almost always involves treating philosophy as a linear sequence of conceptual disputes and reforms" rather than as an integral part of a total culture. Establishing cultural interconnections was the main challenge to Lesher and two colleagues from art history and history in this course for 38 juniors and seniors at College Park. Lesher provides a syllabus of topics and a bibliography and proposes four selected "pervasive factors" in Athenian life: 1. The Centrality of the Family. 2. The Emergence of the Individual. 3. Human Nature — *ti estin anthropos*.

4. Cross-Fertilization. Each of these relates to many aspects of Athenian life, philosophy being one. For example, the centrality of family is a major source of conflict in Athenian drama, it is a visual topic in grave sculpture, and it was supported by Aristotle. Understanding the pervasiveness of this value points up the revolutionary nature of the philosophies of Socrates and Plato and helps to explain not only the anti-Socratic satire of Aristophanes' The Clouds, but the ultimate execution of Socrates, as seen by Athenians in their time. In similar fashion, Lesher relates philosophic individualism to Hippocrates' "individualized approach to medicine." Lesher concludes that team-teaching has disadvantages that may be necessary to tolerate to gain the breadth of knowledge needed for such courses, but the contextual method yields valuable insights into philosophy that are not opened by traditional textual analysis. (F.S.)

MULTI-USES FOR MUSEUMS

"A Focus for the Interdisciplinary Curriculum" by Diane Stillman, Barbara H. Butler and Carol Vukelich in Museum News (August 1983), American Association of Museums. PO Box 33399, Washington DC 20033 (Membership $35-65/yr, individual copies $3.50).

Utilizing the resources and cooperative structure of the Brandywine Region Museum Educators' Roundable (BRMER) the University of Delaware developed an experimental course for teachers of elementary and secondary age levels called "Museums in Curriculum Planning." Interdisciplinarity was not merely academic; the museums involved represented widely divergent specialties: the Ashland Nature Center, Longwood Gardens, the Historical Society of Delaware, the Hagley Museum, Winterthur and others. The teachers who enrolled in the course represented an array of interests from kindergarten through secondary school sciences and German. The course instructors included eight museum educators (author Diane Stillman is Curator of Education at the Delaware Art Museum) and two university professors (co-authors Butler and Vukelich are respectively Associate Professors of Museum Studies and Education). The course was planned to develop interdisciplinary themes that might be enriched through using resources of several museums. Some themes that were discussed or planned were Community, Rivers, Work, Wealth and Power, Health, and Exploring Rhythm. An exemplary unit was planned and implemented last year by a German teacher from Pennsville, New Jersey on "Creativity and Communication." Pre-museum classroom learning included discussions of different kinds of creativity and the importance of communication in creativity. In the art museum students constructed German sentences about creativity in painting, in the natural history museum looked for creative uses of natural materials, in decorative arts museum sketched Pennsylvania German folk motifs, and in all cases worked to increase their German vocabularies in a context of real things. Not all units were so fully implemented, the authors say, and conclude with the question: "Will the course be offered again? Yes, but with one change -- a single faculty member rather than a committee will coordinate the activities. Although the 10 instructors worked well together, the participants were unaccustomed to having a committee as a 'teacher'." (F.S.)

BRINGING CLASSICS TO THE GENERAL PUBLIC

"Cases and Issues" on ancient and classical studies in state humanities public programs in Federation Reports: The Journal of the State Humanities Councils (January, 1983) National Federation of State Humanities Councils, 12 South 6th Street, Suite 527, Minneapolis MN 55402 ($1.25/issue).

Can and should Greek and Roman classics be primary topics in humanities education for adult public programs? It is more possible to do so now because state-based regrant councils have been liberated from the restriction imposed in earlier years that all programs must address current public policy issues. In the first of a four-part discussion of successful programs in different states, Karen Bowden of the Maine Council points not only to problems of "chalk-dust" associations and popular trivialization of the classics, but also to variant schools of thought among knowledgeable persons regarding the relevance of the classics. These schools of thought range from ancient authors as a still-valid source of wisdom and truth, to classics as a continuous "significant influence in Western society," to classics as an admirable but irrelevant residue of old-fashioned humanities education, and finally and skeptically to classics as a "reactionary embodiment of aristocratic, militaristic and patriarchal values." The Maine programs were sponsored by an association of high school and college teachers of classics. One co-sponsored by the Greek Orthodox community contrasted modern Greek-American concepts of continuing traditions with those of academic classicists; the other project made use of the National Radio Theatre's broadcast of Homer's Odyssey, maintaining that this was more than proper for ancient Greeks' oral culture. In Oregon, a high school teacher, Peter Montgomery, traveled state-wide with a one-man show on myth, making use of audiovisual materials such as a 16-foot timeline, slides, costumes, and an elaborate stageset for his dramatizations, all interwoven with a lecture that concludes with the ultimate message of Greek myth as "the middle way" between dualities of human life. In Oklahoma complete immersion in ancient Rome through an integrated humanities program was the goal of a series built around the exhibit of Roman portrait sculpture from the J.P. Getty museum, on loan to the Philbrook museum in Tulsa. In addition to the exhibit, gallery notes and lectures, Anita May of the Oklahoma Council mentions "an impressive teacher packet [that] related Roman political developments to trends in culture and art, provided a chronology of Roman history, and compared the Roman portraits to an ancillary exhibit of coins in the Philbrook's permanent collection and to a sampling of American and European portraits." (F.S.)

DEVIL'S ADVOCACY

"Five Arguments Against Interdisciplinary Studies" by Thomas C. Benson in Issues in Integrative Studies No. 1 (1982), An Occasional Publication of the Association for Integrative Studies, School of Interdisciplinary Studies, Miami University, Oxford OH 45056 Membership $20/year.

Advocates of interdisciplinary teaching and learning far too often defend their educational enthusiasms without listening to or responding to arguments against them, says Thomas C. Benson, Director of Interdisciplinary Studies and Professor of Philosophy at the University of Maryland in Baltimore County. Without criticizing the arguments, Benson sketches five of the "most popular" objections to interdisciplinary study. The first is that it "rests upon serious conceptual confusion," a vagueness about what is meant by connecting disciplines or why it is a necessary or desirable activity. Practioners of the disciplines already do this routinely when the problem justifies borrowing insights from other areas, but interdisciplinary advocates explain their purposes and methods with an "air of romance." The second argument is that students are in greater need of developing a "mature base" in the disciplines than spending time on diluted, homogenized integrated courses. "Under the guise of an invitation to wrestle with what are frequently fascinating and important issues, the student is cheated of a precious opportunity to develop the skills and background required for mounting a proper attack on the issues." The third argument is that given the limited number of hours available to a student, there is real danger of impeding "the student's development of an essential disciplinary competence," which many hold to be the primary mission of a college, and necessary for a student's future in graduate school of the job market. The fourth argument, according to Benson, is the most common objection: "integrative courses are characteristically shallow, trading intellectual rigor for topical excitement." Such courses imitate popular journalism in the broad issues that are examined superficially, and classes are often conducted by means of discussions based on personal opinions with added "splashy special events" like guest speakers and films. The fifth popular argument is the relatively high cost of many interdisciplinary programs which often insist upon team-teaching, independent study and small classes. Benson closes by touching upon other complaints, such as the view that faculty members tend to be "exiles and refugees" from disciplines that they could not master. Finally he says that rather than voicing defenses against these arguments, interdisciplinary educators should correct any shortcomings that are valid. (F.S.)

HISTORY & THE GENUINE

"Things Unspoken: Learning Social History from Artifacts" by Barbara G. Carson and Cary Carson, in Ordinary People and Every-day Life:

Perspectives on the New Social History, edited by James B. Gardner and George Rollie Adams, American Association for State and Local History, 708 Berry Road, Nashville TN 37204 ($17.95).

Most essays in this volume sound like "Dial-a-Professor" say authors Barbara Carson, a lecturer in American Studies at George Washington University and Cary Carson, Director of Research at the Colonial Williamsburg Foundation, because the other authors emphasize historical research rather than learning history. But if we are to use commonplace historical artifacts to learn social history the educational staff should understand not only the data but the ordinary learning psychology of museum visitors. The authors draw upon several recent studies that indicate that museum visitors (adult and children) have a strong initial need to name things, thereby providing "access to each person's memory system." Second, they need to understand how things work, third, they insist upon knowing if things are genuine, and fourth, a "split-second" later, they need to pass judgment. This inevitable point of acceptance or skepticism is where the educator (guide or teacher) can start to teach social history. "New" social history, however, has an inherent danger of overemphasizing minorities and non-elite society; the authors state that social history should have "a higher calling as community history" in which the totality of a place is examined through interrelationships among persons of all stations, the physical environments in which they behave, and their environment of time and events from daily activities to remoter but no less important national and world occurences.

What sorts of information can be learned from an historical artifact is demonstrated in this article by the example of a chest of drawers, using a "catechism" of five questions that are recommended to evoke by Socratic means the "social history inherent in many different kinds of reconstructed historical settings," with suggested strategies for adaptation to different kinds of museum visitors. (F.S.)

FIGHTING FIRE WITH FIRE

"Censorship in the Schools: What's Moral about The Catcher in the Rye?" by June Edwards in English Journal (April 1983), National Council of Teachers of English, 1111 Kenyon Road, Urbana IL 61801 ($30/yr).

Censorship of commonly used novels such as Catch-22, Slaughterhouse-Five, and The Grapes of Wrath continues unabated, and J.D. Salinger's The Catcher in the Rye is still the leading target. Defenses against censorship by English teachers tend to be based on literary merit rather than on moral worth, says June Edwards, a field instructor for the National College of Education. Definitions of morality should be based on established traditions such as those that derive from secular philosophy, but Edwards advocates using the **New Testament** not only because it resembles other traditions that "demonstrate caring and respect for the rights and dignity of each individual" but because the Bible is the traditional source of moral standards for the modern proponents of censorship. "Unless we use the same source our critics use, we cannot effectively dispute their charges." Analyzing the novel, Edwards shows that the protagonist Holden Caulfield is "a mixed-up adolescent with a strong sense of values." These values include charitable caring about an infirm teacher whom others ridicule, honoring his father, mother, and siblings, sexual purity in the face of tempting opportunities for immoral behavior, respect for simplicity and truth in religious behavior, and a sense of personal responsibility for the moral development of little children. (F.S.)

TRANSCENDENT EDUCATION

"The Need for Global Education," in New Genesis: Shaping a Global Spirituality by Robert Muller. Doubleday and Company, 1982. $14.95

Spirituality as an antidote for the narrowness of nations is the theme of Dr. Robert Muller's book. Muller, who is Assistant Secretary-General of the United Nations, reflects in his ideas the global thinking of such minds H.G. Wells, Albert Schweitzer, and Sri Aurobindo, but as he shows in Chapter 21, his greatest influence has been from Teilhard de Chardin. New Genesis is divided into four parts with twenty-seven chapters. The four parts are "The Global Transcendence of Humanity," "The Global Transcendence of Human Values," "The Global Transcendence of Religions," and "My Personal Global Transcendence." Throughout, Muller emphasizes that we must learn to become responsible members of a "newly born global family endowed with common institutions, a common brain, heart, nervous system, and soul geared to our common survival." In the opening chapter, "The Need for Global Education," he urges rethinking the whole problem of education to overcome the narrowness of individuals, groups, and nations. He points out that the prodigious wealth of planetary knowledge and information available through the diverse agencies of the UN —from computers to crime, hard sciences to human sciences, art, culture, health and earth sciences to space and spirituality— is unfortunately still not effectively used by member nations and especially by educators and planners of curricula. UN has not utilized its data banks and its information on every conceivable and possible subject on the surface of the planet earth and in every major language of the world. The problem, therefore, is not lack of knowledge. Muller's answer is that global education must transcend material, scientific and intellectual achievements and reach deliberately into the moral and spiritual spheres. Muller's global spirituality is not to be confused with narrow orthodox religions. Quoting Secretary-General U Thant's farewell address, he writes "I deliberately avoid using the term 'religion.' I have in mind the spiritual virtues, faith in oneself, the purity of one's inner self which to me is the greatest virtue of all. With this philosophy, with this concept alone will we be able to fashion the kind of society we want, the society which was envisaged by the founding fathers of the United Nations." (Vasant V. Merchant)

TEACHING WISDOM

"The Humanities and the Idea of a Community" by Geoffrey Marshall, in F&M Today (August 1983). Franklin and Marshall College Alumni Magazine, College Avenue, Lancaster PA 17604.

Denying that the humanities necessarily produce good people, or that the humanities have immediate applicability to specific problems, or that the humanities are merely ornaments to human life, Geoffrey Marshall, Deputy Director of the National Endowment for the Humanities, nevertheless argues that the humanities are both relevant and essential to the human community. The humanities as a field of study has been eroded dramatically in recent years. In the disciplines of English, foreign languages and history the decades 1948 to 1968 saw a growth rate in degrees granted of 30%-35%, but in the following single decade 1968-1978 there was a 43%-50% drop. However the "decline in humanities majors is not simply analagous to what happened to button shoes, Big Band music, or Detroit automobiles that looked and drove like rolling marshmallows"-- it is not the disappearance of an economic article that has lost its usefulness. Referring to Frederick Rudolf's statement that "liberal learning certifies uncertainty as a condition of understanding" and Charles Frankel's statement that the humanities are "civilization's organized tradition of self-consciousness," Marshall proposes that a major function of humanities is to establish a "shared experience" among humans. Language, he says, can be a shared mode of communication, but without shared content, its use is limited to functional literacy, suitable only for reading instructions and filling out forms. The shared experiences and shared problems of our human community transcend the skills of specialists and their narrow, if authoritative language. Yet with the diminishing influence of the humanities in education, there is a diminution in the common content of human experience, as well as of the wise acceptance of uncertainty as one of the conditions for understanding. We are in real danger of surrendering questions that require wisdom to be answered by FORTRAN programmers, economists and microbiologists, each operating from the standpoint of a discipline. "We call a specialist intelligent, or even a genius, but only generalists are called wise. If we credit individuals with wisdom, it is always because they have transcended narrowness, contemporaneity, and jingoism." (F.S.)

YALE, GRADES 6-12

"The Yale-New Haven Teachers Institute," supported by grants from NEH, the Rockefeller Foundation, and other national and local corporations. Contact James R. Vivian, Director, Yale-New Haven Teacher Institute, 53 Wall Street, P.O. Box 3563 Yale Station, New Haven, CT 06520.

The Teachers Institute improves materials and teaching effectiveness through collaboration among school teachers and Yale faculty in special seminars and workshops at the University. It was established in 1978 to prove that collaboration between an urban university and its neighboring school system can produce curriculum materials of high quality pertinent to student needs. Each year most New Haven students in grades 6 through 12 study Institute-developed materials in their courses. Teachers working on curriculum units produce whole volumes of units, one for each of the five month-long seminars conducted by Yale faculty. Each curriculum unit is a minimum of fifteen pages, including a statement of objectives, teaching strategies to be used, three or more detailed examples of classroom activities, and three annotated lists of resources (including a student reading list and classroom materials list). The composite list of all curriculum units produced so far is in limited supply and intended for free distribution only to New Haven Schools. Reimbursement for cost of reproduction is a necessity. For best results the creators of individual units should be contacted. The topics of the curriculum units created in the 1983 seminar session are: Elements of Architecture, Greek and Roman Mythology, Reading the Twentieth Century Short Story, America in the Sixties, Cross-Cultural Variation in Children and Families, and Medical Imaging. (James R. Vivian)

AMERICAN COMMUNITIES

"Tufts University Institute in American Studies," N.E.H.-funded project at Tufts University. Contact: Professor Stephen S. Winter, Director, Summer Institute in American Studies, Lincoln Filene Center, Tufts University, Medford, Mass., 02155.

Tufts University, Program in American Studies, offered a summer institute on the theme of "Ideas and Realities: The Shaping of American Communities," to more than 50 secondary school teachers of English, social studies, and other fields concerned with the development of American culture. The entire project consists of three parts: a summer course, a curriculum project arising out of the course, and academic year meetings for disseminating the curriculum materials developed by participants. The course was taught by a dozen faculty representing six academic disciplines who offered recent scholarship on the course theme from their separate academic perspectives. Approximately equal time was spent on examining the interplay of guiding ideas with the social and physical environment in the formation of American communities when the Puritans arrived; in the Revolutionary period; during early industrialization; and in current times. The lectures were supplemented by field trips to Plimoth Plantation, Old Sturbridge Village, and Lowell Urban Park. The institute will meet three times during the academic year as well. Participants, mostly in teams of two to four from the same school, also received assistance with the development of a curriculum project related to the institute theme that can be used in their own teaching.

Projects begun during the summer will be completed during the academic year. The institute will support participants in the dissemination of their projects to interested colleagues through scheduled presentations at professional conferences and through meetings in eastern Massachusetts designed for project dissemination to which English, social studies, and other teachers of humanities will be invited.

Copies of lecture topics, with bibliographies, and a list of projects may be obtained for $1.00. Completed projects, scheduled by April, 1984, will be distributed at a cost of between $1.00 and $3.50, depending upon length. The curriculum projects are based upon such diverse topics as Family and Community Life in New England, The World of Women in 19th Century America, and Mass Media and Community. (Stephen S. Winter)

WILLIAM, MARY, JOB, & EMMA

"Honors Program at the College of William and Mary," funded by NEH and State of Virginia. Contact: Terry Meyers, Associate Dean of the Faculty of Arts and Sciences, College of William and Mary, Williamsburg VA 23185.

The Honors Program at the College of William and Mary marks a return to a rather traditional ideal of education, centering on the close reading and discussion of works central to the development of our culture. Funded in its initial year by the National Endowment for the Humanities and by a grant from the state of Virginia for faculty preparation the preceding summer, the Program is addressed to about one hundred students, mainly sophomores. The Program came into existence for several reasons. A previous course, Project Plus, which had served the seventies well with its strong themes and its pass/fail and residential features seemed to have lost steam and needed replacing. The sophomore year was regarded as a particularly crucial year in which to offer students something unique. Even at a highly selective school such as William and Mary the very brightest students seemed to be in need of special stimulation. Faculty members seemed to be settling comfortably, though not complacently, into the bounds of departments and disciplines and seemed to need the rejuvenation of intellectual discussion with colleagues.

As designed, and as brought into being, the Program seems to have addressed each of these concerns with a good deal of success. Not that there weren't problems and surprises, particularly a sudden drop off of enrollment between the two semesters, but the Program was fortunate in having the aid and assistance of Dr. Harriet Sheridan, Dean of the College at Brown University, as an evaluator. With her help and advice, the Program increased publicity about itself, became more aggressive in seeking out students, and added features to make some of the work load more manageable (e.g. terminals for text processing in an attractive Honors Center).

The core of Honors 201-202 "Cultural and Intellectual Traditions" is the seminar meetings each week. Limited to fifteen students and taught by selected faculty from across the curriculum (Music, English, Philosophy, Government, Physics, Women's P.E., Theatre and Speech, History, etc.), the seminars focus on works that, though they are arranged sequentially, were originally approached less as historical artifacts than as exemplars of themes: e.g. Man and Nature, The Individual and Society, and Human Values: Moral and Religious. In practice, the themes turned out to be less central than the works themselves. Readings included Oedipus, selected dialogues of Plato, Job, The Prince, Dialogues Concerning Two World Systems, King Lear, Faust, Beyond Good and Evil, Death in Venice, On Relativity, To the Lighthouse, The Oresteia, Acts and Romans, The Inferno, The Social Contract, Emma, selections from Marx, Civilization and its Discontents, The Wasteland, The Sound and the Fury, and Invisible Cities. Because of the amount of reading and writing (a short paper a week plus in most cases two longer ones), the course carried 4 credits instead of the usual three. Readings and discussion each week were supplemented by a required Wednesday Forum. Thomas Kuhn, for example, spoke in connection with Galileo's Dialogues and Hugh Kenner spoke on The Wasteland. In connection with Rousseau, students and faculty viewed Truffaut's The Wild Child, and with Faust the film of Don Giovanni. In addition, students were required to attend a concert of works by Stravinski and a screening of Ophul's The Sorrow and the Pity. A field trip to Washington, D.C., for museums and the theatre was a $5 option. Additional materials (NEH grant proposal and report; brochures; sample syllabi and the like) are available from Associate Dean Meyers. (Terry Meyers)

HUMANITIES EDUCATION CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

EDITOR'S NOTE: The CONNECTIONS section of HUMANITIES EDUCATION is an open forum for the exchange of practical tips, useful materials and current debate about trends and issues. Although we won't be able to print everything that we receive, this should be the place where a wide variety of interests can be addressed. Before writing your contributions, study the page on editorial policies. The more economically you present your ideas, the more room we'll have to cover the educational spectrum. Here are some additional hints:

> Your readers, like you, believe in the humanities and arts, and they care about humanity. You won't have to sell them on either humanity or humanities. Like you, they are skilled educators, knowing full well that when our goals are clear, the immediate questions are:
>
> > Where can I find it?
> > What does it cost?
> > How can I make it work?
>
> The first two questions are easy to answer (for you); the third is what our profession, our art and our craft is all about. It is the reason that the few- address the many. You have thought, tried, tested and refined. You are finally ready to help your peers.

DEFINING GLOBAL EDUCATION

First Step to a Fuller World

Global education for a global society is becoming more important as we approach the twenty-first century. The possibility for worldwide human interaction is now greater with the shrinkage in time and space that result from instant satellite communications, supersonic transport and similar technological quickenings. Issues of global harmony, peace, tranquility and economics depend upon the strengthening of relations among peoples of the world community. Domestic employment, energy resources, diplomacy, foreign markets, international trade as well as cross-cultural interactions necessitate greater understanding of the ways in which people live.

What is global education? Educators and social scientists have proposed several definitions. The global character of our contemporary world has produced what J. L. Anderson calls a "global society"— "a global system that is larger and more inclusive than nations." Harlan Cleveland of the University of Minnesota summed up a global perspective outlook suggesting that "it's learning to relate what goes on abroad to one's own life and work—and, just as important, vice versa."

According to M.E. Gilliom global education consists of "educational efforts designed to cultivate in young people a global perspective and to develop in them the knowledge, skills, and attitudes needed to live effectively in a world possessing limited natural resources and characterized by ethnic diversity, cultural pluralism, and increasing interdependence." A broader definition has been offered by M.W. Conner who stated that global education is "a multidisciplinary effort to effect a unity between the humanities and modern social issues. The object is to increase the awareness of the world as an interdependent system and individual nations as both dependent and independent components of that system." The concept of "global perspective" includes a world which is interrelated and interdependent. It includes proficiency in international understanding, foreign languages, recognition of other ethnic cultures, and an awareness of multilingual-multicultural influences internationally. A global perspective takes into consideration "the competence to live and work with other peoples, cultures and issues not just to understand them" ("Toward Education...", National Assembly Report, 1980). This concept also implies the recognition of the interconnection among such global concerns as population, resources, environment and human rights with one's own life and one's society. Moreover, as J. P. Barnett and others report in a proposal for elementary grades, global perspectives education includes "the development of skills and insights necessary for cooperative human interaction".

Education for a global perspective requires an understanding of the diversity of human values, a knowledge of international events and ethnic cultures, and the ability to conceptualize the international system. It includes not only "the empirical study of global problems and world trends...but involves an analysis of proposed solutions to global problems and takes into account theories of human nature, ideology and system change" (World Order Education Report, 1981). Global education is all-inclusive and may include any and all of the following disciplines: peace education studies, world-centered education studies, multicultural education studies, international education studies, cross-cultural education studies, humankind education studies, comparative education studies, global education studies perspectives, citizen education, and future education studies.

In order to better prepare students to live in an interdependent, international or global society, changes are needed in "the context, the methods and the social context of education" (Anderson, 1979). What is necessary, among other things, is to include within the educational system a global perspective component so as to prepare more informed citizens and more effective leaders. This might include a curricular offering which integrates various disciplines:

multicultural-multilingual studies, international relations studies, foreign language and literature studies, ethnic studies, historical studies, the global politics, sociology and economics of the human condition, international educational exchanges and scholarships for study abroad. More specifically, global education will require new skills and competencies, a cross-cultural awareness, and a knowledge of other nations and cultures. Further, a new "civic literacy" which includes cognitive knowledge and attitudes, communication skills and basic competency skills will emerge. There is, too, a growing demand for an increase in people's interactions across national and continental lines.

Turning definitions and goals into practical programs and curricula is a new challenge, and solutions have only begun.

President Carter appointed a Presidential Commission on Foreign Language and International Studies in 1979 to upgrade international education studies in the United States from kindergarten through the university level. The report called for the inclusion of international content in the teaching of all disciplines as part of the competencies of teachers. The Commission underscored the importance of the professional development of teachers in International Education. The State of New York in 1983 developed an international curriculum for the public schools entitled "Education for a Global Perspective: A Plan for New York State." The plan calls for the inclusion of content and skills related to a multicultural society in the instructional program. Professional educational associations such as the American Association of Colleges for Teacher Education have also called for an International Education studies approach at all grade levels. In 1982, the American Association of Colleges for Teacher Education specifically recommended that International Education be included as a basic component of the existing educational offering and called for an emphasis on global perspectives. They "cited the need to improve International Education in the following areas: cross cultural awareness, sense of global dynamics, awareness of emergent human goals, and an awareness of ethical problems in the global context".

With regard to a global curriculum, "one of the most important skills necessary for living in an interdependent world is the ability to think in a way that takes into account the connectedness of things, the way things are related to one another" (Kerr, 1979). International relations/global education allows youngsters to participate more vigorously and more importantly in decisionmaking and in the process of developing creative solutions. Teacher training and staff development in global education necessitates broad changes. Teachers must develop those skills and competencies that have not been traditionally emphasized by schools in teaching global concepts. The faculty, moreover, should be encouraged to participate in the revision and revitalization of global programs and curricula. Educational institutions need not only train but develop incentives for teachers to acquire skills in international studies.

Moreover, global education is most effective where educators, scholars, parents and community persons unite to pool their political, material and human resources, particularly at the local school setting. A public education campaign in global awareness on the grass roots level is imperative. On a broader scale, educators should work more closely with the business community, the media, government agencies, labor unions, legislative bodies including world community groups in the design and implementation of multilingual-multicultural studies.

FINDING OUT MORE ABOUT GLOBAL EDUCATION: A LIST OF WRITINGS AND ASSOCIATIONS FOR NEWCOMERS

PREPARED BY DR. MICHAEL R. CIOFFI

The comparative newness of the field of global (international relations) education is reflected in the fact that some publications are available only in conference reports and ERIC documents. Among these are:

Cleveland, H. "Notes for an Address at the National Invitational Conference of the Council on Learning." Washington, D.C., May 2, 1980.

Conner, M.W. "A Global Approach to Foreign Language Education," ED 209 948.

Jongewaard, S.M. "Learning the Concept of Interdependence: A Study in Two Dimensions", ED 216 981, November, 1981.

Tucker, J.L. "Our Global Future: Implications for Social Studies Education in the United States," ED 216 991, June, 1982.

An excellent source for surveying the topic of global education is:

Kerr, C. "Education for Global Perspectives." The Annals of the American Academy of Political and Social Science, March, 1979.

Four good articles that may lend further insight on global education studies are:

Anderson, Lee. "Schooling and Citizenship in a Global Age: An Exploration of the Meaning and Significance of Global Education." Indiana University, Bloomington: 1979.

Barnett, J.P., Daniels, C.G., Hutton, L. and Kasanau, P. "Teaching Global Awareness: An Approach for Grades 1-6." ED 215 923, 1981.

Gilliom, M.E. "Global Education and the Social Studies," *Theory into Practice*, 20:169, Summer, 1981.

"Toward Education with a Global Perspective: A Report of the National Assembly on Foreign Language and International Studies." 1980.

HISPANIC PROSE LITERATURE:

Themes and Resources for Humanities

The literature of Spain and Latin America has traditionally been neglected by American literature departments, a fact which can be corroborated by comparing the holdings of French with those of Hispanic literature in any college bookstore. This situation is being remedied to a great degree with regard to contemporary Latin American fiction, a field considered by many Hispanists as perhaps the most fruitful of any. Still, there are some notable works available in translation from Spain that the instructor of humanities may wish to consider in order to present a broader perspective of whatever themes, genres, or periods that are desired to be taught. What follows is a thumbnail sketch of some of the more notable works of Hispanic literature available in translation with an explanatory sentence or two so that the reader may decide if further exploration is called for. For an excellent orientation concerning contemporary Latin American literature I would recommend Into the Mainstream by Luis Harss and Barbara Dohmann.

SPAIN

Anonymous. Lazarillo de Tormes
This slender volume first appeared in 1554 and constitutes the world's first full-fledged picaresque novel. It is a particularly fruitful work for considering questions of genre (reaction against romances of chivalry still in vogue in Spain) as well as narrative technique (the unreliable narrator). Although out of print in translation, library copies are available.

Cervantes, Miguel de, Don Quixote
The translation by Samuel Putnam in the Portable Cervantes (Penguin $5.95) is still to be preferred to all others. The notes at the end of each part are also quite helpful.

Perez Galdos, Benito. (1843-1920) Gloria (Fertig $27.50); Dona Perfecta (Barron $4.50)
It is a pity that more translations do not exist of Spain's most prolific nineteenth-century novelist. Other of his novels have been translated but seem to be no sooner published than they are out of print. These two novels both belong to the category of litterature engagee, the latter in particular. Gloria deals with the conflict created by a Christian woman who falls in love with a Jew, while Dona Perfecta considers the struggle between "modern, progressive Spain" in the form of Pepe, a civil engineer from the capital, and "traditional, conservative, and backward Spain" as embodied by Dona Perfecta.

Baroja, Pio. (1872-1956) The Tree of Knowledge (Fertig $21.50); Caesar or Nothing (Fertig $21.50)
Despite Ernest Hemingway's having declared that Baroja should have received the Nobel Prize instead of him, Baroja is virtually unknown in the U.S. He is influenced philosophically by Schopenhauer and Nietzsche. His heroes feel alienated from society, are indecisive, and when they do decide to act, usually fail. The Tree of Knowledge is his acknowledged masterpiece and concerns a young doctor while

Caesar or Nothing deals with a dilettante who decides to enter politics. Both protagonists' worlds are shattered at the end.

Cela, Camilo Jose. (1916-) The Family of Pascual Duarte (Avon $2.95)
As the Avon paperback edition states on the back leaf, this novel portrays "the story of a Spanish peasant born into the brutal world of poverty, hatred, and depravity." One feels simultaneously a feeling of revulsion and attraction upon reading this work. It is a fine example of literature of the anti-hero.

Martin-Santos, Luis. (1924-62) Time of Silence
This novel (1962), although out of print, deserves mention simply because it is probably the greatest novel written in Spain since the Spanish Civil War. It deals with a doctor who unwittingly becomes involved with the low life of Madrid; the view of the postwar Spain is devastating.

LATIN AMERICA

Rulfo, Juan. (1918-) Pedro Paramo (Grove $1.95) Mexico
According to Carlos Fuentes Pedro Paramo inaugurates the birth of the modern novel in Latin America. This brief work narrates the search of Juan Preciado for his tyrannical father, Pedro Paramo. The distinction between life and death becomes quickly blurred and identification of who is narrating when makes the work challenging. A true masterpiece.

Garcia Marquez, Gabriel. (1927-) One Hundred Years of Solitude Colombia (Harper & Row $17.95)
This classic is South America's best-seller and chronicles several generations of the Buendia family and in so doing provides a mythical history of South America itself where the incredible becomes commonplace. Other works by Garcia Marquez in translation are: Leaf Storm and Other Stories, (Harper & Row $3.95) No One Writes to the Colonel. (Harper & Row $3.95) and the Autumn of the Patriarch. (Harper & Row $13.41)

Carpentier, Alejo. (1904-1980) Lost Steps Cuba (Avon $2.50)
This stylistically sumptuous if at times static narrative relates the trip of a musician commissioned by a museum to locate certain tribal instruments in the heart of South America. The trip is one in time as well as in space, yet some of the characters are timeless; indeed, they are avatars of almost archetypal dimension.

Cortazar, Julio. Hopscotch Argentina (Avon $4.50)
This novel deals with the failure of language to capture fully the meaning of reality. Certain moments of profound insight are achieved by his characters, thanks to zany and bizarre situations rather than logical disquisition. Nearly two thirds of the way through the work we discover that we are to start over again and follow a new sequence of chapters, so that we the readers are also creators.

Fuentes, Carlos. (1929-) The Death of Artemio Cruz (Farrar, Straus and Giroux $5.95) Mexico

ˈlthough several of Fuentes' novels have been translated into English for the same publisher (The Good Conscience, $5.95, Distant Relations, $11.95, A Change of Skin, $5.95, Where the Air is Clear $8.95), The Death of Artemio Cruz continues as a classroom favorite. The novel is divided into twelve chapters and tells the story of Artemio Cruz, an orphan who learned to fend for himself and manipulate others in the Mexican Revolution and in business and social dealings afterwards. Each chapter is divided into three narrative voices: a first person on his deathbed, a second person that appears to be either Cruz's conscience or alter ego, and a third person that relates past events of his life. It is recommended that Octavio Paz's article "The Sons of Malinche" (in Labyrinth of Solitude) be read in conjuction with this novel.

Cabrera-Infante, Guillermo. (1929-) Three Trapped Tigers Cuba (Harper and Row $3.95)
Based on a tongue-twister in Spanish this novel deals with Havana night life in the years before Fidel Castro's revolution. The translation is remarkable in that it has captured the spirit of the original despite the numerous plays on words. The novel is a fast paced romp with several narrators.

University of Minnesota, Duluth 55812

EDITOR'S NOTE: Humanities educators are often called upon to explain terms like humanities, humanism or humanist. Because the range of questioners includes parents, foundation grant officers, local television reporters, school board members, clergy, students and our own friends, and because their motives range from ignorance to hostility, it is desirable to have an arsenal of responses ready at hand. We would like to initiate a series revolving around the question: How do you define/ explain/ defend humanities? To start the series going, here is a thoughtful discussion that addresses the current slighting of humanities and the arts in the educational priorities of institutions at all levels.

PUBLIC EDUCATION AND CULTURE APPRECIATION

In an era marked by austerity and back-to-basics, the primary thrust of public education is utilitarian—teaching young people to read, write, and mathematically compute. Not that this is all bad, but when it is at the expense of aesthetic appreciation, that is a grave injustice, particularly to today's youth who are already victims of a society that places a premium on material objects.

The great works of art remain almost unknown to today's youth. The historically famous galleries in our centers of culture—Philadelphia, New York and Washington—remain virtually untapped by today's young people. Yet, the Astrodome and Superdome draw capacity crowds to witness feats of physical endurance. Why the difference?

One cannot help but suspect that yesterday's, and even today's, emphasis on material values and physical prowess is bearing fruit. In today's society, whatever is worth doing must be measurable in dollars and cents. Consequently, names like Rodin, Cezanne, and Monet are unknown to the allegedly civilized segment of our society. And it is probable that tomorrow's generation of young people will be equally ignorant, for they will not have cultured parents to share with them an appreciation of history.

Somehow, society must allow, if not insist upon, public schools exposing young people to things of culture—music, dance, painting, sculpture, and quality literature. After all, history is reflected in all these various art forms. How can young people better develop a sense of historicity than to be exposed to the tangible objects of culture from previous periods in history?

The great works of art are masterful creations of the extraordinarily talented of every generation in history. They are manifestations of life itself, preserved in words, on canvas, or in marble. They are each generation's gift to tomorrow, the artists themselves speaking for their own generations. Rather than being shunned and their works ignored, artists need to circulate among the public. They need to be utilized as resource persons in our schools. They need to be available in our museums and centers of culture to stimulate the creativity in others. They need to have the opportunity for exposure. As there is in each of us a creative urge, a desire to be better than what we are, and an urge to leave a legacy for the future, every human being needs an awareness of culture—to determine where we've been so as to determine where we're headed.

Although these are difficult times economically, in the great centers of culture in Europe, governments have seen fit to subsidize the Arts. Certainly, Americans have come to depend too heavily on government for their every need, and I would be the first to argue in defense of less government. But the Arts have never been self-sustaining. It does, indeed, seem regrettable that few artists can survive at their art. Most must also teach, serve as museum curators, or work at some task totally unrelated to their first love. Yet, farmers can survive on farming, welders can survive on welding; but poets cannot survive by writing poetry. Their worth is rarely discernible until at least a century after their deaths. Because of the rarity of their work, it may well be that until we have a cultured public, government will need to subsidize the Arts, merely to guarantee their survival.

If, however, the public schools were to fulfill their commitment to society, the Arts could become self-supporting. A fundamental responsibility of public education is to make all individuals and institutions of the society self-supporting. So, for the government to continue to subsidize the Arts should, in my judgment, be but an interim measure until the Arts can sustain themselves.

Public education has a vital role to play in the enculturation of young people. Music appreciation should not be thought of as a frill. Art appreciation should not be viewed as a lavish extra. Rather, an appreciation of the Arts should be as essential as being able to read and write.

The artist/educator is not asking that a disproportionate emphasis be placed on the Arts, rather that the Arts be given their due share of time and money. After all, the student who leaves public school without a sense of aesthetic value could be as ill-equipped for the future as the student who leaves without the ability to read or write.

EDITOR'S NOTE: Robert Carter Frazier is Past-President of NAHE, he is Director of Humanities Education at Arizona State University where he teaches Interdisciplinary Humanities and Comparative Arts, he has co-edited several standard humanities anthologies (most recently THE HUMANITIES: A QUEST FOR MEANING IN TWENTIETH-CENTURY AMERICA Kendall-Hunt, 1982, $19.95), he was for twenty years a secondary school teacher, and he has with his wife organized and conducted many European humanities tours. This last thing has rendered him somewhat schizoid; Dr. Frazier's experiences produced the following divided advice to prospective tour organizers:

EDUCATIONAL EUROPEAN TOURS

Are They Awesome or Awful?

"Far away places with strange sounding names" have long held a fascination for many Americans. Travel alternatives are literally endless. Popular options include jaunts of inquiry and discovery on one's own, group tours offered by professional companies, trips directed by travel agencies, and university-sponsored academic tours. Although all such journeys are educational to some extent, the specific value of educational European tours has often been debated, both pro and con.

Academic Credit and IRS Deductions

PRO

Through cooperation with university and independent travel agencies, inexpensive educational tours of Europe can be offered. The price will include transportation on the continent, lodging, and most meals, as well as entrance fees and tickets to museums, historic sites and cultural events. The itinerary may involve several countries and many cities, such as Madrid, Rome, Geneva, Cairo, Athens, Paris, and London. A well planned itinerary, which allows students to experience important epochs of Western culture may be offered. The typical "this is Belgium, it must be Tuesday" kind of schedule is normally avoided, since it is an arrangement in which tour members may be deposited in various cultural centers with a schedule which reads: "day at leisure." On a quality tour, a balance between scheduled activities and leisure time will have been planned so that students may preserve their sanity while digesting experiences. Seasoned directors of educational tours see to it that survival necessities are planned so that housing, transportation and meals require a minimum of attention. In general, however, not all meals are scheduled in advance. This provides some truly free time during which students are encouraged to seek out indigenous sources of food.

CON

Although everything is preplanned under the dual auspices of a university and a professional travel agency, the matter of academic credit is often subject to argument. There are some universities which will not allow more than one unit of credit per week in summer session, regardless of the fact that each day on a tour is twenty-four hours long while the total number of hours spent in a summer class on campus may be much less than that. Consequently, some university summer schools find themselves in the ludicrous position of offering a three week tour for three units of credit, while accepting up to six units of transfer credit from other, perhaps less discriminating colleges, for a similar tour, not under the university aegis. Such details should be made perfectly clear before departure, whether or not the rationale can be explained. Complications may arise the following April 15th, when participants who counted on deducting tour expenses as justified educational advancement, face the Internal Revenue Service. The Treasury Department has explicit rules as to what may and may not be deducted as educational expenses when preparing income tax returns. It is best to understand these details, and just what documentation will be required, before departing.

Accommodations

PRO	CON
On the best educational tours, advance reservations are made for centrally located European-style hotels in each city, so students can get the true feel of the environment. In addition to this advantage, the historic sights in most foreign cities are located in, or are easily accessible from, the center of town. This also eliminates the problem, often encountered on commercial tours, where pampered tourists are painlessly transported from one American style hotel to another, without ever experiencing the country, the city or the inhabitants.	Members of the university tour groups should be willing and able to maintain both a sense of adventure and a mind-set dictating "vive le difference." Foreign travel necessarily involves cultural differences, else there would be little incentive to travel. While many, if not all, of the traditions and activities encountered in Europe may be distinctly alien to tour participants, they seldom are a threat to health or security. The housekeeping in a native hotel in Rome may not be quite up to that of the New York Hilton, but to an intrepid tour member, it should, nonetheless, be acceptable for a short stay. In some countries, a language barrier may exist in the centrally-located native hotels, which are more accustomed to dealing with native or multilingual customers. In most cases, a respect for, or an effort to use, the local language will be gratefully accepted. Once again, a spirit of adventure, tempered by patience, will usually bring about the desired result.

Guides

PRO

A well planned educational tour will be accompanied by a multilingual guide with a background in the traditions, history and humanities of the countries to be visited. The guide is hired by the university to escort the group from arrival to departure. This experienced courier assumes all responsibility for hotel and restaurant accomodations, transportation, baggage transfers, and admission to all events and activities. The services of the tour guide are contracted by the travel agency with which the university is working. The professors accompanying the group are thus more able to concentrate on the educational and cultural aspects of the tour.

In addition, the travel agency will have prearranged for local guides in each city to conduct appropriate regional tours during which they direct the bus and give background information in English. Local guides are not only familiar with local sights, history, and customs, but are also conversant with local laws and idiocyncrasies which might affect the tour group.

CON

In general, the competency and services of the multilingual guide contribute greatly to the efficiency of the entire tour. City or local guides can be quite another matter. At their worst, they are capable of delivering a bus-load of museum-hungry tourists to a local shop or factory for a percentage of the resultant sales. This does not contribute to the overall success of the tour. The professors and tour members need to keep the purpose of an educational tour in mind and limit visits to local shops and factories to a minimum.

The professors accompanying a tour group need to be seated near the front of the bus to keep in touch with the guides and the bus driver, and to add spontaneous observations and explanations. Thoughtless tour members, jockeying for front seats on busses, sometimes forget that the professors are ultimately responsible for the success or failure of a tour. While tourists may play musical chairs on a first-come, first-served basis, a seat in the front should be reserved for professors and guides, just as it is for the bus driver.

Cost

PRO	CON
Because the cost of a university tour is based on a group rate, it will normally be much less expensive than an individual could obtain. In addition, many extras are usually thrown in at no additional cost. Other advantages are the security of travelling as a group and the careful planning of the transportation and activities, which allows each tour member to know before departure the exact itinerary and cost of the trip, and assures that all reservations and activities will actually occur. The likelihood of unpleasant surprises is greatly reduced.	Transportation costs can fluctuate with the economy. In recent years, travel agents have become more hesitant to guarantee advance transportation fare several months ahead, yet arrangements must be made up to ten months in advance. European wholesalers are also becoming reluctant to guarantee the price of the land portion of the tour, so the overall price can vacillate up to departure. Tour participants once could assume that the cost of a tour was a cash-out-of-pocket one-time vacation expense, whereas they must now consider a trip to be a multi-year investment. The fluctuation of interest rates on borrowed money has become an important factor.

Back Home

PRO	CON
The personal self-fulfillment and broadened educational perspective of a successful tour creates a feeling of accomplishment and general euphoria. Every experience takes on additional meaning — each movie, television show, or book becomes a new phenomenon either because "you have been there," or you "plan to go there next time."	Nobody - but *nobody* - will want to sit through a two hour slide show, or listen for long to endless anecdotes about, "When *I* was in Paris," and soon the trip will take on a dream-like quality. Worst of all, no sooner is the travel loan paid off, than the travel fever strikes again, and it's back in debt, and off to the ends of the earth. Travel is not only broadening, it's infectuous.

NEW RESOURCES AVAILABLE FROM FLORIDIAN HUMANISTS

A new product of the many good interdisciplinary programs in Florida is a two-volume general humanities text called Culture and Values, published by Holt, Rinehart and Winston. The book was written by Lawrence Cunningham and John Reich of Florida State University. There have been some seminars hosted by the publisher around the state to acquaint potential users with the books and answer various questions as to how to employ the materials most effectively. Miami-Dade Community College has produced a series of video programs and an accompanying textbook called, collectively, the Art of Being Human. They are available through the Public Broadcasting Service (475 L'Enfant Plaza, S.W., Washington, D.C. 20024) and its Adult Learning Service. Those which I have seen are excellent, and would be a fine acquisition for your local PBS station to run—perhaps with a college course in continuing education going along with it. Individual programs are grouped into modules which examine the way of life of the humanist; the aesthetic sense via art and music; the truths of mythology; faith, philosophy, and the problem of evil; the impact of media on knowing; human nature and the meanings of love happiness, and death. It is an introductory course for anyone at any age who wonders about the "eternal verities" and wants to know how the humanities are relevant to such issues. I suspect it would work well with well motivated high school students as well as college freshmen and older adults in continuing education. There is a good descriptive brochure which may be obtained from the Miami-Dade Community College District Administration(11011 S. W. 104 Street, Miami, FL 33176). The textbook which accompanies the video series is The Art of Being Human, by Richard Janaro and Thelma Altshuler, published by Harper & Row. (Sharon Scholl, Jacksonville University)

FOLKSONG IN HISTORICAL CONTEXT

There still are some bargains available in humanities teaching materials. FOLKSONG IN THE CLASSROOM is in a typewritten newsletter format, but for $4.00 you will receive four issues that contain folksong materials on such themes as the American West, the American Revolution, the Civil War, immigration and so on. The editors, John A. (Tony) Scott of Rutgers University and Laurence (Laurie) Seidman of Long Island University are not talking about using recordings to teach history; they mean singing with your students. Each issue has several songs, with music, and a number of paragraphs providing historical background information as well as strategies for use in the classroom.

The most recent issue is devoted to women's songs, including subsets of songs about Women and Warriors, the Frontier Experience, The Lullaby, Women's Laments, Marriages, Love Songs, Worker and Mother, Women and the Vote, along with suggestions for classroom activities.

Readers of FOLKSONG IN THE CLASSROOM also contribute brief letters of how-to experiences, and it is clear that there are enthusiastic practioners at all levels of education from elementary to college. Recently one correspondent who is a balladeer for the National Park Service wrote: "When I was a student we sang folksongs during our music period, but we considered them 'dumb'. I realize now it was because we had no context....Now, when I sing to children, it's thrilling to see them light up with the understanding of the life of a soldier, the struggle of a farmer, the sorrow of a woman in mourning....You just can't get that from history books!" Contact: Laurence I. Seidman, 140 Park Avenue, Great Neck, NY 11021.

ECONOMICAL UTOPIAS

Teachers who are using Orwell's 1984 and who may want to have students make comparisons with earlier Utopian works will be pleased to learn that an inexpensive paperback has been reissued with complete texts of More's Utopia (1516), Tommaso Campanella's City of the Sun (1623) and Francis Bacon's New Atlantis (1624), plus excerpts from Rabelais, Montaigne and Shakespeare. Famous Utopias of the Renaissance was originally published in 1946; the 1981 Hendricks House edition (Putney VT) costs only $3.95. Because the translations are also from the Renaissance, I have found that reading guides are almost necessary to help freshman get at the ideas. I have had good success with questions that represent puzzles for contemporary interpretation. Students note the page or pages that "answer" the questions. Discussions have been lively, and what is most satisfying of all, they actually discuss the text! Here are a few questions, along with the page numbers of the answers:

> How would Utopia have dealt with double-digit inflation? (60) With 20% unemployment? (59) How is the life insurance business in Utopia? (96) Utopia was written about 25 years after Columbus discovered the New World and three years before Cortez found and conquered Mexico. How would Utopians have felt about the destruction of the Aztec Empire? (54) What are the City of the Sun policies regarding video games? (179) Employment of the handicapped? (193) Try to convert Bacon's prophecies into modern terms. For example I can see in New Atlantis cinerama, teflon, electronic music, lasers, pink grapefruit and Geritol. What do you find?

Needless to say, these strategies for close reading are steps toward discussions of profounder concepts: equality, justice, self-determination, individualism and human perfectibility. (F. Schroeder, University of Minnesota, Duluth 55812).

HUMANITIES EDUCATION

HumaNews

Official Newsletter of the National Association for Humanities Education

EDITOR'S NOTE: Member-subscribers are invited to submit personal newsbriefs about their activities, publications, awards. We will be pleased to print announcements of upcoming conferences, calls for papers, fellowship and seminar opportunities relating to humanities and arts interdisciplinary education. Such announcements should be submitted at least three months in advance of events or deadlines.

FROM THE EXECUTIVE COMMITTEE

Dr. Vasant V. Merchant, President
Northern Arizona University
Flagstaff, AZ 86011

Dr. Fred E.H. Schroeder, President-Elect
Philosophy & Humanities
University of Minnesota-Duluth
Duluth, MN 55812

Dr. Robert C. Frazier, Past-President

Arizona State University
Tempe, AZ 85281

Dr. Sharon Scholl, Member-at-large
Humanities
Jacksonville University
Jacksonville, FL 32211

Dr. Gary D'Lamater, Member-at-large
Director of Teacher Education
Dickinson College
Carlisle, PA 17013

Dr. Bryan E. Lindsay, Ex officio, Executive Secretary
Humanities
University of South Carolina-Spartanburg
Spartanburg, SC 29303

FOR NEWCOMERS: A POCKET HISTORY OF NAHE

For those who are joining and rejoining as a response to this pilot issue of HUMANITIES EDUCATION, the following background information may be of interest. NAHE originated in 1968 as a product of a series of programs sponsored by the New York State Department of Education. The organization grew rapidly and from the outset has had a membership that encompasses the spectrum of American education, including college professors of humanities and fine arts, secondary and elementary school teachers and professional education instructors, consultants and administrators. While espousing no dogma or theoretical school, NAHE and its members have adhered firmly to a core of great works of human thought and expression, the integration of these around major themes of human values and issues, and to a continuous quest to relate the arts and humanities to contemporary issues and to our students.

During the decade of the 1970s the organization was extremely active, publishing guidelines for teacher preparation in interdisciplinary humanities and related arts in response to the revolution in curricula that spawned so many elective courses nationwide. NAHE also published for a decade HUMANITIES JOURNAL and the newsletter HumaNews, and it sponsored major biennial conventions. As with many professional educational organizations, the hard times of recent years forced NAHE to cut back on conventions and redefine publication programs. What you see before you is the new NAHE. Please join. And when you send in your check, won't you tell us about yourself? The more we know, the better we can serve you. We even supply you with a communique sheet of paper.

TO MEMBERS IN GOOD STANDING

How do you know whether you were a 1983 member in good standing? If you received the letter from President-Elect Fred Schroeder, dated August 24, your 1983 dues were paid. The letter provided minutes of recent actions by the Executive Committee. The most important action was to dedicate all funds to the publication and free distribution of this magazine to prospective subscribers. You will be happy to learn that our funds were considerably augmented by seed-grants from College of Letters and Science (Duluth Campus) and the Graduate School of the University of Minnesota. These grants were specifically to increase the sample mailing, and so NAHE is starting 1984 on real zero budget. Consequently, not only is your renewal important to the Association, but it is your only way to remain on the membership rolls. By the way, you can help our funds go a little farther by indicating that you are renewing so we don't have to reprogram your name and address into the computer. And, from the Executive Committee, the sincerest thanks for loyalty and support through the lean years.

"WHITHER HUMANITIES-TOWARD ADVENTURE OR EASE?": A MESSAGE FROM PRESIDENT VASANT V. MERCHANT

"Youth is not a time of life--it is a state of mind. It is not a matter of healthy cheeks and supple knees; it is a temper of the will, a quality of the imagination, a vigor of the emotions; it is a freshness of the deep springs of life. Youth means a temperamental predominance of courage over timidity, of the appetite for adventure over the love of ease."

Nobody grows old by merely living a number of years; we grow old by deserting our ideals and hopes and dreams and the capacity and enthusiasm to work with them, to discover them, shape them, unify them and express them clearly in life and work.

Can Humanities combine the wisdom of the ages in its attitudes and values toward humanity and have the adventure of the Spirit galvanized by imagination with an openness and freshness toward the concerns and problems that humanists face? Can Humanities retain the genius of the past and yet create new avenues of knowledge and integrated awareness to bring brilliance and versatility into life and the educative process?

The NAHE magazine is such a stride in the direction of the synthesis of the old and the new, to infuse new inspiration and vigor into our membership and our professional activities. An organization can be successful only in so far as its members will make it their responsibility to face the rough and tumble of existence and survival before it can flourish in any way. Since Humanities represent all our constellations of values and attitudinal patterns—of past, present and future—it is clearly up to the humanists to take up the cudgels for a new adventure—of communication, sharing, growing, nourishing, and inspiring—through this creative endeavor. And while there are problems that appear "dense" and "heavy"—all at the same time for Humanities, I am reminded of the ageless line of Sri Aurobindo that we will do well to remember during difficult times and critical junctures.

"Was then the Sun a dream
Because there is Night?"

NEWS ABOUT MEMBERS

NAHE veterans all extend best wishes for a happy and productive retirement to LEON KAREL of Northeast Missouri University where he has taught arts and humanities for 35 years. Leon is a Life Member and former Executive Secretary of NAHE and promises to write for HUMANITIES EDUCATION once he is settled among our other Florida members. His new address is 2253 S.W. Danvers Circle, Holiday Lakes Village, Port Charlotte, FL 33948.

BARBARA C. RESPESS, Gifted Resource Teacher at Benjamin E. Mays High School in Atlanta, GA was one of fifteen out of three hundred finalists selected to participate in the NEH-sponsored seminar last summer at University of California-Santa Barbara. The seminar topic was "Religion in a Democratic Society." Barbara, a gifted teacher of gifted young people, has been a reliable supporter of NAHE for years. She reports that the enthusiastic participation of teachers in these first seminars has been instrumental in NEH's expansion of the Summer Seminars for Secondary School Teachers in 1984.

Congratulations to MICHAEL R. CIOFFI on his 1983 PhD from Fordham University at Lincoln Center. Michael's degree is in Educational Administration, Supervision and Urban Education. He also was a 1983 recipient of a Fulbright-Hays Scholarship for seminar study at the University of Perugia in Italy. Elsewhere in this issue readers will find an article and bibliography by Dr. Cioffi on Global Education.

NAHE President VASANT V. MERCHANT was obliged to cancel a research tour of India and Thailand because of necessary major surgery. We are pleased to learn that Vasant is recovering nicely and will soon be back in the classroom. An internationally respected educator, in recent years she as addressed the United Nations and UNESCO, stressing the need for global understanding through education as the main avenue to world peace. Dr. Merchant has been recipient of numerous awards, including a 1976 "outstanding professional woman of the year" from the President's Commission on the Handicapped. The following year Vasant received an award for outstanding teaching from Northern Arizona University.

Our loyal Executive Secretary, former President and editor of HumaNews, BRIAN E. LINDSAY has been channeling his boundless energy toward humanities programs for gifted children. Recently he wrote the lead article in ROEPER REVIEW: A JOURNAL ON GIFTED EDUCATION. Also, under the transparent alias of "Doc" Lindsay, he is the leader of the St. Vitus Dance Band. Bookings are available.

ALLAN DITTMER, who contributed a number of articles to NAHE's predecessor magazine, HUMANITIES JOURNAL, is now Associate Dean of Academic Affairs at the Ohio State University at Mansfield. Formerly Dr. Dittmer was Ombudsman and Associate Professor of English Education at the University of Nebraska-Lincoln.

UPCOMING

CONFERENCES IN FEBRUARY AND OCTOBER

Among organizations that have interests in common with the National Association for Humanities Education is the Association for Integrative Studies. The AIS has two conferences scheduled for 1984.

On February 3-5, the School of Interdisciplinary Studies at Miami University, Oxford, Ohio 45056 will host a conference on "The Future of Interdisciplinary Studies." The keynote speaker is Martin Trow, Director of the Center for Studies in Higher Education at University of California Berkeley. There will be a variety of discussion sections on aspects of interdisciplinary collegiate programs, critical problems and teaching methods. October 25-27, 1984, AIS will be meeting jointly with the Association for General and Liberal Studies in San Francisco. The host institution is San Francisco University; the conference theme is "Education and Citizenship: A Reciprocal Responsibility."

Incidentally, NAHE and AIS have exchanged mailing lists and all AIS members will be receiving copies of HUMANITIES EDUCATION. Conversely, AIS will send conference information to NAHE members. Your Executive Committee and the officers of AIS believe strongly that the missions of both associations stress unity in diversity and that cooperative support is in the best interests of our members and our students. We hope that in the future there will be more opportunities for joint ventures. Humanities educators, particularly in colleges and universities, will want to consider joining both organizations. AIS dues are $20. Send to Professor William H. Newell at the Miami University address above.

EDITORIAL

RIDING THE ROLLER-COASTER

American education seems to have exchanged its proverbial pendulum for a roller coaster ride. Most certainly humanities education has been on a breathtaking downslide. There are some early signals of an upward climb, but each signal is a challenge to humanities educators, because taken together the signals point unmistakably toward conservatism.

But without responsible leadership from humanities educators, responsible conservatism can lapse into simplistic reactionism. Such extremes, after all, are what journalists report and politicians respond to. Humanistic balance, moderation and ambiguity are neither news nor campaign copy. Journalists report falling test scores, alarmists respond with the panaceas of "more homework," (but no reduction in after-school activities), urgent back to basics in "grammar" and spelling (but rarely back to basics in literature, the arts, history, foreign languages).

Nobody seems to be crying for basic development of a mature vocabulary or basic reading of master works—just computer-literacy, which seems to mean typing nonsense-word commands from a Radio Shack manual.

Such pop conservatism proposes a return back to what never was. What really was was the preeminence of the humanities.

Western, European, ethnocentric, masculine, elitist, specialized, certified and satisfied humanities. Man's spirit embalmed in a smirking mummycase.

Clearly, back to basics the way they were is nearly as unacceptable as back to basics that never were.

Nevertheless the extremist conservative reactions contain some valid diagnoses and imply some effective remedies. We need to improve spelling, but particularly the spelling of words that can express profound thoughts. We need to regain command of English grammar and usage to be able to exchange, challenge and share mature ideas. We need to learn to read so that great writing is an open book to all.

Similarly, we need to re-establish a core curriculum of literature, the arts, history and philosophy: a core curriculum that reasserts the traditional classics of the Western world, but takes cognizance of a much larger world with other classics and different premises; a core curriculum that conserves the past, but recognizes that the past has grown by a couple of centuries and a few continents. The challenge is one of selection, choosing the most usable parts of the human heritage for our current needs and for whatever future we can discern.

HUMANITIES EDUCATION COMMUNIQUÉ

Use this sheet for correspondence and short contributions.

Fold and tape or insert in an envelope addressed to HUMANITIES EDUCATION c/o PHILOSOPHY & HUMANITIES, UMD, DULUTH, MN 55812

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Senior Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to redraw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one or two pages (300-700 words) for practical tips, sample assignments, commentaries, etc.; and articles of four to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

- *THEORY "Piaget and Theories of Integrated Study"
- *ADMINISTRATION "Crediting Departments for Team Teaching"
- *HISTORY "Nineteenth-Century Multi-Media at Chautauqua"
- *RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

- *"What you should know about teaching novels in a philosophy course"
- *"Pre-teaching history students for an art museum field trip"
- *"How to help non-musicians to follow a score"
- *"A designer speaks of humanities bulletin boards"
- *"Getting adults to role-play in public humanities programs"
- *"Understanding Oedipus: An Actor's View" .

What we don't want:

- *Creative writing by teachers or students (it doesn't relate to our purpose)
- *Syllabus outlines (curricula should be explained, not listed)
- *"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)
- *"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)
- *"Humanistic counseling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

HUMANITIES EDUCATION

Dedicated to the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions.

IN THIS ISSUE

...of HUMANITIES EDUCATION we lead with a description of a humanities course designed for law students. Written by a professor of law who is also a novelist and literary critic, the article will be of interest to all for its listing and analyses of popular film and fiction dealing with justice.

In our second article, a professor of English teams with a professor of economics to report on the perceptions of courses in the humanistic disciplines by personnel managers in industry. The results are at once disturbing and challenging.

CONNECTIONS (starting on page 34) is packed with useful ideas in theory and in practice. Two articles provide ammunition and arguments to humanists who are in the midst of institutional frays about liberal education, the value of humanities or the nature of humanities education. A secondary schoolteacher shows how to involve students in Greek philosophy from the beginning of a year-long course, while two other secondary schoolteachers— one an artist and the other a historian— describe a successful summer course that teaches students to do primary historical research at the same time that they learn drawing. And that's not all: there are notices of materials available for incorporating new findings in women's studies into history and humanities, a new anthology on death and the arts, a lively radio show— and more.

Our regular features continue: ABSTRACTS will save you over $150. That's what it would cost you to subscribe to or buy the publications that are abstracted in the ten summaries. And in HumaNews, the official newsletter of the National Association for Humanities Education, there is a call for candidates for NAHE offices, news about some very distinguished members, and notices of upcoming conferences from coast to coast.

HUMANITIES EDUCATION is published by the National Association for Humanities Education
with editorial offices at the Department of Philosophy & Humanities
University of Minnesota, Duluth, Duluth, MN 55812

The University of Minnesota is an Equal Opportunity Educator and Employer.

VOLUME ONE: NUMBER TWO: MAY, 1984

STAFF

EDITOR: Fred E.H. Schroeder, Professor of Humanities, University of Minnesota-Duluth
ASSOCIATE EDITORS: Sharon Scholl, Professor of Humanities, Jacksonville University; Susan Coultrap-McQuin, Assistant Professor of Humanities and Women's Studies and Director of Women's Studies, University of Minnesota-Duluth
ASSISTANT EDITOR: Avis Hedin, Senior Word Processor Operator, College of Letters and Science, University of Minnesota-Duluth

Published three times annually by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Assistance for the production of HUMANITIES EDUCATION has been provided by the College of Letters and Science, UMD, George Rapp, Jr., Dean.

FROM THE EDITOR

We have been very pleased with the many manuscripts submitted to us for consideration and look forward to many more. But we remind potential contributors to read the page on editorial policies before submitting material: the unique thing about HE is that we are the only magazine and only organization that is dedicated to the teaching of interdisciplinary humanities, and, so far as possible, we want every item in our publication to reflect that concern, and to be specific about methods and materials that will help our colleagues.

Notice the postage on the envelope in which your copy of HE arrived. Postage can represent one quarter of your $12 subscription. There is a way out, though. More members. Until we have an excess of two hundred fifty regularly paying annual members we cannot qualify for the substantially reduced bulk mailing rates.

Please help to spread the word about us (an application form is in the issue). And if you have access to mailing label lists of likely subscriber-members, please send them to us for sending out publicity and invitations for membership. Deadline for the Fall issue is July 20, for Winter, October 12.

FRANCIS M. NEVINS

LAW, LAWYERS & JUSTICE IN POPULAR FICTION & FILM

A Professor of Law Describes an Innovative Humanities Seminar

There are countless ways in which law and the humanities are interrelated, but relatively few of them are reflected in the law school curriculum, which tends to be limited to a few offerings in legal history, legal philosophy, and perhaps a course or seminar on law and literature. The law and literature classes that do exist have a tendency to deal predominantly and often exclusively with Classics: Shakespeare, Dickens, Fielding, perhaps Mark Twain, but little from the twentieth century, and nothing at all that is in form other than the written word. I had often thought that these approaches were unnecessarily restrictive, that just as much could be learned about the ways law and creativity interconnect through study of more recent works, and not just novels and short stories but movies as well. When the law faculty of St. Louis University voted that each entering student must thenceforward take one course or seminar certified by the faculty as "humanistic" in nature, the door was opened for me to create a seminar which to the best of my knowledge is unique in American legal education, and, from my own point of view, uniquely rewarding as well. Its title is "Law, Lawyers and Justice in Popular Fiction and Film," and the dual purpose of this paper is to describe how it functions and to encourage others in law schools and elsewhere in academia to try similar experiments.

The last fifteen years have witnessed a phenomenal growth in the academic respectability of all sorts of "popular culture" subjects which as recently as the early 1960s would not have been considered fit materials for university attention. It's a rare college indeed which today offers no courses on science fiction, the mystery story, the Western film, the films of Alfred Hitchcock, rock music, and countless subjects of the same sort. Academic periodicals like the Journal of Popular Culture and Journal of Popular Film are available for publication of scholarly work in these areas, and conventions of popular culture professors have become an annual event which participants look forward to with far more zest than is usually generated by academic meetings. In short, the bars are down, the elitist premises which shaped prior concepts of liberal education have been recognized as not terribly useful, and virtually any mode of creativity, approached in a suitable way, is now acknowledged a proper subject of humanistic academic attention.

The "Law, Lawyers and Justice" seminar accepts these premises. Instead of reading Shakespeare and Dickens, students are exposed to more recent materials, including the Perry Mason novels of Erle Stanley Gardner, law-related science fiction, episodes from television series, and feature films. Whatever the works used, the central questions asked are the same: What perceptions of law, lawyers and justice are contained in these works? What can we learn from them about the ways in which people view the legal system and its functionaries? Are the presentations fair? Even where they are not fair, do they point to problems which the legal community is reluctant to deal with?

If a proper mix of viewpoints and genres and types of creativity is presented, the seminar will reflect a basic principle: That American popular culture reflects the full diversity of outlook that is found in American society itself. Just as there is no such thing as the perception of Indians in Westerns or of police in mystery fiction, likewise there is no such thing as the mass-media image of law, lawyers and justice. What one finds in American popular culture is a spectrum as broad as the spectrum in the society itself.

A professor might structure a seminar of this sort in dozens of ways, and even if we can't say with Kipling that every single one of them is right, certainly a great many of the conceivable approaches are valid. Instructors who contemplate offering such a seminar should give free rein to their own interests in popular literature and film; if you have none, this is not the place for you. The seminar should attempt to strike a balance between written and cinematic material, between serious and comic approaches, and among the characteristic American popular genres such as the Western, the mystery, and science fiction. Naturally, with meetings limited to two hours a week, there are limits to what can be covered. Some of these limitations can be overcome through judicious use of the films broadcast on network, cable and local television during the semester. The seminar should be offered near the end of the week, so that the professor will be able to read the following week's TV Guide beforehand and assign or recommend particular movies or series episodes for student viewing. In most cities of any size, it's likely that at least a few classics from the late Fifties and early Sixties - the first golden age of the law film, the period of TWELVE ANGRY MEN, PATHS OF GLORY, ANATOMY OF A MURDER, INHERIT THE WIND, TO KILL A MOCKINGBIRD and JUDGMENT AT NUREMBERG will be telecast conveniently for students to see them. Where this is true, the professor can devote the seminar's classroom time, as I do, to less easily available materials. The late Seventies and early Eighties have become a second golden age of law-related movies, and among the recent theatrical films that come within the seminar's sphere of interest are AND JUSTICE FOR ALL, THE ONION FIELD, KRAMER VS. KRAMER, BREAKER MORANT, FIRST MONDAY IN OCTOBER, ABSENCE OF MALICE, THE VERDICT and THE STAR CHAMBER. Several of these our seminar attended in a group when they opened in St. Louis.

In order to permit each student to research and present a paper on some aspect of law, lawyers and justice in popular fiction and film, the professor must limit attendance to about fifteen students per semester. Since no more than three presentations can be given in a two-hour seminar meeting, the last five weeks of the semester must be set aside for such presentations, so that as a practical matter only nine or ten weeks are available to present and discuss the works to which all in the seminar are to be exposed, and one of those weeks must necessarily be devoted to outlining the structure and goals of the seminar and working out with each student the topic of his or her paper. This leaves eight or nine two-hour sessions in which to cover the "meat" of the seminar.

My approach has been to begin with administrative matters and try to get as many students as possible at least tentatively committed to a paper topic before the end of our first meeting. One must find out what the student is interested in—Westerns? Comedy? Black Culture? Soap Opera?--and carve out a viable paper topic to which the student will bring personal enthusiasm as well as intellectual tools. At the end of our first meeting I screen "Double Jeopardy" (1949), a 15-minute television film with a truly nasty and cynical view of what we laughingly call the criminal justice system, and afterwards we discuss the film's strengths and weaknesses.

Because the American popular genre par excellence is the Western, I devote two weeks to exploring views of law, lawyers and justice as reflected in Western films. Although relatively few Westerns deal in a central way with these themes, I have found several which work quite well in the course, among them the following.

ONE MAN LAW (Columbia, 1931)--starring Buck Jones in a hugely overacted but useful story of the conflict between law and human decency. Jones is tricked by unscrupulous businessmen into taking an appointment as sheriff, and soon finds himself required to evict his friends from the lands of which they have been legally cheated. The anguish of the Depression reverberates through this imperfect but thought-provoking little film, written and directed by Western specialist Lambert Hillyer.

KING OF THE PECOS (Republic, 1936)--starring the young John Wayne who not only plays a lawyer but also is pitted against another lawyer for a good part of the film. As a boy Wayne witnesses the murder of his parents by a ruthless capitalist who wants to become absolute ruler of the territory. As an adult, equally skilled in the law and the gun, Wayne returns to confront the now tyrannically powerful murderer, the tame attorney who has helped the capitalist's rise, and the army of gunmen who keep him in power. An excellent little Western, again reflecting the Depression theme of law vs. simple decency, and directed by action ace Joseph Kane.

LEGION OF THE LAWLESS (RKO, 1939)--starring George O'Brien as a lawyer who sets up practice in a Western town ruled by masked vigilantes who keep the rich in power and the poor in the dirt. Although director David Howard abandons the legal theme for typical Western action in the film's latter half, the first part represents the most positive view I've found in this genre as to the role of law and lawyers in curtailing arbitrary power and replacing it with a regime of rules.

WYOMING OUTLAW (Republic, 1939)--one of the "Three Mesquiteers" series starring John Wayne in his last films before STAGECOACH brought him to superstardom. Although there are no lawyer characters in this film, it is a powerful and depressing look at law and justice in a poverty-wracked community. Donald Barry became a Western star in his own right in 1940 largely as a result of his crackling intense performance in this film as a young man forced by economic hardship to turn outlaw. The climax is prophetic of such later films as HIGH SIERRA and BILLY JACK, with the heroic outlaw hunted down by an army of the corrupt and ignorant, while the carnage is blithely reported by indifferent on-the-spot newsmen. Director George Sherman specialized in seeing the world from the viewpoint of the downtrodden, and he never portrayed that world more powerfully than in this cynical gem.

TEXAS TERRORS (Republic, 1940)--Don Barry stars and George Sherman directs in this quasi-remake of KING OF THE PECOS (see above) with Barry this time portraying the young man who witnesses his parents' murder and, as a lawyer, returns to avenge their death.

Any one or two of these 60-minute features will adequately represent legal themes in the vintage Western film, but those whose local television stations still run HAVE GUN—WILL TRAVEL, starring Richard Boone as the black-garbed intellectual gunfighter Paladin, are advised to supplement the features with two outstanding episodes of this great series. "El Paso Stage" (1961), directed by Robert Butler and written by Gene (STAR TREK) Roddenberry, is carefully structured around themes of contract law as Paladin is hired under false pretenses to come to a small Western town and harass the young lawyer who is threatening to unseat the town dictators by lawful means. And "Fandango" (1961), directed by Boone himself and written by that master of powerful TV drama Harry Julian Fink, deals with the ever-explosive issue of capital punishment: should the two feeble-minded teen-age boys who committed a senseless and brutal murder be hanged according to law, or executed privately by the victim's brother, or, in view of their youth and deprived social circumstances, given another chance? The resolution of this story satisfies almost no one but inevitably provokes discussion.

After spending two sessions on Westerns, we proceed to a study of legal themes in mystery fiction. Prior to my two-hour presentation on this subject, the students are assigned a sizable amount of material to read, both short stories and novels. The authors and materials I have found most useful in this respect are as follows.

MELVILLE DAVISSON POST (1869-1930). This West Virginia lawyer turned short story writer is the most important American writer of crime fiction between Poe and Dashiell Hammett. His earliest stories involved a shrewd and totally amoral attorney named Randolph Mason, who—like so many lawyers in fiction—illustrates all too well Mr. Justice Holmes's social-Darwinian conception of the lawyer as a hired gun in the service of the bad man. In the first and most famous Mason adventure, "The Corpus Delicti" (collected in THE STRANGE SCHEMES OF RANDOLPH MASON, 1896), Mason teaches a client how he can legally get away with cold-blooded murder. Later stories are much in the same vein, although the final Mason tales evidence a reformation on the part of the wily lawyer. Apparently Post too underwent a conversion early in the 1900s, for his later stories are set in early 19th-century West Virginia and are steeped in a harsh Calvinistic Christianity. The protagonist in these tales is sternly righteous Uncle Abner, and two in particular, "Naboth's Vineyard" (1916) and "The Straw Man" (1917) (both collected in UNCLE ABNER: MASTER OF MYSTERIES, 1918), deal expressly with themes of law and lawyers. The Abner series had a marked influence on some of the fiction of William Faulkner described below.

ARTHUR TRAIN (1875-1945). Train's once phenomenally popular short stories about the good-hearted and quixotic old New York attorney Ephraim Tutt are not generally regarded as mystery fiction, but they have much to say about law, lawyers and justice. "Mock Hen and Mock Turtle" (1919; collected in TUTT AND MR. TUTT, 1920) is especially interesting for its thesis that no legal system is capable of justice to aliens.

S.S. VAN DINE. Under this pseudonym art critic Willard Huntington Wright (1888-1939) wrote a dozen best-selling novels about that super-elitist aesthete and amateur detective Philo Vance. Although none of his novels deal with law, lawyers and justice, Chapter II of his THE "CANARY" MURDER CASE (1927) is a self-contained Socratic dialogue between Vance and the District Attorney on the subjects of reason, legal rules and common sense.

ERLE STANLEY GARDNER (1889-1970). A seminar of this sort could not leave out the creator of Perry Mason. I concentrate on the early Mason novels, the ones steeped in the struggle-to-survive atmosphere of the Depression, where Mason is portrayed as a tiger in the Darwinian jungle, a paid gladiator who fights no-holds-barred for whoever can pay for his services. This side of Mason is perhaps best represented in THE CASE OF THE HOWLING DOG (1934).

WILLIAM FAULKNER (1897-1962). Yes, Faulkner too wrote crime fiction, and not just the screenplay for THE BIG SLEEP. Although others may prefer to assign his novel INTRUDER IN THE DUST (1948), about the impending trial of a proud black man for the murder of a white woman, I prefer to use his short stories "Smoke" (1935) and "Tomorrow" (1940) (both collected in KNIGHT'S GAMBIT, 1949), which, like the novel, deal with law-trained Gavin Stevens, a milder and more tolerantly cosmopolitan spiritual offspring of Post's Uncle Abner. The Post themes of succession to land, bloodlines, and the nature of justice are carried forward in toto in Faulkner's "Uncle Gavin" tales.

CORNELL WOOLRICH (1903-1968). This haunted man, who spent his life with his mother in gloomy residential hotels and who went over the edge when she died, is the greatest writer of pure suspense fiction that ever lived. His stories rarely concern law and lawyers, but "Three Kills for One" (1942; collected in IF I SHOULD DIE BEFORE I WAKE, 1945, as "Two Murders, One Crime") is a paralyzingly intense look at justice, in which the police mistakenly railroad an innocent man to the electric chair for a cop-killing, then, learning the truth, cover up their own crimes, while one officer goes out to hound the real killer. Woolrich's empathy with the hunted and the doomed lends echoes of LES MISERABLES to this powerful story.

ELLERY QUEEN. Under their famous joint by-line, Frederic Dannay (1905-1982) and Manfred B. Lee (1905-1971) wrote one novel which has nothing to do with the character Ellery Queen but a great deal to do with law, lawyers and justice in the witch-hunting McCarthy era. In THE GLASS VILLAGE (1954) an old woman is brutally murdered in an insular and bigoted New England town, and a terrified foreign tramp is accused of the crime. To prevent a lynching, vacationing Superior Court Judge Shinn devises a plan to pervert the law in order to uphold the law. Presiding over the tramp's "trial" before the bloody-minded villagers, Shinn deliberately commits a host of legal errors so that the local morons will be placated for now and the conviction can be reversed later. In scenes prophetic of CATCH-22, we find the bailiff and the court reporter and even the judge testifying for the prosecution, while the defense counsel blithely ignores gross violations of the tramp's rights, and His Honor solemnly bangs the darning egg he uses for a gavel and hands down procedural rulings he knows are dead wrong. In this novel law is equated with reason, decency and common sense, and the rules of law are seen as the safeguard against the brutal, arbitrary gut feelings of the American common man.

GEORGE V. HIGGINS (1939-). Higgins' early novels like THE FRIENDS OF EDDIE COYLE (1972) evoked the fringes of Boston's underworld with cinema verite authenticity, but his most sustained work on legal themes is KENNEDY FOR THE DEFENSE (1980), which presents the criminal justice system through the eyes of a veteran defense lawyer. Jerry Kennedy's clients, unlike Perry Mason's, are invariably guilty, and his well-paid function is to work within the rules of an amoral game, arranging deals with other functionaries for his clientele of thieves, pimps, drunk drivers and assorted lice. It's a compulsively readable book, full of the irritations, compromises, unconcise conversations and undeodorized smells of real criminal practice. Also recommended is Higgins' later THE RAT ON FIRE (1981).

JOSEPH WAMBAUGH (1937-). This Los Angeles police officer turned novelist has no peers when it comes to presenting the world from the cop's-eye point of view. For obvious reasons Wambaugh is overwhelmingly cynical about law and lawyers and judges, as witness his novel THE BLUE KNIGHT (1972) and his nonfiction book THE ONION FIELD (1973). Both works come close to being required reading for this type of seminar.

LAWRENCE BLOCK (1938-). This writer's short stories about the corrupt New York lawyer Ehrengraf carry on the tradition of Post's early Randolph Mason tales and give form to the contemporary layperson's contempt for the legal profession. I prefer to use the earliest and perhaps freshest in the series, "The Ehrengraf Method" (1977) and "The Ehrengraf Presumption" (1978).

Having read these and the other stories assigned, the students, even those previously unfamiliar with mystery fiction, are ready for the seminar session in which we discuss the history and development of legal themes in the genre. This material is capped the following week with the screening of a 60-minute episode from the PERRY MASON television series. Although the explanations at the end make little sense, I've had good results with a very early episode, "The Case of the Nervousl Accomplice" (1957), both because it has more action than most Mason telefilms and because it portrays Mason as quite the trickster, unlike the ponderous bureaucrat mindful of the law's niceties into which the television character (and Gardner's literary character too) eventually grew with success.

Although I am not myself a devotee of science fiction, it is important that this field also be represented in the seminar. Fortunately St. Louis University is gifted with reference librarian Katharine Thorp, who is exceedingly well-versed in science fiction and who presents a 60-minute lecture on legal themes in this genre. Prior to the lecture I assign two stories by the most interesting of the lawyer-science fiction writers, Charles A. Harness (1915-). "An Ornament to His Profession" (1966) has to do with patent law, death and resurrection, office politics, deals with the devil, and a host of other subjects, all tightly integrated into a fantastically imaginative novelette. And "Probable Cause" (1968) takes us into a world of the near-future, in which the Supreme Court, some of whose members may be psychic, must rule on whether the word of a demonstrated psychic is sufficient constitutional basis for a warrant to seize the weapon which killed the President of the United States.

The final four weeks prior to student presentations are devoted to longer films on legal themes. I spend one week with two offtrail 60-minute television episodes. "Killer Instinct" (1961), from THE DEFENDERS, guest-stars William Shatner as a man trained by the military to kill instinctively, and who, unable to unlearn this training in civilian life, kills a brutal construction worker in a casual argument. And "Bolt from the Blue" (1960), written and directed by Robert Altman for the MAVERICK series, is the most insane trial farce one is likely to find on film: a parody of the classic anti-lynching Western THE OX-BOW INCIDENT, a forerunner of the mad delights in Altman's

M*A*S*H*, and a wonderful contrast to the earnest seriousness of the DEFENDERS episode.

At least three full-length theatrical features should be shown in a Law, Lawyers and Justice seminar. Whether the instructor opts for some of the famous films listed earlier in this article should depend on how often they are run on local television stations. In St. Louis, where most of them are broadcast with reasonable frequency, I prefer to assign these films when they pop up on local TV and save the seminar time for some less well known but in many respects more rewarding films, such as the following three:

ILLEGAL (Warner Brothers, 1955)--starring Edward G. Robinson in a story about the rise and fall of a criminal defense lawyer. Despite the laughable ending, the film is permeated by an instructive cynicism about the legal system that is bound to generate student discussion. STAR TREK fans will notice DeForest Kelley in a small part and 10-watchers will observe a young and unspoiled-looking Jayne Mansfield as a singer.

CAPE FEAR (Universal, 1962)--starring Gregory Peck, Robert Mitchum and Telly Savalas in a very free adaptation of John D. MacDonald's novel THE EXECUTIONERS (1958). Peck plays a comfortably fixed lawyer in a quiet Southern city which is invaded by Mitchum as a sadistic psychopath seeking revenge on Peck, his wife and their teen-age daughter. The movie begins with the quiet dialogue and orderly procedure of the courtroom and follows Peck as he takes measures to save himself and his family from terror: first strictly legal steps, then, when they fail, the ambiguous measure of having his friends on the police force harass Mitchum (exactly what the Good Old Boys of the time were doing against blacks and civil rights activists); then, when they fail, some clearly illegal moves, culminating in a cold-blooded scheme to murder Mitchum with police connivance. The last thirty minutes of the film take place in the darkness and muck of a swamp, where there is no law but kill or be killed. In the movie's final few seconds, multiple implausibilities pile up and the legal theme returns in a manner which will leave one either blissful or furious. This unbearably suspenseful and thought-provoking film, directed by J. Lee Thompson and with a magnificent musical score by Bernard Herrmann, has been consistently voted by my students to be the finest they have seen in the seminar.

MAN IN THE MIDDLE (20th Century-Fox, 1963)--with Mitchum this time playing the hero, a professional soldier in India during World War II whom his superiors order to act as defense counsel at the court-martial of a racist maniac (Keenan Wynn) for murder. It's intended, of course, as a show trial, the conclusion known in advance by all parties, and Mitchum forbidden to raise the insanity defense which is his client's only hope. But by slow stages we see the ideals of legality eat into him until he sacrifices his career to save a man who clearly isn't worth it. Directed by Guy Hamilton and based on Howard Fast's novel THE WINSTON AFFAIR (1959), this is one of the best and least-known of the pro-law films that proliferated in the first golden age of the late Fifties and early Sixties.

During the first ten weeks of the seminar the students have not just been watching movies and reading mystery stories but have also been conducting their own research and writing their own papers. In order to insure maximum student participation in the seminar and to give each student the benefit of all the others' work, I reserve the last five weeks of the semester for each student to make a scaled-down oral presentation based on his or her paper. Each student is allotted up to forty minutes of time, so that three can give presentations in a two-hour session and all fifteen in five weeks. I announce in advance that the presentation will count for one-third of the student's grade and the final written paper for two-thirds. Before each student's presentation I meet with the speakers individually, go over their work with them, take care of any difficulties that may have arisen, and find out if special equipment is needed. The variety of topics chosen by the first thirty students who have completed this seminar is considerable, and the quality of papers by and large has been high, due in considerable part, I suspect, to the personal interest which the student brings to the subject chosen. Among the topics presented in the seminar have been:

Law, Lawyers and Justice in the Science Fiction of Robert A. Heinlein
Law, Lawyers and Justice in the Mafia
Legal Themes in the Works of James Gould Cozzens
Law, Lawyers and Justice in the "Hill Street Blues" Series
Law, Lawyers and Justice in the Works of Henry Cecil
Law, Lawyers and Justice in the Works of John D. Voelker (Robert Traver)
Law, Lawyers and Justice in the Comic's Eye
Law, Lawyers and Justice in Contemporary Mystery Fiction
The Presentation of Law, Lawyers and Justice in McCarthy Era Films and Fiction
Law, Lawyers and Justice in the Drama
Perry Mason, Gladiator at Law
Law, Lawyers and Justice in the Fiction of Louis Auchincloss
The Police Officer's View of Law, Lawyers and Justice in Film, Fiction and Reality
The Depiction of First Year Law Students in Literature, Movies and Television
Law, Lawyers and Justice in Daytime Television Serials
Law, Lawyers and Justice in Contemporary German Literature
Law, Lawyers and Justice in the Works of Mark Twain
Law, Lawyers and Justice in the World of William Faulkner
Law, Lawyers and Justice in John Mortimer's "Rumpole of the Bailey" Series

Although I don't claim that this seminar will contribute directly to students' lawyering skills, there are several advantages which in a broader sense the student, the teacher and the law school curriculum as a whole can derive from the seminar's inclusion. (1) By exposing students to materials, and to a framework for organizing those materials, that have never before been a part of the law school environment, the seminar helps counteract the boredom and apathy so often encountered among upper-division students. (2) For the right professor, the seminar can become a teaching experience that is completely different from anything he or she has had before, yet one that is well within the proper ambit of law school concerns. (3) The seminar emphasizes what students quickly lose sight of, namely that law is not just a technical skill but a discipline with implications and ramifications throughout the culture, and not just the elite classical culture but that of the people as well. (4) Perhaps most important, the seminar opens the door to certain disturbing questions about law and reflections about the legal profession which law school traditionally does not address. By grappling with these realities in the transmuted form of popular fiction and films, students should better understand and therefore be better equipped to deal with the attitudes towards them which will likely be shared by many of their future clients.

"Law, Lawyers and Justice" has been a great challenge to put together, and greatly enjoyable to boot. I have offered it annually for five successive years and it remains the most popular seminar in the law school curriculum. But nothing in its nature or structure prevents it from being offered, with a few modifications, by teachers without law degrees who are affiliated with undergraduate or even secondary schools. I invite others similarly minded, wherever they teach, to make the experiment.

BUSINESS PERCEPTIONS OF COURSES IN THE HUMANITIES

Personnel Managers are Gatekeepers for Business: Not All Regard Humanities as Important

INTRODUCTION

For the past twenty years members of both the academic and the business communities have paid scant attention to the symbiosis which exists between the humanities and the world of business and technology. Until recently these perceptions have been written about in isolated articles and discussed only at social functions. Within the past two years, however, the picture is changing. Speakers such as William D. Bulloch, director of the Bell Laboratories' publications center, and Walter E. Moody, special consultant to IBM Corporation, have been addressing groups such as the Association of Departments of English and the South Atlantic Modern Language Association. Further, the 1983 American Assembly of Collegiate Schools of Business took as its theme "Business and the Humanities: A New Partnership," addressing the abilities and training which humanities can provide future managers. Current writing seems to support the hypothesis that there is an increasingly close association between the world of business and the humanities. This study then is an effort to determine the importance of humanities courses to one local business community.

METHODOLOGY

In September, 1982, we distributed a questionnaire to members of the Columbus Area Personnel Association at their monthly meeting. The questionnaire was attached to a cover letter explaining that the information would be used as the basis for a study we would be presenting at the Southern Humanities Conference. The heading of the questionnaire was self-explanatory: "Questionnaire Regarding Perception of the Humanities by the Columbus Area Personnel Association." Our Response was 46.5% which our marketing specialists tell us provides a good sample.

The Columbus Area Personnel Association is a local chapter of the American Society for Personnel Administrators (ASPA). The members of the association represent businesses and manufacturers in both Columbus, GA, and Phenix City, AL, and in the surrounding area. Further characteristics of the sample of participating companies are described in Table 1. Note that almost half of the members surveyed came from manufacturing companies, approximately 30% represented service companies and the balance were distributed equally over the remaining four areas of business.

Table 1

Characteristics of Companies Included in Sample

Type	%	Number of Employees	%
Manufacturing	48.6		
Services	29.7	100 - 200	10.8
Retailing	10.8	200 - 500	37.8
Finance	10.8	500 - 1000	29.7
Distribution	10.8	over 1000	10.8
Other	10.8		

The figures will not total 100% as members were instructed to check more than one category if necessary. The companies represent sizeable hiring power in the local community of over 240,000 people as almost 90% of the companies included in the sample have employees numbering at least 200.

The scope of the personnel manager's job includes the hiring of people for management level jobs as well as skilled, semi-skilled and unskilled jobs. In fact, two-thirds indicated they hire employees who can be categorized as non-business professional, while 75% hire management employees. Here again the respondents could check more than one category. Primarily, these personnel administrators are people who hire our Columbus College graduates in their entry level jobs. Their attitudes could certainly affect curriculum at a local college.

When the questionnaires were returned we analyzed them using Statistical Package for Social Science (SPSS). The data were punched on cards and analyzed on an IBM computer. Computer output was used to summarize questionnaire data and prepare tables below.

RESULTS

The results of our survey can be divided into two categories. The first part deals with the attitudes of the respondents toward college degrees and their importance in the job market. The second part reviews perceptions of respondents toward specific college courses.

A topic recently offered students on the essay portion of the Georgia Regents' Test was "Is a college degree less meaningful than it used to be?" The Columbus Area Personnel Association answered that question in a mixed fashion (Table 2).

Table 2

Importance of a College Degree in Securing a Management Position

	Entry Level	Middle Management
Necessary	41	57
Helpful	57	43
Unimportant	2	0

Under the entry level column, 41% felt a degree was necessary while 57% felt it was helpful. The 57% figure can be explained in part by the fact that many entry-level management employees are also attending Columbus College as part-time, or in some cases full-time, students who are pursuing a degree. They were hired into training and other programs with the understanding that future advancement could depend on completing their degrees.

When we move into the column headed Middle Management, the figures reverse: almost 57% stipulated that a college degree is necessary while 43% felt it is helpful. Of course, much depends on what an entry-level job entails as to whether a company would require a degree.

In response to a follow-up question concerning the importance of a Master of Business Administration (MBA) degree in securing a management position (necessary, helpful, unimportant), 76% of our respondents felt that an MBA would be helpful in securing a management position in their company. A further question regarding the MBA degree yielded interesting results. Respondents were asked if they did hire a person with an MBA, what preference would they have for an undergraduate major. Seventy percent preferred business majors, 16% indicated engineers, 8% preferred a business-engineering combination and a negligible 3% indicated liberal arts.

In order to determine the importance of specific college courses, we divided our respondents according to their education. In our sample 24% were not college graduates, 41% had completed a bachelor's degree and 35% hold a master's degree.

We asked our sample, "If a college degree were required, what areas of study would be desirable?" Respondents were asked to indicate very important, desirable, or unimportant. Table 3 summarizes the results for English composition.

Table 3

English Composition

Respondent	Very important %	Desirable %	Unimportant %
Non-college grad	0	33	67
Bachelor's degree	45	27	27
Master's degree	65	18	18

While it is encouraging to note that the importance of English composition increases according to the respondent's education, it is alarming to note the large numbers who found English composition courses to be unimportant. Other humanities areas, not shown in Table 3, fared even less well. Irrespective of their own educational background, no personnel manager saw modern foreign language, classical language, philosophy, music or literature as a desirable area of study; in fact, 100% of the non-college people, 82% of the baccalaureate degree people, and 82% of the graduate degree holders found modern foreign language unimportant. Again 100% of the graduate degree people found classical languages a useless area of study, while 91% of the intermediate group deemed them unimportant. Philosophy surprisingly was ranked as desirable by 20% of the non-college graduates, 45% of the college graduates, and 33% of the post-graduate degree respondents. Music was considered less important, with practically all of the bachelor and advanced degree holders ranking it unimportant. Literature enjoyed an insignificant rise from 0% in importance among non-college people to 36% of the college graduates finding it desirable and 27% of the advanced degree holders considering it desirable.

To reiterate, no group found any humanities area to be very important for the college graduate whom they would hire. Predictably, all three groups favored areas such as computer science, management, finance, and accounting. Seventy-five percent of the non-degree people found computer science important, 75% marketing, 57% finance, and 55% accounting. College graduates favored management (86.7%) while 43% to 54% found computer science, finance, and accounting important. An impressive 100% of the post-graduates listed management as important while 50% listed the other areas similarly.

The heart of our survey regarding perceptions of the humanities by the Columbus Area Personnel Association centers around the remaining questions. Again we divided the answers demographically in accordance with the educational background of the employers. Table 4 addresses the question "Would courses in literature change the business major's insight into human relations?"

Table 4

Literature Courses – Human Relations

	Not Increased %	No Opinion %	Greatly Increased %
Non-College Graduates	66	17	17
Bachelor's Degree	50	36	14
Master's Degree	50	25	25

The educational background of the respondents appears to be reflected in attitudes toward literature.

Table 5 addresses the question "Would courses in philosophy affect the values and attitudes of the business major?"

Table 5

Philosophy – Values and Attitudes

	Not Increased %	No Opinion %	Greatly Increased %
Non-College Graduates	28	28	44
Bachelor's Degree	20	47	33
Master's Degree	15	23	62

As in the previous question, the importance of philosophy courses appears to increase with the education of the respondent.

The responses to the question "Would quantitative skills be affected by courses in logic" are summarized in Table 6.

Table 6

Quantitative Skills – Logic

	Not Increased %	No Opinion %	Greatly Increased %
Non-College Graduates	14	14	72
Bachelor's Degree	7	43	50
Master's Degree	0	8	92

All groups apparently saw the practical application of logic. The emphasis on quantitative skills in the wording of the question may have influenced the answers as those skills are stereotypically linked to business.

Table 7 summarizes the results of two questions pertaining to the study of foreign languages. The respondents were asked "Would knowledge of a foreign language (French, Spanish, German, Japanese) make an appreciable difference in your assessment of the management job applicant?" A companion question was directed at classical languages.

Table 7

Importance of Foreign Language

	MODERN LANGUAGE			CLASSICAL LANGUAGE		
	Not Increased %	No Opinion %	Greatly Increased %	Not Increased %	No Opinion %	Greatly Increased %
Non-College Grad.	71	0	29	70	14.5	14.5
Bachelor's Degree	64	21	15	87	6.7	6.7
Master's Degree	100	0	0	100	0	0

It is apparent from Table 7 that knowledge of a foreign language is not an important attribute of a job applicant. This is especially interesting, even curious, in view of an earlier observation that 70% of the parent companies included in the sample engage in international business.

Communication skills struck a very responsive chord with the respondents. The questionnaire included two questions in this area. The first asked the importance of writing skills; the second asked the importance of oral communication skills. Results are summarized in Table 8.

Table 8

Importance of Communication Skills

	WRITING SKILLS			ORAL COMMUNICATION SKILLS		
	Not Increased %	No Opinion %	Greatly Increased %	Not Increased %	No Opinion %	Greatly Increased %
Non-College Grad.	22	11	67	0	0	100
Bachelor's Degree	0	13	87	0	7	93
Master's Degree	0	8	92	0	0	100

It is obvious from these results that written and oral communication skills are extremely important to the personnel administrators regardless of their level of education.

DISCUSSION

Mark Strunk, Placement Coordinator at Columbus College, recently conducted a study which indicates the discrepancy between the administrator's assessment of communications skills and students' perceptions. Strunk, too, surveyed the Columbus Area Personnel Society as well as a student sample of Columbus College. The student sample included 164 junior, senior, and graduate students in the School of Business. The administrators were given a list of 25 attributes and asked to rank them in importance. The students were asked to rank the attributes according to the way that they perceived employers would rank them. Like the employers, they ranked the 25 attributes on a scale of 1 to 5, representing a range of "not important" to "very important." Here the Columbus Area Personnel Association ranked written communication ninth in importance in the list of 25 attributes. Student ranking of written communication was lower than employer ranking: eleventh in importance.

Continuing with Strunk's study, students also misjudged the importance of oral communication to employers. They ranked it tenth while the Personnel Association members ranked it fifth in importance. Strunk's concern is that if students fail to realize the importance of this attribute, they could fail to emphasize it, leading to a failure in emphasizing attributes which the employer is seeking.

While Strunk's Job Attribute Survey reiterates the relative importance of written and oral communication to local employers, national studies reiterate the de-emphasis on classical and modern foreign languages. John Bohannon, Associate Professor of Finance and Economics at Columbus College, feels that the Columbus Area Personnel Society's voting on the importance of modern foreign languages is based on their realistic assessment of courses necessary to succeed in business. Only an international firm would have need of employees knowledgeable in a foreign language, and here it would be easier for the firm to hire a Japanese who speaks fluent English than an American who knows Japanese.

A November 15, 1982 article in Newsweek entitled "English, English Everywhere" states this case even more strongly. "Today, like it or curse it, English is the closest thing to a lingua franca around the globe . . . It is the dominant language of medicine, electronics and space technology, of aviation, international business and advertising, of radio, television and film." Although more than 70 colleges and universities have in recent years reinstated their language requirements, 52 schools have dropped their offerings in Russian, Chinese, and Japanese. Prestigious Harvard allows undergraduates to exempt their one-year foreign language requirement upon a health-clinic psychiatrist's testimony that the student is psychologically unable to learn another language. With the de-emphasis on foreign languages by business firms and shrinking college enrollments, the prognosis seems to be that American college graduates will continue to be "globally illiterate."

Paul Hackett, Classical Language Professor, interpreted the astoundingly high percentage of respondents who felt a knowledge of classical languages was unimportant. He believes these figures represent the concentration on the skills of their own discipline by a sample taken in one field of endeavor. Bohannon connects the decreasing interest in foreign language on the part of business with the increased tempo to learn a new language--computer language.

CONCLUSION

The results gathered from our survey of the Columbus Area Personnel Association are not surprising. This body, which is comprised of personnel managers and others who have hiring responsibilities for a diverse number of businesses and industries, view college subjects from what they perceive as a pragmatic vantage point. Hence, overall they view music, modern and classical languages, literature and philosophy as relatively unimportant areas of study for their employees. English composition, which is quite likely viewed as having little relationship to literature, was considered an important area of study. Even liberal arts math suffers by comparison with computers. Among liberal arts courses only logic drew a vote of confidence. Here again the sample possibly applauds its pragmatic application as emphasized by our wording: quantitative skills. The members ranked written communication and oral communication as very important skills, skills perhaps having a positive connotation to business and industry, both of which seem concerned about a decline in these areas.

In an article published in the March, 1980 Southern Medical Journal Dr. Richard Harberg of the University of Minnesota writes that the decline in writing ability "has little to do with spelling, agreement, or punctuation, nothing at all to do with apostrophes. It is rather . . . a failure of imagination." At the present, business and industry in the Columbus area seem to appreciate specialized skills while relegating broader based areas of studies to the bottom of their priority list.

Members of the humanities faculty could help bridge the present gap by reciprocally inviting some of the area's business leaders to view their classes and by appearing as guest speakers at civic organizations. We should consider marketing our product through brochures illustrating skills which are developed by humanities courses. Just as Walter Moody of IBM spoke at the South Atlantic Modern Language Association, we can welcome opportunities to speak at industry conventions, reinforced by films developed to support our presentations.

Imagination is the precursor of both communication and innovation. Perhaps it is time for our college community to remind business and industry that conceptualization enables the maximum utilization of technical and managerial skills.

ABSTRACTS

Summaries of significant articles and reports about interdisciplinary humanities education.

AESTHETICS FOR EVERYONE

"A Common Curriculum in Aesthetics and Fine Arts" by H.S. Broudy in Individual Differences and the Common Curriculum (Eighty-Second Yearbook of the National Society for the Study of Education). University of Chicago Press, 1983.

The fine arts of the nineteenth century were for the "finer" elements in the population, but today the riches of the art world are available to almost everyone through shopping mall galleries, records, radio, television and community arts. Yet for the individual, "to go beyond the popular art objects that do not require formal instruction, the school has to make some contribution, just as it has to discipline the mind to go beyond common-sense science . . . and common-sense anything else."

But when we consider agreeing upon a core curriculum in the arts, says Harry S. Broudy of the University of Illinois' College of Education in this yearbook dedicated to individual differences and the core curriculum, political considerations enter immediately. These are not merely encountered in the guise of community suspicions of the values expressed in art works, but in polarizations among art specialists: practicing artist vs. educator, art supervisor vs. general classroom teacher. The arts are also especially problematical when one comes for a uniform curriculum. "Because the arts are not reducible to a general art or a single master art, the common curriculum must either be a little of each for everybody, or concentrate on one medium and hope that something transfers to the others, or it has to find that . . . is applicable to all the media." Finally, the art world is not unified, containing diverse art forms, markets, audiences and support systems.

The usual rationales for a common curriculum are that everyone needs certain knowledge and skills and that these can be reduced to a set of basic concepts that are applicable to different occasions. These ideas of usefulness and basicness are not so easily applied to the arts as they might be to mathematics or language skills. Another rationale is "to adopt some ideal of human existence and prescribe the learnings necessary and sufficient to produce it." Arts appreciation certainly fits into this scheme, yet "the standard studio pattern of professional training" is questionable as contributing to the liberal education ideals of The Good Life, or of inquiry into the Human Condition. Broudy concludes that the arts should be prepared to argue their justification on all these rationales, but should also be prepared to answer a variety of reasonable questions from school boards that are contemplating the establishment of a common curriculum.

Could not the aesthetic experience be subsumed under other studies? No, Broudy says, because the arts are distinct in their acceptance of subjective feeling common to all activities. But then, if the aesthetic experience is indeed distinct and relevant to "other strands of life," does it merit formal instruction? And if so, is it really a school function or should it be part of extra-curricular museums and performances? Should an arts program cover all media or be selective? Is it teachable to all pupils? Can it be made sequential with a fair assumption of skilled instructors at each level? And, can it be assessed? The answers are usually couched in terms of "enthusiastic testimonials."

Broudy suggests dividing curriculum content into four areas. First, "skills of aesthetic appreciation" should address sensory properties of art objects, formal properties of pattern and structure, technical properties of how objects and performances are made, expressive properties—the gestalt of characteristics that cause an art object to evoke feelings. The second set of skills are skills of performance, doing as distinguished from perceiving. Third is "enlightened cherishing" by which Broudy means both knowledge of the accepted canon of arts, and "the use of that knowledge to justify preferences in the arts." Formal aesthetics claims to produce this, but Broudy is skeptical of the applicability of rigorous aesthetics because of its persistent concern for "technical issues in philosophy and art criticism."

Good taste and good judgement are not always the same. The former is spontaneous and habitual; the latter is always a reasoned response. How are schools to achieve some commonality with all the wealth and variety among the arts? For his fourth area of content Broudy proposes common exemplars, which are similar to classics and great works, but should also be representative of classes of things. Exemplars typically embody the peak of a period, or an important transition, or "a new trend not fully appreciated in its time." Broudy concludes with some answers to arguments against a common curriculum, most notably that it is restrictive and prescriptive. It need not be: there's god's plenty to allow for an infinity of variations among students and teachers alike.

SUSPENDED CONCLUSIONS

"How to Develop Ideas: The Contribution Philosophy Can Make to Improve Literacy" in Teaching Philosophy (April, 1983) Philosophy Documentation . Center, Bowling Green State University, Bowling Green OH 43403. $5/ single copy.

In a magazine issue devoted to the problem of declining literacy, Eugene Garver of California State College, San Bernardino maintains that philosopher's most important contribution to the teaching of writing is to foster "an attitude of suspended conclusion," a phrase borrowed from John Dewey.

Garver takes issue with the usual advice of English teachers that students should always use "Concrete, Specific, Definite Language." Going back to Aristotle, he says that immature writers tend to be either too concrete or too abstract. Both are needed, but English teachers will have to clear up their understanding of the terms Concrete and Abstract. A generalization is an abstraction, for example, and without generalizing from specifics, a student is practically condemned to undeveloped thinking: either one must write about specific, personal experiences, or report upon incontrovertable facts. What is missing is the movement between abstract and concrete statements, which are two parts of the single coin of inductive thinking.

Too often, what is absent in student writing is "a sense of complexity, a recognition that moral reasoning often involves conflict, argument and evidence on both sides, a sense that there's a difference between issues about which disagreement is a sign of misunderstanding, of depravity, of heresy, of a different weighing of incommensurable considerations."

What are the sort of ideas that need development? Garver chooses to take a statement of St. Augustine to the effect there are some subjects on which no one is a specialist, "things anyone would be ashamed not to have an opinion about." These, unlike personal experiences and factual reporting cannot be written about as personal opinion nor as exposition of a set of facts. They need actual intellectual development.

After practicing on some "essentially contested concepts," students can be led to the recognition that even personal experiences and presumed matters of fact can also be regarded as contested concepts, and therefore equally subject to development. Some examples of the realm of "essentially contested concepts" are political ideas and ideas about justice and honor.

Philosophy teachers are not alone in their experience with this kind of thinking, and there are many aspects of composition that

Garver believes to be best handled by English teachers, but he does maintain that philosophers can help to reverse declining literacy by showing how to develop ideas rather than to take easy recourse to false distinctions between concrete and abstract.

INTEGRATING VIA BIOGRAPHY

"Dialogue With Autobiography: Integrating Through the Study of Personality" by Mark E. Blum in Issues in Integrative Studies 1983. Association for Integrative Studies, Western College Program, Miami University, Oxford OH 45056. $20/year.

Combining the disciplines of sociology, history, philosophy and psychology, Mark E. Blum, Associate Professor of Liberal Studies at the University of Louisville offers a course that uses autobiography as a means of integration. Blum particularly relates autobiography to the study of personality, noting that an elaborated rationale for integrating disciplines would not be necessary if "the study of personality was cultivated throughout the years of primary and secondary schooling."

Characteristically personality studies have been pursued by way of the disciplines, and, regardless of the value of the insights from these separate viewpoints, they are separated.

Blum maintains that if students were to study persons from a "foreign culture" within an academic unit of a single semester, "one or two lives should be the focus . . . with a major portion of the time being given to the objective context." Blum's course, "Identity and Society" narrowed the area to the United States and, because of the general familiarity, he was able to examine a variety of lives, Franklin, Davy Crockett, Frederick Douglass, Mark Twain, Margaret Mead, Sara Davidson among them. Overall, the course examines the formulation of identity in different situations and from "models" provided by different disciplines.

"Philosophy provides a guiding thread," beginning with a riddle from a 1655 work by Thomas Hobbes. A wooden ship named Theseus is gradually repaired piece-by-piece until it is all new in component parts; the original parts are saved and recycled into a reconstructed duplicate. Which is the ship Theseus? The riddle is used by Blum to introduce to his students three aspects of formulation of identity: naming, structure and memory. With Hobbes, naming provides continuity of identity. From John Locke, Blum selects the idea of the importance of structuring "the facts of the identity in a coherent order" — "at the minimum, a set of conscious operating principles that determine what reality was." The third philosophical thread from philosophy is memory, "a facet of identity formulation stressed by David Hume." Autobiography can be viewed as an exercise in searching one's memory for the essential components of identity.

Blum maintains that viewed in these ways, autobiography not only interrelates the sciences and humanities, but is a means of integrating the students' lives with history.

HUMANITIES IN MANAGEMENT

"Educators must advocate holism to prepare our human resources for the coming decentralization" by George C. Lodge in a special issue of Personnel Administrator (December, 1983) on "Work in the 21st Century." American Society for Personnel Administrators, 606 N. Washington St, Alexandria VA 22314. $30 annually.

Without a doubt, schools must "get better" in the 21st century, writes George C. Lodge, Professor of Business Administration at Harvard. For him "better" means a turning away from the theoretical bases initiated in the renaissance by Copernicus and Newton, trends of specialization, reductionism by analysis, proliferated disciplines, objectivity, rationalism and materialism.

The counteractions are holism, synthetic thought, recognition of subjectivity, intuition and even irrationality as realities of human interaction with the total environment. It will not be a quick or easy process. Education is founded upon old theories which fragment both the world and ways of studying the world. Thorough various institutional and informal structures the old model is entrenched and programmed for self-perpetuation. "The college is a series of long, dark tunnels," and students who inquire how the tunnels might interrelate will receive instruction only by accidental encounter with some maverick: "respectable professionals don't get their Brownie points that way."

Some universities have established centers to facilitate integrated studies of real problems, but Lodge says it must start with primary and secondary education, "building bridges between school and community." One positive example is of a community in which a high school science instructor helped students to learn to analyze pollutants, the project leading to active participation by the students in politics and, ultimately, to the restoration of a lake for swimming."

In management, Lodge believes that the "antique assumption that management is peculiarly a business skill must be replaced by a new type of manager "who can at all times see the new interrelatedness of things." Such men and women should become "engines of change" who are marked by trustworthy authoritativeness, ability to communicate, access to power to effect change, capability to protect agents of change from the "inevitable retaliation of the status quo," and competence to integrate skills of experts. "In the 21st century good management will be measured by the levels of waste and violence in society; by the quality and standard of life in our communities; and by the creativity and self-respect of our people."

LIBERAL ARTS THROUGHOUT LIFE

"A New Mission for Continuing Education: Teaching the Skills of the Liberal Arts," by L. Steven Zwerling in The Chronicle of Higher Education, March 28, 1984. 1333 New Hampshire Avenue, Washington DC 20036. $45/year.

Contrary to the usual picture of strictly vocational orientation among adult learners today is this analysis of three types of people who could "profit from re-immersion in the liberal arts." One group, those who received their undergraduate education in the 1950's and 1960's, were well supplied with courses in great books of the western world, but, says L. Steven Zwerling, Associate Dean of Continuing Education at New York University, much of this exposure was at an age too young for full understanding.

The second group is from the late 1960's and early 1970's. Their liberal learning was haphazard, made up of attractive electives, but without any overall framework or groundwork of analytic skills. The third, most recent group are of the generation of single-minded careerists who after gaining some purchase in the business world are finding that their close attention to learning job skills has left them with an intellectual and cultural vacuum.

All three might benefit from a return to humanistic studies in an adult education setting, but this should be provided in ways that differ from the ordinary random listing of courses that prevails in most extension schedules. "Traditionally continuing education is thought of in terms of individual courses, not a curriculum." Zwerling suggests clusters of courses over a series of semesters that relate to one another by theme, chronological period or other principles. For students of the first group who encountered classics when they were too immature, he suggests a conventional reprise of their undergraduate work, permitting them to "live out the fantasy of rereading their college texts as mature adults." Adult learners ordinarily show preference for problem-centered curricula; therefore Zwerling suggests clustering a series of courses from different disciplines around meaningful issues.

For the career-driven recent graduates more "practical" clusters are recommended that go beyond technical competencies into problem-solving skills, oral and written communication skills on one side, and related academic studies in social sciences and humanities on the other.

INTO THE WOODS WITH HANSEL & GRETEL

"The Fairy Tale: An Introduction to Literature and the Creative Process" by Roberta Hoffman Markham in College English (January 1983). National Council of Teachers of English, 1111 Kenyon Road, Urbana IL 61801. $30/year, $4/issue.

Published fairy tales such as the Grimm version of Hansel and Gretel can provide a surprising variety of doorways to advanced literary works and critical approaches. Alternatively we can employ psychoanalytic, existential, socio-political, structuralist and other approaches to these brief and often familiar tales. With such technical tools firmly in mind, students are less intimidated or baffled by longer, more sophisticated works.

However, the greatest value of using fairy tales, writes Roberta Hoffman Markham, professor of comparative literature at California State University, Long Beach and 1982 recipient of an award for outstanding professor, is in the freeing of students' minds from imposing upon literary works personal opinions derived largely from restricted experiences of the here and now. Every literary work should be read as "once upon a time," that is, in its own terms.

First, though, students must develop some necessary understanding about fairy tales. The pejorative connotations of myth and fairy story should be dispelled. Fairy tales "are true because they are capable of expressing the essence of things . . . and restoring imagination to a primary place in human consciousness." A sense of tales as being moving metaphors is important. They neither report facts nor adhere to set symbolic patterns, but create a pattern of analogies between the inner psyche and outside experience. Within this "ephemeral" metaphoric narrative, all things are possible, yet self-consistent.

Markham also lays a groundwork of "masculine and feminine principles as energies within us." These are not masculine or feminine roles; we are not studying dominant men and subservient women, but looking at a division and duality that underlies myth with such pairings as sun/moon, Apollonian/Dionysian, intellect/feeling, action/being. None can exist without the other; students soon discern symbols within the dualities, such as the forest as a symbol of the feminine principle-mysterious, uncharted. After an analysis of the thematic structure of Hansel and Gretel, Markham proposes a variety of literary analogs: the splitting of characters to express contradictory feelings in The Brothers Karamazov and The Scarlet Letter, the quest into the forest of consciousness in The Divine Comedy, Woolf's To the Lighthouse, Gide's Theseus.

Another tale-type analyzed is that of the simpleton who triumphs. Markham's example is the Grimm tale "The Three Feathers." Students empathize with this unlikely kind of fairy tale hero and become more willing to understand ambivalent literary heroes such as Stendhal's Julien in The Red and the Black. The repetitive structural elements in fairy tales also prepare students to discern structural narrative patterning in works of literature. Other approaches, concepts and examples in this article support Markham's contention that with fairy tales as introduction, students learn to go beyond mere suspension of disbelief to willing belief in created worlds of imaginative literature.

GOING ONE BETTER THAN FILM

"The Slide/Tape Show: A First-Class Alternative," by Randy Croce in Federation Reports (September/October 1983) by National Federation of State Humanities Councils, 12 South 6th St. No. 527, Minneapolis MN 55402 $1.25/issue.

The gaps in a visual narrative made up of separate photographic slides are like the gaps in verbal narrative, says Randy Croce, photographer from St. Paul, Minnesota. The gaps are one reason that slide/tape shows are superior to the totally continuous narrative of film or video which do not allow for the unsaid that can be the creative contribution of the audience to cause and effect relationships and to active interpretation of symbols.

The advantages of slide-tape presentations over film are not all so abstract. Budgetary advantages are a major consideration in funding and producing public educational programs in the humanities. A 35-millimeter camera and a portable tape recorder are small, inexpensive, do not require more than one operator and, given the vast array of film speeds today, one does not need to carry along bulky lighting paraphernalia. Film and processing are inexpensive and the photographer-editor can not only make use of slides from many locations, even shots made years apart, but it is possible to borrow other persons' slides to blend in for the desired effects.

Croce made a slide-tape show under the auspices of a joint grant of the Minnesota and Montana state humanities councils on the topic of tribal celebrations of four Blackfoot tribes of Montana and Alberta. The inobtrusiveness of the 35-millimeter camera made it possible "even to be a participant in the activities," something that would be much more difficult using motion-picture equipment. "People are more likely to feel self-conscious in front of a larger, continuously-running camera which records everything that they do."

Editing has advantages, too. Croce was able to show segments to the Native American subjects who helped to select, arrange and amplify the final product. It was their selections that made it possible to see a whole category of slides that depicted sharing. Using either a commercial or a home-made slide table viewing box, the editor can look at the entire sequences at one time. Rearrangements are done in a moment, requiring none of the expensive editing equipment of film or video or the time-consuming and memory-straining searching through one or more reels for alternative cuts.

The audio portion is cheaper and easier to work into the final product. Motion-picture audiences have come to expect perfectly synchronized lip movements; with slides, the physical discontinuity of the slides frees both editor and audience from expectations of Hollywood technical perfection. To Croce, the advantage goes beyond economy: "the editor is more free to make symbolic connections between visual images and ideas stated in the audio accompaniment." An example is provided in excerpted pictures and script from Croce's production, THE DRUM IS THE HEART, showing the circle as a leitmotif that is vital to the American Indian in nature, the dances, the tepee and philosophy.

Highly sophisticated slide-tape can be done using two or more projectors, dissolves, cropped slides, progressive synthesizing of images and music mixing, and once a master program is completed, conversion to filmstrip for classroom uses is not expensive. But even with simple equipment, Croce believes that this is not merely "a second-class alternative" but "superior to moving-image media for conveying the abstract and complex ideas with which the humanities are concerned."

MANHATTAN PROJECT

The Integrated Humanities Curriculum at Manhattan School of Music, supported by a three year grant from NEH. Contact James Sloan Allen, Chairman, Academic Department at Manhattan, 120 Claremont Ave, New York, NY 10027.

Though it has been created especially to fit the needs of musicians deeply involved in a professional program, the content of the program is appropriate for undergraduates at most liberal arts colleges. The small number of professional opportunities for highly skilled musicians led the creators of the program to believe that broader education was necessary so that musicians could live rewarding lives outside the music profession. Critical thought, lucid speech and writing were fundamental skills to be taught. Logic, social responsibility, a grasp of the Western cultural heritage, and interrelations among the arts were goals of the conceptual realm. The result is a seven-part curriculum beginning with Introduction to Reading, Writing, Thinking required of all freshmen, which draws analogies between literary thinking and musical thinking. Three semesters of seminars called "The Great Conversation" introduce students to classic literary works from antiquity to the present century studied for the insights which they offer to human nature and the perennial problems of existence.

A unit of historical seminars features four models: High Culture and Popular Culture; Reason, Revolution, and Romanticism; The Culture of Modernism; War and Modern Culture. Literary study draws upon various historical periods with student performance of the music of each period a continuing assignment. The major themes and styles in all the arts of these periods is part of the curricular structure. In addition, three specialized courses complete the series, and they are coordinated with professional courses in music history and theory. The major works of American, English, French, and German literature are considered in separate courses. Aesthetics and Art Criticism offers an introduction to critical thinking about the forms and expressive terms of the arts. Myth, Life and Art gives attention to the key myths in Western music and literature. Ethics and Music explores the professional role of the musician, and two courses in political thought introduce students to the major strands of political theory and practice in contemporary world culture. A coordinated lecture-concert-film series complements these studies with significant extra-curricular offerings.

The creators of the Manhattan curriculum aim to provide a comprehensive educational experience which they believe is vital to contemporary society, no matter how professional or specialized a student's goals may be. They have organized something unique in the instruction of musicians, and much of their content and organization is imaginative and broadly applicable to non-professional situations.

WE HEAR AMERICA SINGING

"American History Through Music and Role Play" by H. Eugene Karjala and Raymond E. White in The History Teacher 17:1 (November, 1983). Society For History Education, California State University-Long Beach, Long Beach CA 90840. $15/year; single issues $5.

In full ministerial regalia, Cotton Mather lectured the dozen Ball State University students on the moral state of New England, and afterward he led them in lining-out hymns from The Bay Psalm Book. With this beginning, an eight-week experimental course set forth upon a musical and personal tour through American history. Four two-week units were prepared by the instructors, H. Eugene Karjala of the School of Music and Raymond E. White of the History Department: religion, the frontier, social reform, and politics.

Course and unit objectives were clearly articulated, the overall purpose being to place students and instructors into a "simulated past" where they could face human problems in their full historical contexts. Primary consideration was given to breadth rather than depth; thus the two weeks on religion included in addition to colonial lining-out, singing schools, "fasola" shape-notes, spirituals and a costumed debate between John Wesley and George Rapp on the comparative tenets of Methodism and the Harmony Society. For each major unit, readings of primary and secondary sources were required, along with music listening and film viewing. Unit examinations were given as well as unit course evaluations.

From the outset, students showed preference for the more active role-playing: the singing school in the first unit, the town meetings on women's rights in the third unit and, in the unit on politics, presidential election campaigns in which "candidates made campaign speeches based on research and party members supported the candidates with the singing of campaign songs." The final project had students researching individual personae ranging from Sweet Betsy from Pike to John Lennon, and, at a two-hour dinner party, sustaining each role in conversations. Evaluations indicated that the least effective aspects of the course were the subjects that had been overdone in prior experiences—for example, the American Revolution—; and subjects that were unfamiliar but were not treated in sufficient depth—specific social reform movements in particular. The course is being repeated this year.

The article includes annotated lists of resources—historical books, records, films and pedagogical information—for each unit.

SOUNDINGS

National Humanities Center's weekly radio program supported by the NEH. Contact Wayne J. Pond, Public Programs Officer, National Humanities Center, 7 Alexander Drive, Research Triangle Park NC 27709.

Since the beginning of its national syndication in 1980 this half-hour public-affairs radio series has been broadcast over 250 commercial and public radio stations reaching an estimated 111,000 weekly. The program is available without cost through Eastern Public Radio, which distributes "Soundings" via satellite to NPR stations. Stations without satellite downlinks may obtain the programs by writing to Mr. Pond directly. Humanities instructors would do well to request their local station carry this program, as its variety and timeliness make it an important instructional resource.

Just a few of the topics of past programs have been the state of our language, the art of writing literary biography, American education today, the environment, feminism, war and peace, and the social relevance of art. Discussants have been historians, writers, politicians, theologians, philosophers, and artists. Programs are lively, full of counterpoint, and easily excerptable for class use. A full list of all programs along with all stations currently airing the series is available from the National Humanities Center. A more detailed sample of topics and participants from programs scheduled this April can give an idea of the quality of this offering:

"Patterns Called War"

April 1 James Leutze (Professor of History and Director of the curriculum in peace, war, and defense, University of North Carolina-Chapel Hill); Douglas Porch (The Citadel, Charleston, SC); Samuel Williamson (Professor of History and Dean of Arts and Sciences, University of North Carolina). April 8, conclusion of program.

"Social Aesthetics"

April 15 Charles Blitzer (Director, National Humanities Center); George Hartman, architect (Hartman/Cox, Washington, DC); Claude McKinney (Dean, School of Design, North Carolina State University); Kenneth Severens, architectural historian (College of Charleston).

"Social Aesthetics"

April 22 Mary Sturgeon, art historian (University of North Carolina); Elaine Cohen, sculptor (Stony Brook, NY).

HUMANITIES EDUCATION CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

(EDITOR'S NOTE: In our first issue, we began a series on "How Do You Explain/Defend the Humanities?" The following two articles are admirable responses to challenges faced by humanities teachers today. In the first, Arnold M. Horwitch looks the Future of Humanities according to three different meanings of "humanities." In the second, Jeremiah Reedy places Humanities in the larger context of Liberal Arts Education.)

THE HUMANITIES: WHAT OF THE FUTURE?

We who are involved in the teaching of "the Humanities" are often seen as T.S. Eliot's "hollow men . . . leaning together, headpiece filled with straw . . . paralysed force, gesture without motion." This unenviable public image is of our own making and is correctible. The future of Humanities Education is up to us; but before we can decide what it shall be, we must more precisely state the question.

If we mean, "What is the future of the quantity and variety of creative activities by the public?" the answer is: "never brighter." Modern technology has produced a revolution in communication media, transportation, processes of visual and audio reproduction, new and plentiful materials for arts and crafts, and an enlargement of the so-called leisure time in which to actively participate in the production, performance, and enjoyment of the arts and humanities. If we are not intolerant about the quality of some of that production (being careful, thereby, not to discourage experimentation), the sheer quantity of it will result in many works of lasting value being created; and in the valuable works of the present, past and future being enjoyed by more people than ever.

If we mean, "What is the future of the Humanities as scholarly disciplines within academic institutions?" the answer is: "the same as it has been for the past 150 years (or perhaps as far back as the Alexandrian scholars of the 3rd Century B.C.)." Truly valid, valuable research, extending our knowledge of important persons, works, events and issues, will be done by a very few people gifted in certain ways. The amount of significant work (perhaps "meaningful" would be a more appropriate albeit overworked word) will not be substantially enlarged by the large increase in the number of workers in the field; for those who are blessed with important aesthetic and intellectual insight are exiguous. The mass of scholarly work published will continue to be undistinguished in content and pedantic in form. Eventually the force of events (the costs of producing, storing, retrieving, and communicating this plethora of vacuous material) will reduce the academicians' present insistence on this kind of human effort to a sensible level, which will still leave room for much arcane scholarship.

If we mean, "What is the future of the teaching of the Humanities?" the question can be divided into five subordinate questions:

1. What shall we teach?
2. To whom shall we teach "it"?
3. When shall we teach "it"?
4. Who should teach "it"?
5. Toward what end should we teach "it"?

As to the first question, we paraphrase Matthew Arnold: The best that has been thought and expressed, in a variety of cultures, times, and modes of expression (not solely the literary mode). We should be sensitive to the current cultural productions, but never carried away by the fads of nostalgia, historicism, or popular contemporaneity. Wordsworth said well what we should teach:

"Of Truth, of Grandeur, Beauty, Love, and Hope,
  and Melancholy Fear subdued by Faith;
Of blessed consolations in distress;
Of moral strength, and intellectual Power;
Of joy in widest Commonality spread;
Of the individual Mind that keeps her own
Inviolate retirement, subject there
To Conscience only, and the law supreme
Of that Intelligence which governs all."

As to whom we should teach the Humanities, the tragic failure of American education is the loss of the transference of vital awareness of "the best that has been thought and expressed" to the youngsters in the elementary and secondary schools. The real purpose of the "general studies requirement" for undergraduates at our large colleges and universities is to provide some minor remedy for this earlier systemic failure. The usual four years in college are the least important for the beginning study of the Humanities (except for the practice of critical thinking and the development of a mature awareness of the moral nature of Human Beings). Sensitivity to the illuminations and enjoyments inherent in the Humanities should be developed in a continuous orderly manner throughout the twelve years of lower education. The undergraduate years in college could then provide the deepening and enrichment of these illuminations and enjoyments, as a result of the natural demand of the students, rather than as an inconvenient graduation requirement.

We teachers of the Humanities are cognizant that arts and letters provide life-long opportunities for personal and social enrichment. Much more ought to be done by academicians to reach out beyond the campus, to actively participate in the needs and opportunities of Continuing Education programs. At a much later stage in life, to study the works of Plato, Dante, Shakespeare, Goethe, Praxiteles, Giotto, Rembrandt, Picasso, Bach, Mozart, Beethoven, Mahler with the knowledgeable assistance of an enthusiastic, dedicated teacher, could be a corrective to our national blight of alienation, angst, and meaningless material consumption. Futher, an appreciation of non-Western cultural achievements could go far in developing in us the desire to actively preserve our total human culture, through pluralistic enrichment rather than induced homogeneity.

As to the fourth question, the Humanities teacher (at all levels of education) should be a broadly-trained, widely-experienced person, with a synoptic rather than analytic view of human existence. This person should be dedicated to the students, not to the "disciplines;" should be inspired by the works presented, and by the modes of expression being studied. Above all, the Humanities teachers, and the system within which they perform their work, ought to be humane: sensitive, and sympathetic to the living needs of students and colleagues.

Finally, the teleological question: "Why teach the Humanities?; toward what end?" Here it might be best to itemize, in increasing importance:

1. To combat the gross materialism of our age and place. There is much truth in the general complaint that our lives lack true aesthetic pleasure, self-fulfilling productiveness, real comradeship, and adventure. Perhaps Alexandre Solzhenitsyn said it best in his Harvard Commencement address of 1978: "After the suffering of decades of violence and oppression, the human soul longs for things higher, warmer, and purer than those offered by today's mass living habits, introduced by the revolting invasion of commercial advertising, by TV stupor, and by intolerable music."

2. To help people, younger and older as well as college-age, become more discerningly aware of "the best that has been thought and expressed"--for their lifelong enjoyment and enlightenment.

3. To assist people to recognize the fundamental freedom of the human creative spirit as manifest in the awesome works of art, architecture, fiction, music, poetry, dance, drama, and philosophy, that exceptional persons of all cultures and ages have produced.

4. To aid people to give birth within themselves (as did Socrates, the self-described "midwife"), to the realization of our ultimately moral nature which requires of each of us that we accept the responsibility for our lives, for the lives of other human beings, and, given our growing technological power, the responsibility for all earthly life itself.

If we academic Humanists do not see our mission in these terms and fail to attend to the declared and undeclared anguish of people today, then there will be scant future, of any real value, for the teaching of the Humanities.

We Humanists should fine-tune our minds so that we can express to others, in concise coherent terms, that bit of understanding we've reached and the mass of unanswered questions we've uncovered. We should joyously teach in our chosen fields with the remembrance of Wordsworth's thoughts:

"--may my Life
Express the image of a better time,
More wise desires, and simpler manners—nurse
My Heart in genuine freedom—all pure thoughts
Be with me--so shall thy unfailing love
Guide, and support, and cheer me to the end!"

A CLASSICIST'S GUIDE TO DEFINING LIBERAL ARTS EDUCATION

There is much confusion about what a liberal arts education is. This essay is a modest attempt at definition. A glance at an elementary logic textbook reveals that there are many kinds of definitions. There are etymological definitions, ostensive definitions, and nominal definitions, not to mention real, descriptive, stipulative, causal and essential ones. If we wanted an etymological definition of a liberal arts education, we might explain the derivation of the word "liberal" from Latin liberalis and arts from Latin, ars, artis. If we wanted an ostensive definition, we would point to people who are reputed to be liberally educated. One could go on and on, but the best type of definition (and according to some the only genuine definition) is one per genus et differentia. This means we identify the class or genus to which the thing to be defined belongs, and then we tell how it differs from everything else in the class by giving its "specific difference." Thus to define a triangle we state that it belongs to the genus polygon which also includes quadrilaterals, pentagons, hexagons and other many-sided figures. Next we identify the specific difference of a triangle as having three sides. A triangle then is a three sided polygon.

Although I have been advised by professional philosophers not to attempt it, I have decided with the boldness that comes from imperfect knowledge to define a liberal arts education per genus et differentia.

Liberal arts education belongs to the class "post secondary education." Among other types of education that belong to this class are vocational/technical training, education at a polytechnic institute, education at a conservatory, professional education, seminary education and probably others I have failed to notice. No one will quarrel with this. The difficult task is to identify the specific difference that distinguishes liberal arts education from the other members of the class. A careful study of the history of Western education and perusal of a number of college catalogues convinces me that there are three interrelated characteristics that distinguish a liberal arts education from all other types of education:

1. A liberal arts education is non-vocational.
2. A liberal arts education is a literary/humanistic education.
3. Liberal arts education is broad.

Liberal arts education involves the study of subjects that do not prepare students for any specific job or career. The old saw has it that "a liberal arts education teaches a person not simply how to make a living but how to live." A liberal arts education is a preparation for life.

This does not mean, of course, that liberal arts education and vocational training are incompatible. They are in fact complementary, and there is no reason why students can't major in business administration or nursing and get a liberal arts education at the same time as long as they study the subjects that are essential to liberal arts education.

When I say that a liberal arts education is essentially a literary/humanistic education, I mean that it involves the study of literature, history, philosophy, English and foreign languages, art, music, speech, religion and other subjects that have "humanistic content and humanistic methods," as NEH puts it. I mean literary in an almost etymological sense, i.e. focusing on written documents; hence the emphasis on mastery of language (both the native language and foreign languages) that has characterized liberal arts education since the time of the sophists, Plato and Aristotle. The literary/humanistic nature of liberal arts education is, of course, inextricably linked to its non-vocational character. It is, of course, obvious that for students who plan to become teachers of humanistic subjects, liberal arts education is both liberal and vocational, but such students are the exceptions. Liberal arts subjects are studied for their own sake while vocational subjects are always means to an end, viz. a career or profession.

A liberal arts education is a broad education because the humanities raise the "big questions," the existence of God, the meaning of life, the nature of human nature, the foundations of morality, and so forth. Breadth, however, has another aspect, viz. diversification, and it is towards this that the social sciences, natural sciences and mathematics make their indispensable contribution. A liberal arts education is thus a broad literary/humanistic education that is not directly vocational.

Several quite obvious conclusions follow once we have this definition of liberal arts education clearly in mind. In the first place, the courses that constitute the specific difference are part of the essence of a liberal arts education and are, therefore, the ones that should be required. At some institutions, however, students are required to take almost no work in the Humanities and can earn a B.A. degree with little or no work in English, foreign languages, philosophy, religion, history, art or music. A liberal arts education without extensive work in the Humanities is a "triangle" without three sides. Secondly, the culmination of a liberal arts education is a B.A. degree, and historically it has differed from a B.S. degree, a B.F.A. degree, B. Mus. degree and other bachelor's degrees. Students who do most of their work in the social sciences or natural sciences and take only one or two Humanities courses should be awarded a B.S. degree and not a B.A. It is unfortunate that we have lost sight of the differences between bachelor's degrees. One wonders, furthermore, if there is any sort of obligation to try to meet society's expectations in this regard.

A third insight that flows from the definition given above is that humanists are specialists in liberal arts education; we do very little vocational training. It follows from this that humanists must bear the lion's share of blame if liberal arts education is poorly understood today. Humanists have failed to articulate a philosophy of education and have failed to explain the claims of liberal arts education to the last generation or two of students. In addition, they failed to defend traditional liberal arts education vigorously enough when it came under attack in the late '60's and early '70's.

But I will go even further: Liberal arts education is Greek through and through. The Greeks invented it, the Greeks passed it on to the Romans whence the Western world inherited it. Liberal arts education is Greek in origin; its assumptions are Greek, its methods Greek, and its goals Greek. Furthermore, for nearly two and one-half millennia, a liberal arts education was an education in the Greco-Roman classics. A corollary of this proposition is that classicists are specialists in liberal arts education par excellence. We are in a unique position to explain to the contemporary world what liberal arts education is.

In conclusion, let me say that I do not think that academics talk enough about what liberal arts education is. I think that the situation is so serious, in fact, that we should hold "teach-ins" to discuss and debate the nature of liberal arts education, a subject which, by the way, is not a trivial one—it pertains to our very raison d'etre.

I shall no doubt be called a trouble maker for raising these issues, and I shall be accused of being divisive. I shall be accused of arguing solely pro domo mea, but that does not matter. I hope, however, that some readers will be provoked by this argument to challenge the substance of what I have said and that this will lead to a fruitful exchange of ideas and insights which would benefit the whole of academia.

PLATO IN THE CLASSROOM: PHILOSOPHY AS HUMANITIES CORE

--Which of these two lines is straighter, A or B?

—Line B, obviously.

—Is it perfectly straight?

—No.

—How do you know?

--It can't be; it's made of chalk, and if you looked close enough, you'd see little bumps.

—Here is line C. Is it straighter than B?

—Yes.

—How do you know?

—It looks straighter.

—What do you mean?

—Well, it's not perfectly straight, but it's, you know, pretty close.

—Line C is pretty close to the idea of straightness you have in your mind?

--I guess so, yes.

—So when you call a line "straight," what you are doing is comparing it to the idea of straightness which you somehow have in your mind, or Ideal Straightness. Have you ever seen an absolutely straight line? Could you?

—No, but . . .

—Why not? Where did you get this idea of straightness if you have never seen it? And if you died, would line C still be straighter?

We introduce our study of Plato's Theory of Ideas with a Socratic dialogue similar to the above. The controlled discussion moves to consider other Platonic Ideas, substituting for Straightness first Equality ("Are these two pieces of paper equal, in the sense of absolutely identical?"), then Justice ("Then, when we say a law is unjust, we must have in our minds an idea of Justice, and the law in question falls short when we make the comparison?"), then Beauty ("So the Parthenon resembles Ideal Beauty more closely than Huron High School does? Try to disregard your affection for your school."). We move from here, an elaboration of a passage in the "Phaedo," to argue the independent existence of Ideas, and then the claim that we learned these Ideas before birth.

Our Humanities program at Huron High School in Ann Arbor, Michigan, is a team-taught interdisciplinary course which examines Western European civilization. We move chronologically, and in many ways our study of Plato is the foundation of our course, much as it is a foundation of Western European thought. Students read the "Crito," the "Phaedo," and sections of The Republic, and we discuss them in history and literature seminars. We use our study of Plato to initiate seven themes in the course:

1. The dualism of body and soul. This dualism persists as the problem of mind, which we encounter later with Locke and others, and it is transmuted into Christian terms, as in St. Augustine's "City of Man" and "City of God."

2. The Theory of Ideas. Platonic idealism reinforces our study of Greek sculpture and architecture, and it resurfaces frequently—in Botticelli and Shelley, and in apollonian approaches to music.

3. The nature of proof and argument. Study of the "proofs" of the soul's immortality in the "Phaedo" leads to a distinction among mathematical, scientific, and philosophical proofs, the latter being more of a persuasive argument than a proof in any strict sense. This concept of proof as argument underlies teaching students to write interpretive essays. The aim here is a flexible and humanistic sense of what knowledge and truth mean.

4. The immortality of the soul. Examine what Plato believed and the grounds for his beliefs in the "Phaedo," and compare that to the beliefs of students and the grounds for their beliefs. Platonic thought had a strong impact on the concept of the soul's immortality.

5. A political system as a product of values and assumptions about human nature. While The Republic is not our first such consideration (students read Hammurabi and Pericles' "Funeral Oration" among others) it is clearly a system comparable with others (Utopia, The Prince, Leviathan).

6. The courage of Socrates, the man. The nature of the hero is a recurring theme, and the example of Socrates is compared with others (Odysseus, Job, Hamlet, Faust, Nora Helmer) throughout the course.

7. Philosophy as a product of historical context. Plato's otherworldly "Phaedo" and his totalitarian Republic can be seen in the light of the uncertainties following the Pelopennesian Wars and the perceived decadence and materialism in Athens.

Thus philosophy, and especially Platonic philosophy, can be valuable as a discipline in and of itself as a path to knowledge, but it can also serve as a path to the broader appreciation of human achievement in history, music, political science, literature, and art history. An interdisciplinary humanities course is a perfect place for philosophy because philosophy provides a home for the humanities.

VITRUVIUS: ALL-PURPOSE ROMAN

One of the most characteristic symbols for contemporary humanities programs is Leonardo's drawing of a nude man, spread-eagled and inscribed within a circle and a square (see p. 44). Occasionally we see this image of "man the measure of all things" labelled as the "Vitruvian Man," but all too rarely are we told anything of Vitruvius, the Augustine Roman architect who prompted this sketch and whose dicta have influenced western architecture up to this day.

Fortunately, Vitruvius' Ten Books on Architecture is available in paper translation (Dover $5), it is eminently readable and endlessly fascinating, and over the past dozen years I have found it to be a humanities text that presents portals to many aspects of classical and modern humanities. Of course, if you require an unmitigated diet of high tragedy and deep moral philosophy, this practical manual of building and technology would appear to be a mundane interruption of True Humanities. Classicists, I am told, disdain the Ten Books because the Latin is clumsy.

On the other hand, there may be no clearer ancient work available that exemplifies the classical aesthetic ideals of balance, symmetry and propriety. These, and other terms, are carefully explained by Vitruvius with specific examples. (One assignment I have made after students have these concepts firmly in mind is to ask students to apply them to a building or place with which they are familiar--I have had some startlingly persuasive arguments for the classicality of an ROTC quonset and a shopping mall--; but the key outcome is that students not only begin to look critically at architecture and urban design, but they acquire classical techniques for doing so.)

Vitruvius also is an exemplary "You are There" document. All we know of Vitruvius is what he tells us, which even includes details of his personal appearance. He describes only one of his own buildings—a basilica which departs from the norm he recommends, but Vitruvius addresses his books to Caesar Augustus because he anticipates major public works projects at this dawn of the Pax Romana, and as a reference cites Augustus' "father" Julius, for whom Vitruvius was a military architect.

Besides these intersections with political history, Vitruvius connects well with classical drama (he describes theatre designs in both Rome and Greece, providing details found no where else of acoustic amplifiers and movable scenery for different types of drama) and, naturally, with temple designs and their religious and philosophical rationales. The "Vitruvian Man" is part of the undercurrent of Pythagoreanism that runs through all the Ten Books, with ideals of perfect form, mystical numbers and universal harmonies.

In brief then, major humanistic themes are incorporated into Vitruvius' work, but in an applied context. My practice is to assign portions that relate to concepts of balance, symmetry and propriety to provide a material, structural base for one of Terence's equally structural comedies like The Brothers or Phormio, and for the aesthetic ideals of Horace's Ars Poetica, and for the epicurean moral balance of Cicero or Lucretius. My ultimate goal, however, is to demonstrate the persistence of classical ideals, and the Vitruvian model is not only a firm (and scholarly legitimate) base for architectural examples, but Vitruvius' easy style smooths the way for reading his heavier imitators, Alberti and Palladio, from whom all Renaissance, Baroque and Neo-Classical theory derive.

If I taught in a technical institute, I would make Vitruvius more central and assign the whole book, with its recipes for concrete, for amplifiers, for city layouts, for tuning catapults, for bathhouse heating systems, for hydraulic organs and odometers. (See A.W. Sleeswyk's article in Scientific American, October 1981.) But even without such a selective student audience, I have found that Vitruvius attracts and informs students who are baffled or repelled by what they otherwise perceive as aesthetic non-problems and alien dead cultures. (Conversely, it should be allowed that other students do not need a material portal to understanding philosophy and arts, but generally I find that the historical immediacy of Vitruvius stimulates the aesthetes as much as it does the unsophisticates.)

Finally, as Vitruvius writes about the education of an architect, I find one statement of particular use for explaining the value of interdisciplinary humanistic liberal education:

> "But perhaps to the inexperienced it will seem a marvel that human nature can comprehend such a great number of studies and keep them in the memory. Still, the observation that all studies have a common bond of union and intercourse with one another, will lead

to the belief that this can easily be realized. For a liberal education forms, as it were, a single body made up of these members."

Alexander Hamilton High School
Milwaukee, Wisconsin

"Here's to Milwaukee, the Cream City of the Lakes." Most of us might link that sobriquet to a sudsy fluid which long proclaimed that it was the agent for the city's fame, or might associate it with the "America's Dairyland" caption which graces Wisconsin's license plates. In reality, Milwaukee, the Cream City, the "Athens of the North," established its nickname during the 19th century, when vast areas of the city consisted mainly of residences and commercial and civic buildings constructed of a light (cream) colored brick produced from the clays peculiar to the area. From the 1840's until the turn of the century, vast quantities of these bricks were made, and were marketed in an area from Dubuque and Minneapolis to cities as far east as Buffalo, New York. Milwaukee County's 250 square miles remained, however, the center of cream city brick, although most structures were demolished over the years, particularly during the post World War II decades. Other buildings suffered misguided attempts at "modernization," or came to languish beneath coats of paint or grime. During the 1970's, though, local preservation and restoration efforts were becoming evident.

In 1978 the authors, colleagues for many years, submitted a proposal to develop a knowledge and appreciation of local historic cream city brick architecture among high school age youth in the area, and to inventory Milwaukee County's surviving cream city brick in the process. The "Cream City Brick Project" was funded by the City of Milwaukee Public Schools, with suburban students eligible to participate under provisions of the Milwaukee School Desegregation Plan. The Milwaukee County Historical Society also agreed to support photographic costs of the project, in return for receiving the results of the project's historical research. Operated as a part of the summer school program, each year's cream city brick project consists of a sixteen day "History of Cream City Brick" workshop meeting for four hours per day, followed by a sixteen day "Depicting Cream City Brick in Art Form" workshop meeting for the same number of hours. The four hour (8 am until Noon) time block makes it possible for students to travel by bus to visit and study buildings, and to do research at local archives. It also permits students to have lengthy, uninterrupted art studio or fieldwork sessions. Students may enroll in either or both portions of the workshop, which grants 1/2 unit high school credit in social studies for part 1, and 1/2 unit high school credit in art for part 2.

Since 1979 a total of approximately one hundred students from sixteen area schools, residing in the City of Milwaukee and four of its suburbs, have participated in the project. They have ranged in age from 13 to 19, and in ability from class valedictorian and skilled art students to students taking the course for makeup credit or without prior high school art education.

Preparation for the annual workshop commences in the fall of each year, when an area of the county is surveyed by the history instructor, with the help of interested winter school students. (Enrichment funds are available from the school system for this activity.) Approximately 100 buildings are located, with their addresses recorded. Black and white photos (color film dyes deteriorate over a period of years) of each building are taken in early spring, when leafless trees permit a clear view. Promotional flyers are printed in spring and distributed to area schools. Letters are sent to owners of buildings and to archival agencies and museums enlisting their cooperation. The history and art instructors confer, selecting enlargements of photos for studio work, and planning sites for art field work.

The sixteen day history workshop operates from mid June until early July. After an introductory planning session, participants spend two days studying architectural styles through field trip visitations to the historic district of the neighboring city of Racine, and to buildings in Milwaukee which were surveyed during prior years. Each participant then selects several buildings from the enlarged map and photo display of the current year's project which is mounted on the classroom bulletin board. The class then travels by bus and on foot for two or three days, personally visiting every building, taking field notes, and often meeting with owners and seeing interiors. Several days are then spent doing research in the archives of the County Historical Society, the County Courthouse, the Local History Room of the Public Library, and the City Hall. Old maps, newspapers, directories, building permits, and real estate records are used, and in some cases oral history interviews are made, to determine the construction date, original owner, and other pertinent data for each building. This information is recorded on 5 x 8 work cards. Two days are then devoted to typing up results on 8-1/2 x 11 "Cream City Brick Building Data" sheets, and mounting photos thereon. (See illustrations on following page.)

This data is made available to students during the second (art) portion of the workshop prior to being presented to the Milwaukee County Historical Society. With the required work completed, the final day or two of the workshop has a more relaxed atmosphere, with visits to sites maintained by local historical societies.

The art portion of the Cream City Brick Work Shop starts in early July and runs until approximately the beginning of August. The specific subject matter (old brick buildings), and the unique length of the class (four hours), provide an excellent opportunity for the students to experience and complete a large variety of art work. Most students finish the sixteen day art portion with at least a dozen matted or framed drawings and paintings; it is not unusual for some to have twenty or more suitable for display. (See illustrations next page.)

The art workshop is divided into three segments: drawing, transparent water color, and acrylics. This includes on-site and studio work in all three areas as well as critiquing and matting following each segment. The summer workshop culminates with a student art show along with pertinent historical information and photographs which the students put up for display at the Milwaukee Public Schools Central Office.

Although students acquire skills in architectural identification, map reading, archival retrieval, historical methodology, use of microfilmed materials, written communication, drawing and painting, and other areas, a greater effect of their participation in the project has been their heightened perception and appreciation of our local architectural and historical tradition. The Cream City Brick Project might be adapted for use in any community, at any age level. An engaging task in humanities education is evident: People need to be educated to appreciate what is beautiful in our urban architectural environment; we all need to open our eyes to perceive our urban landmarks; cutting ties to our history through mindless demolition is like cutting anchor chains to our existence; preservation and restoration can help us to understand the processes of our development, and to provide keys to the questions, "Who are we? Where do we come from? Where are we going?

4. The John B. Dousman House, 1855
3700 South 43rd Street, Milwaukee
Artist: Fred Kosloske

This property was owned by John B. Dousman (1806-1868), the brother of Hercules Dousman, whose mansion Villa Louis (Prairie du Chien, 1872) is a state historical site, and the son of Michael Dousman, pioneer fur trader. John was a physician with a practice in Milwaukee's seventh ward. He served as a delegate to Wisconsin's State Constitutional Convention in 1846, and was president of the Territorial and State Medical Society. His first wife and son died in 1853. The City Tax Assessor's Office dates the house at 1855. John B. Dousman remarried the following year, but continued to show a legal residence in Milwaukee. Probably the house was used as a country summer and weekend farm. The 1860 census indicates that Dousman, his wife, four children, and five servants were all listed as household members. The front of the house features arched second floor windows and a first floor bay, which create high, narrow lines. The house has not experienced any major structural modifications. After the death of Dousman, the property was purchased by John Adler. Although it was twenty years old when the Milwaukee County Historical Atlas was published in 1876, the house, still a showpiece, was featured in the Atlas. In recent times the brick was painted green.

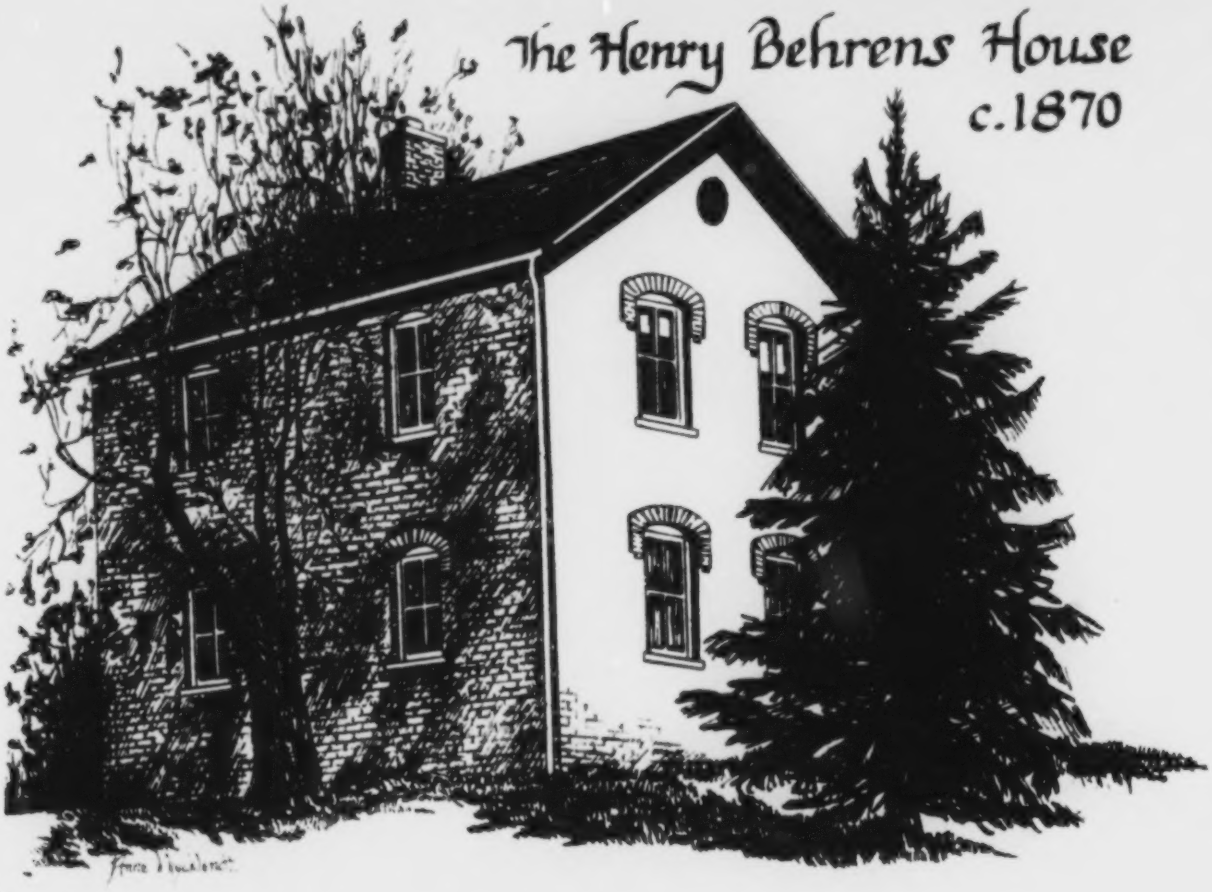
5. The United Brethren Church, 1858
Rear of 3450 S. 52nd Street, Greenfield
Artist: Anne Wycklendt

The Evangelical United Brethren originated with German immigrants in Pennsylvania. The first local church, a log cabin built in 1844, was replaced by this brick structure in 1858. When the present church was constructed in 1929, the Cream City brick structure was moved to the north of the cemetery. It continues to be used as a museum by the church. The pews are those of the original 1844 building. Many of the windowpanes still hold the original glass.

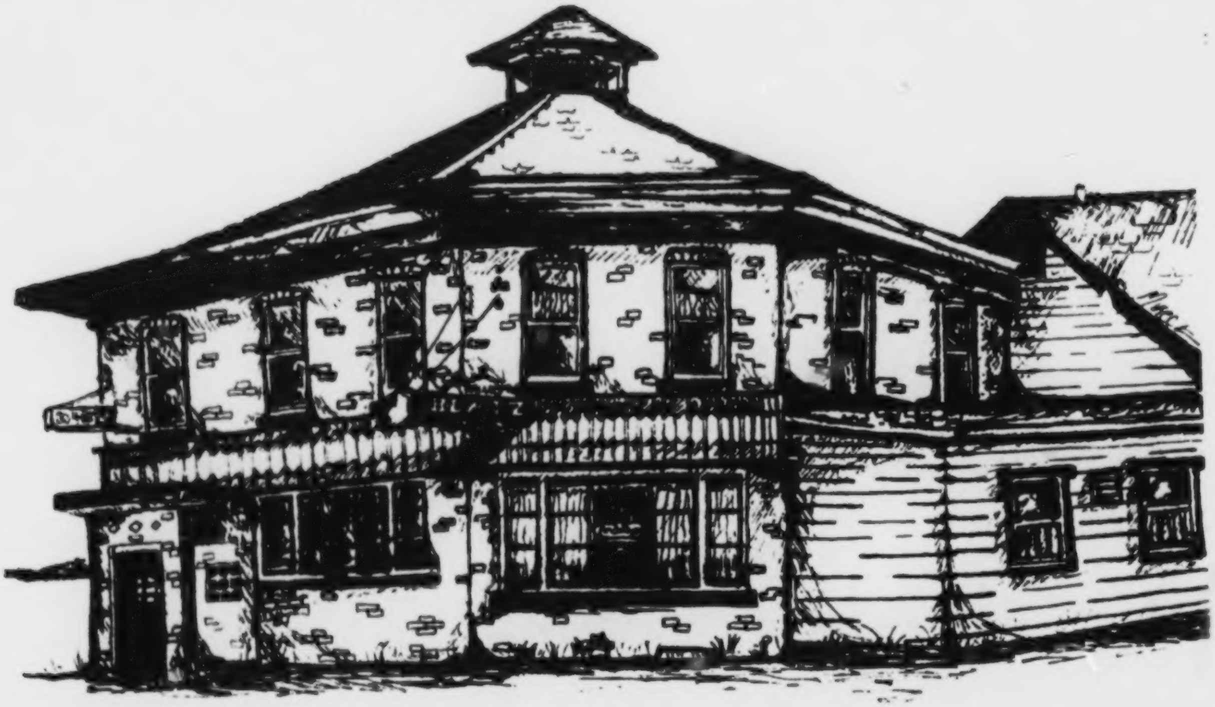
6. The Heinrich Stellman House, c. 1859
5339 W. Cold Spring Road, Greenfield
Artist: Linda Zelewski

Heinrich Stellman (1798-1876) was a farmer who came from Germany in 1844. His original house faced 60th Street. Although this brick six-room house does not appear on the 1858 plat map, Township of Greenfield tax records show a 250% jump in the value of the property from 1857-1859, suggesting that the house was constructed shortly after the plat map was made. The rear wing of the T-shaped structure is one-story wood with a basement. The first floor of the brick front has a triple layer of bricks, with two layers on the second floor. The front section, which has a brick wall between it and the rear section, has a five-foot crawl space, rather than a full basement, beneath it. The hipped roof is topped by lightning rods, like the nearby Boogk house. The window lintels are similar to those on the United Brethren Church and the Layton House on Forest Home Avenue. They emphasize the austere, rectangular lines of the house. Stellman family members lived in the house until well into this century.

The Henry Behrens House
c.1870



The Mathias Jaeger House
—1860



ACHIEVING HISTORICAL SYMMETRY: NEW MATERIALS FOR INTEGRATION INTO ANY HUMANITIES COURSE

John Dewey suggested that historical study created windows on the past. The image is of a person looking out of the windows of a mansion, the views of the garden differing depending on the window's position. Recent academic research in the area of women's history is providing new windows on the past. Women's history has become the "cutting edge" of contemporary historical scholarship. Educators in the historical and humanities disciplines who ignore the new women's history scholarship may be presenting distorted or limited views of the past. Yet educators cannot be expected to sift through the vast amounts of historical scholarship and then create the needed curriculum units that can help to fill the void of women's history in most secondary social studies courses.

With this curriculum need in mind, Marjorie Wall Bingham and Susan Hill Gross have been funded by federal grants and private foundations to write curriculum units on the history and culture of women in a variety of world areas to be used with secondary students. These units are meant to be blended into regular global studies, western civilization and world history courses - not to make up a separate course. Each unit includes a student book or books, a sound filmstrip and teachers guide. The books and filmstrips published in the series are:

Women in India
Women in the USSR
Women in Traditional China
Women in Modern China
Women in the Islamic Middle East
Women in Israel
Women in Africa of the Sub-Sahara
  Vol. I - From Ancient Times to the Twentieth Century
  Vol. II- The Twentieth Century
Women in Ancient Greece and Rome
Women in Medieval/Renaissance Europe

Women in Latin America will be published next year in two volumes. Women in Japan is currently being researched with the help of grants from the National Endowment for the Humanities, Northwest Area Foundation and The Japan Foundation.

All of the units can be purchased through Glenhurst Publications, Inc. (write for a price-list)

BACK TO BASICS IN HISTORY: MEMORIZING DATES

The perennial scapegoat for unimaginative teaching of history is the idea that "history is just memorizing a lot of names and dates." Judging from my experience, either none of this "took," or more likely, it was never done. Many of my students seem not to carry in their minds any chronological hooks on which to hang ideas, documents or events.

What I would like to do is to assemble a list of memorable dates possessing mnemonic characteristics. If students could summon up a sensory reminder for two or three dates per century A.D. and one or two per century B.C. they would have useful equipment for establishing time contexts for new learning experiences.

A few mnemonics are built in: the American poet Christopher Morley once wrote a poem about neo-classical poetry demonstrating that Alexander Pope not only wrote couplets, but he was born and died in couplets, 1688-1744.

Other dates are memorable by coincidence. For example, Shakespeare, Marlowe and Galileo were born in the year that Michelangelo died, 1564. This is, of course, the merest of coincidences, and hardly important—three babies and a dying man represent nothing to either arts or history, so it may be desirable to invest the dates with meaning, or impose meanings upon them. A death mask of Michelangelo exists, which could become the mnemonic for the date. If you have a friend who is a stamp collector, you could look for 1964 commemorative stamps of the babies' 400th birthdays, which might make it stick. For the Pope couplet-dates, search through his Essay on Man or Essay on Criticism for a memorable couplet that represents Age of Reason thought—in Bartlett's "Quotations," Pope is right up there with Plutarch and Poor Richard as a parent of memorable lines.

But these dates remain pretty much trivial in their effects on events or history. That is, they are a far cry from 1492 and 1776, dates that are pivotal or epitome dates. In a sense, 1564 is like the year One, when no one knew it was the year One, and the only event of importance by hindsight is that Jesus was four or five years old—or, that the Nativity was half-a-dozen years in the offing. By effective teaching, even such a date can be invested with cultural meaning, as Moses I. Finley does in his charming essay on "The Year One" in Aspects of Antiquity (Viking, 1968).

To start the list, I'd like to suggest 1863 as an epitome date. The mnemonic is "Four score and seven years": Lincoln's Gettysburg Address was delivered in 1863; 1863 minus four score and seven = 1776; so if you forget 1863 but remember the speech, you can work it out! The year 1863 was also pivotal in the Civil War, for both Gettysburg and the surrender of Vicksburg occurred on July 4, exactly four score and seven years after the Independence Day (whose mnemonic is the Liberty Bell). We need not limit the epitome meaning to military or political history: on January 1, 1863 President Lincoln issued the Emancipation Proclamation, a non-event (not a single slave was freed in reality) of tremendous social significance. Once the epitome date is fixed in the students' minds, one can play "near miss" games. For example, 1863 was the year after the Homestead Act and the Morrill Land Grant Universities Act, both of which profoundly affected American social history. Ideally, for the humanities and the arts one would like to have a major art work associated with the date, (but the best I can find is the Gettysburg Address, which is not bad at all), as well as finding cross-cultural events and artifacts to avoid ethnocentrism. But alas! 1863 seems to be American only.

Unless you want to plant the seeds of the Viet Nam War: Cambodia became a French protectorate in 1863; In the Viet Nam Peace: the First Draft Riots in history took place in New York City in 1863. (F.S.)

EDITOR'S NOTE: Do you have a candidate for mnemonic history? Send in a paragraph or two pages. See Editorial Policies page for format and style.

MEDIA WATCH: VOICES AND VISIONS

A new series on American poets and their works should start on public television in the fall of 1985. Now is an excellent time to begin putting together literature courses to coordinate with this offering. The New York Center for Visual History directed by Lawrence Pitkethly is completing the first of thirteen programs, aided by a grant from NEH. Helen Vendler, professor of English at Harvard, is the senior consultant for the series. Ten programs will feature the works of single individuals: Whitman, Dickinson, Pound, Crane, Frost, Stevens, Eliot, Williams, Moore, Robert Hayden and black poetry. Three additional programs will collect poets Robert Lowell, Jarrell, Berryman, Bishop, Plath, Charles Olson and the Black Mountain poets. The programs specifically decline to illustrate read poetry with visual backgrounds. The actual labor of making poems is a large portion of the content, showing from the works and words of the poets how the works gradually came to be. Visual elements will be drawn from archival materials, still photos, and scenes of places where the poets lived and worked. Interviews of the poets' relatives and associates are part of the format. Estimating that the percentage of people in this country who read poetry is about one percent, the creators of the series have undertaken a long and difficult project in hopes of bettering those odds. (S. Scholl)

PRESS WATCH: DEATH AND THE HUMANITIES (Bucknell University Press, Spring, 1984)

If you have wondered what you might do to develop a Humanities course, or even one unit, on death and dying, a new book by Sharon Scholl, Professor of Humanities at Jacksonville University contains all the data you would ever need. Based on a long running and very successful course, the book has an overview of the language used by the arts in relation to death concerns, and chapters on the role of the survivor, war, and immortality. Materials included are novels, short stories, poetry, music, philosophical works, and visual arts. The book would be suitable for courses for advanced undergraduates or for graduate students, but its greatest use is as a large repertoire of useful items for teachers who are searching for special topics and materials. Far more than simply a listing of works available, the book analyzes works presented both individually and in relationship with other major works on the same theme. Written in non-scholarly English, the book is accessible to a wide audience of readers; music in particular is presented as an expression of human insight rather than as an exercise in formal logic. There are numerous full page black and white illustrations included in its typographically pleasing format. (S. Scholl)

HUMANITIES EDUCATION

CALL FOR NOMINATIONS AND APPLICATIONS FOR SERVICE ON OR WITH THE EXECUTIVE COMMITTEE.

The National Association for Humanities Education is governed by a National Board of Directors, composed of the three elected officers, three at-large members, the Executive Secretary *ex officio* and regional presidents *ex officio*. The working administrative body is the National Executive Committee, composed of the three elected officers and two other members of the National Board of Directors.

The elected officers are President-Elect (chosen by mail ballot in even-numbered years), the President and the Past-President. Thus, acceptance of nomination to the office of President-Elect can represent a six-year commitment to NAHE service.

At the present time there are no regional chapters. Standards and procedures for the formation of such chapters will be explained in a future issue of *HumaNews*.

DUTIES AND OBLIGATIONS

The Executive Committee operates by correspondence and by telephone, although members attempt to meet face-to-face as opportunities arise. Therefore, a candidate must be prepared to maintain active communication with members of the Executive Committee, especially responding to requests for information, opinions and votes. A three-day turn-around is expected on correspondence.

As a member of the Board of Executive Committee, you will be expected to assist with one or more association activities:

Management: Taking minutes, making meeting arrangements, assisting with budget, accounting, agendas, reports, communications, etc.

Liason: Membership promotion, contacts with other associations, promoting and assisting state and regional chapters.

Conferences: Planning, publicity, arrangements, programming, chairing of biennial convention, joint conferences, one-day workshops, etc.

Fund-raising, special projects: Grant-writing, individual fund-raising.

Publications: Sub-editing special sections, features in HUMANITIES EDUCATION, gathering and editing material for *HumaNews*, scouting conferences and seminars for potential articles and writers, soliciting advertising.

Because the Executive Committee works as a team, certain personal traits are required as well as appropriate training and experience: flexibility, openness, integrity; habitual volunteering to get work done; experience in humanities education and professional activities; a proven record of following through on obligations.

APPLICATION PROCEDURE

The current Executive Committee will screen applicants and nominees for the office of President-Elect. After the election, the new officers will appoint at-large members for the biennium.

Please note: many tasks will be performed by ad hoc committees appointed by the Executive Committee, and so we need a good roster of willing workers, both with and without association experience! There is no form for nomination or application. A letter will suffice, indicating areas of experience and expertise and whether this is a nomination for President-Elect or to be included on the roster for appointment as at-large/or committee member. Send to NAHE c/o Department of Philosophy & Humanities, University of Minnesota-Duluth, Duluth, MN 55812.

NEWS ABOUT MEMBERS

Without a doubt the best-known and most comprehensive of all Humanities anthologies is THE SEARCH FOR PERSONAL FREEDOM (2 volumes, William C. Brown, Dubuque, IA 52001). The chief editor for the brand new Seventh Edition is ROBERT C. LAMM. Bob tells us that this is even better integrated than before with dozens of color plates and over 170 complete literary selections. Another new interdisciplinary humanities anthology by SHARON SCHOLL is DEATH AND THE HUMANITIES described in the CONNECTIONS section of this issue.

FRANCIS M. NEVINS, JR., who wrote this issue's lead article, has had four books published in 1983, one on probate law, another on THE SOUND OF DETECTION: ELLERY QUEEN'S ADVENTURES IN RADIO and he has edited two mystery story collections, EXEUNT MURDERS and BUFFET FOR UNWELCOME GUESTS. "Mike" is a detective novelist in his own right and NAHE members will enjoy his law professor detective's adventures.

NAHE president-elect FRED E.H. SCHROEDER has been elected president of the American Culture Association. More kudos for NAHE's global educator president VASANT V. MERCHANT: she has been awarded a World Culture Prize "Personality of the Year 1984" by Accademia Italia.

The February 1984 issue of ARIZONA HUMANITIES ASSOCIATION, edited by DR. VASANT V. MERCHANT is devoted to "Computers, Humanities and Human Values." Topics include "Drama & Computers," "Hopi Dictionary & Computers," "An Application of Computers to the Study of French," and half-a-dozen other articles. The Arizona Humanities Association is probably the most successful state group to bring together humanities educators with persons from other fields. HE is planning for an article that will help others to replicate the Arizona success-story.

Some ideas from members about how to make HE more useful, and NAHE more attractive are well worth thinking about. DR. MICHAEL CIOFFI of New York expressed interest in some sort of NAHE paraphernalia with the familiar Alpha-Omega/Yin-Yan emblem. Executive Secretary BRYAN LINDSAY explored this a year or so ago and had some very handsome samples made for a key fob and a paperweight. Let us know if you want to be on a mailing list for any of these. The price will probably be under $15 each if there is enough interest. PATRICK WALSH of Arizona is a professional printer and typesetter who paid us some fine compliments on our innovative format. He suggests our developing customized binders for individual copies of HE. Once again, if there is sufficient interest this can be arranged. We have no estimates but a binder with the NAHE emblem and a capacity for two years would cost in the neighborhood of $15. Patrick also suggests the possibility of issuing the journal in diskette as well as in paper copy. Let us know if any of these things appeal to you.

In casual discussions we have learned that many NAHE members were in the JOHN HAY FELLOWS program 1960-1965. The former director of the program is honorary Life Member CHARLES KELLER. HUMANITIES EDUCATION would like to invite short articles on the topic of "John Hay Fellows Revisited." If you are a former Hay Fellow, how about writing to us about how you have developed as a teacher of Humanities during the past two decades?

UPCOMING

The **American Culture Association** national convention will be held in Louisville April 3-7, 1985. One of the sectional areas is "Pedagogy and American culture." Abstracts of proposals for papers and panels on interdisciplinary teaching as well as historical studies are welcome. Send your 200-word abstract by October 1, 1984 to: Dr. Marie Campbell, English Department, Mount St. Mary's College, Emmitsburg MD 21727. For information on the convention which meets with the Popular Culture Association with over one thousand participants covering a wide spectrum of cultural, historical and social topics, request information from ACA/PCA, Popular Culture Building, Bowling Green State University, Bowling Green OH 43403.

The **Association for Integrative Studies** will be meeting concurrently with the Association for General and Liberal Studies in San Francisco October 25-27. For registration and program information write to Dr. Michael Davis, Office of the Academic Vice-President, University of the Pacific, Stockton CA 95211. There will be many sessions relating to integrated humanities.

Interface '84, the Eighth Annual Humanities And Technology Conference will also meet October 25-26 in Marietta Georgia. For information, write to Becky Kelly, Department of English and History, Southern Technical Institute, Marietta GA 30060. NAHE has met jointly with the Interface conference in the past and we highly recommend this to members in the southeastern area.

In the Southwest, the **Arizona Humanities Association** will be meeting jointly with the Arizona Arts Alliance in Tucson November 29-December 1. The conference theme is "Art as A Lifelong Experience." Paper proposals for the conferences and 700-word articles may be submitted up to August 15 to our indefatigable NAHE President, who is also president of AHA and Editor of the Arizona Humanities Association magazine. Inquiries and correspondence should go to Dr. Vasant Merchant, AHA, Box 6031, NAU, Flagstaff AZ 86011.

Another October conference on a fascinating topic will be held at the State University of New York at Binghamton. This is on **Medievalism in American Culture**, with such topics as "The Medieval Heritage in American Religious Architecture," and "King Arthur and Camelot, USA in the Twentieth Century." Proposals for papers are acceptable through May 15. the Conference is October 19-20. For Information, write to Professors Bernard Rosenthal and Paul E. Szarmach, 1984 Conference Coordinators, Center for Medieval and Early Renaissance Studies, State University of New York at Binghamton, Binghamton, New York 13901.

FUTURE ISSUES TO HAVE THREE NEW SERIES

Starting with the Fall 1984 issue, HE will have an "answer-man" column on educational copyright questions. Professor of Law Francis M. Nevins will respond to one or two problems per issue. If you have a copyright question about using films, photocopying, fair use, send it to us to forward to our Professor Nevin.

In the same issue, we'll start a new series on Recommended Translations in the Humanities. Professor Jeremiah Reedy of Macalester College will be a contributing editor on Greek and Latin works, Professor Burton Raffel of the University of Denver will comment on modern language texts. Is there a text you want them to discuss? Just let us know.

In the works is a regular column from the National Humanities Faculty. Several members of NAHE are NHF consultants, while others have had NHF-sponsored projects in their schools or have been participants in NHF seminars, so we are looking forward to reports of interest to teachers at elementary, secondary and collegiate levels.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Senior Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to redraw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one or two pages (300-700 words) for practical tips, sample assignments, commentaries, etc.; and articles of four to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

*THEORY "Piaget and Theories of Integrated Study"

*ADMINISTRATION "Crediting Departments for Team Teaching"

*HISTORY "Nineteenth-Century Multi-Media at Chautauqua"

*RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

*"What you should know about teaching novels in a philosophy course"

*"Pre-teaching history students for an art museum field trip"

*"How to help non-musicians to follow a score"

*"A designer speaks of humanities bulletin boards"

*"Getting adults to role-play in public humanities programs"

*"Understanding Oedipus: An Actor's View"

What we don't want:

*Creative writing by teachers or students (it doesn't relate to our purpose)

*Syllabus outlines (curricula should be explained, not listed)

*"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

*"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

*"Humanistic counseling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

c/o PHILOSOPHY & HUMANITIES, UMD, DULUTH, MN 55812

HUMANITIES EDUCATION

Dedicated to the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions.

IN THIS ISSUE

...of HUMANITIES EDUCATION the lead article is a report of a survey of interdisciplinary humanities departments that presents issues vital to the continuation of our programs.

CONNECTIONS once more has an array of practical ideas. The first article, written by a professor of mathematics who has received several awards for teaching, describes a wide-ranging humanities course on The Beatles that has engaged large numbers of students from freshmen to senior citizens. Second is a guide to resources for a course on Business and the Humanities, followed by a visual-aid model for representing regional-historical cultures, and a description of one of the most successful small-grant programs in recent years for improving humanities courses.

And in this issue we begin two regular features, "Best Translations" and "Copyright Issues in the Humanities." Burton Raffel, who prepared a volume on Translations in Humanities for the National Humanities Faculty, discusses Dante and a German gallows poet. Novelist-critic-lawyer Francis Nevins gives an opinion on using videocassettes of feature films in the classroom.

Articles summarized in ABSTRACTS come from such disparate journals as Liberal Education, Harvard Business Review and Studies in Art Education. Finally, HumaNews provides information about some upcoming conferences of interest to humanists.

HUMANITIES EDUCATION is published by the National Association for Humanities Education

with editorial offices at the Department of Philosophy & Humanities

University of Minnesota, Duluth, Duluth, MN 55812

The University of Minnesota is an Equal Opportunity Educator and Employer.

VOLUME ONE: NUMBER THREE: SEPTEMBER, 1984

STAFF

EDITOR: Fred E.H. Schroeder, Professor of Humanities, University of Minnesota-Duluth
ASSOCIATE EDITORS: Sharon Scholl, Professor of Humanities, Jacksonville University; Susan Coultrap-McQuin, Assistant Professor of Humanities and Women's Studies and Director of Women's Studies, University of Minnesota-Duluth
ASSISTANT EDITOR: Avis Hedin, Senior Word Processor Operator, College of Letters and Science, University of Minnesota-Duluth
CONTRIBUTING EDITORS: Francis M. Nevins, Professor of Law, St. Louis University School of Law; Burton Raffel, Professor of English, University of Denver

Published three times annually by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Assistance for the production of HUMANITIES EDUCATION has been provided by the College of Letters and Science, UMD, George Rapp, Jr., Dean.

FROM THE EDITOR

"Thrift, Horatio, thrift," said Prince Hamlet. But thrift is not the only reason for our looseleaf format. Our many new member subscribers will find that it is handy to have a magazine from which you can select the parts you want to keep and have them ready for a ring-binder. As our statement of purpose on the cover page indicates, we aspire to an extremely wide and varied audience of educators. There is no way to put together a magazine with everything for everyone; what we aim for is something for everyone.

So make your selection, put them in your binder, and make use of the Routing Slip to send other parts to friends who will be interested. (The Routing Slip has an application form, too.)

If you don't find enough for you in HUMANITIES EDUCATION, we may need your contributions. Our editorial policies are explained on a separate page.

Deadlines for the next two issues have been extended. For the Winter Issue, Halloween; for the Spring Issue, Washington's Birthday; for the Fall Issue, Independence Day.

PAST, PRESENT & FUTURE OF INTERDISCIPLINARY HUMANITIES

A Survey of Collegiate Humanities Programs Yields an Agenda of Questions That Must be Answered

INTRODUCTION

Over a period of several years of developing and teaching interdisciplinary courses, we have been clarifying our approach to interdisciplinary studies. During this time, we have asked ourselves many questions about the approaches, philosophies, objectives, and various pedagogical aspects of the teaching of interdisciplinary humanities at other colleges and universities. In an attempt to answer some of our questions, we applied to the Research Committee of the University for a small grant to conduct a survey. We received $100 which took care of mailing expenses to 100 universities and colleges selected from Interdisciplinary Studies in the Humanities: A Directory by Elizabeth Bayerl, published by Scarecrow Press in 1977. Fifty-six institutions responded to the survey.

We do not claim that our survey gives a complete picture of the status of interdisciplinary humanities, but the information and data we gathered stimulate some important questions and raise some interesting issues. These questions need to be considered seriously if we are to be responsible in our professional duties as faculty committed to the teaching of interdisciplinary humanities.

Survey Results, Questions and Issues

1. When was interdisciplinary humanities added to your university curricula?

According to our survey, most of the schools offering interdisciplinary humanities added it to their university curricula after 1960. More specifically, 20% of the 52 responding schools added it before 1960, whereas 75% added it after 1960. When asking for the scholarly and social influences on the development of interdisciplinary humanities curricula, we discovered that there is more agreement on social influences than on scholarly influences. In regard to social influences, 57% of the responding schools indicated the crisis in ethical values as an influence. One-third or more institutions indicated the influence of provincialism, pluralism, the nuclear threats and the ecological crisis.

These responses raised two important questions in our minds: (a) Since there seems to be consensus on the effect of social influences on the development of interdisciplinary courses, why was interdisciplinary studies the academic response to the societal crises of the 60's and 70's? and (b) Does interdisciplinary humanities meet a need the disciplines cannot meet?

2. How have changes in interdisciplinary humanities been generated?

Our survey shows that changes in curricula affecting interdisciplinary humanities have been generated, in descending order of importance, by the work of committees, by the inspiration of an individual faculty member, and by the influence of new educational philosophies. Although 22% of the responding schools indicated the influence of a new educational philosophy on changes affecting interdisciplinary humanities, only a few of them specified the philosophy that influenced the development of their program. Two examples of influential philosophies were given: classical essentialism and pragmatism. When studying this data, we became aware of the fact that there is an absence of any consensus on an educational philosophy that might provide a foundation for interdisciplinary humanities. How should we interpret this lack of consensus or attention to an educational philosophy? Some may be asking, "Is it necessary to have an educational philosophy (or philosophies) to give direction to the development of interdisciplinary humanities in the future?" As already indicated above, there is an agreement of societal concerns that have influenced the development of interdisciplinary humanities. Lack of clarity about philosophical reasons for developing interdisciplinary humanities even among the 22% of the responding schools which claim to have been influenced by a new educational philosophy causes us to ask another question, "Can interdisciplinary humanities receive scholarly and academic respect if it does not have a valid philosophical justification?"

3. What is the status of interdisciplinary humanities?

One-third of the responding schools have interdisciplinary humanities programs with departmental status. Not all of these departments have an independent staff. Some of these departments have a faculty with dual appointments. Significant for understanding the present status of interdisciplinary humanities is the following statistic: 72% of the responding schools staff interdisciplinary humanities courses with faculty "borrowed" from traditional departments. This fact raises a most serious question regarding the future status of interdisciplinary humanities. How effectively can a program be developed without a totally committed independent staff? Without an independent staff, a department loses autonomy in developing its program. It has to depend on who is available from traditional departments and on what subjects or themes the "borrowed" faculty can teach in interdisciplinary humanities courses. Since the primary responsibility of "borrowed faculty" is their own disciplines the interdisciplinary program could easily become their secondary concern.

4. What are the major roles of interdisciplinary humanities in university and college curricula?

Slightly more than one-third, or 19, of the responding schools offer degree programs in interdisciplinary humanities. Six of these schools, however, have degree programs without departmental status. These are administered in various ways: by the dean's office, by various traditional departments, by committees, or by a director, for example. Eight schools plan to develop degree programs. This means that one-half of the responding schools (27 of 54 schools) expect to have degree programs in the future.

Interdisciplinary humanities courses play a larger role in general (or liberal) education than in degree programs. In 63% of the responding schools, they are a general education **option**; they are general education courses required for graduation in 44% of the responding schools. The results of our survey suggest that general education will continue to play an important role for interdisciplinary humanities even though some schools plan to develop degree programs in the future.

The administration of interdisciplinary humanities programs raises questions about possible problems related to the recruitment and retention of qualified faculty for programs without departmental status. It also raises questions about the scholarly or academic discipline of interdisciplinary humanities programs that are left to faculty whose major responsibilities, as already indicated above, are in one of the traditional departments. It raises questions, too, about the validity of the ideas and methods used in teaching interdisciplinary humanities where there is no designated body, such as a department, whose members might question and search together for the greatest scholarly integrity for the interdisciplinary approach. Moreover, since interdisciplinary humanities plays a larger role in general education than in degree programs, there is a need to clarify the goals and objectives for interdisciplinary humanities as they apply uniquely both to degree programs and to general education.

5. How are interdisciplinary humanities courses taught?

There are three major ways that interdisciplinary humanities courses are currently being taught: (a) by an individual faculty member with responsibility for the entire course, (b) by the use of guest lecturers in addition to the responsible faculty member, and (c) by combining team-teaching with instruction by the responsible faculty member. Our survey shows that an individual faculty member teaches the entire course in 39% of the responding schools; in 31% instruction by the responsible faculty member is combined with either guest lecturers or team-teaching. Only 28% of the responding schools use the team-teaching approach exclusively. The pros and cons of each method need to be debated. The use of the individual faculty member is more practical, and it is more traditional since it is the method used by the disciplines. Moreover, the use of an individual faculty member to teach the entire course may provide for more integration of the course materials. The issue at stake, however, is the need to debate the value of the various methods.

6. What is the average class size of the interdisciplinary humanities courses?

Even though interdisciplinary humanities courses play a large role in general education, the average size of an interdisciplinary class is much smaller than we have come to expect the size of a general education class to be. The average size of an interdisciplinary humanities class ranges from less than 25 to more than 75 students with 68% of the classes averaging 35 to less than 25 students. Of these classes, 36% average between 25 and 35 students, while 32% average less than 25 students.

One might think that class size would dictate the kind of evaluation practices used. Our survey does not reveal a correlation between class size and evaluation methods. All but one responding school requires essays on tests. The average size of the interdisciplinary humanities classes in this school is 60-75 students. On the other hand, the three schools with interdisciplinary humanities classes averaging more than 75 students all require essays on tests. As an evaluation practice, exclusive use of objective short-answer tests and objective machine-graded tests is rejected by almost all schools. The preferred method is either a short-answer test combined with an essay or an essay test.

7. What are the goals that best characterize interdisciplinary humanities curricula?

In priority order, the following goals best characterize interdisciplinary curricula: (a) to help students acquire knowledge of great works of literature, art, music, philosophy, and religion, (b) to introduce students to the great ideas of Western civilization, (c) to help students develop a philosophy of life or world view, and (d) to help students realize their individual human potential. The main goal in 35% of the responding schools is to acquire knowledge of great works; in 28% it is to introduce students to great ideas; in 15% it is to help students develop a philosophy of life or world view; in 5% it is to help students realize their individual human potential. Other goals are to see relationships between disciplines and to think and communicate clearly.

As one would expect, the criteria for selecting subject matter for interdisciplinary courses is related to these goals. The major criterion for selection is great works of literature, art, and music which "all educated persons should know." The second criterion is great works of literature, art, and music with humanistic themes. A low third criterion is the historical development of literature, art, and music. More specifically, 35% of the responding schools gave great works of literature, art, and music which all educated persons should know as their major criterion; 31% gave great works with humanistic themes as their major criterion; 5% gave the historical development of literature, art, and music as a major criterion. In regard to this information, the following questions were raised in our minds: (a) What are the most valid goals for interdisciplinary humanities in our times? and (b) Should the goals for interdisciplinary humanities used for general education be different from the goals of interdisciplinary humanities degree programs?

8. What approaches are used for teaching interdisciplinary humanities courses?

The most popular approach for teaching interdisciplinary humanities, as attested to by 67% of the responding schools, is a cultural history approach. Half of the responding schools also use a thematic approach, while 41% of the responding schools take an aesthetic approach. A wide variety of themes were given as examples for the thematic approach: Religion in America, Women Writers, Christ Figures, Church and Culture, Euthanasia, Irish Culture, the City in Literature, The Rise of the Bourgeoisie, War and Sacrifice, Mind and Brain, Man's View of Himself, his Gods, Society, and the Physical World. The only commonality among themes seems to be an emphasis on historical themes. The examples of themes reflect a wide-ranging variety and a great deal of individuality in the teaching of interdisciplinary humanities. Variety and individuality have their value, but wouldn't we feel more comfortable as professionals if we had some way to validate interdisciplinary themes for their academic integrity? We believe that only through this kind of scholarly interchange can we provide a strong scholarly basis for interdisciplinary humanities in the future.

9. How recently has the interdisciplinary humanities curriculum been revised?

Our survey shows that 34 out of 50 institutions have revised their interdisciplinary humanities curricula in the last five years as a result of new visions generated by teaching faculty. It is interesting to note, however, that survey respondents attribute the success of their most successful interdisciplinary humanities courses to quality of teaching techniques rather than to the quality of the ideas or the subject-matter of the courses. Naturally, the ideal situation would be to have quality in all areas--subject-matter, ideas, and teaching techniques. Interdisciplinary humanities cannot survive, however, without quality in both the subject-matter and the ideas informing the courses. Innovative new ideas should be encouraged in all subject areas. The question, however, is how to ascertain whether or not new ideas or themes have scholarly and academic value. We do not doubt that there is value in the timely unique themes and ideas that develop out of the interests and concerns of individual instructors. The question is whether or not all of these are qualified for treatment as academic themes and ideas. Is it not the responsibility of leading interdisciplinary thinkers and concerned teachers of interdisciplinary humanities to help provide a convincing future direction for interdisciplinary humanities through scholarly discussion and debate on significant ideas, themes, and teaching techniques? The co-authors of this study firmly believe in the need both to participate in professional organizations and to publish in professional journals that emphasize interdisciplinary studies so that our ideas and teaching techniques can be debated and validated.

Conclusion

Answers both to above-mentioned questions and to other questions require more than statistical evidence. Deriving answers from statistics would be deriving "should" from "is." "Should" (if there is a "should") needs to be defined also in terms of epistemology and educational philosophy. Can interdisciplinary humanities be established without justification provided by a professionally validated philosophy?

We do not want to raise, here, the same questions that we have raised in the above sections. There are, however, two more concerns which we want to emphasize. First, our careful reading of the descriptions of the goals, course titles, and textbooks, as well as the popularity of the cultural history approach, have led us to conclude that there is a greater emphasis in teaching interdisciplinary humanities on learning the subject-matter of the various disciplines than on striving toward insight into the human experiences that inform the humanities. That is, there is little suggestion that the goals of interdisciplinary humanities differ in kind from those of the traditional disciplines. We might ask the following questions: (a) Can interdisciplinary study achieve goals impossible to achieve by a single discipline? and (b) What are these goals?

Second, among the few institutions that indicated the influence of philosophical educational theories on the development of interdisciplinary curricula, no consensus on one or more influential thinkers emerged. This points to a need for identifying major interdisciplinary thinkers and for inquiring into their motivation and methodology for interdisciplinary thought. We believe there is a need to find an epistemological rationale for interdisciplinary humanities in the writings of outstanding interdisciplinary thinkers. Scholarly thinkers give direction for the discovery of knowledge in the traditional disciplines. At the present time, however, interdisciplinary humanities seems to start with ideas, issues, and themes rather than the direct experiences of interdisciplinary thinkers. Who are the interdisciplinary thinkers who can give direction to the discovery of knowledge in interdisciplinary study?

As we said at the beginning of this study, responses to our survey raised questions in our minds. We are also ending our study with questions. By nature, interdisciplinary study raises questions. We believe our collective responses to these questions will determine the future of interdisciplinary humanities.

HUMANITIES EDUCATION ABSTRACTS

Summaries of significant articles and reports about interdisciplinary humanities education.

Editor's Note: The first of the abstracted articles in this issue is drawn from a volume that is recommended to all persons concerned with the teaching and learning of the humanities. The Yearbooks of the National Society for the Study of Education cover a wide range of topics and are available through the University of Chicago Press.

FOUR CENTERPIECES

"Cultural Literacy: Time for a New Curriculum" by John J. McDermott in The Humanities in Precollegiate Education edited by Benjamin Ladner (Eighty-third Yearbook of the National Society for the Study of Education)

The current condition of precollegiate learning in America is gloomy, for most pupils being an "alternation between boredom and violence," and it is hopeless to look for an influx of new funds to transform public education, at least for the remainder of this decade. Nevertheless, the curriculum can be changed, says John McDermott, Distinguished Professor of Philosophy and Humanities in Medicine at Texas A & M, but not by adding more disciplines to an already piebald curriculum, nor by short-changing mathematics, reading, writing and speaking.

What is needed is the early study of "relations," with the continued relational learning experiences throughout the school years. We all come into the world, and into schooling not as blank tablets, but as already complicated beings trapped in a multiplicity of genetic and social inheritances. What these are and how they interrelate to make each unique personality should be objects of diagnostic study. Study is needed because the inheritances are generally unconsciously known to each of us and growing at "the edges" day by day through a bewildering variety of accidental, casual and institutional experiences.

Four curricular modules are proposed by McDermott as an "antidote to the drift away from having the humanities as the centerpiece" of education. The first is autobiography-biography, including lives of the famous, documents of common folk, and the student's own personal diaries and narratives. The second is the science of living things, to which we all relate by virtue of being living. McDermott recommends both laboratory and field work, introducing the student "not only to the names and functions of organisms, but to the dramatic sharing and conflict that is a permanent characteristic of living."

The third module is sculpture, the most dynamic of all the activities of the human hand, and an activity that has almost endless potential for self-expression in many materials and styles. The fourth curricular module is theatre. Students will be directed toward the writing and production of theatrical works that are the ultimate expression of relations. Students can "set up" a human world, in a context of physical, historical and ideational settings, working together in social relations, and performing for an audience.

These modules are not the only possibilities; McDermott mentions archaeology, pathology, dance and comparative anthropology as studies that "help others to make relations, such that the deepest recesses of personal privacy transact with human others, with an external world, and with the images gleaned from a storied and even repressed past."

"In this way, we build our world."

SOCRATIC MANAGEMENT

"Kratylus Automates His Urnworks," by Tolly Kizilos in Harvard Business Review, May-June 1984. P.O. Box 3000, Woburn MA 01888. #30/yr.

Using the style of Socratic dialogue, Kizilos, Director of Organizational Development at the Systems and Research Center of Aerospace and Defense, Honeywell, Incorporated, explores the meaning of productivity in business and in the human community. The character Nikias has lost his job as a potter because his boss, Kratylus, has installed new foreign (Corinthian) labor saving devices. He is now able to produce 200 urns per day with half the labor force, thus keeping Athenian production in favorable competition with Corinth. Another character, Kallias, is spokesman for this conventional idea of productivity: "What is needed," he says, "is more output for a given input....Only when you get paid to produce something of value...can we talk meaningfully about productivity." Socrates, however, puts the question "Is productivity then both good and evil? Is it both the requirement for the workers' prosperity and the cause of their misfortunes?"

Socrates argues that not all productivity is measurable in units of urns. He poses an anecdote in which he is hired to gather fallen olives from the ground in an olive grove, but notices that the fence is broken and wild pigs are eating all the fallen olives. He thereupon spends the entire day repairing the fence, but producing no olives in his basket. Kallias responds that Socrates' action was a violation of work contracts, and punishable by law. In another anecdote, Socrates tells of a slave who with some 100 others was to build a memorial mound for the dead at Marathon, but this slave did no work whatsoever. He was to be whipped, but one of the most productive slaves defended him because "he is a storyteller, not a digger....this man spins tales of hope....He makes our burdens lighter, and we can fall asleep with dreams of freedom in our heads. Next day we are ready for work, believing that if our work pleases you and the Athenians, we may some day gain our freedom." Kallias admits the slave's productivity because it contributes toward the common production goal.

Nevertheless, Kallias insists on unequivocal definitions and measurable input and output. Socrates insists that ambiguity is necessary, partly to accomodate qualitative production such as playwriting and philosophizing, partly because even manual labor includes such intangibles as motivation. "The wage earner also has power because the employer needs him to be as productive as possible, not to be a mere machine executing set goals. If the employer doesn't evaluate him correctly, the wage earner will cease coming up with new products, new methods, or new ideas." And the final judgement of productivity is in the hands of history. The community of Athens might list all the services it performs and establish goals for many kinds of production, but "Athens and other cities and states will live on if they encourage their citizens to excel in what they do best."

Mr. Kizilos is an advocate of participatory management in contemporary business and industry. His Socrates shares this view: true productivity is not simply input and output; it is a continuous dialogue among workers and managers in a world in which some problems may never be solved.

GAMES & DREAMS

"Students Discover a Dream Worth Dreaming," by Maureen Smith in Report: A Publication for Faculty and Staff of the University of Minnesota, May, 1984. Department of University Relations, University of Minnesota, Minneapolis MN 55455.

After two days of intensive work, the seminar gave itself an ovation for its final report, a rewritten American Dream. The seminar, co-sponsored by The University of Minnesota College of Liberal Arts Honors Program and the University YMCA included as participants forty honor students, some faculty members and persons from the business and public sectors of Minneapolis. Following keynote remarks, students discussed their understandings of the American Dream. Most regarded it as something in the past, or, as they encountered it in their families, something too simplistic and materialistic for their tastes.

Examples were "making millions," "a big home and a big car," "a flag in the yard."

This seminar on Ethical Leadership emphasized collaborative work. By means of a simulation game, "Starpower," participants learned to understand the psychological effects of economic inequality and to realize that it is easy to entrench into power groups, forcing the development of adversary counter groups. "The last decision of the [power group] was to share resources, but by then it was too late."

Aside from games, the seminar started by placing participants into "family groups" to discuss ideas for the Dream. Then families were combined into clusters to merge and agree upon concepts. Author Smith, editor of Minnesota Report, was a participant and noted the disputes about terms such as "justice," "success" and "spiritual." "Justice" was replaced with "act justly," "success" turned into "fulfillment" and despite faculty members' opposition, "spiritual" remained. When the clusters had completed their work, each elected two representatives to a committee to write the new Dream.

The final draft included these statements: "Looking back we see an American Dream of individualism and limitless opportunities. Looking ahead there is an interdependent world facing increasing conflicts and boundaries....We came to the group as individuals. We leave as individuals transformed and motivated by a dream. A dream of human fellowship."

For further information, contact Dr. Glen Holt, Director of the Honors Program at the Minneapolis Campus.

BEWITCHED, BOTHERED & BAMBOOZLED

"Reasserting the Value of the Humanities," by Paul T. Bryant in The CEA Forum, April 1983. College English Association Forum, Department of English, Texas A & M University, College Station TX 77843. $20/yr.

Humanists, says Paul Bryant, Professor of English at Colorado State University, "have been browbeaten and bamboozled into accepting their status as second class," especially when confronted by scientists who proclaim that they "know" art, music and literature while humanists "don't know" chemistry. Bryant's reply is a combination of counterattack and thoughtful, critical analysis of the contributions of the humanities.

A chemist who says that humanists don't "know about" chemistry means understanding "the structure of complex organic molecules, or perhaps sophisticated thermodynamic calculations, "but the chemist's "knowing about" music is little more than listening to records; about art, hanging a print on the wall or spending half-an-hour in an art gallery; about literature, reading "history or biography because he's not interested in anything that 'didn't really happen'." This counter-argument, Bryant confesses, is rather childish, but it exposes the silliness of the attack.

More important for humanities is not to feel inferior to science because of its enviable economic status. Because the Defense Department and multimillion-dollar corporations are not vying for our services does not prove that our services are not of equal value. Aping the sciences is a besetting ailment of humanists; "scan the program topics of the Modern Language Association's annual convention" and you will see metaphors lifted from sciences and superimposed onto literature and language for no apparent purpose other than to persuade ourselves that we can be as opaque and inaccessable as scientific research tracts. Furthermore, scientists in their competition for megabucks research grants do not make an attractive model either for professional behavior or for academic freedom. "Humanists," Bryant says, "can help return the scientific endeavor to a more balanced perspective."

Vocationalistic arguments are often used to demonstrate the low value of the humanities. Most arguments are distorted. Campus placement figures represent only a small fraction of the job placement market, and in many specialized fields the baccalaureate training is obsolete in as little as two years. "We might cite a [1981] Bell Telephone study that found that 46% of its younger employees with humanities and social science degrees were judged as having potential for middle management, while only 31% of those with business degrees and only 26% of those with engineering degrees were so rated." Yet persuasive as vocational counter-arguments may be, Bryant cautions that to use them is to sell out the greatest benefits of the humanities, which have to do with living as a human, not merely as an employee.

In the long haul, the methods of science and sciencism have yielded disintegration and fragmentation. "The humanities can overcome this fragmentation by helping us to restore the unity of our consciousness," including all fields of human endeavor, tradition and custom as much as invention. But to "become agents of reunification, we as academic humanists must renew our own sense of unity."

HISTORY APPLIED

"Joining the Parts: The Interior and Exterior Life of the Humanities" by Otis Graham Jr. in Federation Reports, May 1984. National Federation of State Humanities Councils, 12 South 6 Street, Suite 527, Minneapolis MN 55402. $1.25/ issue.

With the creation of the National Endowment for Humanities in 1965 and its subsequent implementation of programs aimed at adult audiences outside of academe, humanities scholars for the first time added the Real world to their accustomed "interior life" of on-campus audiences of colleagues and young students. Graham, Univrsity Professor of History at Chapel Hill uses his discipline as a way to explore how humanists have and have not succeeded in bridging from the interior to the exterior audience.

It is not an easy matter to explore, because History on the academic side of the bridge has been changing to such a degree that Graham speaks of the discipline as being in crisis. Formerly, there was a generally accepted idea of history; the bridge would have been crossed by Great White Men and "manifest events" such as elections and wars. "Elites continue to be important, but room has been made for many approaches to the history of the mass," including popular culture, kitchenworkers, slaves, immigrants, workplaces. As influenced by the Annaliste historians Braudel and Ladurie, American historians abandoned the study of pivotal moments for long term patterns of human responses to environmental change, endemic and epidemic disease, migrations and trade. In place of a comfortable unity, historians and history show the same diversity and separatism as society today.

Yet opposing views about the nature of history and of the applicability of history to current issues are far from unprecedented. For NEH state council programs applicability has been the key question in taking humanities to the exterior audience. In the early years it was required that programs relate to public issues; for a few years now the restriction has been lifted. But, quoting Albert Camus' "art advances between two chasms, frivolity and propaganda," Graham asks: "Do we slip toward the chasm of propaganda with the stress on public issues, toward frivolity if we shun them?" His personal answer is that doing more applied work has enhanced and enlarged the scope of purely academic "frivolous" research.

Nevertheless, some of the attempts to apply history and the other humanities have been ludicrous, such as programs in which "a couple philosophers from the state college and the town novelist were to solve the Middle Eastern problem or the energy crisis." Or replacing Great White Heroes with unblemished noble redmen and blackmen (and women)--humanities enterprises urged on not only by partisans, but by NEH, universities and publishers. Such misapplications can be gathered under the rubric of "presentism... the little uninstructed passions of today at work mangling and rearranging the past."

CLUSTERING PATCHES

"Are New Courses Necessary?: Curriculum Revitalization Can be Achieved through Reordering," by Richard E. Windsor and Donald C. Wold in NASSP Bulletin, April 1984. National Association of Secondary School Principals Bulletin, 1904 Association Drive, Reston VA 22091. Single copies $6.

Reflecting much of American society with disturbing clarity, the secondary school curriculum is a fragmented patchwork of pieces left from earlier enthusiasms. There are residues of the 19th century curriculum, some of the progressive movement's expansion of the curriculum and the student body, smatterings of the electives and mini-courses of the '60s, and a deep incursion of post-Viet Nam back-to-basics and competency-based education. The proportions and degrees to which these parts influence each school are almost infinite in variety, and the end result is incoherence within each school, and confused expectations without.

A solution proposed by these administrators of Westmont, Illinois High School is to increase the required core curriculum with a series of introductory "cluster courses". Each cluster brings together some of the fields of study that are vital to the development of a well-rounded person but that have for one reason or another been eliminated, or relegated to chance by a whimsical elective process. Wold and Windsor accept the traditional required courses (3-4 years of English, 1-2 of math, 1-2 of social science/history, 1-2 of science, and physical education. They also acknowledge a variety of patterns of state mandates for short courses in health, consumer education, career education, etc.). Missing as requirements are "such significant areas as history, geography, business, art and music."

As a model, the authors propose a system in which every ninth-grader would be required to take in addition to English, math and science four 9-week introductory courses in clusters of Art/Music, History/Social Science, Second Language, and Business. "The fine arts requirement, which could be in the form of one course in art or music, serves to focus total school attention on cultural and aesthetic experiences. A survey course in history and social sciences introduces students to various subject matter in this content area." These courses, then, would be foundations for elective choices in later years, but every student would have had both an introductory exposure to non-conventional fields and some grounding in skills and content.

An additional requirement in this plan includes three introductory courses during the 10th, 11th and/or 12th grades in business, home economics and industrial education.

Clustering, the authors say, represents a means of restoring continuity and coherence to the curriculum of American secondary schools. At the same time it can counteract the class-conscious stigmas against some courses, "since all students, including the valedictorian, take a shop class."

SYMBOLS OF UNITY

"The Bedrock of the Humanities: Religion or Science?" by Stan Yarian in Liberal Education, Spring 1984. Association of American Colleges, 1818 R. Street NW, Washington D.C. 20009. $14/yr.

The world that each of us lives in is most certainly made of an inside, an outside and a continuing interrelationship between the two. What makes them into a whole (a world) is the linking of symbols. Symbols, however, are not simply signs, which are "only informative; they point to something else in a one-to-one equation." Symbols are realities of consciousness, dynamically mediating between the inner and outer parts of the world. A true symbol "inevitably engenders a response of care or reverence before the felt mystery of the symbol." Through symbols the world is lived rather than known. Or so it should be.

The literature of religions is filled with examples of what happens when the duality of inner and outer worlds is separated. The ancient Epic of Gilgamesh, Euripides' The Bacchae and the story of the triumph of Zeus over the titanic sky gods are three of the examples used by Yarian, an assistant professor of religion at the University of Vermont at Burlington, to show the self-destructive effects of separation of the world as lived, into two parts. The Bacchae, he notes, was written at the same time that Greek analytic rationalism was first developing ways of speculating "about the nature of the physical world and about the gods in non-symbolic terms."

All of which is preamble to Yarian's contention that the current split between religious experience and science is but a contemporary version of the age-old tension. He goes farther, however, because most religious study and speculation has bought into the same outlook as science, turning the religious experience into something that can be examined objectively as historic and anthropological data. The humanities as well are captive to this view, yet Yarian says that although humanists may have joined religions as "a rearguard action to science,".... "there are dimensions to humanities studies that are not so tractable to human reason." For example, the arts are constituted as true symbols, existing equally as objects and experiences. The same is true of history, a body of facts and of human experiences.

Yet many persons, impoverished by the scientific world outlook, and finding the same outlook applied to arts, literature and history, are rejecting it all and taking recourse to the other pole characterized by Thomas Meehan as "a mass retreat into mysticism, superstition, occultism, the unreality of drugs, irrationality, antirationality and pararationality in myriad forms." The humanities almost alone have the capability of retaining "total worlds", worlds joined by uniting symbols, and to retain these without going overboard into the aspirations of personal salvation or to the mechanistic rendering existence into facts. We humanists may not be saviors, but we can "affirm the symbolic nature of our subject--the humanly lived world--and the possibilities it presents for creative engagement with contemporary culture and Western consciousness."

SURROGATE ART

"Subjective Responses to Paintings as Originals, Colored Slides and Colored Prints" by George W. Hardiman and Theodore Zernich in Studies in Art Education, Winter 1984. National Art Education Association, 1916 Association Drive, Reston VA 22091. $25/yr, $9/copy.

Is your use of reproductions of art works a disadvantage in communicating aesthetic ideas to students? Hardly at all, is the answer of Hardiman and Zernich of the University of Illinois. Using a "semantic differential" test instrument of their own design, they exposed groups of university students to eight art works of four subject-matter types--portrait, still-life, landscape and seascape--, each type being represented in both representational and semiabstract styles. One group of students looked at the original paintings in a special room in the university museum, the second group viewed slides of the originals and the last group saw 5 x 7 colored prints made from the slides.

The semantic differential test uses the same sorts of aesthetic scales as those "traditionally used by artists, critics, historians and teachers of art to qualify, evaluate and characterize works of art," according to the authors. The eighteen scales include such ranges as "powerful-powerless," "like-dislike," "explosive-serene," "depressing-uplifting," "clear-fuzzy." Among the realistic paintings were a 16th century portrait and a Courbet seascape; the semiabstracts were all by Americans.

The responses of the three groups were almost identical as to originals, slides or prints, adding to the information generated by two earlier studies by other investigators but generally flying in the face of the views of the art community, which assumes that there is no adequate substitute for the original art work.

This study, however, did elicit a rather important difference between responses to the representational and the semi-abstract treatment of each type of subject matter. In the emotive category, semi-abstract works came out higher on the pleasing and uplifting scales, while in the structural category, they were decidedly fuzzy.

Editor's note: Sharon Scholl's regular abstracts of funded humanities projects in this issue are gathered into an essay on Six QUILL grants in the CONNECTIONS section (pages 40-44).

HUMANITIES EDUCATION CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

JOSEPH GALLIAN

THE BEATLES & HUMANITIES

A Mathematics Professor Describes a Course That Combines Social & Aesthetic Topics

> "If any one person or group defined that whole spectrum of dreams, accomplishments, failures, and creative confusion we call the sixties, it was the Beatles. For all their epitomization of their time, they seemed to have tapped some secret of universality." (New York Times, October 24, 1982)

THEIR CULTURAL IMPACT

It was more than 20 years ago when 75 million Americans tuned into the Ed Sullivan Show for their first glimpse at four cheeky, mop-top musicians with a fresh sound and a new look. Over the seven-year period from 1964 to 1970, the lives and music of the Beatles had a profound impact on our society. They changed every aspect of the popular music industry. Their films Hard Day's Night and Help! influenced the way present-day films are shot and edited. Today's ubiquitous rock videos began with "Penny Lane" and "Strawberry Fields Forever." Following the example of the Beatles, men let their hair grow long, and wire-rim glasses became fashionable. Millions experimented with "mind-expanding" drugs after the Beatles did. Transcendental meditation, Eastern religions, and Eastern music became popular when George Harrison expressed interest in them. Pop art exploded when the Yellow Submarine film was released. The important role youth has in our culture was accentuated by the Beatles. John Lennon gave the Viet Nam peace movement an anthem with his song "Give Peace a Chance," while his song "Imagine" encapsulates the dreams of many that one day "the world will be as one." The Nixon administration so feared the political potental of John Lennon that it employed wiretaps and undercover surveillance for two years. Even four years after Lennon's death, the Reagan administration argued in court that keeping secret 90% of the FBI file on Lennon is vital to our national security. John Lennon made a significant contribution to the Women's Movement when he spent the last five years of his life raising his son and acting as a househusband while his wife managed their fortune. These topics and the music of the Beatles are the content of a three-credit Humanities course I teach--Topics in Popular Culture: The Lives and Music of the Beatles.

INTERDISCIPLINARY CONNECTIONS

The centrality of the Beatles to the events and attitudes of the sixties offers an ideal vehicle for interdisciplinary connections. Indeed, the variety of their interests and endeavors encompasses not only the arts, but social, political, and popular intellectual movements, as well. Their music and lives both shaped and reflected the values of their generation.

Although people who witnessed the Beatle exploits have vivid memories of the phenomenon, today's college freshmen were mere infants when the group broke up. To most of these students, the Beatles are more a myth than an historical relic. They are often viewed in the same category as Albert Einstein, Babe Ruth, Willie Mays, Wilt Chamberlain, Gandhi, John Kennedy, Martin Luther King, Notre Dame football teams, and the New York Yankees--subjects of reverential tales of heroes of yore. But popular music typically plays a more important role in the lives of today's students than does athletics or politics, so their curiosity about the Beatles is far greater than it is for these other idols of bygone days. They are eager to know the basis for the idolatry.

Let me emphasize that one need not be an expert in music theory to teach a humanities course on the Beatles. I certainly am not one, and I might add that none of the Beatles can read or write music. (For that matter, neither can many great jazz musicians.) Nevertheless, musical expertise is important, because music was the basis for the Beatles' immense popularity. For this reason and the interdisciplinary aspects mentioned before, a course on the Beatles provides an excellent opportunity for team teaching and guest lecturers. I had music professors analyze musical technique (one of them is an accomplished classical pianist who has performed in Carnegie Hall, as well as being a jazz musician and teacher of music theory); a historian lectured on the Lennon-FBI story; an English professor discussed the social significance and poetic imagery of Beatle lyrics; a music critic detailed the influence of the Beatles on the music business (everything from recording methods to sleeve design); and a Beatle fan-club president described Beatle conventions and fan magazines. My experience hardly exhausts the possibilities. One could have a sociologist or psychologist speak on the group dynamics of Beatlemania or the worldwide interest in the rumor that Paul McCartney died, with the attendant "clues" found on album covers and lyrics; a TV or movie critic or communications professor could evaluate the influence of the

Beatle movies and videos; someone with expertise in women's studies could examine Lennon's feminist activities. These guest lecturers need not be fans or experts on the Beatles per se. Their objectivity may even enhance the humanistic perspective. There is a plethora of available source material that can be used in preparation for a guest lecture.

RESOURCES FOR TEACHING

Fortunately, there is an enormous wealth of resource material available to anyone interested in teaching such a course. Indeed, over 200 full-length books and 10,000 newspaper and magazine articles have been written about the Fab Four--many by scholars. On film or videotape are: A Hard Day's Night, Help!, Magical Mystery Tour, Yellow Submarine, Let It Be, The Beatles at Shea Stadium and The Cream of the Beatles. There are numerous Beatle fan magazines that carry ads for a wide variety of Beatle videos, unreleased songs, audiotapes, and memorabilia. The two-hour video documentary The Compleat Beatles provides an excellent introduction and overview to the Beatles' career. Several outstanding series of audiotapes prepared as syndicated radio programs are available (one of these runs 30 hours!). Naturally, a course on the Beatles must prominently feature their music. For this, I recommend the complete British set of 13 albums (available for about $100.00) plus the Magical Mystery Tour LP. The book The Beatles Forever, by Nicholas Schaffner, is wonderfully effective as a textbook.

A course on the Beatles is ideal for those who enjoy using a variety of teaching materials and methods. I have employed still photographs, slides, videos, films, audiotapes, newspapers, magazines, and exhibitions. The campus newspaper ran articles about the course and conducted a survey of favorite Beatle songs; the campus radio station broadcast lectures and interviews by guest speakers; the campus record shop offered special prices on Beatle records; the School of Fine Arts sponsored a Beatles-related art contest; the local news media gave the course extensive coverage--in fact, newspapers and radio stations in many parts of the state picked up the story.

On one occasion, I taught the course entirely by radio. The lectures focused on the music, while the reading assignments concentrated on the Beatles' lives and their cultural influence. Students who missed the broadcasts were able to hear them on cassettes at the library.

The most challenging, and rewarding, undertaking in my thirteen-year teaching career was an Elderhostel course on the Beatles. A series of five, 90-minute lectures was part of a package designed for 40 retired people ranging in age from 55 to 83. Nearly everyone reported that he/she was apprehensive about the Beatles portion of the program, fearing "loud electronic music." Fortunately, they were willing to give the Beatles an "audition." Songs like "Till There Was You," "Michelle," "Eleanor Rigby," "When I'm 64," "She's Leaving

Home," "Penny Lane," "Strawberry Fields Forever," "Mother Nature's Son," "Honey Pie," and "Yesterday" completely won them over. (One lady wept while the latter song played.) Of course, these students were aware of the great impact the Beatles had on the youth of the 60's, and they were eager to know why. They were surprised to hear of Lennon's efforts for peace and his commitment to feminist causes. They were especially interested in the reasons for the breakup of the Beatles and amused by the bizarre business dealings of the group. The course concluded with everyone gathered round a piano singing "All You Need Is Love." This song perfectly captured the mood of the class. This delightful scene was filmed and shown on public television stations in Minnesota.

Although student response has been overwhelming, reaction from colleagues has been mixed. While some have been enthusiastically supportive, one traditionalist (noting that there were not enough courses in Freshman Composition) wrote in the student newspaper, "So one can only conclude that writing well is deemed less important than studying Ringo Starr." Criticism like this should be anticipated, and it should be listened to reasonably--and equally critically. However, it can be minimized by setting rigorous grading standards and by requiring a substantial amount of reading and writing.

Below is a sample course outline, final examination, and an annotated list of reference material.

COURSE OUTLINE

WEEK 1

MUSIC: Roots of Beatle music (Little Richard, Fats Domino, Chuck Berry, Ray Charles, etc.); Early Beatles music.

READINGS: "March 1962," chapter from Shout!; "Hard Days and Nights," chapter from All You Need Is Ears; Chapter 1 of The Beatles Forever.

WEEK 2

MUSIC: Early Beatles music.

READINGS: "1964," chapter from Growing Up With the Beatles; Chapter 2 from The Beatles Forever.

VIDEO: The Compleat Beatles.

WEEK 3

MUSIC: Rubber Soul LP; Revolver LP.

READINGS: "The Beatles," 1965 Playboy interview; "Tokyo and Manila," chapter 11-2 from The Love You Make, by Peter Brown and Steven Gaines; Chapter 3 of The Beatles Forever.

WEEK 4

MUSIC: Sgt. Pepper LP; Magical Mystery Tour LP.

READINGS: "Dash of Pepper," chapter from All You Need Is Ears; reviews of Sgt. Pepper from Time, September 22, 1967, pp. 60-68, and from Newsweek, June 26, 1967, p 70; Chapter 4 of The Beatles Forever.

WEEK 5

MUSIC: Unreleased Beatles songs; songs written by Beatles, but originally recorded by others.

READINGS: "It's Only a Northern Song" and "Magical Mystery Tour," chapters from John Lennon--In My Life; Chapter 15-3 on Apple Corporation from The Love You Make; Chapter 5 of The Beatles Forever.

WEEK 6

MUSIC: The "White Album".

READINGS: Review of "White Album," from The Rolling Stone, December 21, 1968; section on the "White Album" from the book Helter Skelter, by Vincent Bugliosi, pp. 324-330; section on "Hey Jude," from Media Sexploitation, pp. 134-135, by Wilson Key; "The Beatles," a biography from Life magazine, September 13, 1968, and September 20, 1968, by Hunter Davies.

VIDEOS: "Cream of the Beatles"; and miscellaneous items.

WEEK 7

MUSIC: Songs originally made popular by the Beatles, done by others.

READINGS: "The Curious Case of the 'Death' of Paul McCartney," by Barbara Suczek from The Beatles Reader; Chapter 6 of The Beatles Forever; "Ringo" from Musician, February, 1982.

WEEK 8

MUSIC: Beatle singles; audiotapes: interviews of Lennon on peace.

READINGS: "The Peace Politician," chapter from John Lennon: One Day at a Time; "John Lennon versus the FBI," by Jon Wiener, from The New Republic, May 2, 1983; Chapter 7 of The Beatles Forever.

WEEK 9

MUSIC: Abbey Road LP; solo recordings.

READINGS: Selected topics from current Beatle fan magazines; Chapter 8 of The Beatles Forever.

VIDEO: Let It Be.

WEEK 10

MUSIC: Solo recordings.

READINGS: "Shrine Hopping in Liverpool," by David Owen, from Harper's magazine, December, 1983; Twentieth Anniversary special issue of Rolling Stone, February

16, 1984; Twentieth Anniversary coverage in USA Today, February 8, 1984; "The Private Years," by Chet Flippo from Rolling Stone, October 14, 1982.

FINAL EXAMINATION

1. Discuss the factors that contributed to the popularity of the Beatles.
2. Discuss Brian Epstein's contribution to the success of the Beatles. (Without Brian, would the Beatles have made it as big? Did his death hasten the break up? ...?)
3. Discuss the dynamics of the group over the years; that is, the role and contributions each Beatle made to the group.
4. Discuss the way George Martin's role changed over the years.
5. Discuss how the music changed over the years.
6. Discuss the factors that led to the cessation of touring.
7. Discuss the factors that led to the breakup.
8. Discuss the impact the Beatles have had on our culture.
9. Discuss the influence Yoko had on John's music, his interest in art, his efforts for peace, and his attitude towards women.
10. Discuss John Lennon's efforts for peace.
11. Who is your favorite Beatle? (No credit--one-word answer.)

Fawcett, Anthony. John Lennon: One Day at a Time, Grove Press, 1976. A beautifully illustrated book written by an assistant of John and Yoko. It focuses on their artistic and peace efforts.

Friede, Goldie; Titone, Robin; and Weiner, Sue. The Beatles A to Z, Methuen, New York, 1980. A well-researched, easy-to-use Beatles encyclopedia.

Harry, Bill. Paperback Writers--The History of the Beatles in Print, Virgin Books, 1984. A very helpful, illustrated bibliography of hundreds of books and magazines devoted to the Beatles. The content of each publication presented is summarized and given a rating from 1 to 5.

King, William. Beatlefan, The Goody Press, P.O. Box 33515, Decatur, Georgia 30033. A gold mine of opinions, news items, facts, reviews, and Beatle merchandise.

Martin, George. All You Need Is Ears, St. Martin's Press, 1979. This book, by the Beatles' producer, contains several chapters that provide fascinating insight into the creative process of making a Beatles recording.

Meises, Charles. The Beatles Reader, Pierian Press, 1984. A collection of 20 articles from major magazines and newspapers. Contains valuable lists of supplementary readings.

Norman, Philip. Shout! The Beatles in Their Generation, Warner Books, 1981. A best-selling, carefully researched, well-written biography. Absorbing, but not gossipy.

Schaffner, Nicholas. The Beatles Forever, Cameron House, 1977. The best illustrated, most enjoyable book ever written about the Beatles.

Schaumburg, Ron. Growing Up With the Beatles, Pyramid Books, 1976. An exceptionally well-illustrated tribute in which the author describes how the Beatles influenced his life over the years.

Shotten, Peter and Schaffner, Nicholas. John Lennon: In My Life, Stein and Day, 1983 (also published under the title The Beatles Lennon and Me). A book filled with personal anecdotes by Lennon's best friend.

ACKNOWLEDGEMENT

The author is indebted to the editor for his invitation to write this piece and for his comments.

SHARON SCHOLL

HUMANITIES & BUSINESS: A PLETHORA OF MATERIALS FROM THE EXPRESSIVE ARTS

The dominant tendency in planning courses that combine Humanities with technical or professional studies is to turn to **philosophy**. Thus there are many excellent courses in business, legal, and medical ethics. Occasionally there may be a **history** of business, law, technology, or even a literature and law or medicine offering. Generally speaking, what we regard as the broader range of the humanities is largely untouched. As reported by Francis M. Nevins in the Spring, 1984, issue of HUMANITIES EDUCATION, there is much value in a more diverse course with a wider variety of humanities materials; this was the faith that resulted in a course titled Humanities and Business.

The fundamental assertion of the course is that in this country business ventures and thinking are the strongest influence upon our lives, surpassing church, state, or class system. The depth of penetration of these values is recognized in unexpected sources. John Mack, professor of psychiatry at the Harvard Medical School, comments on the steep rise in teenage suicide rates: "Our society seems to impose a business model on our schools. Students are placed in competitive situations with one another as though each individual were a profit-making organization." If, indeed, our schools, families, arts, and even religion are shot through with business values, we ought to trace the rise of this condition and be able to evaluate its results. The nature of the "deal" one strikes with the business faculty is that students do learn something about the many viable forms of business and their critical role in American culture. But, in the bargain, they learn how art, music, and literature reflect upon important concerns.

BUSINESS AS EXTENDED FAMILY

To that end, the course pursues four models of business in America as they have taken shape historically, and still exist today. The first is **business as extended family**, exemplified by Colonial mercantilism and the family-owned enterprise of today. Even in the largest corporation this model may surface in the guise of company uniforms, picnics, or other symbols of familial alliance. A helpful focal point for this unit is Williamsburg, principally because there is much visual and musical material available from the Colonial Williamsburg Foundation. The typical businessman's portrait may be seen in Robert Feke's painting of Isaac Royall and his family, or John Copley's paintings of John Hancock and Paul Revere. There is business architecture, from the taverns and workshops of Virginia to the Louisiana plantations. Stuart Davis' Gloucester Wharf and Ralph Goings' Pee Wee's Diner are contemporary interpretations of the same theme. In music there is a group of good possibilities ranging from Williamsburg's recording of Songs from a Colonial Tavern to William Schumann's New England Triptych.

This unit is particularly hospitable to materials on the family farm and on black labor. Farm life is well documented in the paintings of Edward Hicks, Grant Wood, and Andrew Wyeth. The lives of blacks are captured in Winslow Homer's Cotton Pickers and William Grant Still's Afro-American Symphony.

Benjamin Franklin's autobiography or Poor Richard's Almanac are descriptive of the business life and philosophy of the times, including the apprentice system of training. Melville's classic Bartleby the Scrivener is an interesting commentary on employer responsibility in the days before social security. John Steinbeck's Grapes of Wrath provides insight into family enterprise and farming versus corporate strategies. Many significant works gain fresh insight when one looks specifically for the role of business in the lives of the characters and the business models that are described.

MASS PRODUCTION

Tracing the development of business styles, the next unit is on **mass production**. The excellent Nova videotape on Henry Ford is a helpful introduction. Chaplin's Modern Times is still an effective period piece. Adam Smith and de Toqueville have important insights as to the fatal impact of such systems on familial enterprises. Jacob Bronowski's The Drive for Power is a helpful account of the development of such technology and the accompanying rise of the quality of diet, health, and working conditions. Kurt Vonnegut's story Deer in the Works is a modern version of the clash in values between individual enterprise and the large manufacturer. Richard Bissell's 7 1/2 Cents (basis for Broadway musical The Pajama Game) is an ingratiating account of labor unrest in a factory. Upton Sinclair's expose novel, The Jungle, is still powerful reading. The film, The Blue Collar Trap, documents the causes of modern assembly line unrest.

Art and music which portray the culture of mass production are easy to find. Industry is a subject for art in Charles Sheeler's photographs and urban landscape paintings. Art may be made from industrial products, as in Chryssa's Ampersand or Chamberlain's Hudson, 1959. There are many representations of the culture produced by mass production from Winslow Homer's The Morning Hell to Duane Hanson's Lady at a Table. Such musical items as George Antheil's Airplane Sonata, Ballet Mecanique, or John Cage's First Construction in Metal derive imagery and sometimes sonic resources from mass production.

BUSINESS AS GAME: THE ENTREPRENEUR

The third unit of the course is labeled **Business as Game: The Entrepreneur**, and its centerpiece is the film Citizen Kane. A film on San Simeon attests to Hearst's (Kane's) aesthetic contribution to American architecture. The Great Gatsby has some potential, but has less than one would like of material on his business dealings and business philosophy. Theodore Dreiser's The Titan and The Financier, and Mark Twain's The Guilded Age are landmarks of the period. Andrew Carnegie's autobiography is a revealing portrait of the rise of such a businessman, and several new biographies of J.P. Morgan join a growing repertoire of life studies of the "robber barons." The Alistair Cooke America series segment of that title is another option.

Visual materials abound in this era, and include the great estates of Hearst, Vanderbilt, Rockefeller, Deere, and Ringling. Slides of early modern office buildings such as the old Chicago auditorium and stock exchange, the Ames Building, and the old Marshall Field Department Store are readily available. There is Douglas Moore's opera on the life and times of the silver boom, The Ballad of Baby Doe, and his Pageant of P.T. Barnum.

The last half of the 19th century witnessed the rise of the American West as a grand business enterprise, and the varied endeavors of gold panners and cowboys may be logically included in this unit. The Horatio Alger stories, so expressive of business ideals of the turn of the century, often incorporate the lure of the West as a means of economic wish fulfillment. The West, as translated visually by Bierstadt, Remington, and Benton combines well with Copland's musical compositions on Western themes, Billy the Kid and Rodeo. Thomson's moving score for The Plow that Broke the Plains and Lukas Foss's The Prairie capture the panorama of the era.

BUSINESS AS CORPORATE SYSTEM

The last unit of the course is labeled **Business as Corporate System**, and deals specifically with the culture of American cities. Peter Drucker's studies of the nature of modern organizations are both helpful and readable. Interesting long works abound, from William Whyte's The Organization Man, Rod Serling's Patterns, Sinclair Lewis's Babbitt, Hawley's Executive Suite, to Arthur Miller's Death of a Salesman. Or try Sloan Wilson's Man in a Grey Flannel Suit, Elmer Rice's The Adding Machine, and Pohl's The Space Merchants.

The influence of business upon the design of cities and contemporary architecture begins with Lewis Mumford's classic writings on the nature of cities. Visual materials include Saarinen's T.W.A. and C.B.S. Buildings, Skidmore, Owings, and Merrill's Alcoa and Lever Brothers Buildings, and even Pfleuger's Union Square underground parking facility in San Francisco. Housing designed in business models is easily seen in dozens of housing developments such as Stuyvesant Town in New York City.

Many paintings on the theme of city and business life are available, including the New York scenes of John Sloan, Edward Hopper's lonely cityscapes, Alexander Calder's stabile named The City. Such Pop Art creations as Claes Oldenburg's Dual Hamburgers, Janet Fish's Apples (neatly packaged in plastic), and Richard Estes' Central Savings reflect the rampant commercialism of our time. City music is also abundant and might include Charles Ives' Central Park in the Dark, Norman dello Joio's New York Profiles, Aaron Copland's Quiet City, and George Gershwin's second rhapsody (Rhapsody in Rivets).

Prepared reading matter for student assignments is greatly limited. Business in American Life, by Thomas Cochran (McGraw, 1972) is the only affordable text that shows the influence of business practices upon American culture through our history. There is only one literature collection especially for such a course, Business in Literature, by Burden, et. al. (Longman, 1980). The University of Mid-America circulates for rent or purchase a series of videotapes that is useful and informative, if not inspired. The excellent film series called The Age of Uncertainty, narrated by John Kenneth Galbraith, is a favorite among students and useful in several segments of this course. A great deal of unorganized material is available, and this course is only one possible format for its use.

If one starts, as I did, from "ground zero" in putting together such an enterprise, some background reading is helpful. The following works I found very useful indeed:

American Labor: A Pictorial Social History (Washington, D.C., Public Affairs Press, 1972)
Work, Culture, and Society in Industrializing America, by Herbert G. Gutman (Vintage, 1977)
Virgin Land: The American West as Symbol and Myth, by Henry Nash Smith (Harvard University, 1970)
The American Scene: American Painting of the 1930's, by Matthew Baigell (Praeger, 1974)
Art and the Industrial Revolution, by Arthur Elton (Shocken Books, 1970)
Business Enterprise in the American Revolutionary Era, by R.A. East (Peter Smith, 1964)
Success in America, by Rex Burns (University of Massachusetts, 1976)
The Corporation in Modern Society, edited by Edward Mason (Atheneum, 1966)
Business and Society, by Joseph McGuire (McGraw, 1963)
The Robber Barons, by Matthew Josephson (Harcourt-Brace, 1962)
Working, by Studs Terkel (Avon, 1982)

BEST TRANSLATIONS

BY BURTON RAFFEL

UNIVERSITY OF DENVER

"What could be better than Homer,

or what worse than almost any translation of him?"

George Santayana

I: DANTE'S DAMNED

It takes a poet to translate poetry. That I think is a fundamental maxim -- and, indeed, if anyone but a poet makes the attempt, and especially if the attempt is made in prose rather than in verse, my immediate query is likely to be: why bother? Do we read the original for its reputation? for its literal content? Or do we read it, as I believe we do, for its force and beauty -- in short, for its poetry first and for anything and everything else second.

But it takes more than poetic ability to translate Dante. We are almost eight hundred years away from his Divina Comedia, which is roughly twice the distance from Shakespeare to our time and more than twice the distance between us and John Milton, John Donne, or Andrew Marvell. Dante is a deeply medieval poet, especially in the clear pelucid quality of his diction:

Nel mezzo del cammin di nostra vita
mi retrovai per una selva oscura,
che la diritta via era smarrita.

There is nothing in the least fancy about these lines. "In the middle of the journey (roadway) of our life," Dante starts his great poem, "I discovered (found myself) in a dark wood, where the right (correct) way (route) was lost (confused)." Dante's meaning is of course complex -- but that is the great secret to translating him. The meaning must remain complex, but the language must remain clear, simple, straightforward.

John Ciardi is a very competent poet; he is a vastly incompetent medievalist and his fluent, racy translation is deeply unrepresentative of the true nature of Dante's poetry:

> Midway in our life's journey, I went astray
>   from the straight road and woke to find myself
>   alone in a dark wood ....

The notion of departing from "the straight road" is wholly alien to Dante's poem, as is the associated notion of going "astray," as is the notion of finding oneself "alone" in the dark wood. Vanished is the simple directness of smaritta, "lost, confused"; vanished too is Dante's presentation of the dark wood as a place from which (che) it is difficult to find la diritta via, "the correct (right) path."

Other translators, less competent poetically, have done still worse things:

> Midway the journey of this life I was 'ware
>   That I had strayed into a dark forest,
>   And the right path appeared not anywhere.

Thus Laurence Binyon, and the less said of it the better. The prose translators, of course, do even worse things still:

> In the middle of the journey of our life I came to myself within a dark wood where the straight way was lost.

Thus John D. Sinclair's version. It has the sense and little or nothing more. Was Dante actually a poet? How could one know, from versions like these?

Allen Mandelbaum is not quite so good a poet as is John Ciardi, but he is a poet and also a very much better medievalist:

> When I had journeyed half of our life's way,
> I found myself within a shadowed forest,
> for I had lost the path that does not stray.

Ciardi's freedoms (and all translators take liberties, universally, inevitably) are betrayals. Mandelbaum's are exactly in the spirit of Dante's time and of Dante's poem. Using Ciardi with students one teaches his translation. Using Mandelbaum's I suspect we will find ourselves teaching a good deal of Dante, and to students who have both a sense of what Dante has done to make it his own sort of poem. Mandelbaum is no more Dante's equal than is almost anyone else, but his translation is distinctly the best and the most serviceable we have or are likely to have for the forseeable future. It is available in paperback (the first two volumes are out, the third and final volume is shortly to appear) and, for now, it gives our students and we their teachers the best mix of sound and sense we can find in English. It should be the text of choice.

II: THE GALLOWS HUMOR OF CHRISTIAN MORGENSTERN (1871-1914)

Christian Morgenstern's biting, outrageous, supremely deft Galgenlieder ("gallows songs") began as a kind of social club humor, scribbled to amuse the poet -- who was a very serious poet indeed -- and his friends. No publisher would take them when Morgenstern had accumulated enough for a volume; it was 1905 before they appeared in print -- and by 1913 it had gone through fifteen editions, selling over three hundred thousand copies by 1937.

Morgenstern sometimes pretended that the Galgenlieder had no serious purpose, and sometimes admitted that under the savage humor and immensely playful verse there was profound purpose. "Morgenstern wanted to loosen up the dull, dismal seriousness to which man was tied in a materialistic contemporary world," says one critic. The poet himself spoke of driving the wretched German language off the road. But how is Morgenstern to be read, in English, when so much of his work looks like this:

GESPRACH EINER HAUSSCHNECKE MIT SICH SELBST
Soll i aus meim Hause raus
Soll i aus meim Hause nit raus?
Einen Schritt raus?
Lieber nit raus?
Hausenitraus --
Hauseraus
Hauseritraus
Hausenaus
Rauserauserauserause ....

(Die Schnecke verfängt sich in ihren eigenen Gedanken oder vielmehr diese gehen mit ihr dermassen durch, dass sie die weitere Entscheidung der Frage verschieben muss.)

Fortunately, Morgenstern has for twenty years had his classical English translator, Professor Max Knight, whose bilingual University of California Press edition of selected Galgenlieder is a wondrous re-creation of a poet many have considered untranslatable. (No poet is untranslatable, for the record. Absolutely none.) Here is the way Knight handles "The Snail's Monologue" (with its deft prose tail):

Shall I dwell in my shell?
Shall I not dwell in my shell?
Dwell in shell?
Rather not dwell?
Shall I not dwell,
shall I dwell,

dwell in shell,
shall I shell,
shallIshellIshallIshellIshall I .....?

(The snail gets so entangled with his thoughts, or, rather, the thoughts run away with him so that he must postpone the decision.)

And since we have a competing translation, by two very talented writers, W.D. Snodgrass and Lore Segal, we can see just how good Knight really is. Here is "The Knee," first in Knight's trenchant version and then in the overly soft, overly "poetic" Snodgrass-Segal rendering:

On earth there roams a lonely knee.
It's just a knee, that's all.
It's not a tent, it's not a tree,
it's just a knee, that's all.

In battle, long ago, a man
was riddled through and through.
The knee alone escaped unhurt
as if it were taboo.

Since then there roams a lovely knee,
it's just a knee, that's all.
It's not a tent, it's not a tree,
it's just a knee, that's all.

*****

There wanders through the world, a knee
It's just a knee, no more
It's not a tent; it's not a tree;
Only a knee, no more.

There was a man once in a war
Overkilled, killed fatally.
Alone, unhurt, remained the knee
Like a saint's relic, pure.

Since then it roams the whole world, lonely.
It is a knee, now, only.
It's not a tent, it's not a tree;
Only a knee, no more.

The crisp savagery of the German is in the Knight, but not in the Snodgrass-Segal: "Ein Knie geht einsam durch die Welt./Es ist ein Knie, sonst nichts!/Es ist kein Baum! Es ist kein Zelt!/Es ist ein Knie, sonst nichts." And Morgenstern's bite, which is today far louder than his bark (louder perhaps than it has ever been), is worth calling to our students' attention. Who knows what they might learn?

DAVID BERTOLOTTI

TIME, SPACE & THINGS: CULTURE AS 3-D PUZZLE

Preface

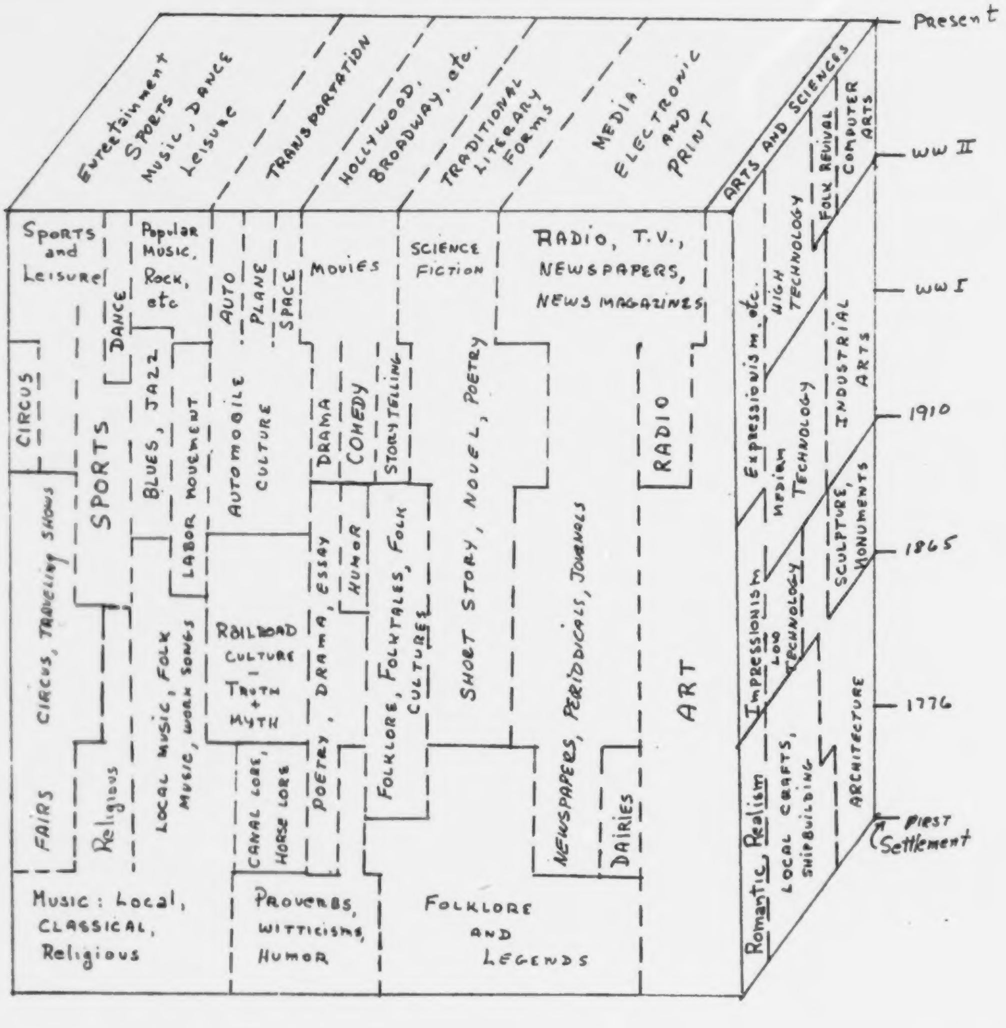
One reason for interdisciplinary humanities is to reflect in the classroom the complicated interrelations of real life. The more we separate aspects of cultural life to make study easier, the more we obscure (and even distort) the integrity of cultures. Conversely, the more we aim at totality, the more difficult disciplined study becomes. David Bertolotti, who teaches humanities to high ability engineering students, has developed a visual model to represent the relationships between the whole culture of an American region and the individual aspects of the whole. The examples, as he points out, are illustrative, but the model is adaptable to all cultures and time.

MODEL FOR THE STUDY OF REGIONALISM

There is one aspect of regionalism as an approach to the study of American culture which needs amplification: How can a region be adequately studied once that region has been defined?

Since the reasons for regionalism extend beyond the immediate search for the accumulation of and the presentation of knowledge as manifest in cultural icons and cultural activity, this model seems a coherent approach to indicate the amount of scholarly activity that is required. For students and researchers, it is necessary to know what about a region has already been researched, studied, and explained. It is equally important to know what has been ignored and, therefore implicitly, what must be pursued in further study. These considerations, coupled with the recognition of constantly emerging perspectives on completed research, demand a systematic approach for the mutual use and benefit of scholars, educators, students and others interested in American culture.

In order to achieve these ends, at least in part, I propose the following model as a method of organizing regional approach.



Entertainment
Sports
Music, Dance
Leisure
Transportation
Hollywood, Broadway, etc.
Traditional Literary Forms
Media: Electronic and Print
Arts and Sciences
Present
WW II
WW I
1910
1865
1776
First Settlement
Sports and Leisure
Popular Music, Rock, etc
Auto
Plane
Space
Movies
Science Fiction
Radio, T.V., Newspapers, News Magazines
Circus
Sports
Dance
Blues, Jazz
Labor Movement
Automobile Culture
Drama
Comedy
Storytelling
Short Story, Novel, Poetry
Radio
Circus, Traveling Shows
Local Music, Folk Music, Work Songs
Railroad Culture – Truth + Myth
Poetry, Drama, Essay
Humor
Folklore, Folktales, Folk Cultures
Newspapers, Periodicals, Journals
Art
Fairs
Religious
Canal Lore, Horse Lore
Newspapers
Dairies
Music: Local, Classical, Religious
Proverbs, Witticisms, Humor
Folklore and Legends
Expressionism, etc.
High Technology
Folk Revival
Computer Arts
Medium Technology
Industrial Arts
Impressionism
Low Technology
Sculpture, Monuments
Romantic, Realism
Local Crafts, Shipbuilding
Architecture

This model incorporates two essentials necessary to regionalism: time and space. Of course, the subject matter contained are for purposes of illustration only; however, a region took on an identity at some point in time and therefore time is an important cultural consideration. The space is filled by the matter of the culture itself; music, art, newspapers, cultural activities and other areas of study. Ultimately, each region is defined in terms of its specific dimensions of time and space. Obviously, each researcher must accommodate this model to specific subject, time and regional requirements.

Such an approach allows for accomplishing some of the following. **One**, it allows for a complete and comprehensive study of a region and, at the same time, avoids haphazard and capricious research which may result in misinterpretation of regional worth. **Two**, it allows for the creation of selected and direct perspectives on specific matter contained within a region. **Three**, it provides growth potential for interdisciplinary scholarship and research. **Four**, it avoids fragmentary, "hit-or-miss," accidental or coincidental research which may only have curiosity value. Not that curiosities are meaningless, but such value in and of itself may not be representative of cultural activity within a region. **Five**, it provides a coherent image of a region that others than those of academia can comprehend, thereby perhaps resulting in financial support, increased research material, and other such benefits. **Six**, it aids greatly in course development for those either beginning the classroom use of regionalism or those seeking to perfect and expand existing courses. **Seven**, it allows for concentrated and directed graduate study with minimal duplication. **Eight**, it generates coherent papers for panels, professional meetings, and journals. And, **nine**, it partially helps to explain the creation and exhibition, the buying and selling, the changing and altering, the developing and the demise, and the appearance and disappearance of much of American culture.

In conclusion, I suggest that any region is essentially a three dimensional puzzle, parts or all of which can be reconstructed through the study of as many of its facets that lie within reach of those willing to examine.

COPYRIGHT ISSUES IN THE HUMANITIES

BY FRANCIS M. NEVINS

ST. LOUIS UNIVERSITY
SCHOOL OF LAW

I: VIDEOCASSETTES IN THE CLASSROOM

THE PROBLEM:

For an American Studies course on the Frontier Heritage a professor checked out from the public library a videocassette of the movie SHANE. The class is taught in a large lecture hall for which playbacks are done from a central studio staffed by the university library's Media Division. The university library has a scrupulously conservative policy regarding copyright law, and playback was refused.

Is the library policy correct?

PROFESSOR NEVINS'REPLY:

The university library's refusal to play back the Shane videocassette was dead wrong, and the professor had a clear legal right under the Copyright Act to play the cassette in class, provided that the cassette was a lawfully made copy of the movie.

My conclusion is not based on the concept of fair use. If the only relevant legal criteria were the four vague factors which Section 107 of the Copyright Act tells courts to consider in deciding whether a particular use is fair, no one could say with certainty on which side of the line the Shane issue falls. Fortunately, there is a much more clear and precise provision of the Act which speaks directly to this issue, namely Section 110.

This lengthy section creates a series of blanket exemptions from copyright infringement liability in certain carefully defined situations. If a particular use comes within one of the exemptions, the fair use criteria need never be considered. And the classroom use of a lawfully made copy of a movie falls squarely within the first of the Section 110 exemptions.

Subsection 1 of Section 110 provides that copyright is not infringed by the "performance or display of a work by instructors or pupils in the course of face-to-face teaching activities of a nonprofit educational institution, in a classroom or similar place devoted to instruction...." The clearest instance of the conduct protected by this language is the classroom reading of a novel or story or poem that is still under copyright, and poetry teachers can rest assured that they can't be sued by Robert Frost's estate if they read "Stopping by Woods on a Snowy Evening" aloud to their students. The statutory language however is also broad enough, if taken in isolation, to protect the classroom "performance" of a copyrighted movie. But the next few lines of Subsection 1 make it clear that the above language doesn't settle the matter.

These lines were no doubt inserted into the statute at the urging of the motion picture industry. Their effect is to create an exception to the exemption "in the case of a motion picture or other audiovisual work, [where] the performance ... is given by means of a copy that was not lawfully made under this title, and that the person responsible for the performance knew or had reason to believe was not lawfully made."

In other words, the exemption doesn't apply if the professor knew or had reason to know that the copy he plays in class was unlawfully made. If the copy was lawfully made, or if it was unlawfully made but the professor didn't know this and had no reason to know it, the exemption does apply and the classroom use is legal.

The House Judiciary Committee report on the Copyright Act is fully in accord with this conclusion. The paragraph dealing with this issue reads as follows:

> "The final provision of clause (1) deals with the special problem of performances from unlawfully-made copies of motion pictures and other audiovisual works. The exemption is lost where the copy being used for a classroom performance was "not lawfully made under this title" and the person responsible for the performance knew or had reason to suspect as much. This special exception to the exemption would not apply to performances from lawfully-made copies, even if the copies were acquired from someone who had stolen or converted them, or if the performances were in violation of an agreement. However, though the performance would be exempt under section 110(1) in such cases, the copyright owner might have a cause of action against the unauthorized distributor under section 106(3), or against the person responsible for the performance, for breach of contract."

So much for the precise question asked. But my answer will probably suggest to many readers a variant of your question, namely, what if the cassette played in class was **not** bought from an authorized dealer but taped off the instructor's home TV set? In the recent Betamax case the U.S. Supreme Court decided---and I emphatically agree---that using one's videorecorder to tape copyrighted material off the air for later nonprofit viewing is not a violation of the Copyright Act. However, the Court made it clear that it was not ruling one way or the other on the legality of using such home-made cassettes outside the home. The fact that home-made videocassettes are lawful in the context of an infringement suit against the Betamax user does not necessarily mean that they are lawful for purposes of the Section 110(1) exemption. Thus, a conservative university might properly deny playback in that situation. But where the cassette was obtained from a legitimate outside source as the *Shane* cassette in your problem seems to have been, the university was clearly wrong to refuse to play it in class.

NOTE: NAHE members may submit copyright questions to the Editor of HUMANITIES EDUCATION. They will be forwarded to Professor Nevins for his consideration.

QUILL Grants as Educational Opportunity: Six Humanities Samples

QUILL (Quality in Liberal Learning) is a funding agency of the Association of American Colleges begun in 1977 as a joint venture of that organization and the Ford Foundation. In subsequent years such corporate giants as the Exxon Foundation and IBM have given modest support to the initiative. The current round of proposal solicitation has $45,000 to offer - hardly enough to make a university development office take notice. However, these grants have had a significant impact upon interdisciplinary instruction and particularly Humanities courses, though these are by no means the exclusive foci of funding. The current round is devoted to education for global awareness and science instruction for the non-scientist.

The first important limitation upon these funds is the type of curriculum or instructional approach chosen for a particular grant sequence. One's own special interest may not be represented for some time. The other limitation is upon the amount of funds to be granted, from $1,000 to $8,000. With a total source of less than $50,000 for each grant series, one can easily see that the lower end of that range is the more attractive to a committee trying to make the most of their money. According to the figures given for applications received and proposals funded, the ratio runs about one in nine.

There are genuine advantages to the QUILL guidelines. First, the support is for the revitalization of instruction. The competition is not among folks who are seeking travel opportunities or research support; it is among educators whose primary concern is what happens in a classroom. The "big names" in academia are automatically out of the running. The simplicity of the application should also be mentioned. Aside from a simple cover sheet and possibly a budget page, the narrative is limited to only three pages of single-spaced type. Obviously, some final report would be due the funding agency, if no more than as a simple courtesy, but long data filled prosecution-witness missals are unnecessary. The deadline for QUILL III has passed, but undoubtedly there will be many such offspring in the years to come. It is well worth obtaining the complete summary of past projects by writing to the AAC at 1818 R Street NW, Washington, D.C., 20009, and requesting the report of Project QUILL.

What are these projects like, and how do they involve the Humanities? To what populations might the educational format extend, and to what ends? The few selected projects which are described below give some answers to these questions and indicate something of the breadth of tactics and results which may be included in QUILL proposals.

Jacksonville University

The Mind: An Interdisciplinary Course Based Upon Theories of Mind Originating in Philosophy, Chemistry, Psychology, and Computer Technology. (Nov., 1979 - Apr., 1980) Contact Thomas J. Pauly, Jacksonville University, Jacksonville, FL 32211.

I begin with this one because I was one of the planning committee and attended a great many of the class sessions. Though some QUILL projects are single-time efforts, this one went for three sessions and will probably be resurrected as an honors seminar. Under a general Humanities label a philosopher presented divergent positions on the meaning of mind, contrasting past thought with the assumptions of behaviorism and identity theory. The psychologist centered on the scientific method used to address such questions, on visual perception as a case in point, on learning, and higher orders of mental capacities. The chemist developed a unit of work dealing with the nervous system and information processing. The computer specialist dealt with the nature of intelligence and its transferability to electronic processing devices. The enterprise retained some honest relationship with its Humanities designation by refocussing regularly upon value questions and fundamental human issues.

With four quite different people teaching four complete segments, coordination was the problem everyone expected it to be. Typical of many pioneer efforts, the class was ahead of the publication of useful student reading materials. Some excellent materials gave comprehensive views of the field; other elements had to be patched together from books intended for other uses.

As with the case of most QUILL projects, the participants thought the effort well worthwhile. My own favorite evaluation came from a student who remarked that he guessed he had grown up academically now that he was thinking about questions that were not answerable.

Bowling Green State University

Approaches to Value in a Technological Culture: An Interdisciplinary Program in the Humanities (June, 1979 - June, 1980) Contact Michael Moore, John Nachbar, or Thomas Klein, Bowling Green State University, Bowling Green, Ohio 43403.

This particular revision project carried ten hours of undergraduate credit and enrolled its first group of 23 students, predominantly freshmen. They met in a dormitory lounge and used summary-critiques, small group investigative projects, and two relevant units of the College Outcome Measures Project for evaluation in place of traditional examinations.

The course focussed upon the central dilemma of our time - whether the benefits of technology have outweighed the costs. A wide variety of attitudes toward this issue were studied, resulting in an attempted synthesis of the two factions. This large block of studies included a trip to the Henry Ford Museum, a GM foundry, guest lectures, interviews, films, and other learning strategies.

Aside from the content element, the course sharpened specific skills. Techniques of problem solving, recognition of assumptions and frames of reference, generalization from a base of specific facts, and organization of different orders of concepts were emphasized. Students were expected to gain skill with interpreting literature, the fine arts, philosophy, and popular culture, as well as understand how these disciplines answered key questions about the meaning of technology.

Meredith College

Can This Be Love? A Liberal Look at Tragic Passion (Nov., 1978 - Apr. 1979) Contact: Sarah M. Lemmon, Dean, Office of Continuing Education, Meredith College, Raleigh, NC 27611.

One area to which QUILL Grants have been applied is that of continuing education with out-of-school adults. Hence the catchy title of this offering. The format was a ten-week course, interdisciplinary and team-taught, centered around the theme of romantic passion in Western culture. The classic myths, medieval romances, and The Divine Comedy jostled companionably against modern novels and films. Faculty leaders represented literature, philosophy, religion, music, and French.

The article of faith upon which this course rested was belief in the lasting value of liberal studies and its relevance to the central concerns of our times. This message was intended for residents of an area much devoted to scientific, technological endeavors who failed to turn up in any number to hear it. Though students were numerous enough and receptive, they consisted mostly of the already converted.

Saint Mary's College of Maryland

Institute for Liberal Learning in Retirement (Sept., 1979 - May, 1980) Contact Christine Cihlar, St. Mary's College, St. Mary's City, MD 20686.

Planners of this venture dealt with a seemingly insurmountable disparity in educational levels among their students. They polled retired persons in the area as to their preferences for some educational experience, finding film and slide presentations running well ahead of lectures and discussions of a more rigorous nature. Undaunted, they planned a series of different types of presentations, one combined with a hot lunch program.

The first session offered four units on psychology, regional history, and the Shakesperean tradition. An evening session the second semester centered around Kenneth Clark's "Civilization" series in thirteen meetings, illustrating the potential for traditional cultural history approaches with such an audience. The diversity of sites, the integration of the programs with the life style and interests of the participants, and their involvement in the planning were strong points of this program.

Furman University

The Humanist in the Working World (Jan. - Mar., 1979) Contact Judith Gatlin, Director of Career Programs, Furman University, Greenville, NC, 29613.

Another area of the QUILL Grants has been in the interface between scholarly and business activities. The Furman project was unusual in that it sent faculty, not students, out to be interns for a summer. Professors of English, French, Spanish, history, political science, and art history worked for manufacturing, communications, and institutional organizations. The upshot of it all was a full day convocation devoted to exploring the relationship between scholarly endeavors and the needs of a working life. The intern faculty, recent graduates with work experience, and nearly 1400 students participated in a variety of career exploration formats. The project enhanced career advising and indicated skills that needed better development in graduates. It also strengthened faith in the efficacy of traditional liberal arts disciplines and provided an affirmation of their practical long range value.

Johnson County Community College

Topical Integration of Humanities and Career Education (Aug. 1978 - Mar. 1979) Contact Landon Kirchner, Johnson County Community College, Overland Park, KS 66210.

This project has elements not encountered in the foregoing ones - travel funds for staff, support for outside consultants, and production of videotapes for future use. The concept was to develop units of Humanities materials that would be integrated into existing courses in the career preparation programs. Efforts were centered upon nursing, business, and law enforcement; a philosopher and a historian were the developers of the Humanities materials. Many approaches were used. A teaching team on ethics and health care was formed. Case problems using real-life situations involving ethical choices were introduced in management courses. A unit on the history of police work and the changing definitions of crime was worked into the law enforcement program.

By and large, the predictable problems of effecting a complementary relationship between value-oriented studies and technical skills occurred. The burden of integration fell more on the career program instructor and required more time and effort than originally contemplated. However, the project was a sensible and workable answer to the burgeoning of career-related programs at the expense of equally significant liberal arts curriculum.

Summary: The QUILL Grants are a useful source for stimulating educational change. Though hardly sumptuous, the grants can purchase released time, teaching materials, services of consultants, and other significant items that make curricular innovation possible. They are easy to apply for, easy to administer, and well worth the time spent working up the application.

SHARON SCHOLL
JACKSONVILLE UNIVERSITY

DEFINING THE HUMANISTIC DISCIPLINES @$1.25

In each of the issues of HUMANITIES EDUCATION we have included among our abstracts of articles something from the magazine Federation Reports, subtitled The Journal of the State Humanities Councils. A particularly useful issue was the May, 1984 Special Issue, containing a section entitled "Current Issues in the Humanities." Eight essays are included, each defining one or more disciplines and explaining issues and movements within the disciplines, with suggestions of topics, themes and approaches for using experts and ideas in public humanities programs.

At $1.25, this is a bargain not to be passed up (ordering information is as usual in our Abstracts section). What might you gain?

*Jean Owens Schaefer will tell you about marxist and feminist approaches to art history, and ways to integrate arts and art history in public programs.

*Joseph M. Williams discusses bilingualism, dialects, and how to get people to discuss the quality of prose.

*Fannie J. LeMoine provides revised views of the Latin world and tells of promising approaches in teaching classical languages.

*David Wyatt will give you (at last) a readable explanation of structuralism -- and other critical schools.

Other articles are on anthropology, ethics, religious studies, women's studies and ethnic studies. Most have suggestions for further readings. How might you use this Special Issue? Certainly if you are working on a grant proposal for your state council (or committee or commission) you could get ideas for employing special disciplines that you hadn't thought of, and you might even get a humanist-specialist to find a way to teach outside of classroom. In the classroom an essay might be valuable for making students think about humanities as a profession as well as a subject. In your curriculum committees, this could be a way toward assessing just how up-to-date course content is, or isn't. (F.S.)

UPCOMING

The **Southern Humanities Conference**, which includes among its membership many members of NAHE, will hold its annual conference January 31 - February 2, 1985. Sponsored by Emory University, Spelman College, and Georgia Institute of Technology, the 1985 meeting will be held on the Georgia Tech campus close to downtown Atlanta. The program will include papers on various aspects of the theme "The Humanities in International Perspective," such as "the Humanities in socialist/Marxist states," "the Humanities in Third World countries," the Humanities and human rights," "humanist responses to terrorism," "the international art market," "the challenge of preserving cultural treasures," "translating the Humanities," and "the Humanities text as cultural exchange object." For information, write to:

Dr. Robert Detweiler
Graduate Institute of the Liberal Arts
Emory University
Atlanta, GA 30322

If you are in the New York metropolitan area, or if you have a particular interest in the interpretation of history in museums, consider **Past Meets Present**, October 7-9, 1984. This national multidisciplinary conference will consider visions of the past as presented in museums, historic sites and landmark districts. Open to scholars, curators, educators and designers working in interpretive exhibitions. Contact Jo Blatti, Project Director, New York Council for the Humanities, Rm. 204, 33 W. 42nd St., New York, N.Y. 10036.

The **American Culture Association** national convention will be held in Louisville April 3-7. One of the sectional areas is "Pedagogy and American Culture." Abstracts of proposals for papers and panels on interdisciplinary teaching as well as historical studies are welcome. Send your 200-word abstract by October 1, 1984 to: Dr. Marie Campbell, English Department, Mount St. Mary's College, Emmitsburg, MD 21727. For information on the convention which meets with the Popular Culture Association with over one thousand participants covering a wide spectrum of cultural, historical and social topics, request information from ACA/PCA, Popular Culture Building, Bowling Green State University, Bowling Green OH 43403.

The **Association for Integrative Studies** will be meeting concurrently with the Association for General and Liberal Studies in San Francisco October 25-27. For registration and program information write to Dr. Michael Davis, Office of the Academic Vice-President, University of the Pacific, Stockton CA 95211. There will be many sessions relating to integrated humanities.

Interface '84, the Eighth Annual Humanities and Technology Conference will also meet October 25-26 in Marietta Georgia. For information, write to Becky Kelly, Department of English and History, Southern Technical Institute, Marietta GA 30060. NAHE has met jointly with the Interface conference in the past and we highly recommend this to members in the southeastern area.

In the Southwest, the **Arizona Humanities Association** will be meeting jointly with the Arizona Arts Alliance in Tucson November 29 - December 1. The conference theme is "Art as A Lifelong Experience." Paper proposals for the conferences and 700-word articles may be submitted up to August 15 to our indefatigable NAHE President, who is also president of AHA and Editor of the Arizona Humanities Association magazine. Inquiries and correspondence should go to Dr. Vasant Merchant, AHA, Box 6031, NAU, Flagstaff AZ 86011.

Another October conference on a fascinating topic will be held at the State University of New York at Binghamton. This is on **Medievalism in American Culture**, with such topics as "The Medieval Heritage in American Religious Architecture," and "King Arthur and Camelot, USA in the Twentieth Century." The Conference is October 19-20. For information, write to Professors Bernard Rosenthal and Paul E. Szarmach, 1984 Conference Coordinators, Center for Medieval and Early Renaissance Studies, State University of New York at Binghamton, Binghamton, New York 13901.

NEWS ABOUT MEMBERS

Among many exciting programs at the Tampa Museum, INEZ WOLINS has developed a Teachers Resource Guide to the Ancient World of styles and lifestyles in art and daily life in Egypt, Greece and Rome. DAVID H. STRINGER is gathering material for a projected book on "Humanities in the High Schools" and will welcome any resources and information you might want to recommend. Send to him at Huron High School, 2133 Brockman, Ann Arbor MI 48104. KAY B. JABUSCH is now President-Elect of the Utah Council for Humanities Education. And speaking of presidents-elect, FRED SCHROEDER has been elected to serve as a member of the Minnesota Humanities Commission. Contributing Editor BURTON RAFFEL will be on the editorial board of a new journal called ORAL TRADITION. JEREMIAH REEDY spent much of the summer as advisor to a group of student scholars in Italy under Minnesota's SPAN program for students from several colleges and universities.

EDITORIAL: INTERDISCIPLINES AND ART MUSEUMS

Interdisciplinarity can be a frightening, even threatening term to persons whose training and inclinations are specialized. This is not unreasonable, especially as so many of us interdisciplinary true believers advocate total integration of the curriculum, or we assume adversary positions, taking easy potshots at people who don't do things as we would, or we talk about abstruse methodologies of integration, or we make irresponsible demands for expensive remedies like team-teaching and multimedia extravaganzas.

Yet little acts of integration can be as signifcant as global gestalt. Recently we visited the new Dallas Museum of Fine Art, noting two good examples of art history begging for interdisciplinary connections. The first was a Japanese painting. The label stated that it was by Enomoto Kikaku, Japanese 1661-1707, "Mushrooms", a haiku poem, Edo Period, ink on paper.

There was no translation of the poem.

The second was an exhibit prepared by the Museum of Textiles of Washington D.C. on "Lords of Chimor: Textiles from Peru's North Coast." The textiles were impressive and immense, most being coordinated sets of loin cloths, cloaks and tunics, spread out against the walls in glass cases. The label texts provided geographical and historical background, but, in the manner of art history, primarily chronicled the development of decorative motifs. Funding by the National Endowment for the Humanities.

Nothing showed how these huge costumes were worn, or how the textiles were woven.

Our criticism is not that all visual arts should be given interdisciplinary connections, but that these examples are of arts that never were visual arts alone. Indeed, both are instances of the naturalness of some interdisciplinary connections. It is not a mere oversight that the connections were not made. It is deliberate distortion. Not deliberate because of conscious refusal to interpret fully, but by the deliberate narrowness of the art history curatorial tradition.

The connections we speak of may be small, but they are not simple. Chances are that they indicate the need for more specialists, a translator of Japanese calligraphy and a poet for the first, and possibly an ethnologist for the other, because a label indicated that how the Peruvian costumes were worn is unknown. But the average American does not even know how a loin cloth is worn, nor how surviving traditional costumes in Peru are worn, nor what other ancient visual arts might document about past styles. We do know, though, that clothing is made to be worn.

Our real point, however, is that interdisciplinarity in the arts and humanities is a matter of being alert to the things and moments where categorical disciplines are inadequate by themselves. With such alertness, the next steps become as natural as the integrated whole that triggered the question.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Senior Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to redraw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one or two pages (300-700 words) for practical tips, sample assignments, commentaries, etc.; and articles of four to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

*THEORY "Piaget and Theories of Integrated Study"

*ADMINISTRATION "Crediting Departments for Team Teaching"

*HISTORY "Nineteenth-Century Multi-Media at Chautauqua"

*RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

*"What you should know about teaching novels in a philosophy course"

*"Pre-teaching history students for an art museum field trip"

*"How to help non-musicians to follow a score"

*"A designer speaks of humanities bulletin boards"

*"Getting adults to role-play in public humanities programs"

*"Understanding Oedipus: An Actor's View"

What we don't want:

*Creative writing by teachers or students (it doesn't relate to our purpose)

*Syllabus outlines (curricula should be explained, not listed)

*"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

*"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

*"Humanistic counseling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

HUMANITIES EDUCATION

Dedicated to the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions.

HUMANITIES EDUCATION is published by the National Association for Humanities Education

with editorial offices at the Department of Philosophy & Humanities

University of Minnesota, Duluth, Duluth, MN 55812

The University of Minnesota is an Equal Opportunity Educator and Employer.

VOLUME TWO: NUMBER ONE: JANUARY, 1985

STAFF

EDITOR: Fred E.H. Schroeder, Professor of Humanities, University of Minnesota-Duluth

ASSOCIATE EDITORS: Sharon Scholl, Professor of Humanities, Jacksonville University; Susan Coultrap-McQuin, Assistant Professor of Humanities and Women's Studies and Director of Women's Studies, University of Minnesota-Duluth

ASSISTANT EDITOR: Avis Hedin, Senior Word Processor Operator, College of Science and Engineering, University of Minnesota-Duluth

CONTRIBUTING EDITORS: Francis M. Nevins, Professor of Law, St. Louis University School of Law; Burton Raffel, Professor of English, University of Denver

Published three times annually by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Assistance for the production of HUMANITIES EDUCATION has been provided by the College of Letters and Social Science, UMD, Robert Franz, Acting Dean.

FROM THE EDITOR

This issue of HUMANITIES EDUCATION is experimenting with several changes in format. We have contracted with a small business that employs handicapped workers to seal each copy in plastic. For the first time we are mailing at bulk rate. Both should prove to be significant economies, but we want to be certain that subscribers are receiving satisfactory service. A random selection of subscribers will assist us in evaluating these changes. In response to reader suggestions, we now place a table of contents and date on the cover page.

Any economies will be profoundly influenced by the scheduled rise in postal rates. It seems inevitable that our membership-subscription rate must rise, but we are holding back until we can assure you of increased benefits. In the meantime, one extra benefit is being provided at no extra cost. All NAHE members will receive copies of the Southern Humanities Conference's biannual newsletter, HUMANITIES IN THE SOUTH. Your first copy should arrive before summer.

CONTRIBUTOR INFORMATION

Contributors should consult the Editorial Policies sheet carefully. As will be seen, HE is wide-ranging, quite permissive and has no "party line" in respect to definitions of **humanities**, **interdisciplinary** and **education**, but the wide boundaries are nonetheless firm. Please do not submit articles over ten pages long unless you are planning to revise. We particularly seek brief (1-4 page) items of a "how-to" nature for CONNECTIONS. Deadline for Spring is Washington's Birthday; deadline for Fall, the Fourth of July; deadline for Winter, Columbus Day.

TEACHING HISTORY THROUGH LITERATURE

The European Novel as Focal Point in "Western Civ" Introductory Surveys

In recent years the privileged position of history in the college curriculum has largely disappeared. During the turbulent era of campus activism many schools acceded to student pressure for greater freedom of choice by eliminating such requirements as the traditional survey of Western Civilization, which had been the staple of most history departments since the 1920's. With the survey no longer mandatory in most institutions, students began to desert history classrooms in favor of courses with more trendy or pragmatic appeal.

Of late, however, it has become apparent that to continue the laissez-faire approach of the late 1960's is an indulgence we can no longer afford. The Carnegie Commission has concluded on the basis of currently available evidence that the lack of historical understanding typical of many college graduates today puts at serious risk the very concept of the liberally educated person, which has for generations been the *sine qua non* of a democratic society. Clearly a meaningful course of general significance must be developed to serve as the kind of building block which was once the function of the old "Western Civ" survey. Indeed, many universities have recently moved to restore a valid introductory course for undergraduates who sadly lack any understanding of the roots of modern culture. History departments, which generally have been assigned responsibility for developing such a course, have debated its contents with uncommon vivacity. Could the old ideas which lay at the heart of the discarded survey be resurrected, or was a massive refurbishment necessary to make the course meaningful to a student population obsessed with relevance and passionate only about what is useful and practical?

Two years ago the Pennsylvania State University re-introduced a general survey course subtitled "Western Heritage." While not yet a requirement, the course has quickly become a cornerstone of the undergraduate curriculum, with most students electing it, not admittedly from personal enthusiasm but rather as a means of fulfilling their humanities requirement. Western Heritage I deals with ancient, medieval and early modern Europe, while WHII covers the period from 1700 to the present. As modern European historians, we were assigned to the latter course. Because of the broad scope of the course, we were reluctant to embark on a rerun of the political approach which had led to the death of the traditional survey. In our preliminary planning sessions we therefore made the decision to discard the old model and instead to construct a course which would reflect an essentially humanistic perspective. If, as has been demonstrated convincingly in recent research by Evelyn Grant and John Napus, a cultural or aesthetic emphasis is as successful in terms of student mastery of material as the more traditional political approach, then we felt justified in reshaping the survey so that the "mentalite" of an era, expressed primarily in the works of its creative artists, would be the focus of concern, even at the expense of the political narrative which we had once favored. This led to a critical choice at the outset. The principal burden of the new course, we decided, would be borne by the European novel, around which the course would be constructed.

We had in the past often assigned novels in various courses as a method of enriching content. We had been struck by the power of the novel not only to illuminate an obscure period but to enlarge the empathic capacity of students as well. Now we proposed to use the novel not as supplementary reading but instead as the focal point of the syllabus, the core around which the course itself would be built and the springboard for classroom discussion from which the thematic shape of the survey would inevitably grow. A textbook would be used to provide continuity and as a minimal frame of reference. But it was a series of novels which would constitute the major material of the course, serving indeed as our principal historical source. In a recent article Milan Kundera has written that the novel's *raison d'etre* is to keep the world of concrete living constantly before our eyes and to protect us from the "forgetting of being," by connecting the past with the future. If this was so, then a nexus was at hand to link our totally ahistorical students with the generations which have preceded them and ultimately to acquaint them with the dilemmas which lie at the heart of every society, whatever the century.

At the start we reduced the course to a manageable series of themes and drew up a list of novels which reflected each of these themes. Our framework for the fifteen-week semester was as follows:

Unit I: The Quest for Enlightenment--Voltaire, *Candide*
Unit II: Revolution and War--Anatole France, *The Gods Will Have Blood*
Unit III: Industrial Transformation--Dickens, *Hard Times*
Unit IV: Expansion and Empire--Conrad, *Heart of Darkness*
Unit V: Twentieth Century Warfare--Remarque, *All Quiet on the Western Front*
Unit VI: The Rise of Totalitarianism--Kafka, *The Castle*
Unit VII: The Political/Moral Aftermath--Solzhenitsyn, *The First Circle*

* * * * * * * *

The first of our units centered upon themes suggested by a reading of Candide, our introduction to a study of the Enlightenment. Candide's characters, dialogue, and episodes possess a delightful cartoon-like quality with immediate appeal to students. The class found the novel surprisingly accessible and easily perceived; for example in the persistence and tenacity of those prejudices and stereotypes which Voltaire provides in abundance. Indeed, Voltaire appears very modern in his existential acceptance of evil and suffering and in his depiction of religion as sanctifier of the status quo. His satiric view of the absurdity of life drew spontaneous concurrence in class. Even his final conclusion that people must not despair, that they must act in the face of evil and catastrophe was greeted with a sense of recognition by students; and his admonition to "cultivate our own garden" rang with special resonance in a classroom filled with the career-oriented generation of the 1980's.

We discovered in the course of our presentation that a number of aids were at hand to enhance both comprehension and enjoyment. For example, Leonard Bernstein's musical version of Candide was played, to considerable applause. To illustrate the tragedy of the Lisbon Earthquake, contemporary accounts drawn from the historical record were contrasted with Voltaire's dramatic poem. Not only was the tragic dimension of this and similar catastrophes conveyed, but the larger question of God's design in unleashing flood and pestilence upon the world was also examined, both through the eyes of the eighteenth century and in its modern application as well. Candide not only mirrored an earlier society and its ideas, but became as well a font of philosophical speculation with universal implications. Students enjoyed weighing the merits of passivity and activism, of resignation and rebellion. Such discussion led quite naturally to the next of our units which centered upon the revolutionary upheaval beginning in France in 1789 and spreading thereafter to the rest of the world.

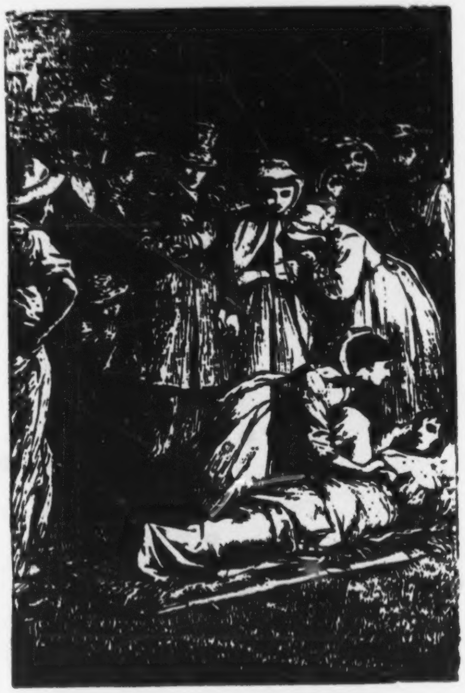
The inadequacies of the religious/political Establishment of the 18th century which ultimately erupted in the cataclysm of modern Revolution was well represented by Anatole France's The Gods Will Have Blood. We began by discussing the general nature of revolution, using the theoretical construction of Crane Brinton's Anatomy of Revolution, which compares and contrasts the English, American, French and Russian Revolutions. Students responded so well to Brinton's analysis that they were able to fit modern events including the civil war in Ulster, the Iranian upheaval, and the unrest in Latin America into his schema. Having thus established a theoretical framework, we moved on to the events of 1789 in France, as depicted in The Gods Will Have Blood. The central question of revolutionary fanaticism is illustrated through the juxtaposition of two major characters, Brotteaux des Ilettes, the cultured aristocrat, and Evariste Gamelin, the poor artist. Brotteaux, a cynical aesthete, emerges nonetheless as a decent and humane person; while Gamelin, a worshipper of the abstract ideals of Rousseau, ultimately became a destroyer of people. Unable to bridge the gap between idealism and human frailty, Gamelin appears the prototype of the young terrorists of the present who justify the slaughter of innocents in the name of utopian "justice." The character proved fascinating enough that the complexities of the Revolution in which he was enmeshed became accessible to the class: the struggle between the Girondins and the Mountain, the triumph of Robespierre, the war, and the rise of Napoleon to eminence. Students came to see the revolutionary era in its full dimension: as a matrix giving birth to new institutions and releasing energies which were destined to transform the world.

To illuminate the third of our major themes--the transformation of an agrarian society by the invention of machines--our choice was Dickens' Hard Times, a novel which perfectly captures the climate of early industrialization and suggests as well many of the dilemmas which confront all societies in transition. For Dickens, by recreating the ambience of early industrial England with such striking verisimilitude, has in effect provided a universal model whose implications extend well beyond the actual milieu and time frame of the novel itself. Thus instead of reciting the usual statistics of economic development in preface to a study of industrialization, we launched the students on a tour of Coketown, a "town of machinery and tall chimneys" where "killing airs and gases" filled the lungs of the workers as they passed "to and from their nests, like ants or beetles." We heard the "rattling and trembling of the steam engines' pistons," and observed "a sun eternally in eclipse through a medium of smoked glass." Because many of our students are products of working class Philadelphia, Dickens' evocation of polluted rivers, teeming mills, and stunted lives conjured up all too familiar scenes. It brought instantly to many minds the fetid air of industrial Fishtown and Manayunk, the poisonous waters of the Schuylkill River which currently serves industries along its bank as a convenient sewer, the nuclear wastes of nearby Three Mile Island, and the generally monotonous regimentation of blue collar life. Because all of these images lie well within the parameters of their personal experience, few students fail to see how the economic forces reshaping the nineteenth century world have equally affected their own lives in the twentieth.

Hard Times suggests as well that the unresolved social problems of the present have their origins in an earlier society, thus establishing for the student an historical frame of reference which is essential to the development of a mature perspective. Dickens' classrooms, where "little vessels" were daily filled with "imperial gallons of facts" in preparation for life in a mechanistic society evoked immediate recognition. Most were able to grasp the way in which institutions such as schools reflect a society's basic values and are frequently used to reinforce the prevailing ideology. The concept of social class, so crucial to an understanding of modern history, is also illustrated in Hard Times, characters such as Mrs. Sparsit, Isaiah Bounderby, and Stephen Blackpool standing as prototypes of their respective strata--whether redundant aristocrat, ruthless bourgeois, or exploited proletarian. Each provides a valuable human equivalent for the abstract generalizations upon which a survey course is necessarily built. Explaining such concepts as capitalism and socialism, Chartism and Social Darwinism becomes an easier task if one can substitute Blackpool for proletarian and Bounderby for capitalist.

Students, when asked to comment on the concerns of Dickens' day which remain unresolved today, quite correctly point to atmospheric pollution and ecological damage, noting also that the "black canals" and the river that "ran purple with ill-smelling dye" in Coketown have been supplanted by the chemical waste dumps and Love Canals of the present.

In sum, Hard Times opens a window on the social, economic and cultural trends which have developed in the wake of the industrial revolution and which have deeply affected all subsequent generations, including our own. Moreover it leads quite naturally to the next of our basic course themes--the expansion of Europe into the wider world of Asia and Africa in the late nineteenth century. Clearly the motives which impelled Europeans to export their values along with their products to the rest of the world have their roots in the economy of Coketown: the need of industry for cheap raw materials, the necessity of exporting manufactured goods, the thirst of millions of regimented factory hands leading drab lives for the vicarious thrills and excitement provided by the imperial thrust into the world's exotic places.



Stephen Blackpool recovered from the Old Hell Shaft

Heart of Darkness serves as the cornerstone of an examination of European imperialism, revealing not only motives but costs as well. It is a novel which may be taught on many levels. The historical data which it incorporates is easily authenticated: the mistreatment and exploitation of Africans on the rubber plantations of the Congo Basin, the quasi-governmental role of private trading companies established to enrich European investors at the expense of the indigenes, the collusion of African tribal authority in the debasement of fellow blacks, and the brutalization of Europeans themselves as exemplified by the tragedy of Kurtz. While the voracious appetite for territory and power which stimulated European expansion is portrayed with fidelity, Conrad does not scant the desire to enlighten and to uplift which played an equally important role in the conquest of what he variously describes as the "blank spaces on the earth" and as "a white patch for a boy to dream gloriously over." It is the inevitable perversion of that humanitarian impulse and the destructive effects of the unequal encounter upon both conqueror and victim which Conrad reveals with such deadly prescience.

Thus Conrad's portrait of life in the Congo in the late nineteenth century can serve as a springboard for classroom consideration of a host of political, economic, and moral problems. Did excess capital formation in Europe predetermine the pattern of expansion, as theorists such as Hobson and Lenin maintained? Were there positive benefits, too, which stemmed from the imposition of European rule: the codification of law; an end to such practices as infanticide, female circumcision, and tribal slavery; improved health and sanitation facilities? Or did the violence implicit in the imposition of European control become a self-fulfilling prophecy, as Frantz Fanon maintained in The Wretched of the Earth? Moreover, the continuing drama of modernization, set in motion by the collapse of traditional Afro-Asian societies and by the impact of new ideas and technology derived from Western practice remains unfinished. Students discover daily in newspaper headlines and magazine articles that bitterness and controversy characterize relations between nations of the prosperous "North" and the impoverished "South," that "imperialism" remains a damning phrase in the Third World, and that the unresolved tensions of the nineteenth century are still at work in Central America, Middle Asia, and Southern Africa--in short, wherever haves and have-nots encounter each other within the eroding framework of traditional tribal or village life.

The last three units of the course are devoted to a survey of the critical movements of the twentieth century. As one might expect, tragedy on an epic scale lies at the core of the three units in which we explore such specifics as the First and Second World Wars, the enduring impact of totalitarian forms such as Fascism and Communism, the Holocaust, and the shadow cast by the use of the nuclear bomb. Initially we anticipated that the interest of students would be heightened as we approached events which occurred in their parents' or their own lifetimes. Instead we encountered unexpected difficulty in our exploration of twentieth century history as it is prismatically reflected in All Quiet on the Western Front, The Castle, and The First Circle. The difficulty may perhaps be explained by the fact that our students have been subtly shaped by the forces of consumerism, hedonism, and parochialism which are today endemic in American life. Strangers to suffering and sacrifice, these children of relative affluence find it hard to summon forth the feelings of pity and awe with which the history of humanity in the twentieth century must be approached.

Thus it becomes a test of the teacher's craft, when dealing with such an epochal event as World War I, to make students aware that it was the first of the body-count wars, in which mass death and biological slaughter entered the collective unconscious of Westerners and became realistic possibilities in future. The hero of All Quiet on the Western Front, Paul Baumer, becomes a prototype of all of the millions of young soldiers who were deemed expendable in the name of ill-defined national purposes. Just as Anne Frank made the Holocaust meaningful to people immune to statistical proofs, so, too, does Baumer personalize the waste of young manhood which has been a continuing feature of a war-ridden century, a circumstance not without meaning for the young people in our classrooms. Moreover, the demoralization of Western peoples rising out of the ruins of the war makes comprehensible the genesis of totalitarian states in which all-powerful bureaucracies offered "escape from freedom" to those for whom the burden of Western history and values has proved too great.

Kafka's novel The Castle was presented to the class primarily as a reflection of the interior landscape of twentieth-century people. The intellectual heritage of Einstein and Freud, together with the despair engendered by the destruction of war, left human beings adrift in a hostile universe, without identity or certainty. Einstein in his theory of relativity dispelled the orderly, rational world posited on unchanging physical laws, while Freud destroyed the belief that reason alone could prevail, by exposing the force of the unconscious. Kafka's hero "K" must enter the Castle, but he is not sure how to do so. He has an appointment as Land Surveyor, but he has no real job, nor an office in which to work. He remains adrift, frustrated in his quest to enter the Castle, to assume an identity, or to become an integral part of the community. For students, "K" quickly becomes Everyperson--lonely, alienated from nature, separated from roots, displaced by machines, and submerged in the enormity of the modern state. Though the novel mirrors the despair of people grappling with anomie and searching for their identity in the midst of 1920's style prosperity, it also foreshadows the rise of totalitarian ideologies which would be fueled by the miseries of the 1930's. Such ideologies represented an escape for those unable to cope with the frustrations of modern life. Thus a study of the novel prepares students for the age of the dictators and for the rise of bureaucratic oligarchies with absolute power over others.

The final unit of the course is built around The First Circle, a novel which effectively authenticates the terrors glimpsed intuitively by Kafka. The fate of the individual within a totalitarian society, whether Red or Black, has been the theme of some of the greatest writers of the century including Arthur Koestler, Ignazio Silone, Andre Malraux, Guenter Grass, and Eli Wiesel. Solzhenitsyn's anti-Soviet hero shares the faith of Silone's anti-fascist protagonist in Bread and Wine: "Freedom is not something you get as a present. . . . You can live in a dictatorship and be free--on one condition: that you fight the dictatorship. The man who thinks with his own mind and keeps it uncorrupted is free." The First Circle also raises a number of ethical and moral questions with special meaning for students to whom Auschwitz and the Gulag appear as remote as the moon. For such students it is essential that there be some understanding of the high price paid by those who have dared to reassert the rights of humanity in the face of Fascist or Stalinist brutality. The First Circle becomes, therefore, the matrix out of which grows comprehension of the motives of dissenters, an appreciation of the dilemmas which confront all people living within repressive societies, and an understanding of the manner in which modern technology and science have increased the reach of the State and enabled it to penetrate the innermost sanctum of the individual's life and identity.

In the course of discussion prompted by this novel, we explored the anguish of ordinary people caught in the grip of a classic dictatorship: German physicians ordered to implement euthanasia laws, Italian professors pressured to take oaths of loyalty to Mussolini, soldiers ordered to shoot civilians, Jewish sonderkommandos compelled to work in gas chambers, Polish and Czech workers forced to accommodate Russian hegemony. In such discussions students experience not only the trauma of choice, but they learn as well the power of those forces in every society which promote conformity rather than rebellion. Thus does the sacrifice of succeeding generations of dissenters, from the German students of the White Rose "Conspiracy" of 1943 to the Refuseniks of Soviet Russia today, become a living manifestation of the Western Heritage and a celebration of the values of freedom and individuality which students are finally able to recognize as its central core.

* * * * * * * * *

In our two years of experimentation with what some have facetiously dubbed a miscegenation of fact and fiction, we have been confirmed in our belief that fusing European history and literature is not only possible but eminently practical. Fears are often expressed by historians that literary characters and situations may overpower factual material and that the historical method itself will be fatally compromised by the introduction of emotion-laden, subjective material drawn from great novels. Pitfalls, it must be admitted, abound. No one can deny that Dickens' Hard times is more interesting to freshmen and sophomores than T.S. Ashton's fact-laden The Industrial Revolution or David Landes' magisterial The Unbound Prometheus. But if Dickens succeeds in firing the imagination and in opening the student's mind to a broad range of images and conceptions, it then becomes the instructor's task to extend the reach of that imagination and to enlarge the opening of that mind. This obviously can best be done by incorporating within one's classroom presentation analytical data and interpretive material drawn from a variety of historically impeccable sources, (including Ashton and Landes). Such an approach insures that the emotional power of great literature will not be invoked randomly, but rather as a means of establishing a human model and of generating the empathic sensitivity without which there can be no genuine historical understanding.

HUMANITIES AND HIGH SCHOOL REFORM

Criticism is Abundant:

Integrated Humanities May Be an Answer

Adler, Mortimer. *The Paideia Proposal*. New York: MacMillan Co., 1983.

Boyer, Ernest. *High School: A Report on Secondary Education in America*. New York: Harper and Row, 1983.

Bruner, Jerome. *The Process of Education*. New York: Vintage Books, 1960.

Sizer, Theodore. *Horace's Compromise: The Dilemma of the American High School*. Boston: Houghton Mifflin, 1984.

Whitehead, Alfred North. *The Aims of Education*. New York: Mentor Books, 1929.

The reports examining American high schools published in 1983 and 1984 share a call for improving the intellectual quality of education. The essential complaint, by and large, is that American high schools are not doing enough to train and fill the minds of their students. The emphasis in the reports varies, however, some focusing on pedagogy, others on curriculum, some on the subjects presented, others on the actual experiences and behavior of teachers and students. The unanimity amid diversity of the reports and the often contradictory suggestions may leave local reformers perplexed. So much of the criticism is valid, and so many of the suggestions sound like good ideas; but how can one reform a curriculum when the advice is so disparate? Is the answer in quantity--requiring more math and more English--or is it more important to improve the way classes are taught? Should the schools focus exclusively on the cultivation of intellectual life, or should that cultivation coexist with some of the traditional purposes of the high school in preparing students for vocations, citizenship, and social service? Does the focus on the intellect mean a reduction of the kind of social support and social meaning that many students find as members of the school-as-community, or does it simply mean a reduction of distracting bureaucratic nonsense? Reading several of the reports may energize speculation but confuse understanding.

Two of the reports, High School by Ernest L. Boyer and Horace's Compromise by Theodore R. Sizer, illustrate this diversity most clearly, for while they agree that the high schools lack an intellectual life, they approach the problem with very different values and assumptions. Boyer's main emphasis is on the scope, sequence and integration of the curriculum, and he sees that the most important purpose of the schools is to prepare young people to play their roles as members of their community and of the human race. Sizer, on the other hand, is more interested in the education of the individual. He minimizes society's claim on the individual, and he sees the cultivation of thinking abilities through good teaching as most important, with the scope, sequence and integration of the curriculum as distinctly secondary considerations. Both Sizer and Boyer make good sense, but can their ideas be reconciled within a single curriculum response?

I wish to suggest in this essay that a course in the humanities can meet the central criticism of both Boyer and Sizer, and furthermore can harmonize at least some of their suggestions. While much of the emphasis, at least in the popular press, has been on needed improvements in the teaching of science, mathematics and technology, the major reports themselves place significant emphasis on the knowledge, abilities and inclinations traditionally associated with the humanities. The importance of the humanities was itself eloquently presented in a 1980 publication, The Humanities in American Life, produced by the Commission on the Humanities and written, in large measure, by the late Charles Frankel. While humanities programs differ in form and in substance, they all communicate in some way what Frankel describes as "how people have tried to make moral, spiritual, and intellectual sense of a world in which irrationality, despair, loneliness, and death are as conspicuous as birth, friendship, hope, and reason" (p. 1). This exploration of what it means to be human pervades the diversity of approaches to the humanities. Three features, however, are essential and distinctive to humanities programs, and these features show us a way to satisfy both Boyer and Sizer:

1. A humanities program deals with broad questions of human meaning and purpose, in our roles as individuals, as members of societies, and as members of the human race.
2. A humanities program is interdisciplinary. It thus can examine relationships among different humanistic disciplines, and it can present the intellectual perspectives of different disciplines on large questions and problems which transcend separate academic

disciplines. Team teaching is strongly implied by this interdisciplinary approach.

3. A humanities program strongly emphasizes critical thinking, mainly through classroom discussions. (The use of student essays is, of course, another way humanities programs emphasize critical thinking, but the relationship between writing and thinking is itself a large subject, beyond the scope of this essay. Sizer himself says that "exercises in writing should be the center of schooling" (p. 104), but he does little to develop the idea beyond saying that writing is the record of the sequence of one's thoughts. *College Thinking* by Jack W. Meiland (New York: Mentor, 1981) develops a very clear format by which the mode of argumentative thinking can be embodied in an essay. Peter Elbow's *Writing Without Teachers* (New York: Oxford University Press, 1973) describes vividly how the act of writing leads to the formation of thinking, as opposed to the notion that we form ideas first and then write them down. *Empty Pages* by Clifton Fadiman and James Howard (Belmont, CA: Pitman Learning, 1979) is a thorough and thoughtful discussion of writing and critical thinking.)

While all humanities programs do not share these three features, many do, and I am arguing here that a program with these features can meet the major criticisms of both Boyer and Sizer.

As mentioned earlier, Boyer's main criticism, beyond the obvious point about the need for literacy, has to do with the lack of integration in the curriculum. He advocates a "core of common learnings--a program of required courses. . .--to extend the knowledge and broaden the perspective of every student" (p. 94). He values "global thinking," by which he means not simply awareness of the geopolitical whole but also of our own heritage and the heritage of other nations, and he laments current narrowness and self-centeredness in students. Boyer expects students to be cognizant of ideas which he sees as essential: enduring works of literature; people, issues and ideas in American history; the "rich tradition of thought, culture and political experimentation of Western European Civilization" (p. 102); as well as civics, the natural world, mathematics, foreign language, and more. A central purpose of the curriculum, then, is to connect students to the larger world.

Boyer's intellectual values here are obvious. He wants students to have knowledge, but in his discussion of core curriculum he does not deal directly with the higher order of intellectual skills and attitudes which Sizer emphasizes. While Boyer does devote a chapter, "Instruction: A Time To Learn," to the issue of good pedagogy, there he draws largely on Adler's ideas in Paideia Proposal,* and he is clearly more interested in presenting subject matter than in thinking itself. Boyer advocates provocative and lively Socratic discussions and laments teaching which simply covers the material. He says, "Students suffer from information overload," (p. 146) but it is not at all clear how his very full curriculum would not add to that overload.

One way to avoid such overload is to present the information, as Jerome Bruner suggests, in the context of the structure of a discipline. Boyer goes a step further. He calls for an ever larger sense of coherence, one which presents students with inter-relationships: how the information is related, and how the disciplines themselves are related. He objects to "the compartmentalized view of the curriculum," and he wants students to see "how the separate subjects are connected [and] how collectively they relate to the larger world." Boyer talks about bringing "a new interdisciplinary vision into the classroom and the total program of the school," and he mentions that "teachers also should work together more collaboratively," (pp. 114-115) but he does not go so far as to mention, explicitly, team taught interdisciplinary courses. Instead he advocates a Senior Independent project which would draw from the different academic fields. From my experience with such projects, I suggest that an interdisciplinary course might be a better way to lead students to the vision Boyer seeks, though admittedly it may not ask the same independence of students which Boyer's Senior Project would require.

How would an interdisciplinary humanities course respond to the intellectual claims which Boyer makes on the curriculum? First, and most obviously, it would meet the need for an interdisciplinary vision. A program which combines history, the visual arts, literature, philosophy, and music, whether the focus is on Western European Civilization, American Culture, Perennial Human Problems, or Great Ideas such as Justice, Beauty and Courage, would almost necessarily draw students out of the narrow perspective of the separate disciplines. For example, students could examine how humans conceive their relationship with God through comparing the austerity of Romanesque architecture and Gregorian chant with the defiance and submission in The Book of Job. Another example: Students might compare the attitudes toward death of Socrates in the "Phaedo," Beethoven in the Second Movement of his Third Symphony, the Hellenistic sculpture, Dying Gaul, and in Pericles' "Funeral Oration." Exactly how the inter-relationships are to be reinforced is a separate and difficult question, one which has many answers, but it is clear from a number of successful humanities programs that interdisciplinary education is possible. The intellectual validity of separating the academic disciplines should at times give way to larger human and educational priorities.

---

*Adler's controversial book has its greatest value in the simple organization of three Columns of Learning on page 23: 1) Acquisition of Organized Knowledge by didactic instruction such as lecture, 2) Development of Intellectual Skills by means of coaching, exercises and supervised practice, and 3) Enlarged Understanding of Ideas and Values by means of Socratic questioning and active participation. The rest of the proposal is remarkable mainly because of the bold and forthright assumptions Adler makes.

An interdisciplinary humanities program would also meet another of Boyer's strong claims as to the purpose of high schools. His insistence that students be aware of our human heritage--American, Western European, and Eastern--would be ideally met by a course in the humanities. Frankel, in The Humanities in American Life, argues that, "since ancient Athens humanists have been expected to contribute to the general sense of civic responsibility" (p. 6), and even that "the essence of the humanities is a spirit or an attitude toward humanity. They show how the individual is autonomous and at the same time bound, in the ligatures of language and history, to humankind across time and throughout the world. . . . Intensity and breadth in the perception of life and power and richness in works of the imagination betoken a people alive as moral and aesthetic beings, citizens in the fullest sense" (p. 3). The kind of large issues and questions which are essential features of a study of the humanities necessarily leads students to consider their roles in an unfolding human history and as members of society. What constitutes a just society? What is worth dying for? When freedom and justice conflict, which has priority? What is the nature and importance of beauty? Boyer's core curriculum offers much in this vein, but humanities courses explicitly highlight such ongoing human questions and concerns, and thus the intense need for connectedness, which is so much a part of Boyer's emphasis on heritage and globalism and so important in an adolescent's psychological make-up, finds direct expression.

The team-teaching aspect of an interdisciplinary humanities program, incidentally, would address some of Boyer's other concerns and suggestions as well. Though many teachers relish the privacy and autonomy of the classroom, many others are weighed down by the isolation, sameness, and the lack of adult stimulation that are part of the professional routine. Every day it is the teacher and thirty students in the same room at the same time. It is no wonder that, despite our knowledge that variety in activities is an important component of effective teaching, monotony is so tempting, so built into the scheme of things. Team teaching shows a way out of the routine. Teaching teams lead easily to diversified roles--lecturer, gadfly, seminar leader, coach--so it is not the same thing every day. One of the teachers may have primary responsibility on a given day, and the others could take different roles. Teachers also have the stimulation of a collegial relationship, discussing students, the subject matters, and teaching itself. Thus many of the benefits for students would fall to teachers as well.

In Horace's Compromise Theodore Sizer takes a rather different approach to reforming the American high school, an approach reflecting his New England association with independent schools and the diversity and academic toughness which they have traditionally encouraged. While Sizer shares Boyer's high preference for the intellectual claim on curriculum, he does not share Boyer's emphasis on connectedness to society and to one's cultural heritage. In fact, Sizer presents a tight little argument which concludes that the schools only can require of their students competency in literacy, numeracy and civics, and that by inference the remainder of their education should not be required. In place of Boyer's heavy emphasis on civilizing students, Sizer asserts the following: "Beyond expecting rudimentary civility, the state has no subtle or not-so subtle right to shape my personality" (p. 87). Instead of Boyer's thick gruel of requirements, Sizer would allow students to leave school once the basic competencies are demonstrated. Any further requirements would constitute an infringement on the individual. Thus the curriculum, if you can call it such, is flexible and voluntary. He is very hesitant to suggest a structure or sequence, and the one model he does present organizes a high school into four areas or large departments (1. Inquiry and Expression, 2. Mathematics and Science, 3. Literature and the Arts, 4. Philosophy and History), but without stipulating a flow through courses, distribution requirements, or the attainment of any essential knowledge in those areas about which Boyer was so concerned. It is not clear whether Sizer is opposed to such sequences, would leave them to be suggested by the individual school or district, or, more likely, is not very interested in them.

If the attainment of more knowledge is not Sizer's main remedy, then what is his remedy? And what is the illness? Observations in many schools across the country led him to note the docility and passivity of students: "Many schools are quiet, apparently happy, orderly, but intellectually dull. They are not provoking, stimulating places, and their students are not hungry" (p. 56). It is interesting to note that the same diagnosis of "docility" was central to Charles Silberman's Crisis in the Classroom, though the prescription Silberman encourages based on English open schools is significantly different from Sizer, who sees the schools as culpable because of both the tyrannical use of time blocks which stress punctuality over reflection and the poor teaching which stresses "coverage" (whatever that means) over active student involvement through exercise of the mind. Sizer may be simplistic when he approvingly quotes Fred M. Hechinger's speculation that "a large part of stupidity is just . . . . chronic boredom" (p. 39), but the point has some validity. While Boyer laments the same passivity in students due to poor pedagogy and misplaced objectives (as does John Goodlad in A Place Called School), for Boyer this passivity is a secondary factor in the educational malaise, while for Sizer it has primary importance. And while Boyer wishes to broaden the curriculum, requiring more subjects, Sizer wants to narrow the curriculum. He adopts the aphorism, "Less is more," and he argues that we should engage a narrow span of ideas more deeply. The educational focus is clearly on the qualities of mind rather than on the content of the curriculum.

Like Boyer, Sizer stresses the importance of basic skills, especially literacy, and also like Boyer he turns to Adler's model of teaching as coaching for the best way to teach skills. But beyond these necessary abilities, what does Sizer find so important as a quality of mind? He writes with an enthusiasm all teachers know about the "hungry students" with active and restless curiosity. Such students are actively engaged in their own learning and are "constructively skeptical" (p. 54), the very opposite of the docility he condemns. (I wonder if a mediocre teacher, working in Boyer's curriculum with an emphasis on the transmission of traditions and heritage, would discourage Sizer's hungry students.) Simply covering the material is no way to produce or encourage such students, and it is also unsatisfactory to say that they are born, not made. So how do we awaken our students?

Sizer finds his answer in Socratic questioning by the teacher, again as suggested by Adler. Well directed questions from the teacher can force each student to clarify and sharpen his or her beliefs, examine their underlying grounds, and consider alternatives and implications. Questions will also make it impossible for students to hide on the fringe of class as the shrewdly cautious Melissa did in the most disturbingly true of the characterizations with which the book abounds (pp. 161-164, 171). If more class time is to be spent in Socratic probing, then less will be spent "covering the material," and this is consonant with Sizer's "less is more." Typically, then, the classroom would be a seminar. A seminar differs from a traditional classroom in terms of class size; Sizer makes it clear that the teacher must regularly confront and engage each student, and he suggests there be no more than 20 students per class. But equally importantly, a seminar differs from a traditional classroom in terms of the purposes and activities. There is little reason to reduce class size if the teacher's role is to cover material. After all, an energetic teacher can engage a large group of students in Socratic questioning. What should happen in seminar, then, is that the teacher's questions lead students to question their values and assumptions, to develop a critical, especially self-critical, state of mind. The curiosity which pushes both inward and outward is essential to the "hungry student." It is not just the ability to ask the deep questions, but the inclination to do so.

In what ways would a humanities program as previously defined address Sizer's concerns? The interdisciplinary nature of humanities would not interest him very much. True, he attacks the narrow disciplinary approach of Brunerians, he suggests combining departments, and he accurately criticizes the disjointed educational experience of most students who "can rarely make any sense of the whole" (p. 92), but he does not pursue this line very far. Similarly, the broad questions of human meaning and purpose earn little explicit attention. He is deeply interested in the process of questioning--that is the hunger of the hungry student--but not in the sense of the large questions which humanities considers, questions to which humankind has responded with works of art, music, literature and philosophy, and with political and social systems.

A closer examination of Horace's Compromise, however, reveals a congruence between the principles of humanities education and Sizer's values. The questions which he sees as most important because they underlie any meaningful discussion are the same questions which lie at the heart of the humanities: "Which is 'better' for a proven purpose, United States-style federalism or United Kingdom-style parliamentary democracy? Why may Woody Allen's Annie Hall be a 'better' or 'worse' movie than Gone With the Wind? When is euthanasia acceptable?" (p. 116). These are no less than the questions of the nature of justice, of what makes life worthwhile, of the meaning and purpose of the arts, with which a humanities program deals explicitly.

The structure of an interdisciplinary humanities program is also conducive to the kind of Socratic questioning which Sizer advocates, if it employs team teaching. Having two or more teachers not only facilitates the interdisciplinary advantages, but it also facilitates variety in the formation of instructional groups. If we imagine, for example, a course in which 80 students are taught by a team of three teachers (history, literature and art), some of the class periods could best be spent in large group instruction such as lectures or films (in Adler's terms, "Aquisition of Organized Knowledge"). This would free much of the remaining class time for seminars. The groups of 27 would not meet Sizer's reasonable standard of 20, but the clearly defined Socratic purpose of seminars would be an improvement over "covering the material."

The subject matter of the humanities is particularly well suited to Socratic questioning because of the epistemological status of truth in the humanities. Unlike scientific truth, which consists of theories and laws founded on and derived from objective observations, truth in the humanities is more tentative and more dependent on the values and assumptions of the practitioner. Instead of proofs in the humanities, we have arguments, and so dialogue is the natural medium of exchange. Instead of the way one scientific theory modifies or replaces another, the humanities thrive on what Keats called "Negative Capability," the toleration of ambiguities and multiple meanings. Thus, truth in the humanities is cumulative in a way that it is not in science. For this reason it makes little sense for the teacher of humanities simply to stand and deliver the Truth. Information does need to be presented to the students, and interpretations should be reasonable, informed, and consistent with the facts. But interpretation of the facts (the details of the painting, the play, the speech, the historical event) is what the humanities are about. Thus, the teacher elicits interpretations, and challenges them; students challenge each other's interpretations and the teacher's; the teachers challenge one another. Seminars in the humanities are, in principle, a perfect marriage of form and content.

Alfred North Whitehead, in The Aims of Education, makes the case for the centrality of inter-related disciplines, and implicitly he makes a case for the central questions which are part of the human experience. "The solution which I am urging," says Whitehead, "is to eradicate the fatal disconnection of subjects which kills the vitality of our modern curriculum. There is only one subject-matter for education, and that is Life in all its manifestations. . . . The best that can be said of [the fragmented curriculum] is, that it is a rapid table of contents which a deity might run over in his mind while he is thinking of creating a world, and had not yet determined how to put it together" (p. 8). A humanities program by its nature attempts to "put it together" through the interdisciplinary approach, through its focus on broad questions, and through involving students in self-examination, showing them that the questions central to humanity are also their questions.

HUMANITIES EDUCATION ABSTRACTS

Summaries of significant articles and reports about interdisciplinary humanities education.

(Editor's note: In response to readers' requests for reviews of books and materials, this issue of ABSTRACTS reviews several books along with our usual abstracts of articles and of exemplary humanities programs.

Beginning with the next issue, HUMANITIES EDUCATION will have a regular review department conducted by James Mehl of Western Missouri State College, St. Joseph MO 64597. All suggestions, inquiries and correspondence regarding reviews should be directed to Dr. Mehl.)

FLICKS & HISTORY

Historians + Filmmakers, Toward Collaboration, edited by Barbara Abrash and Janet Sternberg, 1983, The Institute for Research in History, 432 Park Avenue South, New York City 10016

Everyone likes the idea of films on historical topics, but nearly all attempts at collaboration end in a widening crevasse separating historians and filmmakers. This very real problem prompted a 1982 roundtable funded by the New York Council for the Humanities in which thirty-three authorities from the two camps sought to understand their differences. The pamphlet represents a summary of more or less impromptu remarks.

One difficulty is that historians rarely think in visual images while filmmakers regard language, especially discursive or analytical language, as violations of the essence of cinematic art. Some participants recommended a crash-course in filmmaking for historians as the best route to collaborative success, citing an instance in which an art historian was asked after submitting a detailed script about Cezanne to "compose the whole film without a word and see if you can say the same thing." Learning the technique of story-boarding alone can begin to liberate the historian from verbal dependency.

On the other hand, filmmakers often are cavalier about historical accuracy. In part this results from two simplistic theories about the past that condone fictional distortions. One view is that the past is a free commodity available to us to employ as we wish for whatever ends are deemed valuable today. The second view is that "the past is essentially unknowable." Since we cannot know the true past, there are no absolute boundaries to fictionalizing history. Whatever validity there may be in these theories, they are not legitimate excuses for ignorance about what is known, nor for irresponsible distortions.

ENEMIES WITHIN

"Erosion in the Humanities: Blowing the Dust from our Eyes," by Helene Hoglen in Profession 83. Modern Language Association 1984.

The dust that is in our eyes has its source from within the ranks of humanists as much as from outside critics of contemporary American education. The litany of troubles is familiar: back to basics, vocationalism, falling enrollments in the humanities, loss of a central core, and so on. The humanities are under siege, yet too often they abet the attacks by going over to the besiegers, substituting "practical" writing for courses in literature, seeking recourse in the nostalgic security of the old imposed canon of Great Works, or even providing leadership for those who would insist upon the irrelevance of humanistic study. William Bennett and Walter Jackson Bate, for example, have both argued that the proliferation of critical schools and "new enthusiasms" such as women's studies, film and ethnic studies point to the urgent need to return to traditional texts and proven critical techniques. Similarly, such leaders also deny the particular applicability of the humanities to social and political issues, "warning us away from the front pages and back to the pages of the great books."

There is some degree of reality in the crisis, admits Moglen who is a professor of English literature at the University of California at Santa Cruz, but some of the fears are unfounded. Proponents of the various structuralist and post-structuralist critical schools do not advocate the incorporation of their theoretical findings into the general curricula, much less its imposition upon undergraduate education. Indeed, a recent survey of American and European theorists shows a level-headed concern that their speculative schemas might become "a refuge for students, self-contained and irrelevant to texts." In addition, far-out theorists and their disciples are a minority and hardly represent the current state of humanistic study--other than to show that there is ample tolerance for alternative viewpoints and lively opposition.

Much more disturbing to Moglen is the isolating of the humanistic texts from the contemporary "real world" as a means of restoring rigor to the disciplines. Quite the opposite is what is needed; more connections, not fewer. The various "new enthusiasms" to which the critics of modern humanities object occasionally represent narrow ideologies, but far more often they "do not identify relevance with the debasement of materials but see it as a guiding principle of pedagogical strategy.... By establishing strong connections between literary studies and gender studies, ethnic studies, and area studies and by developing problem-oriented and interdisciplinary courses, we can make our curricula and classes more responsive to a diverse student population." To illustrate, Moglen recalls a course in English literature of the nineteenth century that she taught to a group primarily made up of mature, married black women in Mount Vernon, New

York. They began reading from Mayhew's London Labour and London Poor, taking oral histories, comparing maps of London and Mount Vernon for patterns of slum development, continuing with related social historical readings and research, but "all the time we were reading Blake and Wordsworth, Dickens, Charlotte Bronte, Gaskell and Carlyle."

What is it that we humanists can do that transcends the disciplines and makes us as valuable to the university and society as economists, engineers, administrators? "I believe that it as readers that we have the most to offer: our experience as interpreters and our respect for interpretation." The article closes with a proposal for nationwide humanities institutes bringing together the whole range of Americans into communities of learning and mutual respect.

THINKING BLACK

"Teaching Black Philosophy" by Howard McGary, Jr. in Teaching Philosophy (April 1984) Philosophy Documentation Center, Bowling Green State University, Bowling Green, OH 43403. $15/yr.

Philosophy is generally regarded as a "Whites Only" study by many black college students, or at least there is a proportionately low presentation of black students in regular philosophy classes at Rutgers University where McGary teaches. After surveying the literature on Black Philosophy courses McGary concluded that most restrict consideration to ethical and social philosophy. While such limitations are legitimate, they are limitations, and may not even introduce newcomers to understanding the nature of philosophy itself.

Toward this end, the first part of the course is aimed at the rational examination of ambiguous terminology. If there is such a thing as "Black philosophy" it must be founded upon a more or less unique phenomenon called "the Black experience." But students must first be led to grapple with the issue of whether any particularized philosophy (Jewish philosophy, feminist philosophy, etc.) has validity in a discipline that many would maintain is aimed at universals rather than particulars.

The chief argument for pluralistic philosophy is that the different environments and experiences of different populations produce some unique puzzles about the nature of reality, about justice, about morals: "Some of the things that an Eskimo would wonder about would not even occur to the average American." Yet even if we allow for a separate "Black experience," we must as philosophers try to define that experience. McGary's course looks critically at several attempts to do this. (The article has extensive bibliographic references.) For example, the definition of black experience as "reaction to white oppression" must take cognizance that all peoples have known despair, futility and oppression. The racial nature of black's suffering is not necessarily unique either: native Americans have endured similar racist experiences but do not share in "Black experience" or "Black philosophy." Some proponents of black uniqueness argue inherent differences of "soulfulness" or "negritude." These concepts are not only vague but invite one to espouse theories of genetic differentiation in human behavior. This is not only still unproven in a laboratory sense, but it rather dangerously reopens the doors to old stereotypes.

The conclusion is that there is indeed a "Black experience," but it is "*not* innate, it is acquired through participation in Afro-American culture." In the second part of the course, more particular questions were examined on the basis of the conclusion, for instance, "If our present institutional design cannot be altered to accommodate this uniqueness, should blacks form their separate institutions?"

McGary gives his course tentative good marks on at least two counts--*relevance* (minority students have found that the traditional curriculum "ignores and distorts important aspects of their life experiences"), and *demography*--"a good number of these students went on to take other courses in philosophy."

DUCKS & BUNNIES

"Problems of Knowing and Being in Public Humanities Projects" by Stanley M. Browne in *Federation Reports* July-August 1984, National Federation of State Humanities Councils, 12 South 6th Street #527 Minneapolis MN 55402. $1.25/issue.

Whenever we contemplate using philosophy in public programs we generally mean ethics. This is sensible, says Browne, a program officer with the Alabama Committee for the Humanities, but it shortchanges two of the most venerable concerns of philosophy, *knowing* (epistemology) and *being* (metaphysics). Browne suggests four strategies that might introduce these two philosophical fields into programs in arts interpretation, ethical issues and museum exhibits.

Dramatic performances and reading of plays such as *Macbeth* can introduce the "age-old problem of skepticism with regard to the senses." Is the blood on Lady Macbeth's hands real? Is she experiencing the blood through her senses? Aside from drama, visual arts can also raise epistemological issues. Starting with the classic duck-rabbit optical illusion, it is possible to go on to paintings and photographs that "illustrate why some philosophers have challenged the empiricist assumption that there are some unambiguous objects of perception." Again, museum exhibits "do not convey humanities themes as such"; they require interpretive programs. Natural history museum ethnographic exhibits, for example, can provide a springboard for discussions of differing metaphysical conceptions of the world.

The "mind-body problem" is a standard issue in metaphysics, but it is inherent also to social-ethical issues such as euthanasia, while discussions of capital punishment can introduce the public to questions of free will and determinism. How deeply and thoroughly one goes into these questions is a matter for the specific program at hand, but to ignore the interrelatedness of philosophical subfields in the interest of simplifying public programs is to ignore and distort philosophy itself.

COMMUNITY CORE

Tufts University Institute in American Studies Contact Person: Sheldon Krimsky, Ph.D. Department of Urban and Environmental Policy, Tufts University, Medford, MA 02155

What better thing to do in the depths of winter than to plan for summer (read that, study programs)? One long running and very effective effort is that conducted by Tufts University for elementary and secondary teachers and funded by the National Endowment for the Humanities. This opportunity is tuition free with stipends from the funding source. Living accommodations are in the university dormitories, enhanced by a learning and resource center for institute participants.

The month-long 1984 session in July was attended by 37 teachers from many areas of the country. Though all participants are well qualified people, the competition is not so keen as that for other types of grants. (In this case, there was room for three more, suggesting that some of us who discourage easily might give this one a try.)

The theme of the last session was The Shaping of American Communities, featuring activities germane to this idea over the past three centuries. Field trips were taken to Plymouth, Sturbridge, and Lowell, Massachusetts, and an archaeological dig on a historic site was an optional opportunity. Teachers also received individual assistance in developing course materials for their use on sub-topics of the main theme. One of the aims of the funded institute is to disseminate these curriculum projects to other schools.

Following the evolution of American communities, study was organized around the themes of town, village, city, and suburb with a week's work devoted to each phase. Twelve lectures by Tufts University faculty framed the factual content and interpretation of these phases. Field trips and readings fleshed out each participant's experience and provided material for their projects. Ten teachers participated in the archaeological dig, which involved briefing sessions and an afternoon in a county court house learning to search title deeds and probate records. Field excavation and recording, site mapping, and matrix construction took place on three long afternoons. The site was the property of George Luther Stearns whose (now demolished) house was a station in the Underground Railroad and a meeting place for abolitionists.

A great variety of ideas and experiences was captured within the community theme. A brief sample list of the required and recommended readings is worth perusing for its breadth and potential investigation: N. Jorgensen, A Guide to New England's Landscape; R.D. Snow, The Archaeology of New England; William Cronon, Changes in the Land; Larzer Ziff, Puritanism in America; Alan Ludwig, Graven Images: New England Stonecarving and its Symbols; Henry May, Enlightenment in America; S.M. Lipset, The First New Nation; Thomas Kessner, The Golden Door; Lucy Larcom, A New England Girlhood; Barbara Welter, Dimity Convictions; Elizabeth Phelps, The Silent Partner; Ralph Ellison, Shadow and Act; June Jordon, Civil Wars; Robert Goodman, After the Planners; Proctor and Matuszewski, Gritty Cities.

The teaching materials project is one outcome that accrues to the public in general, and there is every intention of disseminating the results. A good support system, available typists, and library resources eliminated many of the snags typical to such ventures. A twenty minute slide-sound program on the rise of the industrial revolution may be available for the cost of duplicating the slides and tape. Other projects may be obtained at less cost by contacting the designers through the director of the Institute. Most of the projects completed during the 1984 session are listed below:

Dinwiddie County K-12 Humanities Project, Arts in History During the Depression 1929-1941, Writing Oral History of Mendocino County, Shaping American Communities, Silas Marner Never Had Saturday Night Fever, Secular Religious Utopian Communities in 19th Century America, From Judge Hawthorne to Nathaniel Hawthorne; The Transformation of New England, The Minority Community, The Influence of the French in the Development of the American Community, The Shaping of American Communities, The Role of Women in the Westering Experience, The Rise of the Adolescent Gang, The Evolving Roles of Men and Women, The American War of Independence, History of the Boston Labor Market, New Jersey's Development from Colonial Times to Today, The Experience of American Women: Plymouth to the Present, Logging Communities of the Northern California Coast, Tools and Workers in America - Preindustrial to Modern Times, Women in Community Development.

SECOND-GUESSES

"Toward a New Moral History" by John Muresianu in The History Teacher, May 1984. Society for History Education, California State University, Long Beach CA 90840 $5/copy, $22/year.

Making moral judgments after the fact is not the same thing as making moral judgments of historical facts. Thus, while we hardly question the justice of the United States' declaration of war on Nazi Germany today--particularly in view of our knowledge of the Holocaust--, in 1941 America was far more aware of the atrocities perpetuated by Stalin's Soviet Union. Moral history records the unfolding of decisions and values in the light of facts as they were known.

"Moral history" therefore is not history of morals or didactic history, says John Muresianu of Knox College. Rather, it is concerned with "questions regarding the justifiability of momentous events or the costs, benefits and deeper meaning of trends or events of world significance." For an historian to become a practitioner of moral history several new aspects of training must be considered. Formal moral philosophy is one, history of "ideas, values and 'mentalities'" another. More difficult for some to nurture is the suspension of moral judgment, a posture that should include wide acquaintance with alternative moral models such as the Kantian, utilitarian, Aristotelian Marxist, etc.

The kinds of questions Muresianu proposes are highly charged for many reasons--sometimes because we are so imbued with accepted judgments that we find alternatives unthinkable.

Four exemplary issues are presented: war, slavery, revolution and cultural decline, each with instances of recent interpretations that reopen old questions and indicate areas of needed research. The American Revolution, for instance, was rarely questioned during the bicentennial years, yet Bernard Bailyn's The Ideological Origins of the American Revolution circumlocutiously suggests that the Tories may have had greater moral justification than the rebels. In respect to cultural decline of America Muresianu cites several influential jeremiads but poses the historical question of "compared to what?" Some high school teachers have taken the lead in moral history along these lines and Muresianu suggests "an undergraduate survey course in American history could be structured around the theme 'was America more of a democracy in 1770 than in 1690? In 1790 than in 1770? In 1860 than in 1790'?" Also noted is a Lippincott published text series America's Alternative Series.

SAY IT "IN ART"

"Art Education and the Language of Art" by Erik Forrest in Studies in Art Education, Fall, 1984. National Art Education Association, 1916 Association Drive, Reston VA 22091. $25/yr, $9/copy.

Humanities educators often justify their being because of the universality of their topics. But can they go beyond the topics to universality of communication? Obviously not in spoken languages, although every spoken language is translatable, suggesting that at least in the structure and vocabulary we have universally interchangeable parts. Translatability is one of the characteristics that the visual arts do not share with spoken language. "We could not conceive of translating a Rembrandt painting into English," says Forrest, who teaches in the School of Art at Ohio University. And even if we translate a painting into another medium, say an etching, probably much more is lost in nuance of shading and color than what is lost by translating an English sonnet into Russian.

There are other ways in which it is impossible to demonstrate that Art is a Language. Any given language has "syntactical and grammatical rules for sentence construction and systems of symbolic logic that control truth, falsehood, validity, reliability and so on." Some national arts of the past and even in the present do have relatively closed systems within which there is rightness or wrongness, but Forrest maintains that it is not the same as right or wrong grammar. Certainly in the arts of the twentieth century western world the personal and idiosyncratic possibilities go far beyond accepted conventions such as a language requires.

Proponents of the idea that art is a Language point to the basic design principles (e.g., form, line, color, etc.) which would seem to "parallel the concepts of grammar and syntax." However, these are valid at only a superficial level; most particularly the parallels collapse when the comparison is made with words, which retain most of their meaning out of context. An elementary visual shape or a particular color is not like a word: no one would dream of looking up a color in a "dictionary" to learn its meaning, establish synonyms or see where it can and cannot function in a "visual sentence" as a nonlinguistic noun, verb or preposition.

Nevertheless, there are ways in which art performs the same kinds of functions as language. Visual arts and other arts can and do operate as media of expression of emotions and values. The arts often have a public rhetorical function as well, being used for persuasion and reaffirmation, not only in overtly propagandistic political forms but in subtler expressions of Weltanschauung of a community or institution. Thus, although the general concept of art as language is fallacious, there are similarities, as well as the nagging awareness that learning to appreciate a foreign art requires that to some extent we must learn a language, which is not like our own.

PIETAS AND ELEGIES

Death and the Humanities, by Sharon Scholl. Bucknell University Press, Lewisburg, PA, 1984

In Death and the Humanities, Sharon Scholl, Professor of Humanities at Jacksonville University, gives an optimistic overview of the ways in which humankind's most universal subject has been approached throughout the history of the arts.

The major subdivisions: "How the Humanities Speak About Death," "Death and the Survivors," "Death and War," "Voluntary Death," and "Immortality"; are discussed in terms of specific works from the history of poetry, literature, movies, choral and instrumental music, and the visual arts.

As all thinking persons who are sooner or later confronted by the realization of human mortality, so creative geniuses have, throughout history, contemplated death and interpreted the resulting emotions in works of art. These universal artistic expressions are the concern of the author. In the introduction Ms. Scholl states:

> This is not a book about medical technicalities, legal and economic importunities, historic, or sectarian traditions about death. It deals sparingly with such situations as generate tabloid headlines and are often mistaken for the critical aspects of death and dying. Rather, this work is devoted to experiences and reflections upon death as transmitted by the expressive forms of art, music, and literature. Further, it is a study of the collective imagination created and reflected by these forms. Thus, in dealing with death and the humanities, we are at the generative center where the reality of death resides for all of us.

The book includes nearly forty illustrations of painted masterpieces, as well as numerous selected poems, excerpts from literary works, and impressive analyses of great instrumental and choral compositions. References are made throughout to the masters of universal thought, to thinkers such as Sophocles, Euripides, Virgil, and Homer;

to the broad gamut of humanities people and their varied artistic communications on the ultimate experience. In Death and the Humanities, Ms. Scholl demonstrates that death is a universal occurrence that those in the arts reflect upon and share with all humankind.

Robert C. Frazier

AGAINST MEDIOCRITY

Against Mediocrity: The Humanities in America's High Schools, edited by Chester E. Finn, Jr., Diane Ravitch and Robert T. Francher. Holmes-Meier, New York, 1984.

Against Mediocrity is a collection of essays which respond to the criticisms and challenges of A Nation At Risk. The editors note that while the latter drew special attention to math and science education, the plight of American schools extends to the humanities as well. The book is a product of the Educational Excellence Network of Vanderbilt University's Institute for Public Policy Studies, undertaken with support from the National Endowment for the Humanities. It grew out of 1983 conferences held in Atlanta and Denver.

After a Foreword by William J. Bennett and an Introduction by the editors, Against Mediocrity is organized around five aspects of mediocre high school humanities education: 1) Why the Humanities, 2) Teaching the Disciplines, 3) Case Studies, 4) The Education of Teachers, and 5) Professionalism and Quality Teaching.

The humanities have an important role to play in our nation's schools. Harry S. Broudy argues in the first essay of the opening section that an education in the humanities provides a common background of knowledge, or "allusionary base," which enables one to think productively, and he sees the traditional humanistic disciplines and the classics as the most fertile and effective subject matters. Leon Botstein's justification of humanities education centers on the importance of language and the unique ways in which education in the humanities, through a consideration of language, develops our capacities to think.

The next section of the book contains three essays dealing with teaching the disciplines of English, foreign language and history. In each case the authors lament a movement away from valuable educational functions. Robert Francher describes how English teaching has been distracted from its primary humanistic mission by less important claims, and he argues that the "fundamental task of the English program is to educate the imagination." What Francher calls "humane culture" rests on the fact that imagination, primarily through language, shapes emotion and aspiration, and he advocates that the English curriculum develop imaginative processes through the study of literature and language, and through .writing. The way language shapes thinking and culture is also central to Carlos Hortas' essay, and he argues that only through requiring foreign language study beginning in elementary school can students come to appreciate different cultures. Clair Keller sees that history teaching has been fragmented and diluted into "social studies" and that students are thus deprived of the opportunity to develop the sense of time and place which only history can give. Other humanistic disciplines are not given separate treatment, and the interdisciplinary aspect of humanities courses in this book retreats before the separate disciplines.

The third section of the book shifts from the theoretical plane to the reality of observations by considering case studies of humanities teaching, English by Scott Colley and Social Studies by Gilbert Sewell. Both authors, with few exceptions, are disappointed by the mediocre teaching they see. Both claim that the high expectations, enthusiasm and standards found primarily in some higher level classes can be applied to all ability levels in the schools.

Two essays present rationales for roles of the humanities in the education of teachers. Peter Pouncey urges a core curriculum in the humanities as essential to the education of any teacher, and he suggests specific readings. Edwin Delattre, similarly, sees that strong intellectual grounding in the humanities is needed, and he argues that inservice education for teachers should stress humanistic disciplines rather than trendy techniques so that teachers can participate in and be nourished by genuine intellectual communities. Gary Sykes puts the prospects for the reform of teacher education in perspective by reviewing efforts of the last twenty years. The absence of a shared vision of the purpose and value of teacher education has crippled reforms, and he urges re-evaluation as a starting point.

The final section deals with professionalism and quality teaching. Again the emphasis is on the value of subject matter and the teacher's love of his/her subject matter rather than mastering "teaching methods" and such tricks of the trade. Jon Moline moves to a definition of "professionalism" which includes both a sense of commitment which earns the trust of the client and the enforcement of standards of quality, and he compares teachers with the paradigm professionals--physicians, lawyers and members of the clergy. John Casteen sees that the failure to enforce professional standards causes the states to impose standards. He argues that schools or subject area teachers might be valid bodies to set and enforce standards. Peter Greer presents a brief history of the humanities movement in the high schools, and he urges several steps which administrators could take to encourage the humanities in their schools. In the conclusion editors Finn and Ravitch propose twelve recommendations to improve humanities education in the high schools.

The book was stimulating and provocative, but I found the absence of classroom teachers from among the authors led to some naive simplifications about schooling. Too often writing about the humanities achieves such a lofty plane of pious pronouncements on high culture and high standards that the real diversity of humanity which is somehow supposed to be the subject of "humanities"--chewing gum and twitching in post-pubescent terror in the classrooms of America--gets lost in the dazzle of language.

Against Mediocrity treats its subject thoughtfully, and the variety of approaches illuminates the nature of the humanities as well as our current crisis in education.

David H. Stringer

HUMANITIES IN MEDICINE

The Place of the Humanities in Medicine, by Eric J. Cassell, M.D., The Hastings Center: Institute of Society, Ethics and Life Sciences, 360 Broadway, Hastings-on-Hudson, NY 10706, published as a monograph issued in August, 1984.

The monograph by Dr. Cassell is one element of a project sponsored by the National Endowment for the Humanities to assess the role of the humanities in the education of physicians. Cassell concludes that many people in medical education would welcome a larger role for the humanities, though the response is hardly consistent. There would be greater receptivity if instruction in the humanities were rethought and directed toward different outcomes. While agreeing that even premedical students lack motivation to study the humanities and that the admissions policies of medical schools are to blame, Dr. Cassell cites the growth of humanities studies within medical schools as a positive factor. This initiative can flower, he believes, if it can be structured to achieve medically appropriate ends.

The basic problem of the humanities instructor in a medical community is to realize without resentment that a medical monomania possesses today's students. They cannot be approached on the basis of the intrinsic worth of the humanities; humanities must pay their way by contributing to a physician's knowledge and skill. The unavailability of jobs in university humanities departments has made the few positions in medical schools attractive. Such work carries little of the usual academic rewards; publication as an outgrowth of teaching becomes problematic; and instructors are constantly called to account for the applicability of their materials to medicine. But daily encounters with a different vision of reality can enlarge the humanities as long as instructors resist the temptation to adopt exclusively the analytic, reductionist methodologies of medical practice.

What do the humanities have to offer medicine? The most general good Dr. Cassell lists is "repersonalizing" the physician's knowledge by applying scientific generalizations to individual patients.

"Literature offers the opportunity to see the interplay of illness and persons, the role of physicians in the lives of others, the impact of their own medical knowledge on the doctors' personal lives, and the perception of physicians by laypersons." Thorough study of appropriate texts allows the potential physician to consider all the factors surrounding an illness in their infinite detail. Literature can emphasize the functioning of the body in everyday life, rather than isolated in clinical situations.

Communications skills, based especially on study of normal conversation, are essential to any diagnostic and therapeutic procedure. The actual words, the varied things the same words can stand for, and the person to whom the words have meaning form the web of communications. The effective use of medical rhetoric is essential in eliciting histories and transmitting the basics of a therapeutic regimen. Acquiring a rich array of descriptive terms to transmit equally detailed perceptions fits the international language of medical terms to individual situations. Dr. Cassell finds in the descriptions of gifted novelists the precision he believes medical description lacks. By paying attention to the details of appearance and demeanor as presented in literature, the physician may learn to make fuller assessments of patients. Medical students must be taught descriptive skills, a natural component of the literary side of the humanities.

History is viewed as a corrective to contemporary egocentricity in medicine, the assumption that what is done today is the best that can be. Physicians fail to realize the intimate connection between medicine and society at any given time. Medical history also provides a common basis for the layers of sub-specialties with which medicine is beset. In addition, the historical path of medical thought is a fruitful indicator of possible future research. More specifically applicable to medical practice, the study of history introduces the student to the nature of time and process, both vital to tracing the history of a disease in a patient. Dr. Cassell points out that 80 percent or more of diagnoses are made on the basis of the historical account of the illness provided by the patient. History recording and interpretation are vital to medicine, as is thinking in terms of processes taking place in real time.

Philosophy is easily recognized in the medical school curriculum in the form of bioethics. In addition, Dr. Cassell stresses teaching the tools of thinking. Interpretation, involving value perceptions, must balance scientific theorizing or research. Criticism as a skill should be taught as a formal way to subject the whole of medical life to analysis. Reasoning and decision making are two other skills to be sharpened by philosophical procedures. Formulation of case study problems, analysis of data, and application of therapeutic intervention are processes that can be improved upon with practice. Making appropriate distinctions, achieving precision of thought, explaining the link of aspects to whole patterns in an illness are marks of good clinical thinking. Nor should synthetic thinking be subjugated to analytical thinking; physicians must approach patients on personal and moral terms as well as mechanistic ones. Philosophers could greatly aid students in bringing these processes under conscious control. They could help physicians weigh subjective, value laden information in some balance with objective, numerical information. Other than mentioning visual theory and artistic perception as contributing a wider base of information, Dr. Cassell does not include the fine arts aspect of the humanities in his survey.

A brief bibliography is included, among which several items appear easily obtainable by readers interested in pursuing these matters:

Bruer, John T., "Premedical Education and the Humanities: A Survey," available from the Rockefeller Foundation from their conference on the humanities and premedical education of February 25, 1980.

Self, Donnie J. (editor) The Role of the Humanities in Medical Education, Bio-medical ethics program, Eastern Virginia Medical School, Norfolk, VA, 1978.

HUMANITIES EDUCATION
CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

JAMES V. MEHL

LIBERAL ARTS, FINE ARTS, HUMANITIES

Towards a Pedagogical Understanding

Jeremiah Reedy's article (Humanities Education, 1, no. 2) points out the need for clearer definition and more precise understanding of the historical development of the liberal arts, the humanities, and the fine arts, especially for teachers of these subjects. Professor Reedy properly emphasizes the place of languages and literature, including the classics, in the humanities curriculum. He also distinguishes, appropriately, the broader, value-oriented purposes of humanistic education, as opposed to the narrower, more specialized goals of the vocational school. However, Reedy tends to equate, improperly I think, the liberal arts and the humanities, without a sufficient explanation of their historical development. He identifies the fine arts, at least by his inclusion of art and music, with the humanities, thereby glossing over the generally recognized distinction between the history of the fine arts (which is a subject proper to the humanities) and the actual practice of the fine arts. Such a distinction is carefully maintained by both the National Endowment for the Arts and the National Endowment for the Humanities. Furthermore, it is important for teachers of the humanities to understand the post-Kantian distinction between the fine arts and the humanities. This was represented by a change in the status of poetry, considered a part of the studia humanitatis during the Renaissance, to that of a fine art since the eighteenth century. It is my intention here to summarize and to integrate some of the recent scholarship which deals with these issues. My viewpoint is that of a cultural historian, while my conclusions encourage a hermeneutical approach to humanities instruction.

I: HISTORICAL DEVELOPMENT THROUGH THE RENAISSANCE

Several studies by Paul Oskar Kristeller explain the historical development of the humanities, especially through the Renaissance. Kristeller has shown that the humanities were revived, or rediscovered, by Italian humanists during the fourteenth century. A humanist was a teacher or student of this specific, rather narrow, course of studies--the studia humanitatis--which included grammar, rhetoric, poetry, history, and moral philosophy. Instruction was based on reading and interpreting the Latin and, to a lesser extent, the Greek classics. Humanistic education was, then, for both classical Rome and the Renaissance, basically a literary education which emphasized proper, that is persuasive, style in language and communication, along with practical guidance for living the active, virtuous life of a citizen.

The Renaissance humanistic program of study countered the late medieval scholastic education in the universities, which the humanists considered to be too narrowly professional and scientific; the scholastics had developed a highly rational and speculative approach to language and to its use in the pursuit of truth/knowledge (scientia) in philosophy-theology, medicine, and law. During the classical, patristic, and early medieval periods, the humanities and the liberal arts were oriented, in practice if not in exact definition, towards a broader literary education. This training in the liberales artes (bonas artes) would provide humanitas, or what the ancient Greeks called paideia; Cicero argued that such an education would lead both to living rightly and to speaking well. The second-century Roman grammarian, Aulus Gellius, provided one of the clearest statements of this Ciceronian ideal, and the same educational program entered the Middle Ages through St. Augustine's On Christian Doctrine. In the fifth century, martianus Capella defined the liberal arts as seven in number: the trivium (grammar, rhetoric, and logic) was to provide basic training in language skills for qualitative learning and the quadrivium (arithmetic, geometry, astronomy, and music) to acquire the mental habits and specific data for quantitative knowledge in the practical sciences. By the twelfth century, however, dialecticians (early scholastics) at the Cathedral Schools of Reims and Chartres, and then in the universities, had shifted the focus and the purpose of liberal arts education; logic became the dominant art, redirecting Latin grammar and rhetoric to a speculative, scientific analysis of texts, particularly the sacred scriptures and Biblical commentaries. Logic and dialectic were the preferred methods for debate and formal treatise in the university classroom; the best expressions of this approach were the Summae of Thomas Aquinas. For Thomas, poetry and literature were the lowest forms of learning. The goal of the medieval university was to produce trained professionals in theology, law, and medicine.

The humanist tradition maintained that it pursued the development of human wisdom (sapientia), whereas the medieval scholastics attempted to acquire only knowledge (scientia). A similar circumstance in nineteenth-century Germany brought about a revival of classical-humanistic education in order to counter the vogue of scientific-technical education. Indeed, our English term "humanism" derives from the German "Humanismus," coined at that time. The challenge for the humanities continues today with the new emphasis on technical-vocational curricula. These differing approaches to education, as Professor Reedy suggests, are not necessarily in conflict, although controversies have emerged under specific historical circumstances; rather they stress different educational purposes and alternate means to their respective ends.

Classical and Renaissance humanism should be understood in the Western rhetorical tradition. This tradition, after Cicero and Quintillian, treats the humanities rhetorically, as having the ability to persuade. Human wisdom (gnosis) in itself is not sufficient, for that wisdom must be used to persuade one to action (praxis). The instrument of persuasion was eloquence. This Renaissance ideal of eloquence, according to Hanna H. Gray, could arise only through a harmonious union between wisdom and style. Its goal was to guide people to the virtuous life. The humanists placed this view of humanism as eloquence in opposition to the scholastic program of studies. Training in humanistic rhetoric, therefore, was essential for educational and social reform. But even more so, poetry was considered the highest form of eloquence. Poetry best exemplified the union of wisdom and eloquent style. For this reason, virtually all Renaissance humanists wrote poetry and referred to themselves often as "poets," "orators," or "philosophers," because the names held the same connotation. The great number of treatises written in defence of poetry by Renaissance humanists, from Petrarch to Sidney, has been the subject of several recent monographs.

II: THE MODERN DISTINCTION BETWEEN THE HUMANITIES AND THE FINE ARTS

Such use of poetry strikes us as rather strange today. And properly so. Since the eighteenth century, poetry has been distinguished from the humanist art of rhetoric and has become, like music, painting, sculpture, and drama, a fine art. O.B. Hardison and Walter J. Ong have explained the reasons for this transformation of meaning. Hardison cites the philosopher Immanuel Kant, whose Prolegomena to Any Future Metaphysics (and the aesthetic systems which derive from it) requires us to distinguish between "purposive" and "nonpurposive" judgments, assigning poetry and the other fine arts to the latter category. Ong describes similarly this distinction as "servile" (purposive) and "non-servile" (nonpurposive), arguing that the philosophical division is based on Aristotle and Thomas Aquinas. Thus rhetoric remains a humanistic study because it is purposive, its goal is to persuade, while poetry becomes a fine art because it is a product of the imagination, of the will, its goal to edify or to entertain. Ong suggests that humanistic rhetoric, grounded in oral tradition, was displaced by the "technological age" ushered in by the Industrial Revolution and by the concomitant Romantic movement of the late eighteenth and nineteenth centuries. This changed cultural milieu, which also gave new meaning to the individual rights of political democracy in the West, led to our current interpretation of the fine arts as indirect expressions or statements. John Stuart Mill recognized this fundamental change: "Eloquence is heard; poetry is overheard."

As a result of this new understanding, most teachers and interpreters of the humanities today use examples of poetry and the other fine arts as indirect (nonpurposive) expressions of the cultural values of other historical times and places. The classics, the masterpieces of Western literature, drama, art, music, and dance, serve as mirrors to reflect the changing pattern of cultural values from earlier periods. In this way the fine arts have come to play an essential role in humanities education.

It should be kept in mind, however, that this perspective of the fine arts is peculiar to our own age; we should not force the post-Kantian criticism onto earlier cultural periods. The Renaissance understanding of poetry as the highest form of rhetoric, that is as purposive, has already been discussed. When teaching the poetry and the other literary examples of the Renaissance, therefore, this rhetorical intention needs also to be explained; failure to do so will lead to misunderstanding and false instruction. One can think of other examples of rhetorical purpose in related arts of the period. Bernini's sculptures and architecture, for instance, are as much a statement of the Counter-Reformation Church as they are an expression of the individual genius of the artist. The music and the art of the Baroque era certainly display the public images of both church and court during the seventeenth century. A recognition of the patrons and patronage systems which supported the arts during these earlier periods will assist the instructor in explaining the institutional and dynastic demands placed on individual artists. And the rhetorical function of art can still be found in some examples through the nineteenth and twentieth centuries: David's paintings of Napoleon and his court, the Futurists, and the "state art" of Nazi Germany and the Soviet Union. It is true that post-Kantian aesthetics are essential to our understanding and appreciation of the many, diverse expressions in the arts of recent times, such as Chopin's piano sonatas, Berg's atonal compositions, Beckett's plays, Ferlinghetti's poetry, Pollock's action painting, Moore's sculptures, Gaudi's architecture, and Ailey's modern dance. But this cultural preference should not then be used arbitrarily to judge or even to interpret earlier artistic styles. Not only should the fine arts be judged within the cultural context of their respective times, but they should be interpreted according to the definition of the humanities and arts by the culture at that time.

III: A CONTEMPORARY UNDERSTANDING OF THE HUMANITIES

If the historical relationship between the humanities and the liberal and the fine arts seems complex and a bit confusing, that indeed is the case. In fact, in an important survey of the humanities, Otto A. Bird stops short of identifying any particular disciplines with the humanities. Rather he adopts Wilhelm Dilthey's basic separation between natural or scientific knowledge (Naturwissenschaften) and the human or cultural (Geisteswissenschaften). The humanities are those disciplines or subjects which contribute to Verstehen, to a deeper understanding ("fundamental experience") of the human condition in its cultural context. Bird interprets contemporary humanities as having two complementary dimensions, the study of the language arts (basically the old trivium) and those subjects which deal primarily with the great concerns of human life (Cicero's res magnae), especially literature, history, and philosophy. This is why a study of the classics and masterpieces of earlier times is not only justified, but is considered essential to probing the "big questions" of truth, goodness, beauty, and justice which have confronted human beings through all of history. Unlike scientific knowledge, which tends to be cumulative in its methodology and content, humanistic knowledge is noncumulative and thus includes the study of ideas and artistic expressions from all the ages. The humanist seeks out all the gems of human wisdom which will clarify and deepen the understanding of our human-cultural condition.

Such study has important social, political, and ethical implications for the present. The humanities are eminently practical, for they bring a critical dimension to the human decision-making process. Generous funding of the sciences and technical-vocational programs has allowed great advancement in these fields. Scientists continue to explore the microcosm of the atom and the macrocosm of the expanding universe, while the technicians fashion microcomputers, engineer genetic structures, construct doomsday weapons, and launch rockets beyond the solar system. This veritable explosion in our technical-scientific knowledge points out the need, now more than ever before, for the traditional role of the humanities. Study of the humanities fosters a critical spirit by raising implications for decisions in the use and application of our scientific-technical knowledge. It is one thing to know how to clone living cells and to build the ultimate weapon; it is quite another to understand when, or even if, to use that specialized knowledge and technology. Through an investigation of the great cultural documents of civilization, the humanist is able to raise broader questions regarding the use of our science and technology. This role of the humanities is important not only for the schools, but also for clarifying the numerous and complex public policy issues which confront our democratic society.

My conclusions and suggestions are several. The historical development of the humanities and their relationship to the liberal and the fine arts is complex and changing. The classical understanding and identification of the humanities and the liberal arts had shifted by the twelfth century, as the seven liberal arts were treated as skills to pursue the scholastic subjects of the medieval university. Beginning in the fourteenth century Renaissance humanists revived the earlier tradition of the humanities--the studia humanitatis--to counter the scholastic approach. Their orientation was primarily rhetorical and they treated peotry as the highest expression of rhetorical eloquence. The patronage systems of church and court tended to reinforce the rhetorical, or persuasive, attitude towards and use of the fine arts during the early modern period. This confusion of the humanities and the fine arts was clarified during the eighteenth century by Kant and the aesthetic systems derived from his philosophy: the humanities were purposive, or directed towards action, while the fine arts were nonpurposive, or existed as their own raison d'etre--to edify or to entertain. Teachers and students should be aware of and use carefully this modern distinction between the humanities and the fine arts. When studying examples of the fine arts from earlier periods, we should be sensitive to the different understandings and expectations of the arts within those cultural contexts. We should not force our own definition and standards on artists and humanists from different times and places. Rather, as Professor Bird has suggested, we should seek out those classics and masterpieces from other ages precisely because they may provide us with alternative insights into the meaning of our human condition. This accumulation of cultural insights, while differing from the kinds of natural knowledge received through scientific inquiry and from the practical skills achieved through vocational training, can indeed lead us to a deeper understanding of our own humanity. Study of the traditional humanities is necessary in order to place the specialized knowledge of science and technology in a broader, human-cultural context. The humanities need to play a more vital role in our schools and in our democratic society as we encounter the challenges of the twenty-first century.

SUGGESTED READINGS

Highly recommended for all teachers and interpreters of the humanities is Otto A. Bird's *Cultures in Conflict: An Essay in the Philosophy of the Humanities* (paperback ed.; Notre Dame-London: University of Notre Dame Press, 1976), which includes a useful bibliography of both primary and secondary sources. I am also indebted to the other authors, some already cited, whose ideas and insights have contributed to the formation of this essay. For Renaissance humanism, see the studies by Paul Oskar Kristeller: *Renaissance Thought: The Classic, Scholastic, and Humanist Strains* (paperback ed.; New York-Evanston-London: Harper and Row, 1961); *Renaissance Thought II: Papers on Humanism and the Arts* (paperback ed.; New York-Evanston-London: Harper and Row, 1965); and *Renaissance Thought and its Sources*, ed. Michael Mooney (New York: Columbia University Press, 1979), which should be supplemented by Hanna H. Gray, "Renaissance Humanism: The Pursuit of Eloquence," *Journal of the History of Ideas*, 24 (1963), 497-514, and by Jerrold E. Seigel, *Rhetoric and Philosophy in Renaissance Humanism* (Princeton: Princeton University Press, 1968). The liberal arts are treated in David L. Wagner, ed., *The Seven Liberal Arts in the Middle Ages* (Bloomington: Indiana University Press, 1983), while their shift in scholasticism is the more specialized topic of G.L. Bursill-Hall, *Speculative Grammars of the Middle Ages* (The Hague-Paris: Mouton, 1971). The limited efforts for humanistic reform in the late medieval universities are explained by Terrence Heath, "Logical Grammar, Grammatical Logic, and Humanism in Three German Universities," *Studies in the Renaissance*, 18 (1971), 9-64, and by Alan Perreiah, "Humanistic Critiques of Scholastic Dialectic," *The Sixteenth Century Studies Journal*, 13 (1982), 3-22. Renaissance defenses of poetry are the subject of Concetta Carestia Greenfield, *Humanist and Scholastic Poetics, 1250-1500* (London-Toronto: Associated University Presses, for Bucknell University Press, 1981), and of Margaret W. Ferguson, *Trials of Desire: Renaissance Defenses of Poetry* (New Haven-London: Yale University Press, 1983). The eighteenth-century distinction between rhetoric (as a humanistic study) and poetry (as a fine art) is discussed by O.B. Hardison, "The Orator and the Poet: The Dilemma of Humanist Literature," *The Journal of Medieval and Renaissance Studies*, 1 (1971), 33-44, and by Walter J. Ong, SJ, "The Province of Rhetoric and Poetic," in Joseph Schwartz and John A. Rycenga, eds., *The Province of Rheotric* (New York: The Ronald Press, 1965), pp. 48-56, and, more generally, in his *Rhetoric, Romance, and Technology* (Ithaca-London: Cornell University Press, 1971). See also the useful survey of the modern arts by Robert Hughes, *The Shock of the New* (New York: Alfred A. Knopf, 1981).

UNIVERSITY OF DENVER

I: BLOOD AND GUTS IN 15TH CENTURY FRANCE: THE POEMS OF FRANÇOIS VILLON

Born in 1431, dead perhaps in 1463 (no one knows or more than likely ever will know), Villon is known to us largely through police records, for he was a brawler and a drinker and perhaps a thief and perhaps a lecher and certainly one of the great poets of all time. It was a brawling time; it was also still, in many ways, a medieval time, even as it was changing, year by year, into the early modern era we call the Renaissance. And Villon represents all of it -- the brutality and the aspirations, the comradeliness and the hatreds, the pity and the contempt.

En ce temps que j'ay dit devant
Sur le Noel, morte saison
Que les loups se vivent du vent
Et qu'on se tient en sa maison
Pour le frimas, pres du tison
Me vint ung vouloir de brisier
La tres amoureuse prison
Qui souloit mon cuer debrisier.

It seems to me that a thorough teacher of literature or history or philosophy or religion (and perhaps of other subjects, but this is enough, it will do) could teach for a month or more on just this one verse stanza. Christmas as the "dead season," a season when hungry wolves hunt in vain and so "live off the wind," conjures up with singular vividness and force the realities of seasonal life as men on earth once knew it. Persons "staying in their houses/ Because of the frost" are forcefully juxtaposed against the half-starved animals. A person can store food, can afford to stay indoors and weather through the weather. It is the starkest proof of civilization -- not perhaps much proof to us, in our air conditioned houses, stocked with canned goods and frozen foods and more supplies of every sort than people of Villon's generation saw in a year's three hundred and sixty-five days, but abundant proof for all that. Humans have fire, too, that great potent civilizer, and can stay near it, and stay warm. And they have yearnings, desires, and regrets, and bitterness, all beautifully captured in Villon's three last lines, here.

But how do we teach Villon to students, most of whom cannot read modern French, none of whom are likely to read Villon's French? We turn to Galway Kinnell's fine bilingual edition, first published in 1965, revised in 1977, and available in paper covers with useful notes and a sensible short poet's introduction.

In the year above-mentioned
Near Christmas, the dead time
When wolves live on the wind
And men stick to their houses
Against the frost, close by the blaze
A desire came to me to break out
Of the prison of great love
That was breaking my heart.

What Kinnell has seen, and most other translators have been too caught up in the words and forms of the original to understand, is that Villon's extraordinary vividness enables the translator to do away with rhyme. "Rhyme is not a decoration," Kinnell agrees, "but part of the character of Villon's poetry." On the other hand, as the evidence of his flowing, powerful rendering proves, he has also understood that the essence of a poem and of a poet is not in the parts but in the whole. It is a fine, clear, beautifully usable translation.

To the lords and masters God give good works
And lives lived in peace and quiet
In their case there's nothing to set right
So I'll shut up about them
But to the poor ones like me
Who have nothing God give patience ...

I doubt that students could possibly resist Villon, in this fresh, sturdy garb. I know I cannot!

II: THE LYRICS OF GOETHE'S FAUST

American students, reading Goethe's Faust in no matter what translation, have certain inevitable difficulties. Dramatic poetry of a deeply philosophical order is not native either to the tradition of poetry in the English language or to the culture of the United States. And it remains true that there is as yet no satisfactory translation of Faust as a whole.

But one important, if subsidiary reason for Americans' difficulties with the poem is surely the wretched rendering almost all translators have given to the lyrics and songs of Faust, lyrics which indeed constitute a very significant part of the second part of the poem. Mephistopheles roars out, in part one,

Trauben trägt der Weinstock!
Hörner der Ziegenbock;
Der Wein is saftig, Holz die Reben,
Der hölzerne Tisch kann Wein auch geben.
Ein tiefer Blick in die Natur!
Hier ist ein Wunder, glaubet nur!

Walter Arndt's "new" translation (1976) quite simply massacres this:

Grapes on the vinestock,
Horns on the goat-buck;
Juice is the wine, wood is the vine,
A wooden table can flow with wine.
A singular gaze up Nature's sleeve --
Here is a miracle -- believe!

"Perhaps the last quality which most people associate with Faust," Walter Kaufmann writes, "is its overflowing humor, which runs the whole scale from the benign to the sardonic, including in between the raw ... [and] the witty ..." Arndt runs the scale from zero to zero: no American student could I suspect understand, much less savor, the barbarous flatness of his rendering. Here in stunning contrast is an immensely lively version by a man who is himself a poet, Jim Eggeling. (It is taken from The Denver Quarterly, Summer, 1976.)

th
Grapevine bears its clusters
of
Grapes
th
HEGOAT wears his great HORNS.
juicy
Vines are WINEWOOD
so:
wooden
Tables: BE WOODWINE!

(peer
Deeply into Natura)

HERE'S TH
MIRACLE --
JUST
WATCH IT! JUST PULL
OUT TH
BUNGS & DRINK
YRSELVES
FULL!

It might not be possible to translate the non-lyric parts of Faust in this style (though it is closer to the German than one might at first suspect). But take just one line in these two versions, both rendering Ein tiefer Blick in die Natur! ("A deep look into Nature!") Arndt is arch, horribly free, and as bad as bad can be: "A singular gaze up Nature's sleeve." Eggeling re-lineates, but he makes superb sense, and poetry, of the German: "(peer/Deeply into Natura)."

How can our students properly respect a literary monument like Faust unless its translators too respect it, and give us in good measure that "overflowing humor" of which Kaufmann speaks so well?

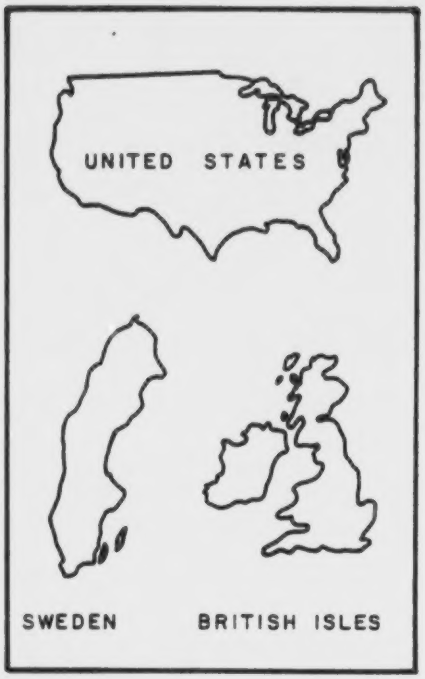
STAFFAN KLINTBORG

CULTURAL CROSS-CURRENTS



BRITISH AND AMERICAN CULTURE COURSES IN SWEDEN; SWEDISH AND BRITISH CULTURE COURSES IN THE USA

Hardly any young Swedes leave school without at least six, often eight or nine, years of English language instruction. For English at the university level we stick to the traditional belief that a deeper understanding of language fosters an ability to appreciate English literature, at the same time that we use literature as a stepping-stone to a higher language proficiency. In addition we teach other aspects of English-speaking cultures, such as political systems, legislation, the press and so on. All of these extensions, which we call "relia," supposedly increase our Swedish students' understanding of the discipline of "English," yet when they visit Britain or the United States, they discover non-linguistic aspects of culture for which they are largely untrained.

Indeed, when my British colleague in Växjö and I realized that we expected our students to know more about the passing of amendments in the House of Lords in Westminster and in the Senate in Washington, and more about public schools in Britain and the USA than the workings of the Swedish Riksdag and "grundskola"; when we further realized that minor poets in English were far more familiar to the students than major artists and composers, we did some real thinking on what constitutes "a culture." The outcome of our thinking was an optional course at Intermediate Level called "British Culture."

Our university was generous enough to give us a course development grant, which enabled both of us to go to London for a week to gather material. We had a highly productive "cultural" week going to bookstores, to record-shops and to art galleries and museums for slides. Gaps were filled in by an institute for contemporary music, the book sales department at the National Theatre and a company specializing in slides of buildings from all over Britain.

The visible result was a decent collection of pictures, tapes and records, and a course book where we had contributed different sections plus a supplement with reproductions. We had agreed on a staple cultural diet of music, painting, architecture and theatre history, with further delicacies added depending on the students' tastes.

It also turned out, as we had hoped, that each time the course was given, it developed differently because it attracted students of different special interests. One student was a collector of china, another was married to a town-planner; we had folk and pop music fans, a choir member who taught us to sing English madrigals in five parts, a nursery school teacher who performed puppet theatre for us, etc.

The class met for two hours every week in the language laboratory, which had stereo equipment and a large table in the middle to sit around, instead of the usual classroom arrangement. It was a good thing that we team-taught, not only because we could then prepare and initiate the discussion of different specialties, but also because of the time-consuming job of selecting slides, transferring the music from records to cassettes, and not least chasing around for projectors and other missing equipment, or for the technician, when things fell apart!

The course is "cross-disciplinary" in the sense that every session is devoted to a cultural period, with the aim to cover what happened in all the non-literary art forms during one and the same epoch. The Perpendicular Gothic arches of King's College Chapel, Cambridge, are shown to the accompaniment of polyphonal music of the choir boys; William Morris' designs for wall-paper and simple furniture are compared to the collections of folk music which later inspired composers like Vaughan Williams. Architecture plays a prominent part in the course, for we wanted our students to share the delight of trying to date the cathedrals and cottages of Britain by looking at windows, porches and towers.

Literature is not included in the program, since there are separate literature courses for all students. Naturally, what we look at and listen to gives rise to discussions of literary parallels: the Sutton Hoo archaeological finds shed light on Beowulf, the paintings of Constable and Turner illustrate the Lake Poets, Hogarth and Fielding are shaped in the same cultural mould, and Blake the artist deepens the understanding of Blake the poet. Students less open to literary associations usually appreciate the Roman forts for their technical ingenuity or the Bayeux tapestry for the strip-cartoon affinities.

The students are told at the beginning of the course to select a topic for individual "research" and oral presentation. They have to record their choice of music or make slides from book illustrations with the help of the technician. The department pays for the expenses provided that it can keep the material for future use.

Not only have the participating students felt that they have got a deeper understanding of British culture, or perhaps even culture in general, but those of them who are teachers or are going to be teachers can use this knowledge to reinforce or illuminate linguistics or history of literature. And there has been an extra benefit: we who devised and taught the course have learnt a great deal from the students that we did not know when we started.

It is now with great excitement that I am embarking on offering a version of the British culture course to American students and I am very curious about their reactions. My hopes for the future are to expand the present course to five credits (it is now given three credits) and offer it as an extension class in Sweden. I would also like to devise a similar course on American culture, and I am now, during my year at the University of Minnesota, Duluth, constructing a new one on Swedish culture for the Humanities program. Some of what American culture entails I hope to absorb by living and working in this country. My dilemma about planning the Swedish culture class is much greater, as it would be for anyone planning to teach about his or her own culture: Should I cater to the traditional view of Sweden with its folk-dances, folk-costumes, Christmas and Midsummer rites, or should I try to sort out truth from prejudice about my home country as an over-protective, state-controlled haven with liberal sex-education? What is Swedish culture?

COPYRIGHT ISSUES IN THE HUMANITIES

BY FRANCIS M. NEVINS

ST. LOUIS UNIVERSITY
SCHOOL OF LAW

II: THE PHOTOCOPY ISSUE

THE PROBLEM:

A humanities professor learned, upon coming back to school after the winter break, that three of the four book she had selected for a course had gone out of print, although all three were recent publications that had been listed in Books in Print. He had xerox copies made of all the passages that were necessary for the course--about 75 pages --and sold them at cost to the students. If publishers make their works unavailable by withdrawing them from print, isn't it fair game as well as fair use to copy what is needed for classroom use? Is there any problem with charging costs of reproduction to the students?

PROFESSOR NEVINS' REPLY:

This problem will require a much longer answer than my last, and the best place to begin is with a brief look at copyright philosophy. Article I, Section 8, Clause 8 of the United States Constitution gives Congress the power "to promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." Pursuant to this power, Congress passed the nation's first copyright act in 1790. With the passage of time and the proliferation of ever more complex creative media, the successive copyright statutes enacted by Congress have likewise become more complex and detailed. The present Copyright Act became effective January 1, 1978, replacing an earlier act that had been the basis of our copyright law with only minimal revision since 1909.

The essence of copyright is that the law gives creators monopoly power over their works. But the copyright monopoly has always been limited in the United States by the ideals of free speech and action as set forth in the Bill of Rights. Historically and philosophically, copyright has been conceived as a means to an end, that end being the promotion of cultural progress, and our copyright legislation has always restricted the legal monopoly both as to time (as is required by the "limited times" language of the Constitution) and as to substance. The scope within which this limited monopoly operates can be described in a variety of ways, but until recently few if any thinkers on the subject would have disagreed with this principle: Copyright is intended to govern relations between the creator of a work and all those businesspeople who intervene between the creator and the work's ultimate consumers. It is not intended to control non-commercial use of copyrighted works nor to permit lawsuits against non-commercial users.

Ten years ago, Chief Justice Burger of the U.S. Supreme Court expressed this consensus as follows: "The [constitutional] clause thus describes both the objective which Congress may seek and the means to achieve it. The object is to promote the progress of science and the arts. As employed, the terms 'to promote' are synonymous with the words 'to stimulate,' 'to encourage,' or 'to induce.' To accomplish its purpose, Congress may grant to authors the exclusive right to the fruits of their respective works. An author who possesses an unlimited copyright may preclude others from copying his creation for commercial purposes without permission. In other words, to encourage people to devote themselves to intellectual and artistic creation, Congress may guarantee to authors and inventors a reward in the form of control over the sale or commercial use of copies of their works." Goldstein v. California, 412 U.S. 546, 555 (1973) (emphasis added).

In the last few years an assault has been launched for the first time on this age-old consensus. What has precipitated the assault is the development of new technology which for the first time has put the power to reproduce all sorts of creative work in the hands of the ultimate consumer. Before photocopying machines, audiocassete recorders and videocassette recorders came into the marketplace, the "pure" consumer who wanted or needed an unauthorized copy of a literary or audiovisual work had to purchase such a copy from one or another sort of "pirate" whose sales activity, being clearly commercial in nature, fell squarely within the prohibitions against copyright infringement. But even though the sale of infringing copies of a copyrighted work was illegal, the mere purchase of such copies was not and still is not. However, thanks to the videorecorder and the xerox machine, the "pure" consumer now has the ability to leapfrog the traditional pirate and independently reproduce for private noncommercial use or enjoyment all sorts of copyrighted works. From the viewpoint of the consumer, the new technology represents a great boon. But from the point of view of institutional copyright owners such as publishers and movie studios, it ushers in a disastrous new era of "everyone his own pirate." The most crucial issues in copyright law today are those in which such institutions are trying to halt the private non-commercial copying of printed and audiovisual works by ultimate consumers.

The rights comprised in a copyright are enumerated in Section 106 of the statute. "Subject to sections 107 through 118," the copyright owner "has the exclusive rights to do and to authorize" five kinds of activities, of which we are concerned only with the first: "to reproduce the copyrighted work in copies...." If this were the only relevant statutory provision, it would seem crystal clear that unauthorized photocopying even for private noncommerical use would violate the copyright owner's rights. However, Section 107 through 118 of the Act contain twenty closely printed pages of limitations on and qualifications of the rights granted in Section 106. Section 108, for instance, sets forth conditions in which public or academic libraries may reproduce most copyrighted works for archival purposes or at a patron's request. But none of these provisions specifically exempts from liability the photocopying of all or part of a work by a private noncommercial user. If such activity is to be defended, it must be on the ground that it comes within the terms of Section 107, the provision governing fair use.

The concept of fair use was created by the courts, applied over the years to countless situations, and finally codified into statute law when the new act went into effect on January 1, 1978. The intent of Congress in enacting Section 107 was neither to expand nor to contract the judicial doctrine of fair use but to make it a part of the statute precisely as it existed at the time. With one brief omission irrelevant to our present purpose, this section reads as follows:

> "Notwithstanding the provisions of section 106, the fair use of a copyrighted work, *including such use by reproduction in copies*..., for purposes such as criticism, comment, news reporting, teaching (*including multiple copies for classroom use*), scholarship, or research, is not an infringement of copyright. In determining whether the use made of a work in any particular case is a fair use the factors to be considered shall include--
>
> (1) the purpose and character of the use, including whether such use is of a commercial nature *or is for nonprofit educational purposes*;
>
> (2) the nature of the copyrighted work;
>
> (3) the amount and substantiality of the portion used in relation to the copyrighted work as a whole; and
>
> (4) the effect of the use upon the potential market for or value of the copyrighted work."
>
> (Emphasis added)

No amount of meditation on the language of Section 107 will enable an educator to determine with certainty what kinds and amounts of photocopying for classroom use count as "fair" under these criteria. For this reason, three organizations of interested parties--the Ad Hoc Committee of Educational Institutions and Organizations on Copyright Law Revision, the Authors League of America, and the Association of American Publishers--held a series of meetings and developed a set of "Guidelines for Classroom Copying in Not-for-Profit Educational Institutions." The purpose of the Guidelines was to fulfill "the need for greater certainty and protection for teachers" by offering quantifiable numerical limits rather than the imprecise philosophical approach of Section 107. These Guidelines are not a part of the Copyright Act but are printed in the Act's legislative history and, according to the House Judiciary Committee, represent "a reasonable interpretation of the minimum standards of fair use." H.R. Rep. No. 94-1476, at 72 (1976). With respect to books and periodicals, the Guidelines read as follows:

AGREEMENT ON GUIDELINES FOR CLASSROOM COPYING IN NOT-FOR-PROFIT EDUCATIONAL INSTITUTIONS

With Respect to Books and Periodicals

The purpose of the following guidelines is to state the minimum standards of educational fair use under Section 107 of H.R. 2223. The parties agree that the conditions determining the extent of permissible copying for educational purposes may change in the future; that certain types of copying permitted under these guidelines may not be permissible in the future; and conversely that in the future other types of copying not permitted under these guidelines may be permissible under revised guidelines.

Moreover, the following statement of guidelines is not intended to limit the types of copying permitted under the standards of fair use under judicial decision and which are stated in Section 107 of the Copyright Revision Bill. There may be instances in which copying which does not fall within the guidelines stated below may nonetheless be permitted under the criteria of fair use.

Guidelines

I. Single Copying for Teachers

A single copy may be made of any of the following by or for a teacher at his or her individual request for his or her scholarly research or use in teaching or preparation to teach a class:

A. A chapter from a book;
B. An article from a periodical or newspaper;
C. A short story, short essay or short poem, whether or not from a collective work;
D. A chart, graph, diagram, drawing, cartoon or picture from a book, periodical, or newspaper;

II. Multiple Copies for Classroom Use

Multiple copies (not to exceed in any event more than one copy per pupil in a course) may be made by or for the teacher giving the course for classroom use or discussion; provided that:

A. The copying meets the tests of brevity and spontaneity as defined below; and,
B. Meets the cumulative effect test as defined below; and,
C. Each copy includes a notice of copyright

Definitions

Brevity

(i) Poetry: (a) A complete poem if less than 250 words and if printed on not more than two pages or, (b) from a longer poem, an excerpt of not more than 250 words.

(ii) Prose: (a) Either a complete article, story or essay of less than 2,500 words, or (b) an excerpt from any prose work of not more than 1,000 words or 10% of the work, whichever is less, but in any event a minimum of 500 words.

(Each of the numerical limits stated in "i" and "ii" above may be expanded to permit the completion of an unfinished line of a poem or of an unfinished prose paragraph.)

(iii) Illustration: One chart, graph, diagram, drawing, cartoon or picture per book or per periodical issue.

(iv) "Special" works: Certain works in poetry, prose or in "poetic prose" which often combine language with illustrations and which are intended sometimes for children and at other times for a more general audience fall short of 2,500 words in their entirety. Paragraph "ii" above notwithstanding such "special works" may not be reproduced in their entirety; however, an excerpt comprising not more than two of the published pages of such special work and containing not more than 10% of the words found in the text thereof, may be reproduced.

Spontaneity

(i) The copying is at the instance and inspiration of the individual teacher, and

(ii) The inspiration and decision to use the work and the moment of its use for maximum teaching effectiveness are so close in time that it would be unreasonable to expect a timely reply to a request for permission.

Cumulative Effect

(i) The copying of the material is for only one course in the school in which the copies are made.

(ii) Not more than one short poem, article, story, essay or two excerpts may be copied from the same author, nor more than three from the same collective work or periodical volume during one class term.

(iii) There shall not be more than nine instances of such multiple copying for one course during one class term.

[The limitations stated in "ii" and "iii" above shall not apply to current news periodicals and newspapers and current news sections of other periodicals.]

III. Prohibitions as to I and II Above

Notwithstanding any of the above, the following shall be prohibited:

(A) Copying shall not be used to create or to replace or substitute for anthologies, compilations or collective works. Such replacement or substitution may occur whether copies of various works or excerpts therefrom are accumulated or reproduced and used separately.

(B) There shall be no copying of or from works intended to be "consumable" in the course of study or of teaching. These include workbooks, exercises, standardized tests and test booklets and answer sheets and like consumable material.

(C) Copying shall not:

(a) substitute for the purchase of books, publishers' reprints or periodicals;
(b) be directed by higher authroity;
(c) be repeated with respect to the same item by the same teacher from term to term.

(D) No charge shall be made to the student beyond the actual cost of the photocopying.

If these Guidelines were part of the law, and if they stated the outer limits of fair use, then I'm afraid that the photocopying of 75 pages of text as described in your question would not be permissible, because under the Guidelines no more than 1000 words or 10% of any prose work, whichever amount is less, may be photocopied for classroom use without permission. But, as we've seen, the Guidelines are not part of the law, and as the first sentence of the document states, their sole purpose is "to state the minimum standards of educational fair use under Section 107...." (emphasis added.) In other words, the Guidelines create a sort of safety zone within whose bounds educators may photocopy without fear of copyright infringement suits against themselves or their institution. Outside of those bounds, schools and educators must rely on the general language of Section 107 quoted above. The Guidelines clearly recognize that fair-use copying is possible beyond the safety zone, for the second paragraph declares that the document "is not intended to limit the types of copying permitted under the standards of fair use under judicial decision and which are stated in Section 107.... There may be instances in which copying which does not fall within the guidelines....may nonetheless be permitted under the criteria of fair use."

So finally we've reached the heart of your question, whether copying 75 pages worth of out-of-print texts, and selling them to students at cost, falls within fair use. And the answer, as usual with questions of fair use, is: maybe yes, maybe no. But in the absence of any definitive judicial ruling on the outer limits of fair use, it seems to me that in the exercise of prudent judgment a teacher may legitimately decide to go ahead with the photocopying. If the material were readily available for purchase from the publisher, or if the teacher or school charged more than the actual cost of photocopying, my instincts would probably go the other way. Given the facts as stated, I believe that the photocopying is arguably justifiable as fair use. As a practical matter, of course, there are hundreds of thousands of instances of school photocopying that never come to publishers' attention, and hence are never challenged, for every one that becomes the basis of even a threatening letter from a lawyer, let alone a lawsuit. Ultimately, the question you asked me must be resolved by the individual teacher on the basis of his or her best judgment. I'm sorry my answer can't be more specific, but that's because the law isn't specific either.

A Librarian Replies on Video Copyright

I write in reply to Professor Nevins' comments on the question of playback of public library loans of feature length films in the classroom. He states unequivocally that the university media center was "dead wrong" in refusing the service; the use was "clearly legal." I would suggest that the question of the legality of that practice is far from clear. A number of lawyers have taken the opposite view, holding that the right of contractual constraint of distribution under Sec. 106(3) is a first right. Subsection (b) of Sec. 109 deals with the scope of the copyright owners right to control public display of a particular copy of a work. The Senate committee's apparent intention was to preserve the traditional privilege of the owner of a work to display it directly but to place reasonable restrictions on the ability to display it indirectly such that the market for distribution of copies would be affected, unless it constitutes fair use under Sec. 107. Videocassettes of feature films are for sale and for rent. Those distributed by public libraries are clearly marked For Home Use Only and specifically cite classroom use as a violation of copyright. Furthermore many public library media centers will refuse to loan a feature film if they are aware that the purpose of use is classroom playback.

The House Judiciary Committee's report on the Copyright Act, from which Professor Nevins quotes, states in the same general area, re, clause (1) of Sec. 110 on face-to-face teaching activities

> "Face-to-face teaching activities under clause (1) embrace instructional performances and displays that are not "transmitted." The concept does not require that the teacher and students be able to see each other, although it does require their simultaneous presence in the same general place. Use of the phrase "in the course of face-to-face teaching activities" is intended to exclude broadcasting or other transmissions from an outside location into classrooms whether radio or television and whether open or closed circuit.
>
> Instructional broadcasting
>
> Works affected - The exemption for instructional broadcasting provided by Sec. 110 (2) would apply only to "performance of a nondramatic literary or musical work or display of a work". Thus the copyright owner's permission would be required for the performance on educational television or radio of a dramatic work-----or of a motion picture."

Thus, on the basis that this was a dramatic work in its entirety, obtained without payment of fee, clearly marked for home use, and closed circuit transmitted, a conservative media center, mindful of their responsibilities to both the law and their institution, would surely hesitate. Clarifications of such uses may be forthcoming in current pending law cases and in amendments to the Copyright Act now being considered.

I am more disturbed by the apparent if veiled suggestions throughout the comment that educators have rights to just about anything for classroom use without permission or payment. The Washington-based education community's Ad Hoc Committee on Copyright Law has urged in their report the necessity for the educational community to live up to the spirit of the copyright law and to assume responsibility for monitoring educational practices. The continued flow of funds to produce and distribute high quality instructional programming depends in large part on income received for the efforts. The media center personnel are caught among the conflicts of their desire to serve their patrons and the educational mission of their institution, awareness of the copyright restrictions, and an understanding of the costs and complexities of production. Rather than castigate the media center, it seems to me the responsibility exists for all parties to work out equitable solutions and then to abide by them.

I would urge faculty to communicate their perceptions and experiences to their elected representatives if they believe the current laws need revision and clarification. The producers and distributors are doing just that from their point of view.

Connecting Art and Science:

The Clarke Art Institute and Williams College, Williamstown, MA, coordinated a three day conference funded by NEH on the topic "Art and Science in Related Revolutions." The aim was to set up dialogue between artists, art historians, scientists, and historians of science, using as models the great simultaneous revolutions in art and science in Western history and in pre-modern China and Islam. The aim was to discover to what extent the visual arts and experimental sciences had cause-and-effect, or sympathetic relationships at critical junctures of their development.

Individual units of the conference are of such general interest as to be worth the trouble to contact presentors for copies of their remarks. They were: "The Significance of Word and Image in Renaissance Science," by I.B. Cohen, Professor Emeritus, Harvard University; "The Eyes Have It: Dutch Art and Natural Knowledge in the 17th Century," by Svetlana Alpers, Professor of Art History, University of California, Berkeley; "Simon Stevin and Pieter Saenredam: A Study in the Mathematical Mode," by Martin Kemp, Associate Dean of Graduate Studies, University of St. Andrews; "Einstein and Modern Art," by Linda Henderson, Associate Professor of Art, University of Texas; "New Sciences, New Arts: Evolution of Revolution?" by Robert Root-Bernstein, Salk Institute for Biological Studies, San Diego; "Is there Progress in Art?" by Suzi Gablik, Visiting Professor of Fine Arts, University of the South; "Educating Alciati: Emblems for a Scientific Revolution," by Williams Ashworth, Professor of History, University of Missouri, Kansas City; "The Laws of Chinese Science were the Laws of Chinese Painting," by Nathan Stein, Professor of Chinese Culture, University of Pennsylvania; "Scientific Illustration and the Image of the Scientist in Islamic Art," by Anthony Welch, Associate Dean, Fine Arts, University of Victoria. The opening address by A.C. Crombie, Visiting Professor in the History of Science at Williams College was "Science and the Rational Artist." (S. Scholl)

Computing With Women in History

Glenhurst Publications, Inc. and MicroEd are collaborating to publish a series of software programs meant to enhance the books in the Women in World Area Studies series.

The first two microcomputer packages are ready for purchase. This BookSoft program covers the WWAS student books, **Women in Ancient Greece and Rome and Women in Medieval/Renaissance Europe.** The software packages include: floppy disks (two covering the materials on women in ancient Greece and Rome and three covering the medieval/Renaissance), documentation, instructional, software guides and teacher's guides for the student books. By using the student books with the microcomputer programs, the micro is freed from the necessity of having to present certain materials such as pictures, statistical and primary source data and extensive text materials, that are presented in the student books, **Women in Ancient Greece and Rome** and **Women in Medieval/Renaissance Europe.**

Each complete package--documentation, instructional software guide, teacher's guide, student book, and floppy disks--(Apple IIe or Commodore 64) is $79.95. The next titles in this microcomputer series will be **Women in Africa of the Sub-Sahara, Volumes I and II.** They will be available later this fall. Other packages in the series will include **Women in Latin America--from Pre-Columbian Times to the 20th Century, Women in Latin America--the 20th Century, Women in the Islamic Middle East, Women in Israel, Women in Traditional China, Women in Modern China, Women in India** and **Women in the USSR.**

Write to Glenhurst Publications, Central Community Center, 6300 Walker Street, St. Louis Park, MN 55416.

HUMANITIES EDUCATION

HumaNews

Official Newsletter of the National Association for Humanities Education

EDITOR'S NOTE: Member-subscribers are invited to submit personal newsbriefs about their activities, publications, awards. We will be pleased to print announcements of upcoming conferences, calls for papers, fellowship and seminar opportunities relating to humanities and arts interdisciplinary education. Such announcements should be submitted at least three months in advance of events or deadlines to ensure properly timed publicity.

FROM THE EXECUTIVE COMMITTEE

Gary D'Lamater
Director, AMP Institute
AMP Incorporated
Harrisburg, PA 17105

Robert C. Frazier
Associate Professor of Humanities
College of Education
Arizona State University
Tempe, AZ 85281

Ann Arbor, MI 48104

Inez Wolins
Department of Educational
Communications and
Technology
New York University
New York, NY 10003

The big news is the gratifying growth in membership of NAHE. Elsewhere in this issue is a series of maps documenting the resurgence of our sixteen-year-old organization. This was made possible by the generous support of the University of Minnesota for promotional direct mail campaigns, most recently with grants of $300 each from Duluth campus Provost Robert Heller and from Dean Robert Franz of the College of Letters and Social Science. We have also arranged with the Southern Humanities Conference to have copies of their newsletter, HUMANITIES IN THE SOUTH mailed to every NAHE member.

The Executive Committee has elected two new members, thereby bringing younger leadership into the organization and more accurately reflecting our various constituencies. David Springer, who has an MAT degree from Harvard is a high school teacher, and Inez Wolins is a museum educator with experience at the museum at Cornell University and Curator of Education at the Tampa Museum.

Because of our rapid growth, we have temporarily frozen the elective offices. The opportunity for resuming national conventions seems much closer than anticipated, and we invite suggestions and volunteers from all members. The maps of member distribution may suggest regional conferences. If you are planning another relevant conference, consider joint sponsorship by NAHE or a NAHE conference-within-a-conference. We have done this several times in recent years with considerable success. Write or call any member of the Executive Committee if you would like to try out an idea.

Meanwhile, the magazine is our sole project. Editor Fred Schroeder has recommended doing HumaNews as a separate, more frequent newsletter. If you believe that you have the skills for such editorship, send a letter of application to Dr. Schroeder outlining your qualifications and ideas.

NEWS ABOUT MEMBERS

Members of the NAHE Executive Committee have been especially active in humanities affairs. GARY D'LAMATER, a member of NAHE for the past twelve years has left the academic world to apply his experience and research in curriculum development to the business world. Dr. D'Lamater is the Director of the AMP Institute, sales and marketing training center for AMP Incorporated, in Harrisburg, Pennsylvania. AMP is the leading producer of electrical and electronic connection, switching and programming devices in the U.S. Gary intends to remain active in NAHE affairs and has promised to contribute some "views from the corporate world" to HUMANITIES EDUCATION.

ROBERT FRAZIER'S article "Man Quests the Future" is the keynote essay in an issue of ATE: ACTION IN TEACHER EDUCATION magazine devoted to the topic of Technological Literacy. Reviewing a variety of futurist works, Bob takes an optimistic view of educational trends. INEZ WOLINS, newly appointed to the Executive Committee, is heading the Non-Print Media Committee of the American Association of Museums. Activities include such things as developing a clearinghouse list of current media programs produced by or about museums. Memberships on the Committee are $10. VASANT MERCHANT has published a two-part article in the WORLD UNION journal on "The Mission of the Arts and Humanities and Global Awareness." Vasant argues particularly for the unifying power of music, and surprises the readers by calling attention to the neglected second stanza of Kipling's "Ballad of East and West," which points toward unity, not separation. BRYAN LINDSAY'S "Theories of Light: Ways of Approaching Excellence" has been published in VITAL SPEECHES OF THE DAY.

DAVID BERTOLOTTI who teaches humanities at the General Motors Institute has a new book on CULTURE AND TECHNOLOGY, published by Bowling Green University Press. And speaking of culture and technology, AMOS ST. GERMAIN who was a founder of the Humanities and Technology Association and the Interface conference announces that next year's conference will be October 9. For details, write to him at Southern Technical Institute, Marietta, GA 30060.

GORDON VARS, Executive Secretary of the National Association for Core Curriculum has done a story on NAHE in THE CORE TEACHER newsletter. It's appreciated. One of Minnesota's most beloved high school humanities teachers, RICHARD DE GUISE retired early for reasons of health, but Dick reports that he is feeling fine and is busy with many projects -- traveling, golf and writing.

UPCOMING

CONFERENCES

The **Southern Humanities Conference**, which includes among its membership many members of NAHE, will hold its annual conference January 31 - February 2, 1985. Sponsored by Emory University, Spelman College, and Georgia Institute of Technology, the 1985 meeting will be held on the Georgia Tech campus close to downtown Atlanta. The program will include papers on various aspects of the theme "The Humanities in International Perspective," such as "The Humanities in Socialist/Marxist states," "The Humanities in Third World countries," The International Art Market," "The Challenge of Preserving Cultural Treasures," "Translating the Humanities," and "The Humanities text as Cultural Exchange Object." For information, write to:

Dr. Robert Detweiler
Graduate Institute of the Liberal Arts
Emory University
Atlanta, GA 30322

"New Order/No Order" will be the theme as photographic artists, educators, critics, curators, and students gather at the Hyatt Regency Hotel in Minneapolis, Minnesota from March 14-17, 1985, for the annual conference of the **Society for Photographic Education**. Speakers will address the role of the photographer in the current cultural order, and consider how the power of the image in its many contexts is creating new demands for greater responsibility in authorship. Almost twenty museums and galleries in the Minneapolis-St. Paul area will exhibit photographs during the conference period.

Garrison Keillor, host of National Public Radio's A Prairie Home Companion, will open the Conference on Thursday evening, March 14.

On Saturday, March 16, participants can choose from a number of panels which will each follow a particular emphasis. "Issues in Education" will trace the evolution of teaching programs in photography and look at ways to make these more responsive to current issues. The status of the participation of women in photography is the focus of the "Feminist Perspectives" panel. Museum professionals will offer insights into their activities during "The Curatorial Posture of Museums," and editorial decisionmaking will be explored in "The Published Photograph." Other panels include "Minnesota and the Arts," "Criticism," and "Economic Survival in the Eighties," in which artists who have attained economic stability will discuss alternatives to teaching as a support for their art-making.

For further information about Conference attendance and accommodations, contact: 1985 SPE National Conference, P.O. Box 14254, St. Paul, Minnesota 55114 (507-332-8741). Reduced fare information, a roommate-matching service and day-care are available.

The **American Culture Association** national convention will be held in Louisville April 3-7. One of the sectional areas is "Pedagogy and American Culture." For information on the convention which meets with the Popular Culture Association with over one thousand participants covering a wide spectrum of cultural, historical and social topics, request information from ACA/PCA, Popular Culture Building, Bowling Green State University, Bowling Green, OH 43403.

NAHE members will be receiving a separate mailing on a conference at Wayne State University in Detroit on **The New Humanities Relating to Business, Professions and Technology**. Planned for April 9-11, 1985, the conference will have speakers from the humanities and from business on questions of marketplace, minorities, liberal education, professional ethics, as well as workshops on developing humanities courses relating to careers. Contact Office of the Provost for the Humanities, Wayne State, Detroit, MI 48202.

The Medieval Monastery is the subject of a three-day conference in Minnesota May 14-16, 1985. Papers on all aspects of monastic life and architecture will be presented on the Minneapolis Campus of the University of Minnesota. On the middle day, the conference will move to St. John's Abbey at Collegeville for a tour of the world's largest collection of monastic manuscripts, lunch with the Benedictine Brothers, and performances of music, dance and interpretive lectures by Concentus Musicus. "The first section of the lecture-demonstration will illustrate some of the abbey's functions as school, employer, refuge, etc." Contact Andrew MacLeish, English Department, University of Minnesota, Minneapolis, MN 55455.

The School of Music of the University of Michigan, Ann Arbor, will host a conference August 9-15, 1985, on **Black American Music.** A varied fare, from lectures to master classes to recitals and panel discussions, is planned for the six days, the purpose of which is to assess the impact of Black American music on world music and cultures. Scholars and composers such as Eileen Southern, Geneva Southall, Wendell Whalum, George Walker, Samuel Floyd, and Josephine Wright are scheduled to participate.

The conference is directed to that large body of music by Black composers which has been obscured as well as ignored by those elements which have been marketed for mass appeal - jazz, blues, and the spiritual. The intricate network of connections between authentic Black idiom and the art music of Black composers is the little known territory which the conferees will explore. The extensions outward from the Black idiom to serious composers in the European art tradition will also be more thoroughly explored. "This music constitutes an indespensable chapter in the on-going history of the culture at large," states Willis Patterson, Associate Dean of the School of Music. Its sources and world impact must be authenticated soon before time obscures the vital traces. Much of the work of the conference will consist of tracing sonic links between such polarities as ragtime and the compositions of Ulysses Kay; the harmonic vagaries of Duke Ellington and the artsongs of Howard Swanson; the rhythmic excitement of be-bop and the artsongs of David Baker.

There is a further benefit of the conference extended to 35 young black musicians who will be given scholarships for study with conference leaders in performance and interpretation. Information about these scholarships and application procedures may be obtained from Dr. Patterson.

CALLS FOR PAPERS AND THINGS

Like many other humanities teachers, the editor of HUMANITIES EDUCATION was introduced to interdisciplinary humanities at the conferences of the **National Council of Teachers of English** in the Sixties, and his first articles on interdisciplinary pedagogy appeared in ENGLISH JOURNAL. We are pleased to see that both NCTE and EJ continue their interest in humanities, as evidenced in the enclosed brochure soliciting articles for a special issue of EJ on humanities in secondary schools.

The **Association for Integrative Studies'** next annual meeting will be held at Stockton NJ October 10-12, 1985. They are particularly looking for workshop topics on (1) how to handle interdisciplinarity in traditional institutions-- and how to survive in hostile environments, (2) interdisciplinary teaching: practical suggestions, research findings, problems, (3) the politics of interdisciplinary liberal education. Write to Michael Field, Honors Program, Bemidji State University, Bemidji, MN 56601.

The University of Minnesota Art Museum has received a grant from the National Endowment for the Arts to conduct a year-long survey of **Minnesota's Folk Arts.** Willard B. Moore, a Minneapolis folklorist and sometime NAHE member, will conduct the survey.

Dr. Moore will spend the early weeks visiting regional arts councils, historical societies, college campuses, and practicing artists. This first stage will be devoted to the establishment of a network through which Moore can reach folk artists and collections of folk art throughout the state.

In addition to artifacts or "visual folk arts," Moore will be looking for song, dance, narrative, and speech performances which might fit into the category of folk art. Ballades, Corredos, working songs, ethnic rituals and Christmas mumming (known in the Scandinavian communities as Julebukke), and personal experience stories may be included in the survey.

Individuals and institutions are urged to contact Moore with questions, information, or possible leads to folk arts sources:

Willard B. Moore, Special Curator/Folk Arts
110 Northrup Auditorium
84 Church Street, S.E.
Minneapolis, MN 55455

FOREIGN STUDY AND TRAVEL OPPORTUNITIES

Western in Greece '85, an offering of the Foreign Study Office and the Department of Liberal Studies of Western Washington University, will conduct traveling seminars with visits to archaeological sites, ancient ruins, museums, historical places, and to villages and countryside of Greece, her mainland and islands -- with opportunity to stay long enough in one place to share its way of life.

For four weeks the group will stay in a guest house in an Athens neighborhood. The remaining six weeks will be divided among group travels on the Peloponnesian Peninsula, an Aegean Island tour, and approximately ten days for individual exploration. We plan on a late quarter six-day break for individual pursuits and excursions within Greece at the student's own expense.

Flight: The group will convene in Athens on March 25. A group flight will be arranged by All About Travel, 104 Unity Street, Bellingham, WA 98225. Tel. (206) 734-4000. Toll-free from outside Washington 1-800-322-3131. Airfare from west coast approximately $900.00. To arrange flight call or write to All About Travel. Our best deal this year may be to fly out of Vancouver, Canada. Keep in touch with All About Travel, no matter what part of the country you live in.

Cost: Program fees include tuition, text books, scheduled excursions, housing, all breakfasts, most dinners, instruction, and administrative costs:

Program fee (including tuition & application fee): $2,055.00

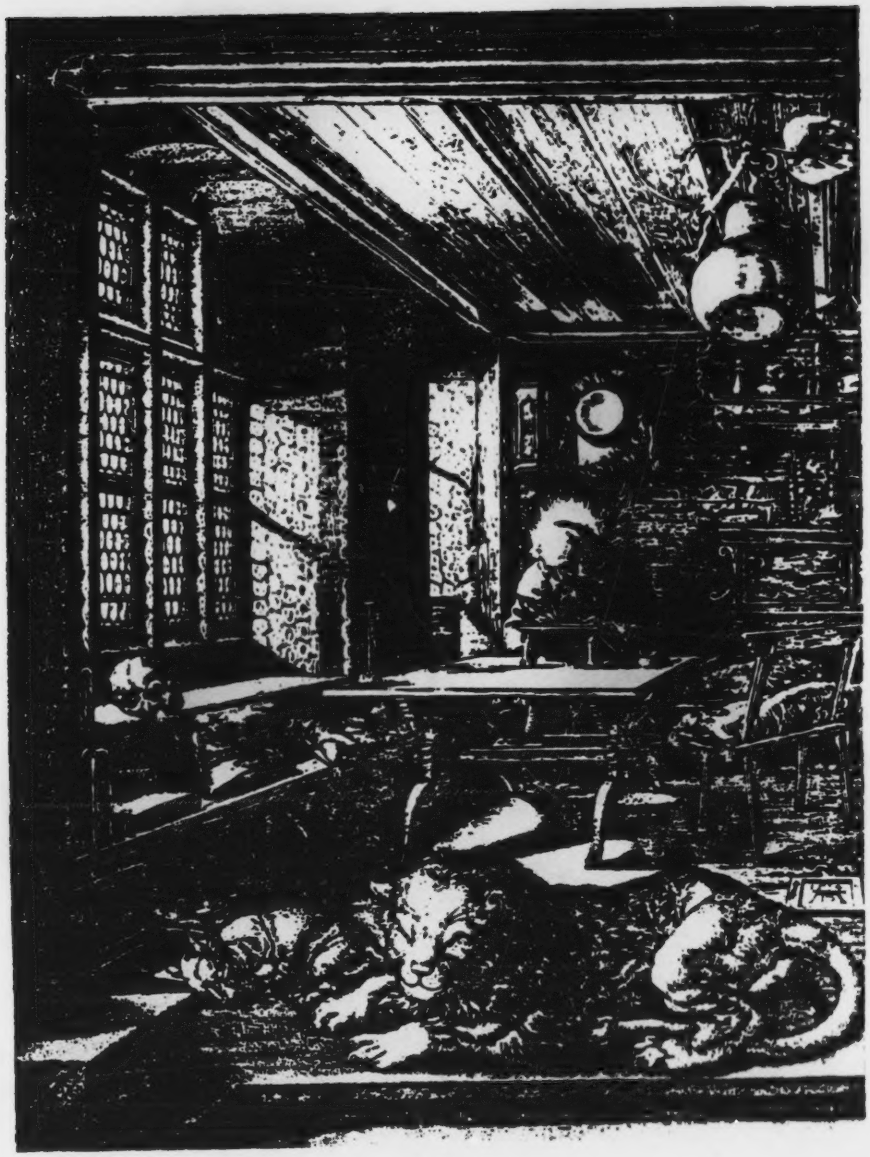
Inquiries may also be directed to:

Professor Nita Clothier
307 Arntzen Hall
Western Washington University
Bellingham, WA 98225
Phone: (206) 676-3032 or at home (206) 733-7291

English Mysteries in a Landscape is a course to be conducted by Fred E.H. Schroeder at the University of Birmingham, England. Popular classic mysteries will be read and discussed in the light of the concept of landscape. Side field trips are being planned for Dartmoor, Oxford and London literary sites. The course is available for undergraduate, graduate and no credit. Minneapolis departure is July 23, 1985 with return August 17 (open option for later return). Fee is $1550 including transportation, lodging on the university campus, tuition, field trips and classic English brekker with snorkers and bloaters Monday through Friday. Classes meet Monday through Thursday with three day weekends open for independent touring. Contact Thomas Pollock, Continuing Education and Extension, 19 SBE, University of Minnesota, Duluth 55812. (218-726-7980).

AND... UPCOMING IN THE SPRING ISSUE

Classicist Jeremiah Reedy joins the staff for "Best Translations" with an essay on translations of Homer-- with a surprising conclusion. Burton Raffel will look at translations of French prose and poetry. Museum Educator Inez Wolins discusses theory, practice and controversy about using television and other electronic media in museums. Past-president Bob Frazier joins forces with a talented Middle-School teacher, Ron Maggiano, to describe one of the bright spots in humanities in the public schools. And James Mehl initiates our first book and resources review section. There will be more, of course, but what it will be depends partly upon you. Deadlines: Washington's Birthday for the Spring issue; July 4 for Fall; Columbus Day for Winter.



EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Senior Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to redraw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one or two pages (300-700 words) for practical tips, sample assignments, commentaries, etc.; and articles of four to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

*THEORY "Piaget and Theories of Integrated Study"

*ADMINISTRATION "Crediting Departments for Team Teaching"

*HISTORY "Nineteenth-Century Multi-Media at Chautauqua"

*RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

*"What you should know about teaching novels in a philosophy course"

*"Pre-teaching history students for an art museum field trip"

*"How to help non-musicians to follow a score"

*"A designer speaks of humanities bulletin boards"

*"Getting adults to role-play in public humanities programs"

*"Understanding Oedipus: An Actor's View"

What we don't want:

*Creative writing by teachers or students (it doesn't relate to our purpose)

*Syllabus outlines (curricula should be explained, not listed)

*"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

*"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

*"Humanistic counseling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

HUMANITIES EDUCATION

Dedicated to the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions.

HumaNews: The Newsletter of NAHE

HUMANITIES EDUCATION is published by the National Association for Humanities Education

with editorial offices at the Department of Philosophy & Humanities

University of Minnesota, Duluth, Duluth, MN 55812

The University of Minnesota is an Equal Opportunity Educator and Employer.

VOLUME TWO: NUMBER TWO: MAY, 1985

STAFF

EDITOR: Fred E.H. Schroeder, Professor of Humanities, University of Minnesota-Duluth
ASSOCIATE EDITORS: Sharon Scholl, Professor of Humanities, Jacksonville University; Susan Coultrap-McQuin, Assistant Professor of Humanities and Women's Studies and Director of Women's Studies, University of Minnesota-Duluth
ASSISTANT EDITOR: Avis Hedin, Principal Secretary, College of Science and Engineering, University of Minnesota-Duluth
CONTRIBUTING EDITORS: Francis M. Nevins, Professor of Law, St. Louis University School of Law; Burton Raffel, Professor of English, University of Denver; Jeremiah Reedy, Professor of Classics, Macalester College

Published three times annually by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Assistance for the production of HUMANITIES EDUCATION has been provided by the College of Liberal Arts, UMD, Robert Franz, Acting Dean. Subscriptions are $12 per year. Checks should be made out to NAHE and sent to HUMANITIES EDUCATION, Department of Philosophy and Humanities, UMD, Duluth MN 55812.

FROM THE EDITOR

New members of the National Association for Humanities Education may feel curious about the organization itself. In our HumaNews newsletter at the end of this issue we reprint a brief history of NAHE, along with our regular announcements of upcoming conferences, meetings and publications. We encourage you to use our publication as a bulletin board for activities you would like to announce.

One of the extra benefits of your membership in NAHE is a group membership in the Southern Humanities Conference, including a free subscription to their excellent newsletter, HUMANITIES IN THE SOUTH. This newsletter is issued twice yearly, but as the incorporation of the names and addresses of NAHE members into SHC files is a somewhat complicated clerical task, individual members may have a six or seven month delay before they receive their first copy of HUMANITIES IN THE SOUTH.

CONTRIBUTOR INFORMATION

Contributors should consult the Editorial Policies sheet carefully. As will be seen, HE is wide-ranging, quite permissive and has no "party line" in respect to definitions of **humanities**, **interdisciplinary** and **education**, but the wide boundaries are nonetheless firm. Please do not submit articles over ten pages long unless you are planning to revise. We particularly seek brief (1-4 page) items of a "how-to" nature for CONNECTIONS. Deadline for Spring is Washington's Birthday; deadline for Fall, the Fourth of July; deadline for Winter, Columbus Day.

ELECTRONIC MEDIA IN MUSEUMS

One Medium's Weakness is Another's Strength

The educational philosopher John Dewey once said of the educational process, "Start with where the child is." Where today's children -- and adults -- are is in the midst of a culture whose visual images are derived from television, the videotape recorder, the computer, films and the like. All of these electronic media can have a place within museums, but especially museums with strong educational missions. Such electronic media can be used to enhance physical objects which are, after all, the media unique to museums.

The museum educator often considers how one medium helps visitors better understand and appreciate other media. Visitors frequently encounter wall labels, gallery guides and catalogues to complement exhibitions and provide interpretation of objects. Indeed, the printed word is the most widely used supporting medium in museums. It is favored as being superior to other forms of media, although some art critics, such as Hilton Kramer, are quick to criticize the plethora of words used by curators and educators. "Rarely if ever," Kramer wrote, "have so many pictures in a great museum (referring to the Metropolitan) been so forcibly and ubiquitously chaperoned by so many words." Kramer's remarks were prompted by the 1974 Impressionist Epoch exhibition, which was supported in part by the National Endowment for the Humanities, a federal agency which encourages the liberal use of interpretive materials to highlight humanistic content inherent in exhibitions.

Media may be best used by curators and educators when they enhance the object or provide the visitor with multiple interpretations of an object. This way, the visitor observes and chooses the interpretation which is personally significant to him or her.

Electronic media have educative value as interpretive resources in ways print cannot because we are part of a media-oriented culture. Electronic media are appropriate for museum visitors because media are commonplace in the home. The media provides familiar bridges to connect the visitor with the museum objects. Increased emphasis has been placed on the medium itself as an important element in the mass communication process. Marshall McLuhan, in his book, Understanding Media: The Extentions of Man, coined the popular phrase, "The medium is the message." What this means is that the **carrier** of communications influences the message, the sender, the audience, and the effects of communication far more than was previously understood.

The media may communicate a message to the museum visitor which leads or draws that visitor to analyze, perceive and interpret an object. The emphasis here is on providing the visitor with the context in which he or she brings greater understanding **to** the object -- not to communicate **for** the object. In other words, the media are not to be used as substitutes for the museum objects.

One of the most consistent findings in the literature on media and education is the superiority of multi-media over single-medium presentations. There are various reasons why it should be of value to have the same material presented through more than one medium. To receive information on the same topic through different media is to learn about the topic from different points of view. Consider the difference between the slide presentation and film or video presentations. Presumably, both are used with groups and individual visitors in the museum. The advantage of a static medium such as the slide projected onto a screen is that it allows for intensive and analytic study. Media differ in their ability to promote different kinds of messages and forms of communication. Media differ in the degree to which they are controlled by both communicator and user. A moving image, for example, of an early American settler performing chores is far more useful to a visitor than a still picture hanging next to a farm tool. The dynamic quality of the moving picture is appropriate to communicate the meaning of the object. One medium's weakness is another's strength. The skill is to match the correct medium with its function in an exhibition installation.

SOME EXAMPLES OF MEDIA IN MUSEUMS

One interesting study involving media was prepared by an outside evaluator for the National Museum of American History, in conjunction with the exhibition, Life in America: After the Revolution. The exhibition featured a nine-minute video-loop "The Past in Your Future" presented on a television monitor located in the middle of the exhibition entrance wall. The evaluation reported that very few people who entered the area of the video presentation actually saw the program although it ran continuously. In fact, 66% walked through the area without stopping to view it while 31% watched only a portion of the program and a mere 3% saw it from start to finish. Evaluators surveyed and interviewed over 3,000 visitors for their reactions and learned that the physical setting of the presentation did not attract them. They had difficulty determining what the program was about, and some thought the video program took time away from seeing objects in the museum.

There is an extremely useful lesson to be learned from this museum which had the good sense to hire an evaluator and publish its report. In this case, the medium was incorrectly matched to the goals of the exhibit which were to provide knowledge about the 18th century. The videotape presented several hundred visual images from three centuries along with facts about history. The evaluator recommended in the report that if the program were to be revised, writers should:

- use the active, rather than passive voice.
- work toward presenting unique groups of works in a particularly forceful way.
- make frequent use of the triad i.e., words, phrases, clauses and sentences in groups of three.
- vary the pace of the script e.g., shorten sentences, lengthen sentences, ask questions in the text, avoid complicated sentences, use figures of speech, use examples and illustrations, try pleasant-sounding words, try harsh-sounding words.

The program seemed to suffer from attempting to provide too much information, too many visuals and too many perspectives in too short a time span.

In contrast, the Boston Children's Museum used media in a different way to enhance an exhibition about dying and loss. In one area, a printed phase was supported by a video monitor which ran speeded-up footage of maggots devouring a dead mouse. A series of drawings created by a young child hung in another area supported by text written by the child. Another exhibit, devoted to the rituals of death included a gravestone, an empty coffin, burial robes from different religions, embalming chemicals and make-up used on corpses. Visitors could pick up telephones and listen to funeral music from around the world. The media provided the interpretation of the objects from various points of view. As visitors acquired information, they brought it to their perception of the original objects to put them into context. This is a good (if lugubrious) example of media because each medium capitalized upon its function.

The Red Mountain Museum in Birmingham, Alabama, used a wide variety of media to enhance its scientific and archaeological exhibitions. One such exhibition using media defines areas of prehistory using a synchronized slide show. Since no visitor to the museum lived during these various ages, the animation created by the rapidly changing images and dissolving slide unit simulated environments. This appropriate use of media provided the visitor with specific historical and scientific contexts to bring a greater shared meaning to the paleontologic objects in the exhibit area.

The use of media here did not require manipulation by the museum visitor. A staff member started the equipment which played continuously. Visitors could stand to watch the show for a number of minutes and move on at their own pace. Each different age was presented briefly illustrated by original paintings and graphics accompanied by music and sound effects. The entire presentation offered the most in-depth study, yet viewing one part gave viewers an immediate context to enhance nearby objects.

FAMILY TIME: A MUSEUM EXPERIMENT WITH MEDIA

The Tampa Museum exhibition, Family Time, provided an educational context in which to examine the use of four different types of media -- print, videotape, computer program, and an audiotaped tour in conjunction with an art exhibition. Because individuals each learn best in ways unique to themselves, this variety of media was utilized to invite visitor interaction with objects on different levels. And, because media are familiar to families, it became an appropriate way to introduce family audiences to an art exhibition for and about families in America. Works from 1670 through 1984 were loaned from thirty-five institutions and collections for the exhibition.

The purpose of incorporating media into the exhibition directly was to promote social interaction among family audiences - family member with family member, family member with media and family member with art objects. The use of media provided a familiar vehicle for interaction. It was necessary to find the correct media to arouse curiosity, engage the visitors and provide a forum for discussion about art. In each case, the goal was to bring families and objects together, not families and information about objects. The media were the bridge to change the behavior of the audience from passive strolling glances in the direction of the wall label and its corresponding art object before the quick exit, to one of active involvement and meaningful time spent viewing and communicating ideas and feelings about oneself or one's family based on the objects in context.

The entrance to the exhibition featured a gallery guide available to visitors. One side of the guide was designed for children; the other side for parents. The children's side included a description of the activities and areas of interest. It included suggested activities relating to each theme for children to do at home after leaving the exhibition. The parents' side contained a formal essay and highlighted programs, films, workshops, classes and lectures in conjunction with the exhibit.

Upon entering the first area of the exhibition, "Museum Living Room and TV Family Hall of Fame," visitors encountered a mock-living room environment set up with a television screen across from a sofa. Visitors sat on the sofa to watch a videotaped recording of families engaged in watching and responding to their old home movies. The videotape played continuously allowing for visitors to come and go from the area as their time permitted. The entire tape, which was twenty-five minutes long, was not viewed by most visitors in its entirety but was an audible backdrop in that section. The content of the communicated message didn't require viewers to stay for the duration. In this case, the medium was well suited for both casual and extended viewing; in both cases the points were brief and repeated throughout the feature.

While the videorecorder played home movies geared mainly for adults, children had the choice of viewing with their parents, in which case the audience sat on the sofa in the living room for about four minutes. Alternatively, the children could participate in two activities; they could try to identify famous television families from photographs mounted at their eye level along one wall in easy view of their parents, or they could put together a large puzzle of a family from the 1950s who were watching the home movies. The family moved together through the rest of the exhibition when the adults got up from the sofa and joined their children.

In the section of the exhibition entitled, "What is a Family?" visitors viewed works of art depicting the different kinds of families -- old, young, rich, poor, extended and nuclear. Works by John Kane, Mary Cassatt, C. Paul Jennewein, Leon Kroll and William Gropper were among the forty paintings, sculpture, prints and photographs in the exhibition. Among the activity centers in this section was a computer programmed with an eleven-minute disc called "The Family Unit." Both the program and the computer were loaned to The Tampa Museum for this exhibition. A locally-based, educational software company developed the program to introduce the family through word games similar to the familiar game of "hangman." One or two players could play the game as they identified vocabulary words to define the family. Another section of the program provided short stories about a fictitious family with a quiz at the end of the section based upon the reader's comprehension of the stories. The computer area was very popular with children. In fact, upon seeing the computer, children focused their attention on the program and adults continued to look casually at the art objects in that section. Children often demonstrated keyboard functions to their parents. Parents regulated their children's time on the computer and led them to other objects and features of that theme area. Almost without exception, the family spent longer in the area with the computer than they did anywhere else in the exhibition. Their increased time was divided not quite equally between the computer and the objects.

Print was also used throughout the exhibition in the form of "thought balloons." These were sentences taken directly from remarks quoted by parents who reacted to various parenting issues -- the traumas connected with moving children to a new neighborhood, values parents want to instill in their children regarding their grandparents, and other family concerns. The "thought balloons" hung from the ceiling of the gallery to supplement the subject matter portrayed through the works of art in that section. The quotes did not support the images in a literal sense. Instead, they were meant to arouse interest, to allow adults, for whom they were intended by hanging at a higher eye level, to contemplate further about the theme of the section. The purpose was deliberately to slow down the pace of the visitor so he or she might look more carefully, spend more time in that area and compare one object with another.

The Tampa Museum's education staff collaborated with an independent producer to write the script for an audiotour. A local production studio donated their time to work with the producer on the tape, which was used in conjunction with Sony "Walkman" players. Each parent-child pair who checked out the audiotour received two headsets. The tour introduced visitors to the exhibition through a lively set of activities, sound and original music. During parts of the audiotour, the narrator directed participants to turn off the player and try an activity, play a perception game, search for the answer to a question by comparing works of art or discuss objects related to the themes of the exhibition. The tour and installation were synchronized to allow for steady traffic flow but with ample time for conversation and dialogue. Open-ended questions, adding sound effects to works of art, some role-playing and quick, entertaining, state-of-the-art production techniques helped accomplish this task.

The tape lasted for seventeen minutes, although it included generous gaps and pauses where visitors engaged in conversation, looked on their own at objects and tried activity areas. In each section, the tape augmented the wall labels with new or different information. The complete audiotour led parent-child pairs through the exhibition for approximately forty-five minutes, after which participants completed an evaluation form documenting their reactions. In every case, the family listening to the tour followed it in its entirety.

The final area of the exhibition contained no media at all. The purpose of the deliberate avoidance of media was to conclude the family experience in an environment with only one low-energy activity, a thought-provoking communication board and a large number of objects depicting the family at work and at leisure. Paintings by Ben Shahn and Malcolm Morley were included in this section as well as works by the photo-journalist, Lewis Hine. Even without the stimulation and attraction of media, family visitors conversed easily and freely in this section. The audiotour concluded in this last section as well, encouraging families to look on their own after a brief introduction to the theme using sound effects and open-ended dialogue.

To return to Marshall McLuhan, each medium has its own message. Museum professionals can make educative events happen when the appropriate media are matched with objects and people. The time has come for museums to remove the bias against the electronic media and hesitation about using them, so their educative value will be reflected in those messages with which our audiences spend such a large part of their lives.

Team-Teaching an Interdisciplinary Humanities Course at the Middle School Level

DESCRIPTION OF THE COURSE

During the fall of 1982, the Scottsdale School District instituted an innovative and successful middle school humanities program. For the past two academic years (1982-83/1983-84), the program has been carefully watched and closely nurtured until it finally received the endorsement of the Governing Board as a permanent fixture within the middle school curriculum. Its importance, then, as a model program for other districts cannot be overstated.

The middle school humanities program emerged as an answer to a call from parents and members of the school community for education in the arts, or more accurately "cultural education." Members of the community felt strongly that children at the middle school level ought to be exposed in some systematic way to the great cultural achievements of civilization. Concern was expressed over the decreasing emphasis on the arts and the humanities in the modern curriculum. At the same time, the Governing Board was aware of its responsibility to provide education in all spheres - and that cultural education was as basic to learning as the three R's and computers.

As a result, an interdisciplinary humanities program was proposed and adopted. The purpose of the program was to engage students in the study of human culture including art, architecture, dance, literature, music, customs, religions, and beliefs. The program emphasizes the connections between the disciplines and the inter-relationship between arts and events. It is not the purpose of the course to teach values but to explore how values are created and how they affect the arts.

From the outset, the school district sought the help and advice of the humanities education department at Arizona State University. Dr. James Reith, language arts coordinator for the district, worked closely with Dr. Robert Frazier and Dr. Robert Lamm of ASU to design a state-of-the-art curriculum for students in grades seven and eight.

The basic structure and initial units for this course were developed by a committee of literature, art, and music teachers during the summer of 1982. At the end of the first year, a comprehensive review of the program was begun; and the program was rewritten during the summer of 1983 - once again using a team of literature, art, and music teachers. The end product was a balanced curriculum based on "Human Encounters" and "Human Quests." The units for grades seven and eight are outlined below:

Grade 7

1. Encountering Ourselves
2. Encountering Others
3. Encountering Society
4. Encountering Tradition and Custom
5. Encountering Logic and Reason
6. Encountering Emotion
7. Encountering Nature

Grade 8

1. Seeking Structure and Order
2. Seeking Understanding and Relationships
3. Seeking Beauty
4. Seeking Justice
5. Seeking Competition
6. Seeking Heroes
7. Seeking the Future

Lesson plans for each unit were organized in a teacher's syllabus. Each lesson included materials required, concepts, skills, vocabulary, teaching strategies, activities, and evaluation. Of course, separate lesson plans were prepared for literature, art, and music, although each teacher received a complete syllabus. In addition, a teacher's resource book was prepared in which all supplemental materials were organized by unit.

By design, the middle school humanities program was based on thematic units instead of traditional cultural epochs. Each unit was developed around a central theme or idea as opposed to a particular historical period. This, it was felt, allowed greater flexibility and diversity. Encountering Nature, for example, could range freely from the art of Ansel Adams and Georgia O'Keefe to the music of Beethoven, Grove, and John Denver to the stories of Rudyard Kipling and the poetry of Robert Frost. The cultural artifacts of literature and the related arts could be used to explore basic human concepts and experiences.

Still, the need for a chronological overview was widely felt. Students had to know, for instance, that Julius Caesar and Napoleon were not contemporaries. Hence, a timeline was developed ranging from 2000 BC to the present. Each century was pictured on an 8 1/2 x 11 inch card depicting major developments in history, literature, and the arts. Each humanities teacher was given a timeline to be displayed in the classroom. In this way, students were given a historical framework for cultural developments.

The thematic units also encouraged a truly interdisciplinary approach to the humanities. Relationships between the arts could be clearly defined; and each discipline - music, literature, and art - was presented in the context of the other two fields. The middle school humanities course is not a literature class. Nor is it a music appreciation class or an art history class. It is a humanities course in which all forms of human expression are given equal emphasis.

The thematic approach also prompted a widening of cultural parameters. This was not to be a course in just "the classics." If the content was to remain relevant and interesting for pre-adolescent students, the boundaries had to be pushed back. The classics - or high art - were to be presented side by side with representative examples from folk art and popular art. This, of course, adds another dimension to the humanities. Students might view ancient Egyptian sculpture one day, read the autobiography of Mark Twain the next, and listen to the music of Stevie Wonder and of Handel the next day. In this way, contemporary developments were fused with the milestones of the past. Students were shown that Bach and the Beatles used the same musical elements and that Michaelangelo, Van Gogh, and Miro were all doing essentially the same things in radically different ways.

The most interesting aspect of the middle school humanities program is the team-teaching approach. This, too, was a logical consequence of the interdisciplinary approach to the thematic units. From the beginning it was recognized that the district did not have more than a half dozen trained humanities teachers. Therefore, the program was staffed with specialists in literature, art, and music. These teachers instruct the students cooperatively and on a team basis.

At the same time that the team approach was used, the district instituted a strong program of in-service training and staff development for humanities teachers. Dr. Frazier and Dr. Reith conducted a year-long seminar which met once a week for two hours during the first year. During the second year of the program, Dr. Reith taught a year-long course in cultural history from the beginning of recorded time. These programs were instrumental in that they insured a unified approach to the subject matter in the district's seven middle schools. Slowly, a true humanities faculty using a team-teaching approach began to emerge.

THE TEAM APPROACH AT WORK

Under our team approach, the literature teacher is the designated team leader. The literature teacher is with the class every day of the week and teaches the literature section of the unit for three days of each week.

The music teacher and the art teacher each teach the class one day per week. During the music and art sections, the literature teacher remains in the classroom and cooperates with the music/art teacher in leading discussions, asking questions, and relating the music/art lesson back to the literature lesson. The key factor here is that the students must understand the connections among the three disciplines. These connections are always the basic human ideas or ideals around which each unit is structured.

The literature, music, and art teachers each share responsibility for unit planning and implementation. This is crucial to the success of the program. Lesson plans must be well thought out, and a planned sequence of instruction for literature, art, and music must be developed. Each member of the team should know what the other team members are doing on a daily basis. The music teacher, for instance, needs to know what stories the students are reading and what art they have examined in order to tie in the music lesson with the rest of the unit material.

The weekly schedule of literature for three days, music one day, and art one day is reflected in the grading and evaluation procedures used in the humanities course. Each teacher on the team evaluates and grades the student for literature, art, or music respectively. The literature grade counts for 60% of the overall grade. The music and art grades each count for 20% of the overall grade. A student, then, who receives an A in literature, a B in music, and a C in art would receive a B for the course.

Typically, a unit will consist of a number of individual lessons over a four- or five-week period. The students will have twelve to fifteen class periods devoted to literature and four or five periods each devoted to music and art. At the end of the unit, the student normally takes three separate tests, one from each teacher. This aspect of the course has advantages and disadvantages and will be discussed in more detail later in this report.

An important part of the team approach to the middle school humanities course is flexibility. Because of holidays, special schedules, assemblies, and the like, some classes, particularly in music and art, are likely to fall behind. In such cases, teachers have generally demonstrated a willingness to trade class times and alter schedules for the benefit of the students.

Special activities are also an important part of the humanities curriculum. Because of the unique needs of the middle school student, class projects, guest speakers, field trips, and guest artists all become resources for the instructional team. Here are some examples:

* Many schools plan field trips to hear the Phoenix Symphony Orchestra perform special Concerts for Young People. The students are prepared for the event in advance by the humanities music teacher.

* A literature teacher encouraged her students to write a science fiction screenplay and film the movie "on location" using the school video camera. The music teacher helped the students select appropriate theme music while the art teacher helped design the sets, graphics, credits, and special effects.

* NASA space artist Bob McCall visited each school and gave a slide presentation and discussion of his role as an artist and illustrator for the space program as well as for major motion pictures (including "2001 - A Space Odyssey" and "Star Trek" - The Motion Picture). The students were primed for this excellent presentation by the humanities art teacher.

* The Arizona Commission on the Arts, a state agency, helped fund artists-in-residence for each school. These included painters, sculptors, dramatists, musicians, mimes, poets, and dancers. Each artist worked with the school's humanities faculty to design a program that was interesting and related to the unit being studied.

* A music teacher encouraged students to produce their own slide presentations on endangered animals using music from the Encountering Nature unit.

* Another music teacher had her students produce their own radio show using music from various units. The art teacher helped the students design a station logo while the literature teacher helped the students prepare news reports, station I.D.s, and commercials.

* Several schools featured a local, well-known actor doing an interpretive reading of Edgar Allen Poe's _The Tell-Tale Heart_. The literature teacher gave the students background information on Poe and the story.

* Numerous other field trips were planned by humanities teachers in each of the middle schools. These included museums, ballet performances, plays, and festivals. In each case, the students were prepared by the humanities team and follow-up discussions were held in class.

The team approach, then, was largely successful in facilitating cultural education at the middle school level. Although weaknesses do exist in the program, they are usually offset by the program's many strengths. It is to these positive and negative aspects of the middle school humanities course that we now turn.

STRENGTHS AND WEAKNESSES

A number of factors must be considered when evaluating the middle school humanities program. Let us first consider some of the strengths of the course.

1. Team-Teaching - The team approach to instruction is perhaps the strongest (and most controversial) feature of the program. The team concept allows students to learn from three qualified experts rather than from one teacher who is trying to cover all the bases. In an informal survey of humanities teachers in the program, 81% of the teachers responding agreed that the team approach was successful.

2. Thematic Units - The thematic approach to the course allows a high degree of flexibility and encourages diversity. Students are fed from a cultural smorgasboard as rich and as varied as the world itself. Ninety-four percent of the teachers described the thematic approach as successful. In addition, 94% felt that the themes chosen for each unit were interesting and relevant.

3. Teacher Satisfaction - One-hundred percent of the teachers responding to the informal survey said they enjoyed teaching the humanities. When asked if they wanted to continue teaching the humanities, 97% said yes.

4. Community Response - The support of the community has been impressive. While no surveys are available, the program has been strongly endorsed by PTA groups throughout the district. Some initial concerns over values and philosophy were dealt with on an individual basis, and the second year of the program was virtually void of any complaints from parents or community groups.

5. Test Scores - Test scores for reading comprehension have remained at levels appropriate for the age group and population. Initially, fears were expressed that test scores might fall because students would be reading less. In fact, the opposite has occurred. The students tend to do more directed reading in class, and there has been no significant difference in test scores or reading levels for students in the program.

6. Interdisciplinary Approach - The diversity and adaptability of the course is one of its most salient features. The interdisciplinary approach, combined with the thematic concepts and effective team planning produces an exciting and stimulating environment for cultural learning.

The program, however, is not without its weaknesses. Let us now consider a few problems with the team approach.

1. Teacher Training - The demands placed on a humanities teacher are many, and continuing education is perhaps the most important prerequisite for a strong humanities program. Eighty-eight percent of the teachers felt that they had adequate training in the humanities. This is perhaps a result of a strong in-service program developed at the beginning of the course. However, 84% indicated a desire for further training in the humanities.

2. Expense - The program is costly. Each humanities class is funded at the rate of 1.4 teachers per section instead of the usual

one teacher per section. The school district is committed to funding at this level for only the first three years of the program. At that point, declining enrollment and smaller revenues may dictate the elimination of the team approach and the consolidation of the program under one teacher responsible for literature, art, and music. Given this possibility, teacher training and staff development become even more important.

3. Text - There is no humanities textbook for the course. Teachers rely on a syllabus and resource book for materials and unit objectives. When asked to evaluate these items, the teachers gave a mixed response. Seventy-six percent of the teachers responding felt that the materials were well prepared and easy to use while 23% disagreed. The primary factor here is the complete lack of any kind of humanities textbook for middle school students. This is a serious deficiency and perhaps a major obstacle to the implementation of similar courses in other school districts.

4. Evaluation - Grading and evaluation are both difficult and time consuming. The students receive three different grades and must take three different tests for each unit. Often, the grades given by each teacher are quite disparate. For instance, a student may receive an F in literature and an A in both music and art. During the 1984-85 school year, the humanities faculty will be encouraged to give a single comprehensive examination at the end of each unit. This will eliminate many of the problems associated with evaluation.

5. Audio-Visual Materials - Supplementary materials such as movies, filmstrips, slides, videos, and charts are often either not available or too expensive. Yet these materials are essential in any interdisciplinary humanities course. They are even more vital when introducing young people to works of art for the first time.

6. No Follow-Up Course - At present there is no humanities course at the high school level in Scottsdale. Individual teachers do present humanities topics, and interdisciplinary instruction has long been a part of secondary education. However, there is no mandated program in the humanities for grades nine through twelve. Such a program could be highly successful given the strength of the middle school humanities program.

CONCLUSIONS

The Scottsdale School District's middle school humanities program has been largely successful in providing a framework for cultural education in grades seven and eight. It has successfully combined an interdisciplinary approach, thematic units, and team-teaching into an exciting and rewarding exploration of literature, art, and music. Through the humanities, students and teachers are encouraged to examine the human condition and the artifacts of human expression.

The expense of the course and the need for teacher training are factors to be considered. Grading and evaluation are difficult as in any team approach. And the lack of adequate materials and resources is a handicap to all teachers. Nevertheless, the advantages far outweigh the disadvantages, and the program has successfully met the objectives outlined at the beginning of this article.

Finally, the program has been enthusiastically and almost universally supported by teachers, students, and parents. This is perhaps the best measure of the program's success.

APPENDIX A

Prefatory Information

The curriculum delineated in the following pages attempts to answer a call from the Scottsdale community and from the School District Governing Board for a middle school course of study devoted to what has variously been styled as "cultural education", "literature/music/art appreciation", and "interdisciplinary humanities". The basic structure and initial units of instruction for this curriculum were developed by a committee of music, art, and literature teachers during the summer of 1982. The study will be required of all students in grades 7 and 8 who read at or above grade level; a conceptually comparable program will be available to children who read below grade level. The shake-down year of this curriculum was 1982-83.

Philosophical Stance

This curriculum is predicated upon the belief that any person exists by reason of birth within a certain cultural context and that each person feels, thinks, and acts as he/she does in part because of the conditioning influence of that cultural context. Similarly, all people in all ages felt, thought, and acted as they did in part because of their environmental influences. A study of cultural conditions through the ages should help us interpret how people behaved, what they produced, what they held valuable in such ages. A study of the experience of humankind should illuminate a person's own existence. It is not the purpose of this curriculum to create a value structure, but rather to explore how value structures come into being and why they may or may not appear acceptable to us. This curriculum will treat all such matters objectively, though the procedures necessary to the course may require subjective responses and evaluation.

Purpose and Objectives

The general purpose of this curriculum is to engage students in a study of human culture, presenting to them humankind's major cultural accomplishments against the fabric of a historical continuum. The curriculum will examine various philosophical propositions and seek to discover how they have affected people's activity in art, architecture, dance, literature, music, customs, religions, beliefs, ethical codes, and social and political structures. The curriculum intends to emphasize the interrelationships of cultural events and artifacts, as well as the student's present and future relationships with cultural phenomena.

APPENDIX B - Humanities Curriculum - 1982-83

Grade 7

1. Encountering Ourselves
2. Encountering Other People
3. Encountering the Supernatural
4. Encountering Nature
5. Encountering Society
6. Encountering Emotions

Grade 8

1. Seeking Heroes
2. Seeking Beauty, Pleasure, Comfort, Diversion
3. Seeking Order, Structure
4. Seeking the Future
5. Seeking Relationships, Ideological Understanding
6. Seeking Competition
7. Seeking the Future

APPENDIX C - Teachers' Response to Humanities Survey

1. I have enjoyed teaching the humanities

Strongly Agree	Agree	Disagree	Strongly Disagree
25/76%	8/24%	0/0%	0/0%

2. I would like to continue teaching the humanities.

Strongly Agree	Agree	Disagree	Strongly Disagree
25/78%	6/19%	1/3%	0/0%

3. I have adequate training in the humanities.

Strongly Agree	Agree	Disagree	Strongly Disagree
9/27%	20/61%	4/12%	0/0%

4. I would like further training in the humanities.

Strongly Agree	Agree	Disagree	Strongly Disagree
18/56%	9/28%	4/13%	1/3%

5. The syllabus and resource materials are well prepared and easy to use.

Strongly Agree	Agree	Disagree	Strongly Disagree
7/23%	16/53%	6/20%	3/1%

6. The team-teaching approach has been successful.

Strongly Agree	Agree	Disagree	Strongly Disagree
12/39%	13/42%	4/13%	2/6%

7. The thematic approach (Nature, Future, etc.) has been successful.

Strongly Agree	Agree	Disagree	Strongly Disagree
16/50%	14/44%	2/6%	0/0%

8. The themes chosen for each unit are interesting and relevant.

Strongly Agree	Agree	Disagree	Strongly Disagree
14/44%	16/50%	2/6%	0/0%

HUMANITIES EDUCATION ABSTRACTS & REVIEWS

Summaries of significant reports about interdisciplinary humanities education.

(Editor's note: Contributors who would like to submit abstracts of magazine articles should send them directly to the editor, using the style and format that follows. Reviews of books and educational materials should be sent to the Book Review Editor, Dr. James Mehl, Missouri Western State College, St. Joseph, MO 64507)

DEVILISH PROBLEM

"The Fundamentalist Student and Introductory Philosophy" by David McKenzie in Teaching Philosophy, July 1984. Philosophy Documentation Center, Bowling Green State University, Bowling Green, OH 43403. $16/year, $5/single copy

A New Yorker cartoon of a few years ago depicted two friends in hell having a political discussion: "I don't understand why anyone would want the lesser of two evils," says one. The situation is not unlike that of the fundamentalist student and the philosopher professor. The student regards the professor as an agent of the devil and the professor regards the student as a dupe of the agents of stupidity.

This sort of standoff gets us nowhere, says McKenzie, who teaches at Georgia's Berry College. And there is somewhere to go: fundamentalism (whether Christian, Muslim or Marxist) does not encourage independent thinking or free exploration of ideas, but instead maintains that one single document (Bible, Koran, Das Kapital), interpreted according to one position, is sufficient authority for anything. Philosophers, on the other hand, adhere to a tradition that the unexamined life is not worth living; indeed, McKenzie points out, "the unexamined life may turn out not to be so innocent after all," being not merely narrowing to the true believer, but potentially harrowing for others. The opening of closed minds to other points of view is important business.

Let us begin teaching tolerance by practicing it. The fundamentalist student is a human being and deserves to be treated as such. Professorial sneers and the giggles of philosophy majors produce stolid silence in a fundamentalist victim who is trapped by college requirements to sit through an introductory course in philosophy. Furthermore, these people are often extremely insecure, having taken recourse to dogma because of profound uneasiness about human values, about current issues, and about themselves.

Nevertheless, in a number of respects, the fundamentalist student has "a head start in philosophy. They know already what a philosophical system is; moreover, they have one." Generally, they also know their text, the Bible, and come armed with stock arguments. McKenzie recommends a number of techniques for engaging the fundamentalist student in critical discussion. For the silent student, direct questions regarding the philosophical text at hand are useful. For the vocal evangelists, it is worthwhile to distill their claims to the essence and counter with "brief responses that should open profitable discussion:

> "1. The Bible says that all scripture is inspired by God. Therefore it is, completely.
> Response: The Koran says the same thing about itself. Which is right? Moreover, the biblical claim to inspiration (2 Timothy 3:16) occurred prior to the compilation of the New Testament, and refers....to the Old Testament...."

Other examples are provided and McKenzie also compares the techniques and suitability of two introductory philosophy texts, Halverson's *Concise Introduction to Philosophy* and Christian's *Philosophy, An Introduction to the Art of Wondering* as they relate to fundamentalists, particularly in a college with a large number of such students. But beyond these, McKenzie has found that the most effective means of awakening a critical sense is to provide "a gentle but firm lecture on the status of the manuscripts of the New Testament." The Bible may indeed be God's word, but the bewildering array of manuscript sources, early and recent church councils on the received canon of legitimate books and versions, translations of different nations, times and climes, not to mention the rival interpretations of any accepted text should help fundamentalist Christian students to recognize that there is room for critical analysis of the "core ingredients in their faith" by themselves, within the context of their own philosophical system of faith in revealed wisdom.

BEST LAID PLANS

"'Oft Gang Aglee': A Parable for our Time," a report of the NEH Consultant Grant at St. John Fisher College

Throughout much of 1984 the humanities faculty at St. John Fisher College, Rochester, New York, struggled to put the "liberal" back into liberal education. They have a problem typical of a great many undergraduate liberal arts designated institutions - majors in the humanities account for no more than 5% of all students. The assistance of the consultant was sought to find a creative way to restore the proportion of humanities majors to a level that would assure a liberal arts environment for the collective student body. The faculty-administration-consultant discussions, the proposed action, and its unfortunate fate form a paradigm for the widespread condition of undergraduate humanities today.

There is a notable discrepancy between the faculty's views on the uses of a university and those of students (and probably their parents). According to a survey done in the spring at St. John Fisher, faculty regarded vocational preparation as one of the less important goals, whereas students (and alumni) placed it second most important. Though such an instrument reveals, in theory, an agreement among faculty, in practice each discipline's turf is jealously guarded under the argument that technical competence is primary and liberal education must keep its place well down the priority list. Another often heard explanation for the current state of things was offered by the president of the college, "These things go in cycles."

With the number of students majoring in the humanities ever declining, with a student body unwilling to accept a major that does not offer ready job potential, and with a failed attempt to revise the core curriculum as a background, the problem remained: what to do? Many possibilities were discussed, some of which may still be tried. A few concentrated upon making the humanities majors more attractive: job counseling, scholarships, internships. Others focussed upon structural revisions: offering humanities as part of the MBA, through Continuing Education, as non-credit programs, or as upper division clusters in the more popular majors. The consultant and his committee finally recommended an ingenious solution: require all students to minor in an area remote from his or her major. This beginning eventuated in a formal proposal that all students major or minor in a liberal arts discipline. This plan solved the "truth in advertising" issue which most so-called liberal arts colleges carefully ignore. It also ameliorated the other problem which troubled the humanities faculty: even with a 45-hour core studies requirement, few students ever get beyond the introductory level of courses.

When faced with such a proposal, faculty with vested interests in the more popular major programs considered the diversion from their specialty subjects too damaging to job skill competence and demurred. The faculty vote was not positively favorable to begin with (passed 32-25), and the president gave the plan a coup de grace for three reasons: the definition of liberal arts in the resolution was not clear; all disciplines potentially involved do not have a minor; and the impact on transfer students was not considered.

The project director, David White, reflects upon the experience in his report to NEH, "The College certainly has no intention of abandoning the humanities, but it may be that in the future the humanities will have to emphasize their role in support of majors with a vocational or pre-professional orientation." His colleague, Florence Weinberg, is quoted as reflecting, "The problem with the 1970's was that teachers were going to the ignorant and saying, 'What do you want us to teach you?' And so they say, 'Whatever's going to make me a lot of money.' I don't think we've gotten away from that."

BARN RAISING

"The Seminar: An Experiment in Humanistic Education" by Michael Kahn in Journal of Humanistic Psychology (Spring 1981), Sage Publications, Inc., 275 South Beverly Drive, Beverly Hills, CA 90212 ($25/yr., $7/individual copy).

At Kresge College, University of California, Santa Cruz, the seminar was developed as a primary mode of education. In the beginning "seminars" were often question and answer sessions or fragmented arguments among students. A seminar is more than just a small group of students and a teacher, all of whom have read the same material. The teacher must serve as conversation facilitator rather than information dispenser, participation must be widespread, and students should emerge having deepened their understanding of the material and its implications. Over time the authors discovered satisfying ways to discuss ideas, and that these methodologies could be taught. First, everyone needs to become aware that he has already learned cultural modes of discourse which weigh heavily against the creation of the proper seminar environment. Most of us have been taught that: a) Ideas are right or wrong; b) There are smart ways and stupid ways to view a book, movie, or lecture; c) It is crucial to judge the merits of one's own contributions relative to others; d) Conversation is a struggle in which each must make certain his or her idea is heard and is defended to the end. The authors have identified four kinds of seminars, each progressively freer of cultural liabilities, each a progressively higher style of intellectual conversation. 1. Free for All. The goal of this seminar is to win, be it approval or self-esteem, by looking smarter and making others appear less smart. 2. Beauty Contest. Each idea is paraded in its finery, seeking admiration. When it has been displayed, its sponsor withdraws to think up the next idea, paying little attention to the next contestant. Thus, each person's ideas bear little or no relation to anyone else's. 3. Distinguished House Tour. The seminar begins with a student advancing an idea. The other students explore the idea as they might an interesting house, asking questions, examining and appreciating it. When the students have a good grasp of the concept, someone offers another idea and seminar members explore that. Just as a gracious host doesn't compare houses or claim one is better, each idea is thought to be interesting in its own right. This high form of discourse can produce a good seminar. 4. Barn Raising. In frontier America a family would invite the entire community to help them build a barn. Neighbors would suggest changes and improvements as they built. In a seminar working on this model, a member advances an idea and the community gathers to "build the barn," to put together and expand the idea. The idea becomes the seminar's project. The originator has no more responsibility for developing, defending, or explaining the idea than anyone else in the group. No one is the lone defender of an idea. Each person is part of the task force developing that idea to its fullest potential. Developing these skills of discourse maximizes the possibility of flexibility and creativity. The energy once lost to conflict is directed toward a common goal. A longer version of this paper is available from Kahn and contains ten specific seminar teaching techniques.

6 SEMINARS

Freshman Seminars at Williams College
contact person: Dean Daniel O'Connor
Williams College, Williamstown, MA 01267

Dean Daniel O'Connor describes the freshmen seminars in the Spring, 1984, issue of Alumni Review as one part of the January Winter Study Program. A grant from the National Endowment for the Humanities enabled the faculty to plan a new group of six seminars, of which each freshman must elect one. All disciplines are represented by these seminars, which are team taught and center around unifying themes or topics. The seminars are interesting departures from methods and materials usually found in standard courses. As Dean O'Connor states, "The device of interdisciplinary seminars was chosen in order to introduce freshmen to the ideal of liberal education, that is, to the notion that liberally educated persons have a wide range of intellectual interests." Instructors explore subject matter outside their usual areas of expertise, lecture to both students and colleagues, and enter into discussion with a small learning community. One important aim of the seminars is to create a context in which varied disciplines with different methodologies are brought to bear upon common interests.

The seminars have a significant writing component; students produce two or three short papers on assigned themes with the assistance of a writing resource person as needed. Field trips and other on-site activities add to the special nature of the experience. Since a student is involved in the one seminar for the whole academic day, there are no scheduling conflicts with other courses.

Faculty prepared to work together in the seminars by a two-week summer planning period and a three-day September workshop. There were problems of fitting rather sophisticated material to the ability and interest levels of freshmen. However, students responded favorably to their experiences on evaluation questionnaires, and over half planned to make changes in their future academic careers because of new interests generated by their seminar.

Among the six seminars are those which pertain directly to the humanities or have an element of the humanities as a significant feature. For example, the New England and the Sea faculty includes a geologist, a historian, a political scientist, and Don Gifford, professor of English, who leads a study of Moby Dick.

The Idea of the Modern in the Arts combines faculty from theater, art, English, and music, and features lectures, small group discussions, films, and live performances. Required texts are: Joseph Conrad, Heart of Darkness; T.S. Eliot, The Waste Land and Other Poems; Eric Salzman, Twentieth Century Music; Antonin Artaud, The Theater and its Double; Benedict and Wellfarth (eds) Modern French Theater; Marcel Duchamp (Museum of Modern Art publication); and Edward Corbett, The Little English Handbook. Films shown include The Cabinet of Dr. Caligari, The Man with the Movie Camera, Cocteau's Orpheus, Wozzeck, Anemic Cinema, and Trance and Dance in Bali. Musical works studied are Stravinsky's Rite of Spring and Soldier's Tale, Schonberg's Transfigured Night, Pierrot Lunaire, and Five Orchestral Works, and Webern's Symphony 21. One common theme that unifies works drawn from different disciplines is their common problem of representation and the new means chosen by each to deal with the issue.

Another course dominated by humanities faculty and concerns is The Idea of the Hero. Its paradigms are found in Homer's Iliad, Sophocles' Antigone, the Nibelungenlied, Shakespeare's Henry IV (part 1), and F. Scott Fitzgerald's The Great Gatsby. The student papers focus upon heroic action, as seen in the return of Hector's body in The Iliad; kingship and heroism, as seen in Agamemnon, Gunther, and King Henry; and the problematic existence of the hero in modern life, as reflected by Gatsby. Besides lectures, and discussions, films related to the works studied are included: Fritz Lang's Kriemhild's Revenge, Lawrence Olivier as Henry IV, and Chariots of Fire.

The seminar model for the brief winter session has been largely successful, though demanding both of students and faculty. The college intends to offer the series again with different faculty members participating from year to year. A brief month-long study period is both exciting in its possibilities and frustrating in its limitations. Williams College seems to have made the most out of the situation.

(Sharon Scholl)

SPY BUSINESS

"John LeCarre': The Dark Side of Organizations," by Douglas Wallace in Harvard Business Review Jan-Feb 1985, pp. 6-14.

John LeCarre' writes thrilling, if brooding, spy novels. What on earth have these to do with business administration? Quite a bit, says Wallace, a former banker who is now director of the Center for Ethics, Responsibilities and Values at the College of St. Catherine in St. Paul. The esionage network is an extreme version of a business organization, complete in its own value system, clear-cut in its demands of loyalty, ruthless in its dismissal of unwanted, unproductive personnel. In a sense, the spy business is almost a parody of corporations because its conflict between individual values and organizational goals goes beyond morality.

Analyzing and quoting from several Carre' novels (The Little Drummer Boy; Tinker, Tailor, Soldier, Spy; The Honourable Schoolboy, etc.), Wallace extracts lessons in being human for managers. In the secret service, in business, in bureaucracies, "human values take a back seat to organizational goals.... The temptation is to invest our abstract organizational dreams and goals with values that are not worthy of our ultimate commitment and that inevitably destroy our real, human relationships." Wallace gives instances from Carre' of physically degrading of "surplus" agents, of betrayal of friends, of spies unable to explain why they have committed soul and body to the agency. In one passage, Descartes' I Think, Therefore I am is reduced to something like "I perform, produce, manage for the organization -- and that is my being."

The message for managers is not to dump the organization for a Buscagglian orgy of insincere love, but to temper necessary organizational actions such as dismissal for incompetence or superfluousness with simple acts of caring, acts that admit that each of us shares in responsibility for our colleagues' failures, and that human acts are ambivalent in motives and unpredictable in consequences.

FOUR EASY PEACES

"Peace History, in the American Manner"
by Charles DeBenedetti in The History Teacher, November 1984, pp. 75-110.
Department of History, California State University, Long Beach, CA 90840
$5/single copy

A course in Peace History sounds like a daily newspaper in prelapsarian Eden, and this lack of glamour compared to military history represents one of the reasons that peace history has lagged both in courses and in scholarship. Unlike black history and women's history it has not the motivating force of a segment of population that will benefit in self-identity and enfranchisement. And there are considerable gaps in the peace history that has been written: there is no single history of American antiwar activism and no global study of the modern international peace movement.

Yet there is a large body of material available as attested by this bibliographic essay by De Benedetti who not only has published extensively in peace history, but regularly teaches "Americans and Peace: The Alternative Tradition" at the University of Toledo. (The syllabus of readings is included in a note.) De Benedetti also helps to dispel the amorphousness of scope and definition that is another of the factors in preventing most teachers from presenting peace history which he calls "less a field than a clearing."

The general term contains four distinct subcategories or themes. **Pacifism**, the opposition to any sort of violence has a long American history among Christian sects such as Dunkers, Mennonites and Quakers. The second theme is **conscientious objection** which overlaps with pacificism, but is more selective as to what sort of war the person refuses to participate in, as in one who might object to the Mexican War or the Viet Nam War yet participate in "just wars" such as the Civil War or World War II. **Antimilitarism** "or opposition to encroaching military influence on the civil sphere" is the third theme. Objection to a standing army disappeared after 1815, though some continued to rail against the West Point Academy. Today, antimilitarism has re-emerged in respect to "industrial-military" complexes.

The fourth major theme is **internationalism**, which of course relates to twentieth century institutions such as the League of Nations. DeBenedetti adds other movements, the organized American peace movements such as the Women's Peace Movement of World War I, and antiwar movements, e.g., the Copperheads of the Civil War. Finally, he proposes biographical "peacemaker" themes, including such persons as John Woolman, William Lloyd Garrison, Jane Addams and Martin Luther King.

SCROLLS TO DISKS

"Information and Knowledge: The Computer as a Medium of Humanities Communication" by J. David Bolter in Federation Reports. January/February 1985. 12 South 6th Street #527, Minneapolis, MN 55402. $1.25/issue

The original humanists of the Renaissance were bibliophiles as well as scholars, collecting books for their beauty as much as for their content, striving in the new medium of movable-type print toward the lovely type faces that are still with us -- Jenson, Aldine, Garamond, Plantin -- but it is difficult, says Bolter, "to envision anyone collecting old computer tapes or diskettes for aesthetic reasons."

Nevertheless, computer publication is here, and it will alter the history of language and thought as much as the previous technological revolutions in literacy have done. The first technological revolution was **writing**, a mechanistic preserver of language that Plato found offensive in the Phaedrus, as something destructive to human memory. Yet the first machine for preserving longer flows of ideas was the scroll, a device that is particularly suitable for Platonic dialogues, where arguments unroll serially. The next technology was the **codex**, the paged book, something well suited for encyclopedic collecting. Unlike the scroll, bits of information are retrievable in a codex without having to search through the total text. Gutenberg's revolution of **type-set print on paper** was more a matter of abundance than a startling departure from medieval manuscript codices.

But the abundance was of two kinds, abundant copies that made more widespread literacy attractive, and abundant writing. A knowledge explosion of books on all subjects necessitated new technologies of organization. The medieval subject-matter organization of books and manuscripts such as readers of The Name of the Rose will remember as an arcane and personal cryptography gave way to conventions of alphabetical organization, numbering of pages and chapters, tables of contents, title pages, paragraphing, topic sentences, numerical library retrieval systems and card catalogs.

Despite the particularized means of access to printed information, the print revolution has been substantially linear, that is, one reads a novel or an article from beginning to end, the innovations of paragraphing, topic sentences, chapter titles functioning as aids to memory as one follows the linear track of thought.

Yet, memory still doesn't really work this way, Bolter reminds us. "Associations from one idea may lead us in many directions. For example, if we are reminded of a movie we have seen, we may first think of a scene in the middle." Computer retrieval works much like the memory. Not only is alphabetical organization likely to return to medieval subject organization, but cross-referencing will become freer, more associative, more serendipitous rather than being a reflection of the preconceived and limited relationships anticipated by indexers and librarians.

Bolter, who is a classicist at the University of North Carolina, perceives many other revolutionary changes in the way humanists will employ literacy. For example, texts will lose their fixity because they will be subject to revision prior to the printout of each single copy. Specialized works may abound because publishers need no longer be under the strictures of producing a cost-effective minimum run, and writers of fiction will write novels in which readers may have to choose among alternative narrative routes to a conclusion.

APPLIED HUMANITIES

On the Uses of the Humanities: Vision and Application, a report issued by the Hastings Center Institute of Society, Ethics, and the Life Sciences; 360 Broadway, Hastings-on-Hudson, NY 10706 ($8.00)

This 72-page document is a public report summarizing a two-and-one-half year research project on the status of the applied humanities as related to public policy supported by the National Endowment for the Humanities. A more detailed volume, Applying the Humanities, edited by Daniel Callahan, Arthur L. Caplan, and Bruce Jennings is forthcoming this year from Plenum Press.

The report takes note of the fact that there are fully qualified humanities scholars teaching literature in medical schools, doing historical research to defend Indian land claims, testifying before legislative bodies on environmental alternatives - in short, "doing" humanities in a bewildering variety of contexts. What is happening to humanities in the process? Is there something in their nature that makes them invalid by application? Is the popular version of humanities cloistered in libraries tended by the hooded and gowned as narrow as an ingrown toenail? The reporters make known their position straightaway: "There is, we believe, no good reason why the contribution of the humanities to exigent national problems ought to be overshadowed by other disciplines." But they also note that everything depends upon the manner in which the humanities are brought to bear on the issues and interests of our common life.

Our present hesitation about the role of humanities in the public arena goes deeply into Western Culture. However, at our Classical Greek roots the purpose of the humanities was the cultivation of civic virtue. Aristotle separated the pursuit of pure inquiry from that of application, but listed all those endeavors we currently call humanities as practical, not theoretical. With Epicurus a shift occurred by which a humanities education served the needs of the inner person rather than civic life. It is from this point, the Hastings Center group concludes, that the place of humanities within an intellectual sanctuary free from the stresses of public life is established. With the revival of classical learning in the Renaissance the tradition of "civic humanism" was again launched, only to repeat its evolution to inward cultivation under such French humanists as Montaigne. In modern times the ethos of utilitarian individualism has joined with the professionalization and institutionalization of the humanities to sever the connection between humanities scholars and the full range of social life outside the university. The humanities are now typically justified as components of that mythical liberal education because of some assumed timeless nonutility.

Against, or parallel to, this cloistered model have arisen designs for integrating humanities content and methodologies with worldly concerns. Philosophy has witnessed the most rapid and widespread development, in particular social philosophy and ethics. Some of these now familiar hybrids include environmental and biomedical ethics, warfare, foreign policy, business and professional practices, sexual morality, and intrafamilial relationships. Philosophers working in these contexts do not expect to give quiet appraisals of complex situations and provide a "recipe" for each, but to analyze the basic assumptions of all parties and establish foundations for agreement. The most publicly noticeable difference from their university counterparts is their adoption of different writing styles and forms of presentation. The Hastings Center reporters believe that applied philosophy is so well established that the squabble over turf has ceased in favor of criticism of the rigor of work being done.

Applied history has established itself in the role of the public historian who provides a useful collective memory for many kinds of institutions. Beyond this relatively non-controversial function there is the critical analysis of that history which seeks to inform present policy and recommend the best choices among a group of options. The historian aims to recognize the appropriate social configuration for a specific policy innovation, and to correct mistaken assumptions policy makers may have about the impact of past policies. Historians have found interesting and rewarding work in media, museum research, historical site preservation efforts, and regional, cultural, ethnic data gathering and interpretation.

Applied literature is less widespread, a fact which the report editors partly attribute to the New Criticism and its tendency toward narrow scholastic orientation. The corrective of deconstructionism with its mistrust of all systems has also led away from engaged social-ethical criticism. Often applied literature has come in through the back door of ethics; specific literary works are being used to direct people to the perennial questions of human life. Some social and legal thinkers have explored literary theories in hopes of improving the practice of legal interpretation. Feminist criticism is cited as the most significant new avenue of socially and politically engaged interpretation. It has stimulated minority, racial, and ethnic textual scrutiny, has questioned the use of fictional stereotypes, and even the process of selecting and teaching literature.

Using as a basis its nationwide examination of programs and practitioners, the reporters posit four models (created by Robert Mayer for applied social sciences) applicable to humanities. There is the model of the **social engineer** who applies directly a body of theoretical knowledge to create an answer to a public problem. This is a hazardous model because there are conflicting theories from which to choose and the role does not allow rejection of the goal to be achieved, since it is set by those assigning the project. This model, which casts the humanities as handmaiden to power, can lead insidiously to corruption.

The **clinical** model, proposed by the late Alvin Gouldner, would maintain interaction between the humanities scholar and the decision-maker throughout the progress of the work. The philosopher-in-residence programs in hospitals, legislatures, or government agencies fit this description. It rests upon relative freedom of thought and action within an established bond of mutual trust.

The **enlightenment** model is in evidence when a humanities scholar studies some significant social issue independent of any policy development process but with the aim of providing reflective resources to policymakers. Their conclusions may be translated into language forms necessary to transmit to a general audience the import of the study. Finally, there is the **non-participation** model in which the scholar takes no interest in public discussion, makes no effort to draw the attention of policymakers to his work, and insists that any conclusions be taken without translation to a general manner of discourse. Of the four, the Hastings Center writers conclude the enlightenment and clinical models have the most potential for the humanities.

Applied humanities are fraught with functional difficulties. They are caught between the past, the context which tradition provides, and the needs of the present. They are carried on in the modern world without an integrated view of itself and longing for some basis of wisdom and character. Most practitioners of applied humanities have found their own ways to it; only recently have educational efforts been made to create applied humanities programs of study. There are few universally accepted criteria with which to evaluate the quality of such endeavors. The interdisciplinary character of applied work demands that some hybrid standards be developed. The report lists its own recommendations: that there is no compromise in the nature, and even the uncertainty, of the knowledge being conveyed; that critical detachment be maintained; that the highest standards of inquiry in the field be combined with adaptation of language suitable for persons without professional background in the field. The applied humanities must tread the dangerous ground between rigid adherence to inapplicable disciplinary norms and trivialization of the field.

Throughout the publication are vignettes describing the work of applied humanities personnel in a multitude of settings. Among them are Alvin H. Bernstein, classicist and instructor at the Naval War College; Richard Allan Baker, the U.S. Senate's historian; Kathryn Hunter, instructor in literature at the University of Rochester's medical school; Ronald Jager, humanities consultant for the New Hampshire state legislature; and Fred Snowden, a philosopher on a hospital staff.

The Hastings Center only occasionally grazes the corner of interdisciplinary humanities. Its primary interest is in the juncture of ethics and science. However, this humanities report is an example of the very thorough study that Center can make using its remarkable resources of brain-power and prestige. The monograph, "The Place of the Humanities in Medicine," reviewed in a previous issue of **Humanities Education**, is another sample of its work. We will keep a ready eye on this source for future reports.

WAR-HORSES

A Concise Guide to Building A Classical Record Library by Bill Parker. Minnesota Public Radio, 1985. 45 East Eighth Street, St. Paul, MN 55101

Everyone in North America knows the Minnesota Public Radio Network by way of Lake Wobegon on "The Prairie Home Companion." There's more to MPR than that, for it provides classical music to six states and two Canadian Provinces. This paperback volume draws upon Parker's classical "DJ" programs as well as his experience in record retailing and promotion.

The Guide lists composers by eras - Baroque, Mainstream Romantics, The Americans, etc. - and generally confines music to the proven warhorses: fourteen of Tchaikovsky, two by Offenbach, one Massenet, one Albinoni, two Hindemith, five Stravinsky and so on.

Parker bears in mind cost and availability (he recommends many "budget boxes") as well as quality, and he bases all his recommendations on many reviews and reviewers rather than on his personal preferences. Even so, choosing is still not easy: there are eleven of Mendelsson's E-minor violin concerto! But Parker tries to identify pairings to help the buyer to get two for one. For example, you can get Ravel's Pavane backed with also recommended choices of Chabrier's Espana, Falla's El Amor Brujo, Debussy's Nocturnes or LaMer or Ravel's Bolero or Alborado del Gracioso. There is a separate section for operas, and a sensible introductory essay on what to know before you buy. For each era and composer there is a paragraph of relevant information. Humanities teachers who feel weak in classical music will find this to be a guide to works that "everyone should know," while knowledgeable music lovers will appreciate having someone else go through all the reviews of "standards" and give a concise report of the consensus.

EDITORIAL

Recently we received a letter from Associate Editor Sharon Scholl that echoed one of our continuing complaints about the business of humanities teaching. Sharon wrote:

> Important matter: books we used to be able to count on to use for the standard Western culture courses in humanities are fast disappearing. The *Classics of Western Thought* is dead but for a volume 4 (The Modern World). *The World in Literature* (with weak to non-existent philosophical sections) comes in and out of useful format. I just don't even know of others, and the current *Books in Print* under "Literature - Collections" gives me nothing to choose from for a broad general cultural survey. I just can't use a whole collection on Elizabethan England - I need the whole Middle Ages and Renaissance together. Other books are good for high school - those all inclusive things without enough material for multi-courses. What are the publishers doing to us? Can we get some conversation, book lists, or even petitions to book publishers going on our behalf? Just as "traditional" liberal education and humanities are coming back into revised curricula, they cut off our access to classroom reading matter: What do people use for these very broad culture courses? Is everyone as upset as I am? Could we put something in our next issue to generate discussion and possibly publisher action?

We will add to her list two less comprehensive volumes. One is the long out of print Laurel Masterpieces *Classical Age* literature anthology, the other is the in-and-out of print *Documentary History of Art* (Medieval and Renaissance). It is particularly exasperating because these books have no competition. The classics anthology is the only paper-back volume to include both Greek and Latin literature in translation, and Lionel Casson chose readable translations throughout. The art history anthology by Elizabeth Holt no longer has a rival, and general humanities anthologies don't include documents of artists and architects of the past. Yet Anchor books has let it disappear from print on a schedule governed only by whimsy; finally (we thought!) resolving their indecision by returning it to Princeton University Press. They, however, seem to have decided to print an edition of thirty-seven copies in paperback.

Publishers deserve some sympathy: the Internal Revenue Service decision to tax book publishers' inventories has discouraged maintaining stocks of "slow movers." But equally to blame is the buy-out of publishers by large supercorporations who know little about publishing and less about the ethical responsibilities of business in a free society. When one is in textbook publishing, one is in the business of *education*, not in the wonderful world of That's Entertainment or the greedy game of the gold futures.

HUMANITIES EDUCATION CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

MICHAEL FIELD

DAVID COPPERFIELD AS A RESOURCE FOR UNDERSTANDING PERSONAL IDENTITY

Probably few readers of the second chapter of *David Copperfield* can experience David's vivid recollections of early childhood without also recalling early memories of their own--even some which merge so thoroughly with vague impressions and powerful feelings that it is impossible to say just where memory leaves off and where imagination begins. The power of the novel to evoke such memories suggests that *David Copperfield* can be an effective resource for self-exploration.

A colleague and I recently taught an experimental course in which *David Copperfield* served as a vehicle for helping students to explore the patterns of emotional and intellectual development in their own lives. Along with works such as *Hamlet* and *Candide*, *David Copperfield* provided students with the opportunity to draw connections between the development of literary characters and their own personal development. At the same time, we provided students with several theories drawn from developmental psychology, so that literary depictions of personal development, personal self-exploration, and psychological constructs would be mutually enlightening. The result was a course specially designed for freshmen and sophomores, offered not by the English department but by the newly-formed Liberal Education Council. The title of the course was "Self-Encounters: Personal Identity in Life and Literature."

Our course was designed on the hypothesis that reasoning is developmental in nature. Although a broad-based developmental theory encompassing such distinct phenomena as moral reasoning, general cognitive development and personality development has not been formulated or validated, our model course is based upon the assumption that college students, whether they are young adults or returning to formal study at a later period in their lives, are in the process of growing intellectually, morally, and emotionally. By focusing attention on literary figures depicted at moments of intellectual and emotional crisis, the course seeks to help students explore both literature and themselves in a challenging yet safe environment. The cognitive-developmental models of Dewey (1964), Piaget (1970), Loevinger (1976), Kohlberg (1981), and Perry (1970) provide a philosophical and logical base for understanding the reasoning and decision-making of the literary characters. In turn, the discussion and analysis of literary figures in action provide a psychologically safe method for students to experience and examine inherent stresses and contradictions in their own thinking, and to develop greater capacity for both empathy and abstract thought.

Students met in a classroom setting for two two-hour sessions per week over a period of ten weeks, and earned four academic quarter hours of credit applicable to general education requirements. The course was designed under a grant from the Bush Foundation as a pilot project to explore new possibilities for general education course design; specifically, we hope that this course will lead to applications of developmental theory to curriculum development in and among a variety of disciplines.

Readings for the course were selected primarily because they provide vivid examples of people involved in self-discovery and discovery of the world--examples which students can come to understand as analogous to patterns of development they have personally experienced or, in some cases, to challenges of intellectual and emotional growth which now confront them or soon will. _David Copperfield_ was central to the course, both as our longest reading and as a work in which developmental crises are particularly vivid. We began the course with _David Copperfield_, and discussions, activities and assignments generated by the novel occupied much of our first six weeks. Subsequent readings included _Hamlet_, _Candide_, and three short stories: "A Sense of Shelter" by John Updike, Philip Roth's story "Defender of the Faith," and Katherine Anne Porter's "The Grave," the latter being the only literary work in which the protagonist was female, although we did view and discuss the film _Georgy Girl_.

We found that all our readings presented significant intellectual challenges to our students. Each book or story is in an important sense radical, in that it challenges the reader to call into question frequently unexamined assumptions about fundamental issues and values, for example, sanity, progress, and the nature of heroism. All of the protagonists are led, through experience, to encounter the inadequacy of their cognitive framework for understanding themselves and their world and to consider creating a new, larger and perhaps more abstract and inclusive conceptual scheme. Not all choose to grow conceptually (Candide, for example, confronts the possibility of intellectual growth yet frequently appears to reject it), but all are led by incongruities between their conceptual framework and their experience to the brink of important discoveries about themselves and their world, and must decide how to reinterpret their experience. All learn through bitter experience the dangers of falsifying comfortable, sentimental images of others and must confront the risk of caring for others as they really are. All confront a series of moral dilemmas, and are shown in the process of thinking through their choices. As rich and vital artistic creations these characters and the literary works they inhabit defy schematization, and it was not our intention to coerce students to interpret them in terms of cognitive developmental theory. Rather their very richness and vitality served to encourage students to explore their own personal development. The choice of texts and teaching strategies, based on developmental theory, was meant to stimulate processes of growth in students which, though natural, are unfortunately not inevitable, and are likely to be inhibited rather than fostered if classroom experiences suggest that the students' own personal experiences of self-discovery and growth are irrelevant to the concerns of formal education.

Although we presented brief lectures occasionally in order to provide historical background, many of our classroom activities and written assignments were somewhat unusual in that they were specifically designed to help students make meaningful connections between themselves and literary characters. For example, the two major writing assignments were both autobiographical essays, the first dealing with childhood and the second dealing with young adulthood. Students were asked to examine, as part of their autobiographies, similarities or differences between the patterns of their lives and the life of one literary character. For many, David Copperfield was the character chosen. While we had anticipated that some students would identify with David as a child, we were surprised at the number who focused on David's unfortunate marriage to Dora; the theme of immature decisions about romantic relationships was understandably compelling to many freshmen and sophomores.

Let me describe briefly some of the classroom activities we used which had particular application to David Copperfield. Early in the course, after a discussion of Chapter II, "I Observe," we asked students to identify one of their earliest memories and discuss that memory, and the feelings it evoked, in small groups of three or four students. This activity generated a considerable amount of lively discussion, followed by a discussion involving the entire class in which we considered just how realistic it was that David should remember the things Dickens has him remember. Most people felt, on the basis of their own early memories, that Dickens was quite perceptive about the impressions of early childhood which people carry with them throughout life. This classroom activity was recalled later in the course, when we asked what impact early childhood experiences had had on important decisions later in life, both for David and for our students. Realizing that David's first choice of a wife was a woman much like the mother he lost as a child enabled our students to examine parallel patterns in their own lives.

Another example, later in the course, of a classroom activity which served to bridge the gap between personal experience and the novel involved describing, in the form of a graphic "life-line," the high and low points of David's life. We first asked the class to identify those times when David believed he was happiest, saddest, or experiencing a personal crisis. These were charted on a graph, intended to show what David felt as he was going through these experiences. We then asked if David felt differently about the high and low points of his life when he looked back upon them later in the novel. In this discussion the four "Retrospect" chapters were, of course, highly significant. When David's "lifeline" was plotted as he would have seen it in retrospect it looked very different, prompting a good deal of discussion about Dickens' sophistication as a psychologist, the value of experience, and, it should not be embarrassing to report, the meaning of life. When students were asked to repeat, along with their instructors, the same two-stage lifeline for their own lives, the results were equally interesting.

Throughout the course we asked students to keep a personal journal, which proved to be particularly useful. We also used a variety of other classroom activities, but I believe those which have been described in detail are sufficient to provide a clear idea of the approach of "Self-Encounters." This course was not designed for English majors, nor was it intended to be an introduction to literature for non-majors. Our intention was to design a new kind of general education course which was interdisciplinary in nature and in which the students' own personal development provided a lens, as it were, through which both literature and developmental theory could be viewed. Although I have not described the concepts drawn from developmental psychology which were presented to the class, they were an essential part of the course and a considerable amount of time was spent discussing them.

If I were teaching David Copperfield without the assistance of a colleague who happens to be a psychologist, and in a course specifically designated as an English course, my emphasis would certainly be somewhat different. However, I would continue to encourage students to respond to David, and to other characters in the novel, as if they were real people as well as fictional creations. Surely much of the power of this literary work lies in its capacity to evoke such responses. If I were to redesign the course, I would consider including more focused attention to women; Antigone, for example, might be an appropriate substitute for Hamlet. But I would keep David Copperfield as the centerpiece because it proved to be an extraordinarily rich resource in helping students to explore their own feelings about themselves, and to deepen their understanding of their own growth and development.

&

JEREMIAH REEDY
MACALESTER COLLEGE

TRANSLATIONS PERFECT AND IMPERFECT

I: PERFECT TRANSLATIONS: FERLINGHETTI'S PAROLES

Translations are almost never perfect. The kind of total identification required, the singular grasp of both languages, the sensitivity to nuances and subtleties of far-ranging sorts, all virtually guarantee that even the best translations will be imperfect reflections of their originals.

But some few translations, miraculously, can be called perfect. And one of them is Lawrence Ferlinghetti's version of Jacques Prevert's Paroles ("Words," "Passwords"), which gives us about half of the poems in the French volume -- but offers them so beautifully that the omissions do not much matter. Take "Le Cheval rouge":

Dans les manèges du mensonge
Le cheval rouge de ton sourire
Tourne
Et je suis là debout planté
Avec le triste fouet de la réalité
Et je n'ai rien à dire
Ton sourire est aussi vrai
Que mes quatre vérités.

Prevert was born in 1900; Paroles, his very best book, appeared in 1949, and though the translation was not published in book form until 1965, Ferlinghetti tells us that he did the actual work at just about the time Paroles appeared. The deftness, the extraordinary plangent replication of the raucous and yet immensely sophisticated, witty French originals is, in a word, miraculous:

In merry-go-rounds of lies
The red horse of your smile
Goes round
And I stand rooted there
With the sad whip of reality
And I have nothing to say
Your smile is as true
As my home truths.

The touchstone of translation is frequently the simple, "easy" words -- like "tourne," in line 3, where a lesser translator might have settled for "turn" but this translator, understanding both his own language and the subject matter of the poem, employs, masterfully, "Goes round." So too "mes quatre verites," "my four truths," in the last line, is given to us in English as "my home truths," which is both idiomatically what it means and what, in English, the poem requires. "Plante," in line 5, in most translators' hands would have emerged as "planted," or perhaps "fixed," but Ferlinghetti's "rooted" is exactly right. No translator, of course, can match all the effects of his original: "manèges du mensonge," for example, cannot be replicated. The marvellous thing about these translations is that Ferlinghetti neither tries nor seems to mind that he hasn't. "I translated these poems for fun," he notes, and it's very clear that he's telling the truth.

I have room for one more very short poem:

Le Droi Chemin

À chaque kilomètre
chaque année
des viellards au front borné
indiquent aux enfants la route
d'un geste de ciment armé.

THE STRAIGHT AND NARROW ROAD

At each mile
each year
old men with closed faces
point out the road to children
with gestures of reinforced concrete.

"Borné" means limited, restricted; "front" can mean forehead or face. The translation, "closed faces," is -- again -- perfect. Note, too, how deftly and correctly the singular in one language is turned to plural in another. "Front" is one example, "geste" another. Note in the title how "droit," which means "straight," is transformed into "straight and narrow," and then how "chemin," which means road, gets modulated to path -- and "route," which means path, then gets transformed to road.

Perfection may be beyond praise, but it also calls for it.

Burton Raffel

II: THE COLD ENTHUSIASM OF *MADAME BOVARY*

Edouard Maynial, in introducing the Garnier edition of Flaubert's *Madame Bovary*, points out at once that "this great book was not conceived in a spirit of enthusiasm, nor even in the joy of creation." He adds that the book was in fact "born in some sense in spite of Flaubert and, in order to write it, Flaubert was obliged to do violence to his temperament, to his natural inspiration." It is indeed a novel of hate, not of love, for it is plain that this author loathes his heroine and all the "moeurs de province," the "provincial manners and mores," which surround her (the phrase "moeurs de province" was used by Flaubert as the novel's sub-title). It is hardly surprising, then, that *Madame Bovary's* style is the sheerest, coldest perfection of which prose is capable. Translating such ferocious brilliance is close to impossible, and most renderings of the book (especially the literally execrable version by Karl Marx's daughter, Eleanor Marx Aveling) justify the old saying, "traduttori, traditori," "translators are traitors."

Miraculously, one -- and only one -- translator has not only understood but has solved the problem. Francis Steegmuller's mangificant 1957 translation of *Madame Bovary*, readily available in a Modern Library paperback, somehow captures in English the sense, the flavor, and even the elegance of Flaubert's resplendent prose: no teacher should expose students who cannot read the original French to any other rendering.

Consider:

La parole humaine est comme un chaudron fêlé où nous battons des mélodies à faire danser les ours, quand on voudrait attendrir les étoiles.

Human speech is like a cracked kettle on which we tap crude rhythms for bears to dance to, while we long to make music that will melt the stars.

C'est ainsi qu'ils auraient voulu avoir été, l'un et l'autre se faisant un idéal sur lequel ils ajustaient à présent leur vie passee. D'ailleurs, la parole est un laminoir qui allonge toujours les sentiments.

That was how they would have liked to be: what they were doing was to dream up ideals and then refashion their past lives to match them. Speech is a rolling machine that always stretches the feelings it expresses!

Puis, quand les quatre cordes furent disposées, on poussa la bière dessus. Il la regardra descendre. Elle descendait toujours.

Then, when the four ropes were in position, the coffin was pushed onto them. He watched it go down. It went down and down.

Steegmuller has caught the very rhythms of the French: even an elementary knowledge of French, and the most halting reading aloud, should demonstrate that. But he is a vastly experienced translator, and he knows that imitation is not the route to re-creation. When necessary, to oblige the very different structures and requirements of English, he adjusts, he fine-tunes his translation -- and the last passage cited is a perfect example. "Elle descendait toujours," writes Flaubert. A literalist, smothered by his overwhelming awareness of the French, might translate, accurately but dully, "It went down forever." But Steegmuller, here as elsewhere, knows better; he knows what effects Flaubert is after; he knows what English in its different way can do to achieve those effects; and his rendering is beyond praise. "It went down and down." It looks, after the event, easy, but just try to achieve it -- and then to keep it up for almost four hundred printed pages.

Steegmuller does, as Flaubert did. It is as close to a perfect translation of one of the seminal books in all Western literature as the English language is ever likely to see. Use it.

Burton Raffel

III: IMPERFECT TRANSLATIONS: ILIAD AND ODYSSEY

"The live Dog is better than the dead Lion"
---Edward FitzGerald

Reviews of translations of Homer invariably follow the same pattern (as pointed out by Dorothea Wender, *A.J.P.* Vol. 96, no. 3). The reviewer claims to have a true understanding of Homer's style. The reviewer finds the new translation lacking in certain respects. The reviewer "finds merit in earlier versions" (usually Pope's), but dismisses them (the language is too archaic) and concludes that we are still waiting for the definitive English Homer. The present article does not depart from this pattern.

The latest edition of *Books in Print* lists eight translations of the *Iliad* and ten of the *Odyssey*. They are: Robert Fitzgerald (both epics in verse), Thomas Hobbes (both, verse), Richmond Lattimore (both, verse), W.J. Miller and H. Shefter (both, prose), E.V. Rieu (both, prose), W.H.D. Rouse (both, prose), Andrew Lang (*Iliad*, prose), George Chapman (*Iliad*, verse), Denison Hull (*Odyssey*, verse), Albert Cook (*Odyssey*, verse), T.E. Shaw (*Odyssey*, prose), and Walter Shewing (*Odyssey*, prose). There is also a Modern Library prose verion of the *Odyssey* translated by S.H. Butcher and A. Lang which is not listed in

Books in Print. Several of these can be eliminated at the outset: Concerning Hobbes' translations Walter Shewring says, "About 1675 the now very aged Thomas Hobbes published an Iliad and an Odyssey... Was he anxious to prove that his faculties were not quite decayed? ...the general level is that of contemporary tombstone poets..." Lang and Butcher used a "stately prose style" derived from the King James Bible: "My child, what word hath escaped the door of thy lips? Yea, how should I forget divine Odysseus, who in understanding is beyond mortals and beyond all men hath done sacrifice to the deathless gods, who keep the wide heaven?" Members of the "now generation" are not likely to be "turned on" to the classics by these, nor are today's students likely to be as excited by Chapman's Homer as Keats was. (Keats did not know Greek. Coleridge who did said, "It will give you small idea of Homer.")

What we want is a translation of Homer that captures the four qualities of the epics identified by Matthew Arnold in his "On Translating Homer" -- Homer is rapid, plain and direct in thought and expression, plain and direct in substance, and noble. Among available translations for the teacher who wants both epics by the same translator there are four leading candidates: Lattimore, Fitzgerald, Rieu and Rouse.

Lattimore's translations and those of Fitzgerald have been received with extravagant praise. Regarding Lattimore's work E.L. Harrison wrote, "...we now have from his practiced hand the best modern versions of the Homeric poems in English." Of his Iliad Harrison said that it "ranks as a literary creation in its own right." Only H.A. Mason and Dorothea Wender have found anything to criticize in his translations. The former, writing in the New York Review of Books, confessed that at points he felt Lattimore's poetry was "actually repulsive." Ms. Wender finds his diction often "awkward and unidiomatic" while his "free six-beat line...does not sound like poetry, but like stilted prose."

Both Lattimore's Iliad and Odyssey have useful introductions dealing with such matters as "The Story of the Fall of Troy," "The Homeric Poems," "Dates," "The Unity of Homer," style, main characters, gods, and in the Iliad, a page of Lattimore's philosophy of translation: "My aim has been to give a rendering of the Iliad which will convey the meaning of the Greek in a speed and rhythm analogous to the speed and rhythm I find in the original." Lattimore uses the "plainest language...mostly this is the language of contemporary prose." He translates line-for-line using a free six-beat line:

> Sing, goddess, the anger of Peleus' son Achilleus
> and its devastation, which puts pains thousandfold upon the Achaians,
> hurled in their multitudes to the house of Hades strong souls
> of heroes...

Lattimore is remarkable for his fidelity to the originals; he generally has, in fact, the English words in the Greek word order and thus they occupy the same position in the line. Every student of

Greek knows that his versions make the best "trots" --there can be no doubt about that.

Robert Fitzgerald's line-for-line verse translation of the Odyssey received the Bollinger Award in 1961 for the best translation of a poem into English. Moses Hadas said of it, "Surely the best and truest Odyssey in the English language." William Arrowsmith said, "At last we have an Odyssey worthy of the original," while Bernard Knox wrote, "The longfelt need for a poetic translation of the Odyssey has been filled, and it is safe to say that this will be the standard English version for a long time to come." (Lattimore's Odyssey was not published until 1968.) Fitzgerald himself was less sanguine: "The Odyssey, considered strictly as an aesthetic object, is to be appreciated only in Greek. It can no more be translated into English than a rhododendron can be translated into dogwood. You must learn Greek if you want to experience Homer, just as you must go to the Acropolis and look at it if you want to experience the Parthenon." Fitzgerald begins The Odyssey thus:

> Sing in me, Muse, and through me tell the story
> of that man skilled in all ways of contending,
> the wanderer, harried for years on end,
> after he plundered the stronghold
> on the proud height of Troy.

The teacher who needs only a translation of the Odyssey should probably consider in addition to Rouse and Rieu, Albert Cook's 1974 version, and Walter Shewring's 1980 one. Cook uses a syllabic line that varies from twelve to seventeen syllables:

> Tell me, Muse, about the man of many turns, who many
> Ways wandered when he had sacked Troy's holy citadel;
> He saw the cities of many men, and he knew their thought;
> On the ocean he suffered many pains within his heart, etc.

Cook on the whole is nearly as successful as Lattimore and Fitzgerald although he has been accused of writing lines of "intolerable flatness" here and there. He also has over 150 pages of valuable material on such topics as "The Homeric Question," and "Heroic Age and Heroic Poetry," at the back of the volume.

Lattimore, Fitzgerald, and Cook succeed in sharing with readers their experience of Homer. They have been as successful as anyone has or is likely to be, and yet in no case is the result Homer. Homer's grandeur, his vigor, his pace are simply not there. Before I die, if I can find the time, I should like very much to read all of the Iliad and Odyssey in Greek, but I can hardly bear the thought of reading even 200 lines of any verse translation. Indeed, "What could be better than Homer, or what worse than almost any translation of him?" asked George Santayana. I am, therefore, about to do the unthinkable, to commit unspeakable heresy--I am going to recommend a prose translation! The next time I teach the Iliad and/or Odyssey in a humanities course, I shall use either Rouse or Rieu or Shewring and probably Rieu for reasons given below.

I take consolation in the fact that I am not alone in my heresy. Eugene O'Neill, Jr. when he was teaching Greek at Yale wrote a review of two new versions of the Iliad in the course of which he confessed a preference for prose translations. D. Wender has also defended her choice of Rieu for undergraduate "civilization courses."

In 1980 Oxford University Press published a prose version of the Odyssey by Walter Shewring who was a master of Ampleforth College for fifty years. It has an introduction by G.S. Kirk and a thirty-one page "Epilogue on Translation," which is alone worth the price of the book, plus a glossary and maps. Shewring has rendered the Odyssey into lively, contemporary prose that is highly readable. I cannot fault it, and for the class that is reading only the Odyssey it could be the ideal choice.

In Greek poetry rhythm is quantitative, i.e. it relies on a certain sequence of long and short syllables. English verse is based on a sequence of stressed and unstressed syllables. In Greek words accent was not stressed as in English; it was tonal. Add to these differences the fact that the Homeric poems were composed orally, coming as they did at the climax of a long oral epic tradition which relied heavily on inherited formulae. There has been nothing comparable in English literature since Beowulf. Attempts to translate Homer's hexameters into English hexameters have been miserable failures. A verse translation may convey some of Homer's grandeur, dignity and nobility, but they generally fail to be rapid, plain in diction, plain in thought and faithful to the original. A prose translation can capture these qualities, but it will lack Homer's nobility. This can be compensated for if the prose is somewhat "poetic." Rouse's translations are racy and colloquial; some of his characters speak what I assume is cockney. I believe, therefore, that Rieu's Iliad and Odyssey and Shewring's Odyssey will work best in undergraduate and secondary school humanities courses. It would be a good exercise, however, to have students compare different translations, both prose and verse, and one should shout loudly every now and then that HOMER WAS A POET AND COMPOSED VERSES, NOT PROSE!

RON CARSON

LITERATURE IN THE MEDICAL SCHOOL

I have just returned to my office from teaching a session of a humanities course required of first-year medical students at the institution where I work. The topic today was "doctoring" and the readings were William Carlos Williams' "The Use of Force," and "Brute" by Richard Selzer.

It was obvious early in our discussion that all twelve students had been engaged by these stories. My job was to see to it that optimal use was made of our class time together. Specifically, I was challenged to clear away barriers to understanding as quickly as they loomed up and to guide the discussion in an orderly manner, prompting students to discover important connections between passages in the text relating to the day's topic. The purpose of the entire exercise is to encourage habits of mind and sensibility— — discernment, imagination, sympathy— — that will enhance the professional abilities of these physicians-in-training. Imaginative literature is a particularly apt vehicle for achieving this purpose.

Williams and Selzer show us doctors dangerously distracted by misshapen means from the ends they seek. At once challenged and resisted by their patients, they abuse the power entrusted to them. In "Brute" it is a young surgeon suffering from sleeplessness, called to the emergency room to stitch up a gash in the forehead of "A huge black man . . . handcuffed . . . rearing and roaring . . . hugely drunk . . . scared as a Zulu from his many battles," who, in his own rage, robs the patient of his dignity and then bears the burden of guilt and regret.

Williams' doctor is drawn by the patient's resistance to his attempts to obtain a throat culture into a physical struggle so furious that ultimately a diagnosis can only be wrested from the patient. "In a final unreasoning assault, I overpowered the child's neck and jaws. I forced the heavy silver spoon back of her teeth and down her throat till she gagged. And there it was— — both tonsils covered with membrane. . . . Now truly she was furious. She had been on the defensive before but now she attacked. Tried to get off her father's lap and fly at me while tears of defeat blinded her eyes." The doctor's success is a seeing that "blinds" the patient.

What of the settings of sickness? What is it like to be institutionalized? Impersonality and the tedium of enforced routine are evoked in Randall Jarrell's "The X-Ray Waiting Room in the Hospital:"

Our little flock
Of blue-smocked sufferers, in naked equality,

288

Longs for each nurse and doctor who goes by
Well and dressed, to make friends with, single out,
    the I
That used to be, but we are indistinguishable.

Mary E. Wilkins Freeman makes palpable to the reader the benevolent but confining and dispiriting atmosphere of "the 'Old Ladies' Home'" from which the aged and ailing Shattuck sisters escape to return to their ramshackle cottage where, though life is not easy, they are in control ("A Mistaken Charity"). And, in a contemplative essay on hospital life ("At St. Raphael's"), Richard Selzer imaginatively describes communities of devotion, "corridors of dedication," reference to which should remind readers that the fundamental purpose of health care institutions-- beneath the commerce, behind the bureaucracy--is to provide a haven for the afflicted. "Oh, the things I have seen here which to be witness to were worth all the living that has gone before, all that is to come afterwards."

The crisp, rhythmic diction of poetry can prompt in students a deep appreciation of the experience of illness. In "Surgical Ward," W.H. Auden gives us patients whose whole being is reduced to their wounds.

They are and suffer; that is all they do;
A bandage hides the place where each is living
His knowledge of the world restricted to
The treatment that the instruments are giving.

James Dickey's "Diabetes" evokes in the reader the experience of what it is to thirst "like a prince, then like a king, then like an empire, like a world on fire" and to be oneself the site of a high-stakes joust between forces of moderation and satiation. "Angina" invites us into a family scene where the patient lies (for decades) acutely sensitive to every misbeat of her faulty heart, enduring, taking "her appalling risks in absolute calm," and, against all odds, keeping death at bay. And in "The Cancer Match" we sit ringside as imaginary ritual sparring partners-- the poet's cancer, and his whiskey-- fight ("Or are they dancing?"), and we learn that there is more to hope than what medicine has to offer.

Kafka's "The Metamorphosis" is not ostensibly related to medicine at all, but read allegorically it yields valuable insights into the experience of sickness. The sense of urgency and extremity that hovers over the characters in virtually all of Kafka's stories and novels characterizes Gregor Samsa's experience, too. Gregor is rendered powerless by his situation (I invite students to imagine it to be an injury or an episode of illness). Try as he does, Gregor is singularly ineffective in recovering a locus for his life in a curiously dislocated world. His parents and sister are incredulous and cannot bear to look at him. They feel he has done something to them by changing in the way he has. They find him repugnant, then pitiable, and finally expendable.

I ask students to let a question guide their reading of "The Metamorphosis": What can this parable reveal to us about illness and about human reactions to it, perhaps especially to disabling, disfiguring illness? I do not claim that such a reading of this rich narrative is definitive, only that it is permitted (by the text itself), and that read thus it powerfully illuminates the experience of being victimized by one's changed physical condition.

In autobiographical reflections on surviving an auto accident ("The Great Good Place"), Goronwy Rees takes readers inside his experience of profound alienation from his own body, and artfully escorts them through levels of restored consciousness which correspond to stages of recovery. There was first a lack of awareness of "what my personal relationship was with the curiously mangled body which I seemed so provisionally to inhabit." Add to this an ominous awareness of pain--"yet not my pain, but, as it were, a quality of darkness that bore down upon me, embraced me, enfolded me, a great weight that pressed closer and closer upon me . . . threatened to enter me, become a part of me, become mine. . . ." Unconsciousness provided only a temporary respite from fright before surreal dreams returned to terrorize the hapless victim--"a fly caught in a spider's web." In time, the fractured bones knit themselves back together and the relation of body to self was restored. The onset of full recovery is signaled by the appearance of a nurse who awakens the patient from his nightmare of entrapment in the "spider's web" (the orthopedic apparatus) with healing laughter. "Suddenly, I knew exactly where I was. I was in the hospital. I had been run over, my leg was broken."

In these poems, students encounter the body as wounded and as battlefield. In the Kafka novella, they perceive the body permanently flawed, and in "The Great Good Place," the body broken and on the mend.

Where but in the humanities classroom are budding physicians invited into the lives of the sick, there vicariously to probe and ponder, where the hurt is imaginatively real (and thus elicits a full measure of emotion as well as intellect), but the stakes are low (no living patient feels the probe or bears the brunt of the novice's awkwardness). Where but in essay and story, poem and play, are medical students provided access to the stuff and substance of the myriad human experiences of sickness that provide their profession its reason for being.

COPYRIGHT ISSUES IN THE HUMANITIES

BY FRANCIS M. NEVINS

ST. LOUIS UNIVERSITY
SCHOOL OF LAW

III: VIDEOCASSETTES REVISITED

(Editor's note: Because of considerable reader interest in the TV-in-the-classroom issue, we have postponed Professor Nevins' discussion of copyright and museum art works until the September HUMANITIES EDUCATION.) SYNOPSIS of Our Story So Far: In September, 1984, a reader posed the problem of showing in a college classroom a videocassette of the western movie classic SHANE, which the professor had checked out of the public library. Because the course was held in a large lecture hall, it was necessary for the college library's Media Division to pipe the video into the several TV monitors in the hall. The library refused. Nevins stated that their policy was "dead wrong." In the next issue (January, 1985), a librarian replied that in a case with "a dramatic work in its entirety, obtained without payment of fee, clearly marked for home use, and closed circuit transmitted, a conservative media center, mindful of their responsibilities to both the law and their institution, would surely hesitate." Moreover, the librarian cautioned, educators in general show a disturbing tendency to flaunt the law, maintaining that anything they want to use is their right.

PROFESSOR NEVINS' REPLY:

The librarian who replied to me in the last issue of HUMANITIES EDUCATION is seriously confused about several basic concepts of copyright law. I hope I can sort out her confusions without becoming hypertechnical.

First, she takes it on herself to add a fact of her own devising to the problem I was asked to discuss. As anyone will see who rereads the statement of the problem, nothing was said about a restrictive legend, "For Home Use Only" or "Classroom Use Forbidden," on the Shane videocassette.

Second, she totally misunderstands the nature and scope of the rights the law grants to a copyright owner. Let's assume that the Shane videocassette in the problem did indeed contain those restrictive legends. If so, the media center's refusal to play the tape for the professor's class becomes perhaps more understandable in human terms, but it doesn't change the legal analysis of the situation by an iota. The center's refusal was still clearly incorrect. I'll try to explain why with a series of hypotheticals.

Suppose the copyright owner of a musical work prints on each copy of the sheet music the notice: "No One May Sing This Song in the Shower." Suppose the company that produces a TV series puts on the credits of each episode the warning: "No One May Leave the Room During Commercials." Suppose the publisher of a new mystery novel puts on the copyright page the legend: "No Reader May Tell Any Other Person Who Dun It." Or suppose the publisher of a copyrighted literary work prints on each copy the following statement: "No photocopying of any part of this work is permitted for any reason whatsoever, even if allowable under the doctrine of fair use." All these restrictive legends of course are ridiculous and have no legal effect. Why not? Simply because the law does not give the copyright owner of a work total control over all uses of the work by everyone else. Copyright merely provides a limited number of rights, whose nature and scope are spelled out in the statute. And these rights do not include the right to deny or limit the rights which the Act grants to users of a work.

How do these principles apply to our Shane problem? Quite neatly. The right to perform a lawfully made videocassette in a face-to-face teaching situation is precisely one of those rights which the Copyright Act, Section 110(1), clearly grants to the public at large. No copyright owner of distributor can cut off that right by printing a restrictive legend on a videocassette box.

Third, the writers' response to my article badly blurs the distinctions among a number of fundamental copyright concepts. She talks about the copyright owner's limited right to control distribution of copies, then she talks about the right to control public display of a work. None of this has the slightest relevance to our Shane problem, which is a problem of performance of a copyrighted work. Then she quotes a long extract from the legislative history of Section 110 of the Copyright Act, but her quotation is likewise irrelevant to our problem. What the quotation tells us is simply that the exemption of Section 110(1) doesn't apply where the teacher is not physically present in the same general place as the students. In other words, if the teacher is present in the classroom only in an electronic sense, the right to perform lawfully made videocassettes doesn't apply. I agree completely with that proposition. But she seems to interpret the quotation to mean that there can be no such right to use the videocassette when the cassette itself is not physically present in the classroom but is beamed in, so to speak, from another part of the school. That is not a "conservative interpretation" of the quoted language; it's a grotesque distortion.

The last paragraph of her quotation from the legislative history displays another interlocking series of confusions. Subsection 2 of Section 110 has nothing to do with our Shane problem, which falls under Subsection 1. Subsection 2 deals with the display of any type of copyrighted work and with the performance of nondramatic literary and musical works. But a movie is neither a literary nor a musical work, it's an audiovisual work, and the showing of a movie is not a display, it's a performance. I do wish people would get the basics straight before going into print on matters of copyright law.

A final confusion pops up in the last paragraph of the letter, in which the writer criticizes what she takes to be my view of the doctrine of fair use. That doctrine, of course, has nothing at all to do with the Shane problem, which falls under a specific exemption provision found in Section 110, not under the Fair Use criteria of Section 107. But in her final paragraph she offers suggestions of her own as to how school administrators should deal with copyright problems, and those suggestions strike me as extremely unsound.

It does make sense to say that an administrator should interpret the statute prudently, with a view to how a court would likely rule on a particular issue, and with a resolve not to twist the statutory language so as to create dubious loopholes in one's own favor. But what Ms. Lewis suggests goes way beyond common-sense prudence. Even where a provision clearly authorizes a particular use, as Section 110(1) clearly authorizes the use of lawfully made videocassettes in face-to-face teaching situations, the writer seems to say that school administrators should refuse to allow teachers to exercise their statutory right as long as there is the remotest chance that some lawyer somewhere might make some argument, no matter how implausible, that the statute doesn't mean what it says. This approach is self-defeating, masochistic and not at all conservative in any legitimate sense of that much-invoked word. I trust that no school administrator will seriously consider adopting it.

DICTION & GENDER

FROM THE EDITOR TO CONTRIBUTORS

The traditional usage of "mankind" dies hard; certainly it has a distinguished history of profound practitioners, male and female alike. Further, the inelegant circumlocutions of "Dear Sir or Madame," "he/she" and clumsy administrativistic "individuals," "chairpeople" and the like invite such parodies as "Walt Whitperson" and "Katherine Personfield."

But the fact is that our language has reflected an imbalance, indeed a dominance that no longer holds. After all, since 1789, we've believed in Liberte, Egalite and Sororite, haven't we?

Personal, psychological and political considerations aside, there are venerable traditions aplenty to help us to eschew sexism in diction. When you say "mankind," surely humanity or humans or humankind will satisfy as well. Possibly even people. And rather than "man believes," why not "we believe"? That way, even you and I must join Man. Kind.

The syntactic trap of "everyone-he" and "ones-his" is almost always avoidable by couching remarks in the plural, or, judiciously, in first or second person. And anyway, it probably is high time that one changes his language. Or that we change ours. Of that humans change theirs. Or that you change yours. Or I, mine.

MEDIA WATCH

East of the Sun -- West of the Moon is the initial program in a series of radio programs in the humanities for children 8-10 years old. A large group of humanities scholars, radio producers, and youth specialists worked under an NEH grant to develop a series of programs covering a variety of subjects from ethical decision-making to mythology. Their initial effort was broadcast on November 18 and is available in cassette form for $9.00 to anyone who would like to use it in part or whole at other times. The funding has not developed to cover the costs of developing instructional packages to accompany the program, so that only the original 90 minute program itself may be obtained by writing The Children's Audio Service, P.O. Box 4015, Chapel Hill, N.C. 27515-4015.

Videotape programs prepared from NEH-funded seminars for museum personnel by the American Association for State and Local History are now available for purchase. While some of these relate to technical and exhibit-design matters, all are on the interpretation of history through museums. "Interpreting the Humanities Through Museum Exhibits" features as speaker Fred Schroeder, editor of HUMANITIES EDUCATION. Betamax and VHS formats are available at $75 per half-hour program. Write to Education Division, AASLH, P.O. Box 40983, Nashville, TN 37204.

THE NATIONAL ASSOCIATION FOR HUMANITIES EDUCATION: A POCKET HISTORY FOR NEW MEMBERS

NAHE originated in 1968 as a product of a series of programs sponsored by the New York State Department of Education. The organization grew rapidly and from the outset has had a membership that encompasses the spectrum of American education, including college professors of humanities and fine arts, secondary and elementary school teachers and professional education instructors, consultants and administrators. While expousing no dogma or theoretical school, NAHE and its members have adhered firmly to a core of great works of human thought and expression, to the integration of these around major themes of human values and issues, and to a continuous quest to relate the arts and humanities to contemporary issues and to our students.

During the decade of the 1970s the organization was extremely active, publishing guidelines for teacher preparation in interdisciplinary humanities and related arts in response to the revolution in curricula that spawned so many elective courses nationwide. NAHE also published for a decade HUMANITIES JOURNAL and the newsletter HumaNews, and it sponsored major biennial conventions. As with many professional educational organizations, the hard times of recent years forced NAHE to cut back on conventions and redefine publication programs.

TODAY'S NAHE AND YOU

When the National Association for Humanities Education revamped itself in 1983, it reasserted the decade-old mission to serve and promote "the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions." NAHE also proposed to publish a journal that was "too useful to throw away." That is an ambitious goal for an organization (the only one now or ever) dedicated to interdisciplinary humanities teaching in all settings: colleges, secondary schools, museums, and public programs. This is the reason we have chosen the innovative looseleaf format: members can easily preserve their "own" magazine and send other articles on to friends.

Membership in NAHE continues to grow steadily. More than half the members are professors in liberal arts colleges and universities, but during the past three months we have been seeing a significant increase among museum educators, secondary school teachers and community college instructors. We like this variety and enjoy the challenge of trying to achieve a balanced offering in the magazine. The Executive Committee reminds members that we are a membership organization, and that the life of NAHE depends upon each person's continued interest. In this issue, we have postponed the "News About Members" feature because we received too few communications. It seems that the easiest things to write are the hardest to do (beginning with writing a check for renewal, in some cases!).

In addition to "easy" writing, we have a number of more demanding jobs open to volunteers. Elsewhere in this issue will be found advertisements for book reviewers, for a special issue, and for a newsletter editor. We welcome contributions of abstracts of relevant journal articles and funded curricula, prepared in the style of our Abstracts and Reviews section. And if your talents lie in the direction of organizing conferences, NAHE is ready to resume national conventions. We'd like to have suggestions from experienced leaders and energetic newcomers.

UPCOMING

The Medieval Monastery is the subject of a three-day conference in Minnesota May 14-16, 1985. Papers on all aspects of monastic life and architecture will be presented on the Minneapolis Campus of the University of Minnesota. On the middle day, the conference will move to St. John's Abbey at Collegeville for a tour of the world's largest collection of monastic manuscripts, lunch with the Benedictine Brothers, and performances of music, dance and interpretive lectures by Concentus Musicus. "The first section of the lecture-demonstration will illustrate some of the abbey's functions as school, employer, refuge, etc." Contact Andrew MacLeish, English Department, University of Minnesota, Minneapolis, MN 55455.

The 1985 meeting of the **American Association of Museums** will be held in Detroit June 9-13. Registration fees are high ($95), but as always the museum tour activities at AAM are exciting and informative. Some sessions of particular interest to humanities educators include "Museums and Schools: Partners in Education"-- Topics to be addressed include field trips keyed to the curriculum; museum-to-the-schools programs; museum work experience programs for students; teacher workshops; development of loan collections; and funding sources for new and innovative programs. Emphasis is on the use of collections. "Allies in the Schools: Programming for Teachers"-- A discussion of how to determine goals for teacher programs and ensure consistency with the real needs of a teacher audience. Includes a presentation of a teacher training model that uses the museum more effectively and encourages development of observation skills. "Educators, Curators and Designers: Creating Exhibitions"-- With two goals of the Commission on Museums for a New Century being the redefinition of the role of museums as educational institutions and the explication of the value-laden nature of interpretation, educators need to be more intimately involved in museum exhibitions. This session will examine the role of educators, curators and designers in the selection and planning of exhibitions. Write or call the American Association of Museums, PO Box 33399, Washington DC 20033 for further information.

English Journal, the official journal of the secondary section of the National Council of Teachers of English, is developing a special issue for November 1985 (deadline for articles, June 20, 1985) on

Humanities and the English Teacher. Possible topics: What are the humanities? Should they be taught in a special class or in the English class? Using art/film/music/philosophy to teach composition/literature/language. Preparations of the humanities teacher. Third world literature in a humanities class. New approaches for teaching humanities. Send articles or inquiries to: English Journal, Ken Donelson, Editor, College of Education, Arizona State University, Tempe, Arizona 85287. And don't forget that Humanities Education provides opportunities for you to get your ideas and experiences before other humanities educators. Elsewhere in this issue you will find calls for book reviewers and for newsletter editor, as well as editorial policies and guidelines for articles in our magazine.

The School of Music of the University of Michigan, Ann Arbor, will host a conference August 9-15, 1985, on **Black American Music**. A varied fare, from lectures to master classes to recitals and panel discussions, is planned for the six days, the purpose of which is to assess the impact of Black American music on world music and cultures. Scholars and composers such as Eileen Southern, Geneva Southall, Wendell Whalum, George Walker, Samuel Floyd, and Josephine Wright are scheduled to participate.

The **Association for Integrative Studies** announces a change in venue, to wit, the Fall 1985 conference will move from Stockton State College to *Eastern Kentucky University*. The conference will be held on October 17 to 19, 1985. The theme will be "Higher Education at the Crossroads: Critical Choices and the Role of Interdisciplinary Studies." Dr. Joseph Kockelmans of Pennsylvania State University will be the keynote speaker. Dr. Kockelmans is the editor of *Interdisciplinarity and Higher Education* and one of the nation's most prominent philosophers. The newly combined Pedagogy and Politics Network will be conducting a workshop on the problems of teaching interdisciplinary courses on traditional campuses (as opposed to interdisciplinary or problem-oriented institutions). The workshop will emphasize sharing of ideas and defining solutions to problems, not the formal presentation of papers. Anyone wishing to take part in the planning process can contact Michael Field in the Honors Program of Bemidji State University at Bemidji, MN 56601. He'd be delighted to hear from you. For general information, write to Professor Ann Brooks, Humanities, Eastern Kentucky University, Richmond KY 40475.

The Twenty-Fifth Annual Conference of the **Association for General and Liberal Studies** October 31 - November 2, 1985 at the Westin Peachtree Plaza Hotel, Atlanta, Georgia. The conference theme is "Liberal Education: Expanding Horizons in a Shrinking World." The conference will provide a forum to explore innovative ways of addressing issues such as: The need for general education reform to bring coherence to an everexpanding knowledge base; the challenge of developing students' ability to understand and contribute to the world community; the responsibility of enabling students to live productively in a technologically advanced society; and the importance of preparing students to make responsible value judgements in a rapidly changing environment. The registration fee for the conference will be $75 prior to September

30, 1985, $85 thereafter. Membership in AGLS is $20 per year. For conference information; call or write to: Dr. Elliott W. McElroy, Division of Humanities, Clayton Junior College, Morrow, GA 30260, (404) 961-3420.

The annual meeting of the **National Council for the Social Studies** will be held in Chicago this fall. The theme is "Successful Social Studies: Classroom Excellence." Meetings will be November 22-26, 1985. Contact Peter Stavros, Director of Meetings, NCSS, 3501 Newark Street, Washington DC 20016. 202-966-7840.

The **American Culture Association** will hold its 1986 convention at the Atlanta Hilton Hotel April 2-6, meeting jointly as always with the Popular Culture Association. One of the sectional areas of ACA is on "Academics, Curricula and Teaching." The scope of this area is very broad, including not only historical papers on American education, but presentations on teaching and learning in contemporary American culture. The emphasis is on interdisciplinary approaches to humanities, American studies, history, women's and minority studies, gifted education, writing, etc. These conventions are lively and boundlessly varied with over one thousand participants giving research reports on folklore, popular television, material culture, science fiction, literature of the sea, sports, local history, medieval literature, cultural geography, regional writers and more.

Proposal for panels and discussion groups are welcome as are individual papers on educational topics. You may procure general announcements by writing to "1986 PCA/ACA Convention," Popular Culture Building, Bowling Green State University, Bowling Green, OH 43403.

One-hundred word abstracts of proposals for panels or papers on education-related topics should be sent before October 1, 1985 to: Dr. Marie Campbell, ACA Academics Area Chair, Mt. St. Mary's College, Emmitsburg, MD 21727.

Having problems with your copies of HUMANITIES EDUCATION?

We now have attractive press-on labels that can be fixed to the spine or the cover of the looseleaf binder in which you are keeping your copies. These labels are available postpaid @ 3 for $2.00. Make your check payable to NAHE and mail to HUMANITIES EDUCATION, Philosophy & Humanities, UMD, 10 University Drive, Duluth MN 55812. Please enclose the order slip.

HUMANITIES EDUCATION MAGAZINE LABEL ORDER SLIP 3 for $2.00

Please mail my press-on binder labels to:

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Senior Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to redraw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one or two pages (300-700 words) for practical tips, sample assignments, commentaries, etc.; and articles of four to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

*THEORY "Piaget and Theories of Integrated Study"

*ADMINISTRATION "Crediting Departments for Team Teaching"

*HISTORY "Nineteenth-Century Multi-Media at Chautauqua"

*RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

*"What you should know about teaching novels in a philosophy course"

*"Pre-teaching history students for an art museum field trip"

*"How to help non-musicians to follow a score"

*"A designer speaks of humanities bulletin boards"

*"Getting adults to role-play in public humanities programs"

*"Understanding Oedipus: An Actor's View"

What we don't want:

*Creative writing by teachers or students (it doesn't relate to our purpose)

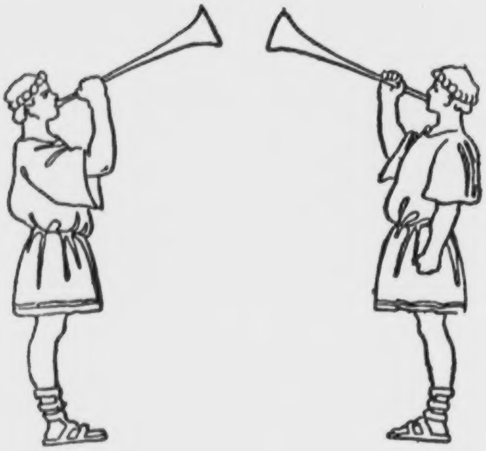
*Syllabus outlines (curricula should be explained, not listed)

*"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

*"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

*"Humanistic counseling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

BOOK-REVIEWERS



A CALL FOR BOOK REVIEWS AND BOOK REVIEWERS

Anyone interested in being a Humanities Education book reviewer should fill out the form below, clip, and send to the Book Review Editor. Reviews and books appropriate for review should follow the same editorial guidelines as for articles. We are interested in positive reviews of good books which will be useful to our readers. Book reviews should be typed double-spaced and normally be no more than three pages in length. Unsolicited reviews will be accepted for consideration, although the Book Review Editor should usually be consulted before reviews are submitted. Complimentary copies of books to review may be requested through the Book Review Editor. All correspondence concerning Book Reviews should be sent to James Mehl, Book Review Editor, Department of Humanities, Missouri Western State College, St. Joseph, MO 64507.

HUMANITIES EDUCATION

is planning a thematic issue on

RITES & RITUALS

HUMANITIES EDUCATION is planning the first of a series of thematic issues on RITES, RITUALS AND HUMANITIES TEACHING. If you teach a course or have prepared other educational programs exploring aspects of rites and rituals, we will welcome proposals for articles of eight to ten pages length and shorter descriptions of techniques, favorite resources, or learning activities. Theoretical, historical and critical topics are welcome, but only if they relate explicitly to classroom or educational practice. Some topics that might be of interest to readers are: rites of passage in the arts and life; pagan ritual as an approach to classical drama, music appreciation by way of ritual music, cross-cultural comparisons as a means to understanding American secular rituals, etc. The ritual deadline for proposals or completed articles is Halloween, of course. Published three times annually by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Assistance for the production of HUMANITIES EDUCATION has been provided by the College of Liberal Arts, UMD, Robert Franz, Acting Dean. Subscriptions are $12 per year. Checks should be made out to NAHE and sent to HUMANITIES EDUCATION, Department of Philosophy and Humanities, UMD, Duluth MN 55812.

CONTRIBUTOR INFORMATION

Contributors should consult the Editorial Policies sheet carefully. As will be seen, HE is wide-ranging, quite permissive and has no "party line" in respect to definitions of **humanities**, **interdisciplinary** and **education**, but the wide boundaries are nonetheless firm. Please do not submit articles over ten pages long unless you are planning to revise. We particularly seek brief (1-4 page) items of a "how-to" nature for CONNECTIONS. Deadline for Spring is Washington's Birthday; deadline for Fall, the Fourth of July; deadline for Winter, Columbus Day.

THOMAS R. McDANIEL

THE EXCELLENCE MOVEMENT & HUMANITIES EDUCATION: QUESTIONS & CRITIQUES

Those of us who work in colleges--teaching teachers, consulting in school districts, writing and thinking about educational issues and ideas--have not had much "input" (as we have learned to say) into this phenomenon we call the "excellence movement." For most of us, I venture to say, this movement--like Hurricane Elena--gathered its strength on the periphery of our territory and then swept across our field of vision with surprising force and velocity. This is not to suggest that the legacy of the movement will be marked by a path of destruction. But what _will_ the legacy be and, more especially for us, what implications does this contemporary gale-force phenomenon have for humanities education?

The purpose of this article is to begin to answer the questions above by identifying some (by no means _all_) of the pertinent issues, ideas, and questions that humanities educators should, in my judgment, address. Here I would ask us to consider four special role-related questions that humanists could deal with for the benefit of prospective and experienced teachers, practicing administrators, the academic community, and the public. My own view will be primarily that of the educational philosopher interested in humanities education at both the school and college levels.

Question #1: What do humanists mean by the term "excellence?"

We might think that "excellence" in humanistic education is a call for a higher degree of mastery of the content of the western humanistic tradition. Such a definition of "excellence" suggests, as humanists often have, that the great truths have already been discovered, that humans are fundamentally the same from age to age, and that an education in the classical humanities exposes students to the best--that is, most excellent--that humanity has been able to produce in the realm of ideas and culture. It is in this respect that William Bennett, in the recently-released report _To Reclaim A Legacy_, laments:

> It is we educators--not scientists, business people, or the general public--who too often have given up the great task of transmitting a culture to its rightful heirs....We must blame ourselves for our failure to protect and transmit a legacy our students deserve to know.

To the extent that schools (and colleges) can expose students to more of the great truths in the historical humanities, to that extent they can move toward "excellence."

Other humanities educators may see in the term "excellence" a call for greater efforts to provide an education that will help students to see the inter-relatedness of disciplines, ideas, or main themes in the humanities. For the student, educational excellence is measured against the holistic understandings that the student is able to synthesize from humanistic studies so that a coherent pattern of truth and meaning begins to characterize the student's vision of the "good life." Such a student sees life in its breadth and depth, enriched by a connectedness to the context of human achievement itself. To the extent that schools (and colleges) can nurture interdisciplinary studies, to that extent they can move toward "excellence."

Still other proponents of humanistic education would define "excellence" in terms of a development in the student of creative problem-solving abilities that allow the student to analyze contemporary and future issues with a keen sense of intellectual insight nourished by studies in the humanities. This view of "excellence" gives special attention to humanistic processes that promise to help society critique itself (an idea as ancient as Socrates) and to employ human reason in the quest for new solutions to perennial problems, new values in a world of change, new interpretations of human dignity in a dimly perceived future. To the extent that schools (and colleges) can sharpen the intellect of every student who will live in a world tomorrow that will be unlike the world today, to that extent they can move toward "excellence."

Which of these definitions of "excellence"--or even others I have not suggested--shall we adopt for a platform of reform? Most current reformers in the excellence movement favor the mastery of content concept in my first definition above. This certainly seems to be the perception of former N.E.H. director William Bennett and his Study Group on the State of Learning in the Humanities in Higher Education. I will have more to say about this content mastery idea in response to the second question I would like to raise.

Question #2: What assumptions underlie the excellence movement and what implications do such assumptions have for humanities education?

The excellence movement tends to assume that business leaders and politicians in state houses are the source of power and authority for educational policy. Some power is also claimed by liberal arts proponents in colleges and universities who have been criticizing schools for some time now for their perceived emphasis on the "frills," on socialization, on athletics, and on vocational studies.

A second assumption that seems to undergird the position advocated by proponents of the excellence movement is that test scores are the best indications of excellence. The commission reports tend to focus on academic deficiencies at the secondary school level--declining SAT scores, for example--but in most of the literature on excellence there seems to be an assumption that once tests of academic skills and subject matter knowledge improve, then we can claim to have produced "excellence."

A third assumption is that American education will become "excellent" only if we adopt a common core of academic subjects that all students would be required to complete (and presumably master, as judged by a standardized test). Some proposals--such as Mortimer Adler's The Paideia Proposal--would return schooling to a classical essentialist curriculum with very few electives; others propose a list of common subjects. For example, the National Commission on Excellence in Education calls for the "New Basics": English, mathematics, science, social studies, computer science. The Carnegie Foundation report of Ernest Boyer, High School, recommends that required courses be increased from one-third to two-thirds of the total units necessary for graduation. Bennett's To Reclaim A Legacy asks colleges to concentrate on a core of humanistic studies that should include the origin and development of Western civilization; masterworks of English, American, and European literature; history of philosophy; and foreign language.

There are many other assumptions that we can identify and analyze. These assumptions in toto give expression to the implicit (as well as explicit) purposes of education that characterize the proponents of educational "excellence."

Question #3: How do excellence proponents deal with the question of values?

The humanities have always had a special interest in values, and humanistic studies never pretend to be value-free. Philosophers see the human being as a "valuing" organism as well as a "knowing" organism, and consequently, axiology is a major area of study for philosophers of education. In Philosophy and the American School, Van Cleve Morris and Young Pai go so far as to claim:

> . . . [P]hilosophy and education are really two versions of the same activity. They both ask 'What can we make of man?' Philosophy asks it in a macrocosm - - 'Man.' Education asks it in microcosm - - 'men.' So philosophy is indeed [as Dewey says] 'the generalized theory of education.'
> . . . For if some value, some program, some life choice is seen to be good for Man it must be good for individual men and women. Philosophy, most especially the study of axiology,

> examines, analyzes, and suggests values; education 'tries them out' on individuals (pp. 208-209).

What values would excellence proponents try out on American students?

One value that this movement stresses is discipline, both intellectual and personal. On the intellectual side, excellence proponents stress mastery of basic skills and traditional content. It is "good" to know the three R's, to develop "thinking skills" and problem solving ability, and to master a common core of traditional content in history and language. As *A Nation at Risk* declares, "our concern . . . includes the intellectual, moral, and spiritual strengths of our people which knit together the very fabric of society. The people of the United States need to know that individuals in our society who do not possess the levels of skill, literacy and training essential to this new era will be effectively disenfranchised . . . ." On the personal side, this movement stresses rather traditional discipline practices to ensure good order and peaceful classroom climate. Wayson and Lasley conclude in their recent article on "Climates for Excellence" (*Phi Delta Kappan*, February 1984, pp. 419-420) that "the emphasis is on getting students to conform by increasing their school involvement and commitment." They also contend that schools with effective discipline have behavioral codes for students where behavioral expectations are clearly delineated: "Students know what is expected of them, and they need not spend time trying to figure out what constitutes appropriate conduct."

A second value that the excellence movement embraces is competition. Much of this movement must be viewed as a reaction to the values espoused in the neo-progressive reforms of the 1960's. Then stress was placed on cooperation, sharing, consensus, and community--especially for the poor and the black. To provide "choice," "access," and "belongingness" schools were expected to de-emphasize homogeneous grouping, academic honors and recognitions, and even grades. These were the practices that John Holt told us explained "How Children Fail." But the excellence movement stresses the necessity for our country, schools, teachers, and students to be "the best."

It is in this respect that we are now seeing many proposals for merit pay and career ladders--both attempts to provide ways for the best teachers to be rewarded for their demonstrated superiority over less effective teachers. For students we are seeing more program emphasis and funds for the gifted. If one examines such reports as *Action for Excellence*, it becomes clear that many reformers see the absolute primacy of a more competitive economic system. That report says: "And surely education for economic growth is a worthwhile goal around which to organize our efforts to rally the American people in the cause of improving the nation's schools." Higher standards, tougher courses, more work, the weeding out of weak students and teachers--such recommendations permeate the excellence literature and the legislative reforms in several states, and these recommendations directly or indirectly support the value of competition.

Question #4: How valid and enduring a philosophy guides the reformers--legislators, academics, business leaders, and others--who now espouse education for "excellence"?

The Chinese say, with characteristically wise understatement, that it is difficult to prophesy, especially in regard to the future. Will this movement produce "better" schools, curricula, students, and teachers? Or will it founder on the educational shoals, as have so many bandwagon fads in American educational history? Educational reforms often succeed when there is a clearly defined and agreed upon agenda with a broad basis of support in the public and in the education profession. Do we have in this case such a definition and such a consensus?

I am not sure that we do. It is not enough to know what one is against; there must also be a reasonably clear vision of the kind of educational product and process one is for. What may pass for apparent consensus in a relatively peaceful era, a reasonably conservative era, an era in American life that tends to focus on traditional values and ideologies, may disappear during a period of turmoil, social ferment, and change. Consider the protest and reform of the turbulent 1960's that followed the tranquil "happy days" of the 1950's. What will happen to the "excellence agenda" should we--God forbid--enter another period of social unrest, political activism, and student dissent? Actually, we can be assured of only one thing: that which was considered essential in this, our present period of reform, will seem inadequate for the new era.

Finally, I wonder whether we can indeed mandate excellence--or somehow will it--from the outside. From all that I can tell from the current research on school effectiveness and school reform, what is absolutely crucial to change is the involvement and commitment of excellent teachers who are no mere puppets to be manipulated. Of course we have some outstanding teachers in humanities in both schools and colleges, but much credible research indicates that our best teachers are leaving the profession, and the new generation is less well qualified intellectually than previous generations. Why this is so is the subject of another discussion; that it is so is well documented. Can we somehow require, from increasingly less capable teachers, new and higher levels of teaching excellence? I am doubtful.

I do not like to close on a negative note. I could be (and hope I am) entirely wrong in this less than sanguine conclusion. It has been said that in education we plant a tree and then, every three months, pull it up to look at the roots so we can see how well the tree is doing. I am waiting to see just when the "excellence" tree will be pulled from its foundation for inspection.

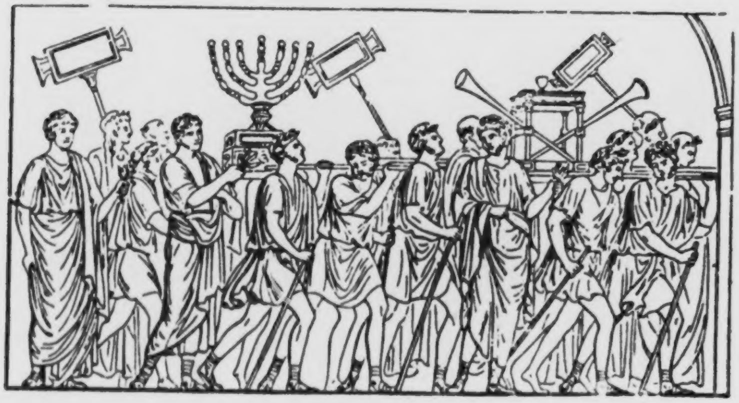
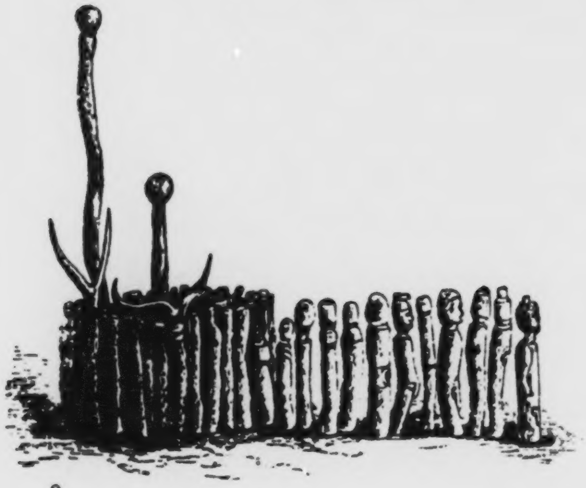
HUMANITIES EDUCATION

is planning a thematic issue on

RITES & RITUALS



HUMANITIES EDUCATION is planning the first of a series of thematic issues on RITES, RITUALS AND HUMANITIES TEACHING. If you teach a course or have prepared other educational programs exploring aspects of rites and rituals, we will welcome proposals for articles of eight to ten pages length and shorter descriptions of techniques, favorite resources, or learning activities. Theoretical, historical and critical topics are welcome, but only if they relate explicitly to classroom or educational practice. Some topics that might be of interest to readers are: rites of passage in the arts and life; pagan ritual as an approach to classical drama, music appreciation by way of ritual music, cross-cultural comparisons as a means to understanding American secular rituals, etc. The ritual deadline for proposals or completed articles is Halloween, of course. Write to Fred Schroeder, Editor, HUMANITIES EDUCATION % Philosophy & Humanities, UMD, Duluth, MN 55812.



SHARON SCHOLL

HUMANITIES IN BUSINESS & PROFESSIONAL INSTITUTES

One of the most useful and seemingly successful roles the Humanities play is in the continuing education of people in business and the professions. Dozens of major corporations, including IBM, Texaco, General Electric, and many banking, investment and insurance companies send executives to Humanities institutes. The Dartmouth Institute, the Wabash Institute, the Aspen Institute, the Stanford Institute, and the Washington and Lee Institute are the most widely known. How do companies benefit from such instruction, and why teach the Humanities rather than advanced technical subjects?

Companies typically send middle management executives in their thirties and forties, people who have been narrowly and technically trained in their collegiate years, and who will soon be called upon to make decisions of large consequences and uncertain outcome. According to Fred Greene, director of the Williams College Program: "This is an intense course intended for managers who are making the move from specific areas of technical or business expertise into the top executive level, from specific problem-solving responsibilities into broader areas where judgmental decisions will be required. The purpose is to stretch their thinking and their frame of reference, to challenge them intellectually, and provide a cultural and historical framework in which they can operate and make more informed decisions. It's the enhanced decision-making capacity that is the payoff for the sponsors."

Washington and Lee's published descriptions stress the difference between their institute and a management development workshop or one in decision making analysis. The Humanities-based program is created to enable participants to understand the whole cultural load of ideas, values, emotions, ethical principles behind all decisions, to identify these varied elements, and to respond to them creatively. A related goal is to increase their ability to think and communicate analytically and precisely. The Dartmouth message is that "Many who come to (the institute) tell us afterwards it was one of the most profoundly moving experiences of their lives. They no longer take viewpoints for granted, (they) examine issues more carefully, (and they) read more broadly as a result." Bill Ketchum, personnel director for AT&T

responds, "Key personnel tend to be working hard and spread thin. One motive in sending them to a program that is a complete change of pace is to make sure personnel we regard highly in performance and potential get a chance to step back from the nitty-gritty, to think about world issues for a change. The company sees value in this."

The Wabash Institute spokesman summarizes the rationale for the choice of the Humanities as the major educational fare for these institutes: "the persistence of the liberal arts in western culture seems to justify the notion that they are important in the lives of men and women; the success of liberal art graduates in general management as distinguished from the management of technical and specialized aspects of corporations seems to justify the confidence we have that such a program as ours should be considered by corporations wishing to develop excellent people within their own ranks." The Washington and Lee published material is more direct: "The literary and philosophical texts depict man and his decisions at some distance, both in time and space, from the modern world. Thus they allow a sufficient detachment necessary to the cultivation of analytical skills that can be employed in examining contemporary issues in business. Second, because literature and philosophy reflect the timeless essence of humanity, they can sharpen our perceptions of enduring values and allow us more complete and more intense visions of the human condition." The many letters from ex-students liberally quoted in the literature of these institutes stress the sense of increased personal resourcefulness and respect for the intangibles of human life. However, institutes are not entirely bookish affairs where people go about for days on end buried in verbiage; most feature concerts, excursions to art collections, theater evenings, films and discussions - in short, involvement in the whole range of contemporary cultural resources.

Institutes for business and professional persons are more alike than not; yet each has its own background and personality. A sampling of four such programs can suffice for this brief overview. One thing they have in common is a limitation on the number of participants - from fifteen to twenty-five, depending upon staff and resources available. Another is the condensation of time, from two to five weeks over one or more summers. Costs run accordingly from five to seven thousand dollars. This fee does not turn a profit, according to most institute directors, but it pays the bills, generates much goodwill, and keeps campus facilities occupied during a slack season. Judging by their publicity, they are oppressively masculine, though mention is occasionally made of the attendance of wives.

Wabash Executive Program
Dr. Eric Dean, Director
Wabash College
Crawfordsville, IN 47933

The Wabash Executive Program claims to be among the first such designs. Founded nearly thirty years ago as the Personnel Development Program, it has shifted gradually toward an academic base, omitting the psychological counseling aspect. Eric Dean, the Director, describes the participants: "Businessmen and women, especially those about to take the step from technical managing to a broader ranging management position, come to campus for a program to expand not their specific job skills but their entire world view.

"While studying everything from international politics to the origins of the universe, from the Declaration of Independence to The Death of a Salesman, they build the wide-ranging intellect and ability to cope with ambiguity which have typically been of consequences of liberal study."

Wabash hosts a seven week program, split into an initial three week period and two week periods over the next two summers. The plan is roughly historical, starting with the ancient Greeks and Hebrews and ending with the rise of science in the nineteenth century. The second summer focuses upon American life and our historical, literary, religious, and institutional traditions. The final year concentrates upon such major collision points as urban life, genetic engineering, worker alienation.

The contents of the curriculum are largely of the "great books" variety, though not confined specifically to the philosophical realm. The first year of a recent institute included such works as Plato's Apology and Crito, Voltaire's Candide, Marx's Communist Manifesto, Russell's Authority and the Individual. The second year, with its American focus, includes Twain's Huckleberry Fin, Tocqueville's Democracy in America, and Miller's The Crucible. The third season centers on modern issues with the objective of demonstrating that they are not unprecedented in human experience. To that end, such works used are Plato's Meno, Machiavelli's The Prince, and Baldwin's Fire Next Time.

Activities are reading, discussion, writing and speaking, along with a physical conditioning program. The reading material, which forms the continuum of each course, is sent out to be read ahead of time because reviews and speeches based upon them form daily assignments. The burden of discussion falls to the group; faculty see that it is productive. Tutorial sessions are offered in addition to the group work; these typically center on honing speaking and writing style. The personal element carries on from year to year in the form of renewed acquaintences. The faculty, which includes a core of Humanities instructors, is also stable from year to year.

Williams College Executive Program
P.O. Box 116
Williamstown, MA 01267

The Williams College Executive Program has also been in place for nearly thirty years and aims to place its participants in contact with the major currents of American thinking on the pressing issues of contemporary life. The leadership believes that certain groups or types of people will derive most benefit from such a program: highly trained technicians, those persons previously limited to business administration or finance; persons who lack a college degree; and foreign nationals who need greater understanding of the roots of American culture.

The Williams College program is single five week session combining lectures, discussions, and field trips. It is structured around well defined disciplinary units which run in hour long segments of varied arrangement from day to day. Some courses are clearly business related; others are not. Economic Issues deals with the problems of expansion and stability, the role of government, international money policies, the use of economic growth, and other such inclusive matters. The political science offering tackles the relationship between constitutional principles, actual government machinery, and changing national needs. Foreign Policy surveys dominant policy choices in relation to the communist block, the Third World, and national defense. Professional Ethics provides a survey of Western ethical thinking from Plato to Sartre and applies philosophical theory to personal choices on abortion, euthanasia, etc., and professional theory to choices in hiring and firing, computer information privacy, environmental health, etc. Determinants of Behavior condenses the most recent issues in heredity and environment and such approaches as behavior modification.

The purely Humanities elements are a literature course surveying works by such American writers as Hemingway, Frost, Lowell, Updike, and Bellow. A music course introduces the major designs of music, its social and economic implications, and features live performances of the Boston Symphony at Tanglewood. An art course surveys the main trends in American architecture, furniture, and painting from Colonial times to World War II. Field trips to Hancock Shaker Village and Francine Clark Art Institute highlight this segment of the program. Drama introduces participants to stage production, collaboration patterns, and texts, using the Williamstown Theater Festival as a model for discussion. Film is examined as a device for narration and features two classic films with analysis and discussion.

Striving to accommodate hectic work schedules, this program will allow a split schedule of half one summer and the other half the following summer. It also stresses physical exercise, though no special program is established to diagnose and prescribe an exercise regimen. Freedom to explore some of the cultural riches of the surrounding area is an important consideration in weekly scheduling.

Institute for Executives
Washington and Lee University
Attn: Robert Fure
Lexington, VA 24450

The Washington and Lee Institute for Executives is a two week program with the subtitle "The Human Factor in Management Decision: A Seminar in Business Ethics." The ability to sort out competing values and conflicting ethical principles, and make justifiable decisions is the main focus of instruction. The curriculum balances two seemingly incongruent elements, specific business issues of pressing immediacy and historic literature and philosophy found in classic works. The purpose is to understand that values which appear in business also operate in other contexts. The underlying faith is that there are approaches which will help resolve competing values.

The Washington and Lee program was begun with a substantial grant from the National Endowment for the Humanities, which enabled the planners to draw on the experience of older programs via paid consultants. The grant source probably had much to do with the decidedly Humanities base of the institute. Though the list varies from year to year, the reading assignments run the gamut from Cardozo's _The Nature of the Judicial Process_ to Faulkner's _The Bear_. Other genres that are well represented include plays such as Shakespeare's _Richard II_, _Measure for Measure_, and _Anthony and Cleopatra_. There are religious works such as Tillich's _Dynamics of Faith_, Kierkegaard's _Fear and Trembling_, and Niebuhr's _The Responsible Self_. Thoreau on _Civil Disobedience_, Emerson's _Essays_, Borges' _Labyrinths_, and Emily Dickinson's poems are also part of the mixture.

Each day begins with lecture and discussion based on one such work and moves in the afternoon to analysis of a specific business case which has connections with the morning text. Discussion is broadened to the many guises in which the underlying issue may present itself. In comparison with other institutes, this one seems to have a sharper focus and more completely literary base. Its brevity may account for a less expensive design which would otherwise include the arts, cultural activities, and field trips. It aims at analytical skills in a daring fashion and obvious intensity.

Humanities and the Professions
Brandeis University
Sydeman 108
Waltham, MA 02254

Business executives are only one segment of the adult working community which has benefited from these Humanities-based programs. The Brandeis University Humanities and the Professions offering has encompassed health professions, the judiciary, and educational administration. It was created in 1980 to respond to the conditions described by a variety of professional people - gruelling work loads, oppressive bureaucracy, socially critical labor without commensurate recognition. The plan is to use literary classics to help participants gain a better perspective on themselves and their social roles, and to explore their relationship to their professional work.

Unlike the multi-week institutes, the Brandeis seminar is a one day effort supported in part by the Massachusetts Foundation for Humanities and Public Policy and the Exxon Education Foundation. It has received an exemplary award from the NEH for the program for district court judges, a description of which may serve as an example of the type of construction used.

About 150 judges had participated by June of 1984 when the National Law Journal did a feature story on the seminar. They meet in groups of eighteen to discuss puzzling questions about human choice that appear both in literature and courts of law. Assigned texts are sent to participants six weeks in advance; they generally consist of short novellas and plays. Such works as Balzac's Colonel Chabert, Conrad's Heart of Darkness, Camus' The Stranger, Porter's Noon Wine, and Baldwin's Sonny's Blues are used to spark discussions of law and morality, legal inequalities, judicial bias, and many other topics.

Judges cite the advantages of being able to reflect, of having contact with other judges in sympathetic surroundings, and renewing their moral courage in the face of overwhelming social grief as special rewards of the day. The effort is being expanded to include prosecutors, public defenders, probation officers, and a host of other law-related work roles. In recommending the program to colleagues in other states, Massachusetts Chief Justice Edward F. Hennessey stated, "It represents a rare and imaginative approach in addressing problems of the judiciary which go by the name of 'burnout'."

The whole area of what is sometimes termed "applied Humanities" is growing more complex and interesting all the time. As these programs attest, such efforts have long ancestry and quite laudable results. Some originated with scholars in the Humanities, but many came about because someone outside academia realized the applicability of literary, philosophical, and artistic matters to their own work. In a few cases one small group asked for a brief seminar which grew into a sustained and sometimes lengthier program. From all indications, some exciting teaching situations are available in these institutes and seminars, and the Humanities components appear to be well received.

HUMANITIES EDUCATION ABSTRACTS & REVIEWS

Summaries of significant reports about interdisciplinary humanities education.

(Editor's note: Contributors who would like to submit abstracts of magazine articles should send them directly to the editor, using the style and format that follow. Reviews of books and educational materials should be sent to the Book Review Editor, Dr. James Mehl, Missouri Western State College, St. Joseph, MO 64507)

QUESTION & CONNECT

"The College Course: Civilization in Question" by Peter G. Stillman in The Journal of General Education 36:1 (1984). Pennsylvania State University Press; University Park, PA 16802. $16.50/yr, $7.50/copy.

College courses are not the topic of this article, "The College Course" is the name of a course that political scientist Stillman and five other professors have taught at Vassar College since 1981. Like most interdisciplinary courses it was designed ad hoc, and Stillman is uncertain about its transference to other schools.

It is a unique course because of using the ubiquitous lecture-discussion format, but that format is rare at Vassar. Furthermore, Vassar is an exclusively liberal arts co-ed college, with no vocational or pre-professional majors. Finally, Vassar has a curriculum with no course requirements, with only a few distribution restrictions and with a strong trust in the students' ability to choose courses wisely. To outsiders, Vassar is a humanities paradise.

Yet, two faculty committees found a worm in the Garden: "students lacked courses that would integrate and unify their knowledge, that would approach the same problem, topic or text from different points of view, and that would give them a fund of liberal knowledge and a framework for asking fertile questions and making extensive connections among the courses."

The College Course was founded upon a number of negatives. It was not to be "core curriculum," it was not to be based on Books of Greatness, it was not to be structured around a closed theme. The course theme was "open" in its title: Civilization in Question.

Beginning with an examination of classical Athens as "one culture central to western civilization" it thereupon presented later attempts to "revitalize, re-shape or criticize" various aspects of the classical tradition. Thus, although the course does not trace the history of a pre-selected idea, it is alert for ideas and topics that may arise from careful reading and help to link one document to others.

Interdisciplinarity is partly inherent in the readings: Homer, St. Augustine, Machiavelli, Marx, Freud, Ghandi, Fanon and others, but primarily the integration results from Stillman's favorite part of the project, the faculty team seminar. The importance of the faculty seminar is pointed up by Stillman's startled self-discovery that of the twenty text that were selected for the College Course, he had actually read only seven before teaching (and taking) the course. That experience would surely be common for most humanities teachers, who also might find, as Stillman did, increased understanding of the insights of other disciplines "and at the same time a re-cognition of the reasons that I prefer to study political theory rather than philosophy or history."

HA! HA!

"On 'looking over a ha-ha'" by Tilden A. Russell in The Musical Quarterly 1985 No. 1. G. Schirmer Inc., 866 Third Avenue, New York 10022. $28/yr, $8/single issue.

For teachers of interdisciplinary humanities, music is often the most difficult to interrelate with the verbal and visual disciplines. Turning from content to form, however, will sometimes yield illuminating connections.

Consider the ha-ha. Ha-ha's were a technological innovation in eighteenth-century English landscape architecture, being especially associated with the great William Kent. Fences and Walls were eliminated by ha-ha's, which are sharp slopes or little "cliffs" that divide the inner residential grounds from the wider landscape beyond, with its cattle, sheep, deer and dung. The illusion is that of unrestricted space and of being at one with nature -- that is, until you stroll to the edge of the precipice, at which time, startled by the trick played upon you and by the recognition that your natural freedom is bounded by artificial limits -- you cry out: Ha-ha!

And there are variations on the uninterrupted ha-ha. Some will have a path leading to an apparent portal on the edge of the ha-ha, thus intensifying the discovery of limitations. Others will have an actual breach in the ha-ha -- a continuing pathway, but enclosed by a formidable iron wall and locked gate. This is the type that is in Jane Austen's *Mansfield Park*, and Russell, an assistant editor of *Imago Musicae*, says that it serves to represent Fanny's moral goodness by her unwillingness to violate boundaries as opposed to Henry's and Maria's "impetuous lack of restraint," for they not only violate the gate, but the bounds of morality as they later commit adultery.

But what has this to do with music? Two prerequisites are needed. First is to understand that gardens are comparable to music in that "form is apprehended only gradually and... after the fact." The English "landscape garden" anticipates all other arts in the emergence of Romanticism. Second, we should ignore one-for-one comparisons, such as looking for a "sonata-form" in a garden. "The only parallelism is... aesthetic, involving the experience of restraint versus freedom in musical form."

Allowing this, Russell analyzes a number of Beethoven works for their uses of da capos (repeats) and codas (tail-ends) for deception and discovery: "The ha-ha like the coda performs two contradictory functions" having "an illusory *thematic* function of openness and continuity, ...subordinated to its true *formal* function of closure and completion." The Presto movement of symphony #7 has several da capos that are used for surprise, repeating where repetition is not expected, not repeating where it is expected.

MEET THE ELITE

"Art Museum Educators: Who Are They? by Terry Zeller in *Museum News*, June 1985. American Association of Museums, 1055 Thomas Jefferson St. N.W., Washington D.C. 20007. Single copy $4.

The backgrounds and training of college professors and school teachers may be somewhat different, but they are fairly predictable: the former learn subject matter in three increasingly specialized degrees, the latter learn one or two degrees of subject matter augmented by theories of learning and practical training in teaching.

How about art museum educators? Unlike professors, they have no extensive tradition, museum educational programs reaching back only to the first decade of this century. Nor do they resemble public school teachers, for there are no licensing regulations or standard training programs. To answer the question, Zeller, who chairs the Department of Education at the Rochester (N.Y.) Museum and Science Center contacted 127 art museums using questionnaires about individual art museum educators. Some results: ninety-nine percent possess college degrees, 64% holding master's, 9% doctorates. At both undergraduate and graduate levels, just over one-third majored in art history. Adding fine arts (studio) and art education to these gives about two-thirds art-trainees at both levels. (Around 10% majored in History/Humanities).

Sixty-one percent of the respondents had no experience teaching at either elementary or secondary level. Almost half visit schools in their areas fewer than three times a year. Three-fifths received their education at private colleges and universities; thus "Many art museum educators come out of well-recognized programs possessing the ...educational outlook and attitudes valued by art historians: expertise in attribution and connoisseurship, research skills and a solid grounding in the factual content and scholarly literature of art history."

Zeller's conclusions from these and other data are judiciously balanced but it does appear that many art museum educators do not regard themselves as part of the educational community, but rather as mini-curators. Although they work directly with public school children from all social backgrounds, there is an aura of elitism to art museums, and this certainly spills over into the education departments. On the other hand, very few collegiate teacher training programs are equipped even to approximate the level of art history/appreciation expertise that museums demand in their job descriptions.

The recent report of the Commission on Museums for a New Century suggests "rethinking" of museum education. Zeller's report underscores the need.

PLAYING FOR KEEPS

"Learning to Look: The Relationship Between Art and Popular Culture Images"
by Suzanne Lacy in Exposure 19:3
Society for Photographic Education,
P.O. Box 1651, FDR Post Office,
New York 10150.

Commercial photographers can provide an enviable model for art photographers. Even putting money aside, the immense impact commercial photographers have upon a vast audience surpasses "The wildest dreams of 'high' and 'fine' artists." So, at an accelerating rate over the past two decades photographers have been drawing upon and emulating the styles, formats and genres of television, billboard advertising and journalistic artists.

But in doing so, says Lacy, a Los Angeles performing artist, they have shown remarkable naivete regarding communications theory and the "educative function of images." Because they do not see their own work as part of the whole visual environment, they can become dupes of commercialism, unwittingly acting in collusion with political and ethical viewpoints that may not be their own. They may even work against their own values.

Images of violence against women represent Lacy's case in point. She presents popular record jackets, magazines news photographs and "serious" art photographs that depict women as victims of violence. The apparent intent of the art photography is variously abstract visual expressions using "pop" conventions or satirical commentary on these conventions. But if we look thoughtfully, each example is actually pornographic because, like almost all commercial photography, each is a narrative picture, implying events and situations both before and after. No reconstruction of the implied narratives in anyone's imagination can be construed as being innocent of sexist, immoral or even depraved exploitation of humans. Artists would only be deluding themselves by maintaining that their images are static, two dimensional, value-free aesthetic objects. The public may not be wiser than the artists, but they are well-trained in looking at pictures in commercial genres.

The educational implications relate to different levels -- "learning to look" should be part of any general arts or humanities study --, but Lacy believes that the practicing artists need more than technical and formal training. "To make new images is one challenge. To make them positive and forceful still another, and further, to introduce these into the culture in a non-manipulative manner is a task of major proportions." When artists choose to play the games of popular culture, they had better be aware that commerce "plays for keeps." On their playground, there is no art for art's sake. Therefore, Lacy states emphatically "both politics and social ethics [should] be a part of our aesthetic evaluation."

HISTORY BY STAGES

"The Reader's Knowledge as the Limits of History: Teaching the use of History" by Richard C. Turner in MMLA, The Journal of the Midwest Modern Language Association Spring 1984. 432 English/Philosophy Bldg, University of Iowa, Iowa City, IA 52242. Single issues $5.

How much history need one know to read literature? If the current level of historical knowledge possessed by average American students is all that is available, we can only hope that literature will be able to stand without a past. This is the dilemma that Turner, a professor at Indiana University-Purdue University, addresses, using a variety of critical ideas. New Criticism and the idea of "language as play" suggest that literature might be understood outside of historical contexts; but conversely, the modern ideas of the act of reading as an exchange between writer ad reader, and of the subjective participation in the text from the reader's experience, suggest that the literature cannot communicate with a tabula rasa.

Dismissing the view that students can comprehend literature in a historical void, Turner also dismisses the idea that we will ever restore the good old days when all students could be presumed to have a common foundation of historical knowledge that provided readers with both a social-temporal context for a work of western literature and a fund of cultural allusions. "It is not just that these students do not know as much as students used to know, but they fail to feel any sense of responsibility for knowing anything that has not been experienced directly by them."

The teacher's dilemma seems unresolvable, but there are half-measures that may fall short of requiring that readers "first master the landmarks of Western Civilization" before tackling a poem or narrative, but can yet alleviate the problem. One such half-measure is what Turner calls the "Nortonization" of literature, exemplified by the W.W. Norton "Critical Editions" series where an array of contextual materials are anthologized with the primary literary text. Rather ironically, these came into existence at the same time that New Critical approaches began to dominate literature teaching, i.e., the young readers' literary-historical foundations had so deteriorated that to approach a work supposedly with reference only to itself, it became necessary to supply foundations via footnotes.

Turner's approach resembles Nortonization in the ad hoc supplying of information, but it is an interpersonal exchange among text, teacher and student that presumes varying degrees of some relevant prior experience among students, and graduated levels of comprehension. This is illustrated by an explication of a short poem, Frances Cornford's "Parting in Wartime," which has only three historical-cultural references: Hector, Andromache and Euston Station; from these Turner extracts profound meanings, showing that "understanding occurs in discernible and, therefore, controllable stages and that readers can have access to any or all levels of meaning by pursuing levels of reference in an orderly fashion."

SURPRISES

"On Teaching Christianity: How to Make the Familiar Surprising" by Patrick Henry in The Council on the Study of Religion Bulletin, February 1985. Wilfred Laurier University, Waterloo, Ontario, Canada N2L3C5. $18/yr. Single copies available.

Students in courses on Christianity come up with some surprising misconceptions, for example that "Pelagius argued that it did not make sense that God should hold Adam and Eve's ancestors responsible for their sins." Unfortunately, most students find no real surprises in Christianity because they so casually and certainly identify Christianity with institutions, with dogma and with the West. And "since institutions are stifling, dogmas restricting and the West declining" Christianity holds nothing for young people who see 2001 right around the corner.

Far too many teachers of the history of Christianity abet the simplifications. Because of their emphasis on theology as the true essence of religion, the implication (often explicit) is that the actual practice of religion is at best irrelevant, at worst, corruption. But we might occasionally surprise students, writes Henry, who is with the Institute for Ecumenical and Cultural Research, by pointing out that when Jesus said "Where two or more are gathered in my name, there am I in the midst of them," he might also have added "and there also is an institution."

Historians of Christianity also abet the situation by their own western parochialism and their insistence on the categorical pastness of the past: "How tightly is our imagination bound by the view... that the last thing of any interest... in the Eastern Church was John of Damascus in the eighth century?" Yet the Eastern Orthodox tradition is alive, well and dynamic today. So is American black Christianity. And (suprise!) the U.S. Roman Catholic bishops' pastoral letter on "The Challenge of Peace" was not a "bolt out of the blue," but part of the self-critical considerations that are in the same traditions that produced the great heresies, the great councils, the great institutions, and the great dogmas of the past. "Dogmatic statements," Henry says, are not epitaphs, but "the harnessing of spiritual and intellectual energy."

IMMORAL TEACHERS

"The Complexities of Moral Education in a Liberal, Pluralistic Society: The Cases of Socrates, Mrs. Pettit and Adolf Eichmann" by Joseph Beatty in Soundings: An Interdisciplinary Journal, Winter 1984. P.O. Box 6309, Station B, Vanderbilt University, Nashville, TN 37235. $12/yr, $4/single issue.

Socrates we know. Adolf Eichmann we know. But who is Mrs. Pettit? Answer: She is a Los Angeles elementary school teacher of the mentally retarded who lost her license in 1973 because she and her husband were members of a "swingers club," and therefore adjudged to be morally unfit to teach. The relationship to the Socrates case is clear. For more than two thousand years societies have recognized that moral education is partly in the hands of those who act in loco parentis, and societies have also usually believed that moral education is partly a matter of personal example. In the cases of both

Socrates and Mrs. Pettit, local communities have taken summary action because the teacher was deemed to be undermining the community's moral values.

With Socrates, the teaching seemed directly to challenge local morals. In Mrs. Pettit's case, nothing in her classroom practice or relationships with her pupils was marked by advocacy or self-advertisement of swinging. The Eichmann case is the hypothetical invention of Beatty, who is a philosopher at Randolph-Macon College. Let us suppose, he says, that Eichmann was not executed, that "the statute of limitations on crimes against humanity has expired," and that Harvard's Political Science Department has chosen Eichmann as the best candidate for a specialist position in "bureaucracy or totalitarian tactics." Should he be excluded on the basis of his history of incontestable immorality?

It is not a simple question, for Beatty has developed careful, if complicated arguments to support both Socrates' and Mrs. Pettit's continuance as educators in a liberal pluralistic society. The operating principle for Socrates is that of inquiry. Inquiry that does not challege is not inquiry. The operating principle for Mrs. Pettit is privacy. Privately, she is swinger in a non-swinging local community. But suppose she were a bisexual in a homosexual community? Or a teetolater in a drinking community? Or a Muslim in Jewish-Christianity community? Almost any imposition of "forced orthodoxy" argued on the basis of "failure to live up to the moral requirements for teaching the young" becomes an invasion of privacy.

The principles of inquiry, privacy and freedom leads Beatty to conclude that even such a depraved man as Eichmann "should not be denied an appointment because his actions are absolutely wrong or his anti-Semitism is false opinion." With reference to a recent book by Derek Bok, Beatty says the implications for other educators (e.g., political scientists or engineers or physicians who have recommended nuclear attacks, or assisted in the development of mass weaponry, or developed advanced abortion techniques) are dangerous to freedom of inquiry and the right to private opinions in a free society.

The real test has to do with whether the person with unorthodox personal morals can fulfill teaching duties impartially. If, for example, personal anti-semitism turns into attacks on Jewish students in the class room, or private "swinging" descends to ridicule in the classroom of conventional families, the teacher might justifiably be dismissed. "Stronger," says Beatty, "such a person should be dismissed since he indicates that he lacks a commitment in his professional role to the necessary moral conditions of the search for truth." Thus, while Eichmann might be allowed to hold his views privately, his record indicates that he would be a very poor risk as a teacher. Harvard shouldn't hire him. And it didn't.

EARTHLY ROMANCE

"To Unearth and Reconnect: Classical Archaeology" by Katherine Abramovitz in Federation Review March/April 1985. National Federation of State Humanities Councils, 12 South 6th St. #527, Minneapolis, MN 55402. Limited number of copies free on request.

Among certified, anointed humanists, classical archaeologists have rarely been called upon to contribute to the public programs of state humanities councils. Yet archaeologists are among the most articulate and lively academic public speakers in the humanities, says Abromovitz, a program officer at NEH and an archaeologist in her own right. The reason, she says, is that archaeological research is expensive, and, unlike more bookish humanists, archaeologists habitually go to the public for financial support. They have to sell their discipline to stay in business.

In many ways, it's an easy sell. Adventure, romance and mystery are built in, and despite the rigorous realities and rare glamour of work in the field and in the laboratories, archaeologists themselves never seem to lose the excitement they share with the first modern excavators, aristocratic amateurs of the eighteenth-century. Possibly the exotic romance is the reason that humanists don't promote public programs. Anything that ancient can't be relevant.

Not so, says Abramovitz. From its very beginnings, archaeology has been in partnership with other disciplines. Starting as a means of validating classical literature and history (not to mention enriching art history by piracy), archaeologists now work hand in hand with anthropologists and natural scientists to explore some very much alive issues. Ecological issues, such as overgrazing, deforestation, salinization through excessive irrigation; economic issues such as control of raw materials and trade routes; social issues such as religious tolerance, urban crowding, equal access to justice. By itself, archaeology cannot do work of such broad cultural scope, but on the other hand, modern archaeology with its interest in everyday life acts as corrective (or corraborative) to the highly selected Great Things of history, literature, art and architecture -- "analogous to our time capsules buried for future generations... Archaeology provides objective, undigested reality, information preserved by fate rather than by design."

(Note: This issue of Federation Review contains more than a dozen brief articles on classical studies, such as the great upsurge of Latin in the secondary curriculum, the importance of the oral tradition in philosophy, and the classical epic hero.)

Sharon Scholl Reviews the Georgia Tech Program and a Statistical Study of Career Placement

HUMANITIES IN THE MARKET PLACE

The Literature and Science Program at Georgia Tech. Contact: Paul B. Armstrong, College of Sciences & Liberal Studies, Georgia Institute of Technology, Atlanta, GA 30332.

Georgia Tech would appear to offer an ideal situation for developing a range of Humanities programs. It boasts a student body of 8,500 very bright undergraduate students. It has an 118 hour (six course) Humanities requirement built into the general education curriculum. However, science and engineering students come with many misconceptions about Humanities and little initial enthusiasm for such studies. Before the program revision funded by the National Endowment for the Humanities was launched, existing courses represented a slow accretion of interesting but unrelated studies. Now, midway through the process, a new design is envisioned consisting of four programs, each with a cluster of five or six related courses. They are Literature and Science, American Literature, Drama and Film, and Humane Studies. Each program begins with a sophomore course that further develops skills of analysis, interpretation, and expression taught in freshman composition. Succeeding courses are related to one another but taught non-sequentially to accommodate scheduling.

The courses developed and envisioned in the Literature and Science program are interdisciplinary in the sense of combining scientific and literary perspectives, but not in the sense of including many Humanities disciplines. It is a program of experiences in imaginative and scientific literature taught by English faculty. Much of the sense of focus must be attributed to this limitation of materials from which selection is made.

Colleagues in science and engineering have been included in program planning. Several of the largest faculties are leaning toward requiring completion of a significant portion of one of the new programs. A certificate option will be offered, consisting of 21 hours with at least 15 hours in literature courses. The expectation is that students will progressively develop expertise and historic depth in one particular area of humanistic inquiry. Each program will consist of the introductory course, historically oriented courses based upon Western culture, and theoretical courses addressing concepts and processes common to scientific and humanistic thinking.

The Literature and Science program rests upon the belief that there are basic similarities between literary and scientific thought processes, recognition of which helps makes the Humanities accessible to scientists and engineers. One of the major issues considered is the relativism of objectivity. The role of assumptions and hypotheses, the elements of problem-solving behavior in both realms is used to break down ideological barriers between the supposed "two cultures."

The introductory course, often decisive in student choice to remain in a program, has been the object of special focus. The introductory Literature and Science course considers the role of hypotheses, assumptions, and conventions in the way both literature and science are understood and expressed. The function of assumptions as limitations on possibilities is explored to discover how presuppositions and conventions open up domains of knowledge at the cost of ignoring for the moment other areas in which different assumptions may operate. The literary example used is James Joyce's _A Portrait of the Artist as a Young Man_, tracing his dilemna of choice between belonging to communities with their inbuilt conventions and attaining complete individual creative freedom which may provide no context for writing. Group sanctioning of some arenas of research over others is one theme in James D. Watson's _The Double Helix_, in which the researchers are joint participants in an intellectual community. Thomas S. Kuhn's _The Structure of Scientific Revolutions_ provides historical perspective on the forming of scientific paradigms. His theory of perception and representation is applicable to the fine arts as well as to literature, and painting is used to illustrate the process.

The second section of the course examines inherited conventions of representation in art and literature as they operate both in creation and in the expectations of perceivers. E.H. Gombrich's _Art and Illusion_ introduces questions of how schemes of representation in painting and poetry become established and are later supplanted. Eighteenth Century nature poems (Thomson, Gray, Collins, Goldsmith), and works by Wordsworth, Pound, and Eliot are examined to discover how poets of each era depicted and corrected prior depictions of the world.

The third section of the course deals with pluralism and the dilemna of contemporary relativism. Disagreements among competing models of the world raise difficult questions about the nature of truth. The underlying question is whether truthful views of the world are multiple and disciplinary or convergent and interdisciplinary.

Such essays as Karl Popper's "Science: Conjectures and Refutations," and Stephen Toulmin's "The Construal of Reality: Criticism in Modern and Postmodern Science" begin the analysis. The major literary work is Joseph Conrad's Heart of Darkness, important for its emphasis on the relativity of truth and for the diversity of critical interpretation of it. Paul B. Armstrong's essay, "The Conflict of Interpretations and the Limits of Pluralism" focuses the discussion.

The introductory course concludes with a reexamination of C.P. Snow's lecture on "The Two Cultures" with a view to summarizing the complex relations between modes of thinking, seeing, and communicating into more than a diametric model. With its limit of 25 participants and emphasis upon discussion, the course is seen as a balance to scientific demonstrations of problems that have a single correct solution. The instructors themselves bring a variety of competencies to the project. Dr. Armstrong is a literary theorist. Dr. James Young, trained in chemistry at Cal Tech, brings a special perspective to his English classes. Dr. Robert Snyder is particularly interested in esthetics and philosophy. Dr. Kenneth Knoespel's area of expertise is Medieval and Renaissance literature and thought. Together they are creating a new model for the Humanities education of scientists and engineers.

Humanities Majors and Post-College Careers. A review of a research project by David S. Bechtel, Career Development and Placement Center, University of Illinois (Urbana- Champaign).

Part of the academic glory and pragmatic sorrow of the Humanities is the fact that they are not directly linked with a post-college occupation. However, we all know our majors find a variety of work opportunities and make a place for themselves in the world. What we generally do not know is the design and ramifications of these choices on a broad scale. A grant from the National Endowment for the Humanities provided funding for a recently completed five year study by David S. Bechtel based on graduates from three campuses of the University of Illinois. The Humanities study was part of a larger effort covering many undergraduate fields. The completed document that compares Humanities and non-Humanities graduates comes to 156 pages crammed with statistical tables, interpretive conclusions, copies of the questionnaires, a summary, and a useful bibliography of other such studies. This review will condense those findings in somewhat cursory fashion; any surveys based upon this model or strategic quotations selected for sensitive use should be checked against the fuller discussion in the original document.

Over 23,000 Bachelors graduates responded to five surveys conducted one year after their graduation, and 11,000 responded to three surveys done up to five years after graduation. Of this number, 2,358 Humanities majors were among the first year respondents, and 1,577 were among the first year respondents, and 1,577 were among the group by five years later. The definition of Humanities majors does not include interdisciplinary studies, but runs the gamut from Asian Studies to Speech Communication, including four languages, Classics, Philosophy, History, English, and Religious Studies. The largest group was composed of English majors, followed by History majors. The rate of return for the classes (1973-1981) ran from a low of 51.7 to a high of 66%.

Important topical areas of the questionnaire were the employment status, its relationship to the undergraduate major, satisfaction with the job and their college major, salary level, further schooling undertaken, and job changes during the five years surveyed. Information elicited from these questionnaires affirmed at the outset that Humanities graduates are employable. Unemployment was 6.6% for them as compared with 4.3% for non-Humanities majors. This figure is qualified by the fact that during part of the five years over 32% of Humanities majors were enrolled for additional degrees, and another 6% were in a non-degree educational program. The figures for non-Humanities majors were not significantly lower. After five years over 70% of Humanities majors and 84% non-Humanities majors were employed full time; this was the largest discrepancy found in this question area.

Initially graduates did not differ significantly in the source of their employment. One year after graduation over 36% of Humanities graduates worked in business and industry, 22% in colleges and universities, and 18% for other educational institutions. A smaller group of 6% worked for government agencies; 5.5% were self-employed; 5.7% had jobs with professional firms. After five years educational institutions and government agencies gained Humanities graduates, and business and industry lost them. The Illinois report cites the high degree of commitment to educational institutions on the part of Humanities majors, but concludes that in other respects the postgraduate career patterns of Humanities and non-Humanities graduates are more similar than different.

Illinois graduates as a whole tended to elect graduate study, the Humanities majors at a somewhat higher rate than others and in a different field of study. Humanities studies served as primary preparation areas for law school; no other area was used as extensively as general preparation for such a variety of graduate programs. Almost 40% of Humanities graduates received an additional degree within the first five years after graduation.

A survey of jobs held by Humanities graduates one year after completing their undergraduate studies produced some surprises. They comprised a third of the librarians in the survey sample, a fifth of the religious workers, a fourth of the law clerks, nearly a fifth of those in writing occupations, and 5% of salespersons. They accounted for 22.9% of teachers, counselors, and school administrators, as compared to 10% for all other graduates surveyed. Humanities majors were clearly not competitive in sales, technical and professional areas, and non-educational administrative specialties. The most disturbing figure was the large number (42.2%) who described themselves as "underemployed," working as clerks, laborers, or routine sales and service personnel. The picture brightened considerably after five years when only 15.1% of Humanities graduates so described themselves. After five years the number in educational fields increased to 30.8%, while 17.2% were business managers or officials, 11.8% were in technical fields, and 10% were in law related occupations. Unfortunately, in the context of the 11,000 persons surveyed, over 26% of the self-described "under-employed" were Humanities graduates.

Salaries, questionable when dealing with dollar amounts, nevertheless revealed a sobering disparity between the general ranges of income for Humanities graduates as compared to non-Humanities. Because a larger number of Humanities graduates were employed by educational institutions, their salaries were depressed. They lagged behind even after five years. But even within educational institutions Humanities graduates reported salary inequity far more than non-Humanities majors. The perception, if not the demonstrable fact, of salary inequity is likely to persist through much of a Humanities graduate's lifetime and be attributable as much to employer type as field of study.

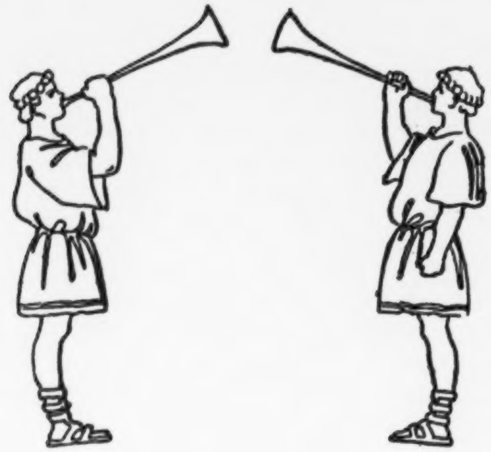
How easily do Humanities graduates find employment of some kind? Prior to graduation 33.3% had secured the promise of employment, and by four months following graduation 86.6% were employed. The perception of being underemployed was not related to how soon employment was obtained. More telling, job satisfaction was reported affirmatively by 68% of Humanities majors a year after graduation, as compared to 89% affirmative for non-Humanities majors. At the five year survey, which included those who had by then completed graduate work, the Humanities majors reported an 86% satisfaction rate, as compared with a 93% rate for non-Humanities respondents. Dissatisfaction after five years was greatest among Protective Services majors, high among visual and performing arts majors and equal to the Humanities rate among Psychology majors.

Despite their slow start and somewhat dissatisfied job orientation, Humanities graduates retained a moderately positive attitude toward their undergraduate preparation one year later. Psychology, Social Sciences, Home Economics, Architecture, Communications, Fine Arts, and Public Affairs majors all had more negative attitudes. Business, Science, Engineering, and Computer majors had more positive attitudes. Five years after graduation there was less satisfaction among all majors with that of Fine Arts, Communications, and Architecture majors having risen in comparison to Humanities majors. Majors selecting the most positive responses the first year retained their opinion five years later.

Should Humanities graduates have chosen different majors? One year after graduation almost one half of the Humanities graduates would have chosen the same major if offered a second chance. After five years 40% said they would retain their major. Overall, about 60% of non-Humanities majors would choose as they did originally. Business, Engineering, and Science majors responded positively at the 70% level. All "generalist" majors had some degree of regret, but among this type of studies Humanities majors registered the highest degree of satisfaction.

The University of Illinois report documents the effects of several transitionary stages during the work life of its graduates. There was the period of changing perceptions about the role of college education in post-college employment which swept the nation through the 1970's. There was the volatile early career period through which the respondents themselves were passing. The Humanities major's perception of his own worth and the satisfaction obtained from his occupation are partly related to stresses caused by both transitions. Society at large simply places little value upon those materials, experiences, and habits of mind which Humanities majors have incorporated into their value systems. One either keeps that legacy and accepts as a consequence a modest position in an economically depressed profession, or one starts over in a job for which little of one's skills and perceptions are required. That so many manage to work out a liveable compromise is a remarkable testimony to human persistence. David Bechtel and his staff have produced a collection of statistical conclusions about this process that are both fascinating and sobering.

BOOK-REVIEWERS



A CALL FOR BOOK REVIEWS AND BOOK REVIEWERS

Anyone interested in being a Humanities Education book reviewer should fill out the form below, clip, and send to the Book Review Editor. Reviews and books appropriate for review should follow the same editorial guidelines as for articles. We are interested in positive reviews of good books which will be useful to our readers. Book reviews should be typed double-spaced and normally be no more than three pages in length. Unsolicited reviews will be accepted for consideration, although the Book Review Editor should usually be consulted before reviews are submitted. Complimentary copies of books to review may be requested through the Book Review Editor. All correspondence concerning Book Reviews should be sent to James Mehl, Book Review Editor, Department of Humanities, Missouri Western State College, St. Joseph, MO 64507.

THE HOUSE OF LIFE

Planning a Classroom for Interdisciplinary Humanities

Over the past thirty-five years I think I must have taught or lectured in almost every kind of classroom American architects have conceived of, from one-room rural schools to gymnasiums and cafetoriums, to shabby quonsets, to thousand-seat auditoriums; but there are only some three or four that have "worked" for me. Each had shortcomings, but let's look at their virtues. One, in a small town in Wisconsin where I taught grades six through eight, was just a rectangular room with low windows on the west side, a large green chalkboard on one end and smaller ones flanking the cork boards at the rear and side. There was ample space for a round discussion table with low chairs, a deep storage wall-counter space and a higher bookshelf-counter running the length of the window wall. Nothing special here, yet I was able to teach seventh and eighth grades separately for some classes, together for others, have students work on their weekly newspaper or rehearse plays in one part of the room while I was conducting a class, maintain a lively bulletin board, have science and art projects displayed around the room, conduct (on alternate days) health classes for girls or boys from grades six through eight, run art classes, speech contests - and change seating arrangements and room orientation half-a-dozen times each year - all without a feeling of clutter, frenzy or prison depression.

Another successful room, is the "case-study" room at the college at which I teach in Minnesota. It is horseshoe shaped, with four levels of fixed counter-desks around it. The seats are fixed swivel chairs that make it possible for a student to turn easily to address anyone in the room directly in a conversational tone. The room holds seventy students, and it is the only room in which I have been able to teach that many people without resorting to straight lecture-presentation and token "discussions." Genuine discussion, dispute, questioning are all possible here without restructuring the room and without cutting out segments of the class. It is a windowless room making it useable for slides and films which were out of the question in the first room I described.

this is a teacher's listening chair!
the deep passage makes an offstage area - and the room will never look closed from inside
this is a teacher's teaching chair

The third successful room in my experience is a lecture hall in a community college in Georgia. This has a sloping floor, a fan-shaped array of theater seats, beautiful acoustics; it is well-lighted, with a stage, and it has the most elaborate A-V back-up I have seen. It is set up for rear projection equipment with a huge ground-glass screen upstage, and a complete remote console in the lectern for lights, sound, tape recorders and playback, slides and movies -- and an enthusiastic A-V staff! It seats, I suppose, two hundred persons, and although amplification is not necessary, the sound system is so true, one might as well use it with a lavalier mike.

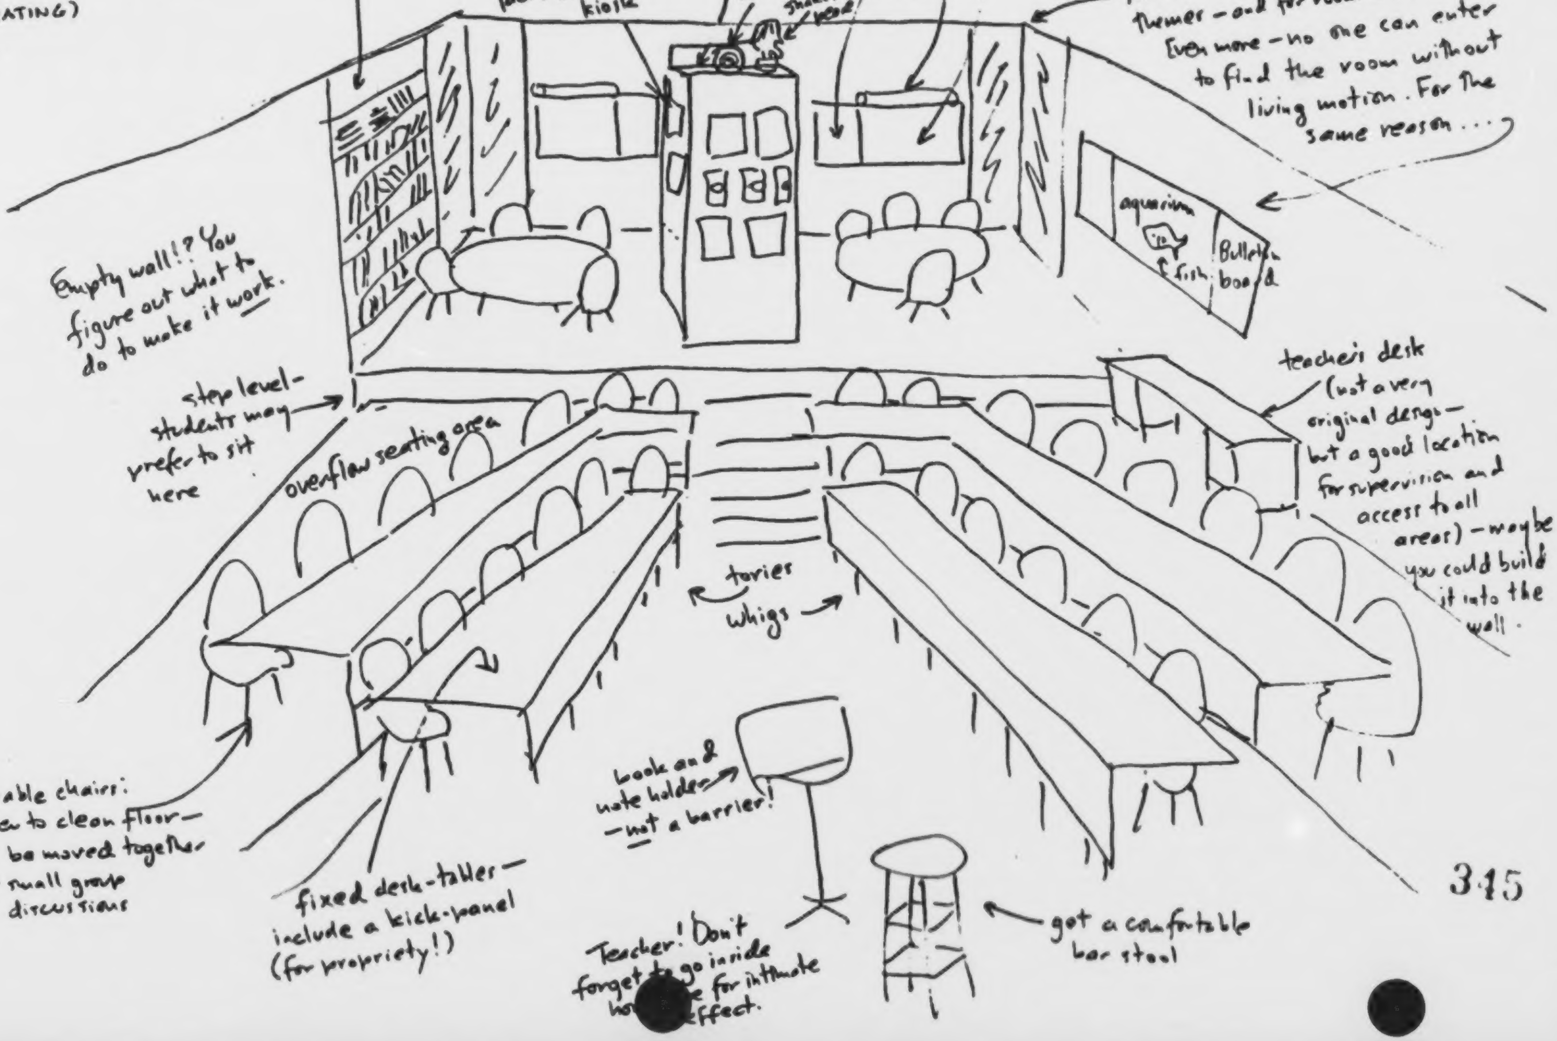
My experiences are not yours, of course; but they may suggest the kind of architectural criticism that is all too rarely sought: whether a classroom really works, and what its practical and psychological weaknesses are. Architects are seldom teachers, school boards are almost never made up of teachers, and administrators generally have not spent many years in classrooms with a variety of students and subjects. Most teachers have some suggestions for improvements, but their experiences are often quite limited, and they are not accustomed to being asked for their opinions. Clearly, all parties to education (including students) should be brought together with an architect early in the planning stages, for a freethinking idea session.

Once they have pooled their experiences and individual suggestions, it will be necessary to combine the best elements. In the model that I am suggesting, I want to see if I can combine the warmth, humaneness and flexibility of my Wisconsin self-contained classroom, but to extend its verbal intimacy to at least the size of the Minnesota case-study room, and to provide it with the rich performance and presentation capabilities of the Georgia lecture-theatre.

Here are my general recommendations: Design a closed room with a tiered horseshoe occupying about half the space, with the desks on the tiers facing a wall with chalkboards and projection screens that can accommodate two images for comparison. These might possibly be two roller screens, or if the height will permit, white painted walls. A draw curtain should be provided for the front of the room to cover the academic paraphernalia for dramatic and musical presentations. For a stage, equilateral triangular rolling carpeted modules of normal step height - which could be arranged into a thrust stage, or area platforms or what you will. There should be a highly sophisticated A-V console at the front (off-side but accessible) with remote controls for lights, projector power, slide changers and amplifiers. If possible, front entrance doors, left and right, with at least a short vestibule in each for "off stage" areas.

The rear half of the room should be at the level of the highest tier, with the projection booth occupying just about the center of the room, serving at once as a kiosk and a space divider for the upper level, creating two areas with round tables, each accommodating, say, ten chairs; these areas for simultaneous discussions, planning, small classes, observation, overflow guests. Use the projection booth exterior for bulletins, art works, grafitti. Lighting can be from

VIEW FROM FRONT TO UPPER LEVEL



bookshelves, etc
door to conservatory or corridor
spotlight
Shakespeare
bulletin board
movie screen
chalkboard
aquarium
fish
Bulletin board
overflow seating area
tories
whigs

THIS ROOM WOULD WORK FOR CLASSES FROM 3 OR 4 TO ABOUT 10 (UPPER AREAS); A DOZEN TO THIRTY (HORSESHOES); FIFTY OR MORE (OVERFLOW SEATING)

Inside the kiosk-projection booth: 2 Kodak slide projectors, dissolve unit, Singer film projector, dolby cassette tape playback with headphone jacks on outside of kiosk

look! mirrors at right angles: good for vanity, for illusion-reality themes — and for room surveillance. Even more — no one can enter to find the room without living motion. For the same reason . . .

Empty wall!? You figure out what to do to make it work.

step level — students may prefer to sit here

teacher's desk (not a very original design — but a good location for supervision and access to all areas) — maybe you could build it into the wall.

movable chairs: easier to clean floor — can be moved together for small group discussions

fixed desk — taller — include a kick-panel (for propriety!)

book and note holder — not a barrier!

Teacher! Don't forget to go inside [illegible] for intimate effect.

got a comfortable bar stool

recessed incandescent lamps, making it possible for students to take notes during slide-talks or films; making it possible to illuminate only inner horseshoes for smaller classes; making it possible to imply intimate "rooms" out of the upper table areas, which you will remember have low ceilings.

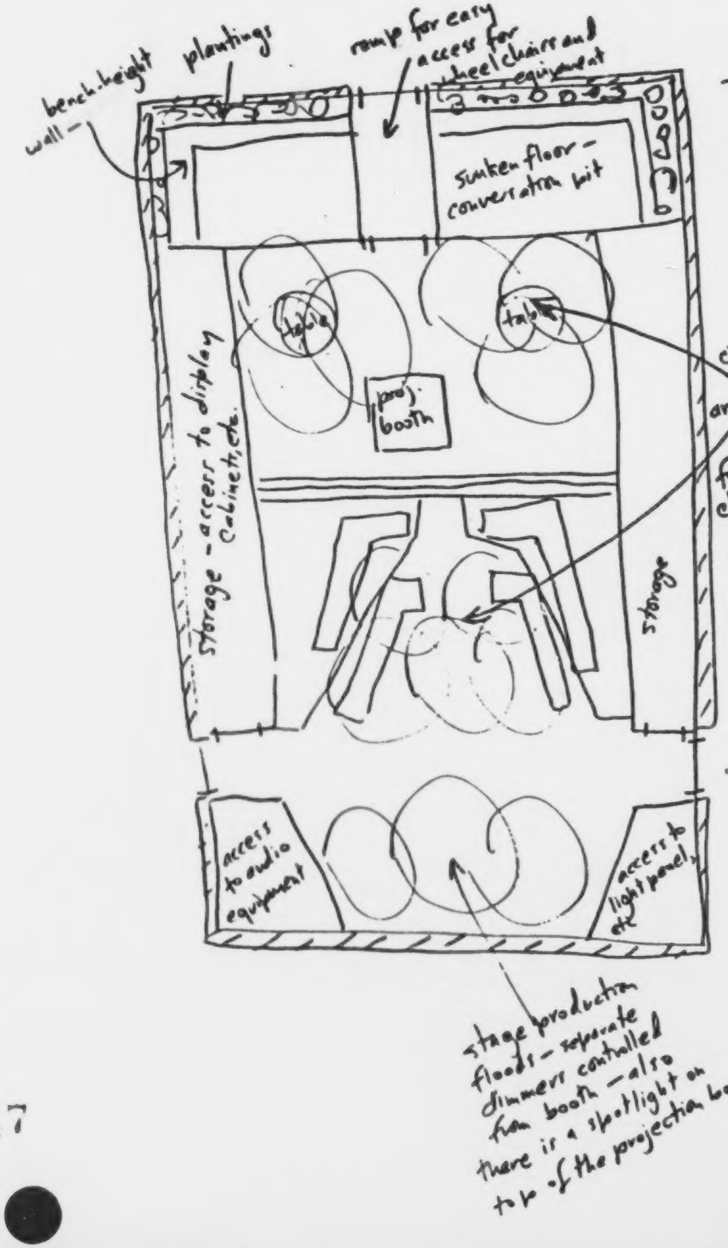
Now let's talk economy. First of all, this general concept is adaptable to any "normal-sized" class - which used to mean thirty students. Recently, though, I have observed many high-school humanities courses with fifty or sixty students, comprised of a combination of groups from two different disciplines. On the other hand, I have seen many humanities mini-courses, with mini-enrollments of just a few students. In community colleges and universities, classes of one hundred or more are not uncommon. The most economical thing to do is to plan for a maximum space for the largest class anticipated, but to design the space so that fixed "audience-seating" will be set for only an average class-size with the balance designed flexibly to arrange into overflow audience, small groups, or even simultaneous class space.

Secondly, within the limitations of building codes, this sort of classroom can be constructed inside existing classroom-containers. I have, for example, observed from coast-to-coast in high schools and elementary schools what was euphemistically named the "multipurpose room," which usually meant an expansive rectangular prism that was purposeless for anything but overflow study halls, bag-lunchrooms or trampoline storage areas.

What I suggest is that classrooms like these have new classrooms built inside them, with false walls (providing at once acoustical insulation, storage space, "vertical crawl-space" for new wiring, rear access for display cabinets, and attractive new walls which may take any shape that teaching requires). Several floor levels can be built in (I presume an architect would meet safety requirements) so that at the rear of the room, where small group discussion areas are planned, the ceiling will be lowest (that is, closest to the floor). Music reproduction equipment can be securely locked inside the inner wall, and if big loudspeakers are used, the sound will not disturb neighboring classes. On the other hand, many smaller speakers could be suspended from the lowered ceiling space, thus permitting lower volume settings.

But what about God's good sunshine? Frankly, the closed room bothers me, but awkward curtains, shutters and shades in a room used frequently for A-V bother me more. The closed room is far more conducive to study, work and attentiveness, and if art works and maps are hung on the walls, a mirror or two are placed for vanity's sake -- and for the sake of some living movement on the walls -- and if a stained glass window were placed somewhere that it could filter real sunlight without washing out projection, the impersonality of a closed room might be alleviated. Even so, a closed room doesn't seem to produce a sense of community or to promote free thought and conversation, all of which are ends of humanities education.

HERE YOU CAN SEE HOW TO BUILD
A GOOD HUMANITIES CLASSROOM INSIDE AN OLD DULL ROOM.



bench-height wall -
plantings
ramp for easy access for wheelchairs and equipment
sunken floor - conversation pit
table
table
proj. booth
storage - access to display cabinets, etc.
storage
access to audio equipment
access to light panel, etc

CONSERVATORY (OR COURTYARD) FOR SMALL CLASSES AND FOR CHATTER

SMALL-CLASS AREAS - COMMITTEE WORK, INDIVIDUAL MUSIC LISTENING, SLIDE REVIEWING, READING

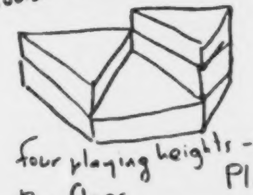
circles are area-lighting schemes for smaller classes

MAIN CLASS AREA - THEATRE-PROJECTION, GROUP MUSIC LISTENING, LECTURES

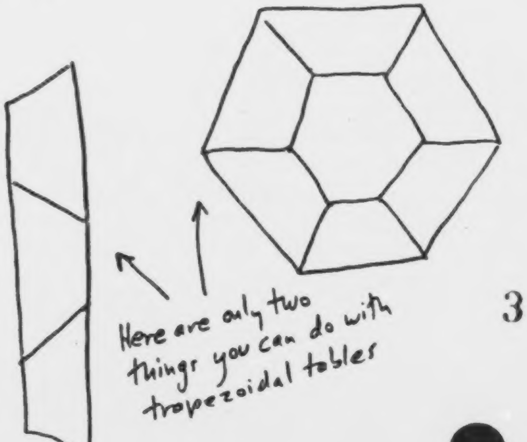
stage production floods - separate dimmers controlled from booth - also there is a spotlight on top of the projection booth

A LITTLE EXTRA GEOMETRY:
TRIANGLES AND TRAPEZOIDS

For staging in front area, get some equilateral triangles made - about 8-10 inches high - carpet in different colors (or black and white) - look what you can do with only six of them! You could make a large thrust stage, too.



four playing heights - including the floor. Plan the color in relation to your back stage-curtain, and, of course, the floor.



Here are only two things you can do with trapezoidal tables

For this, then, the ideal design would include a foyer or lobby open to a court-yard, or in the northern states, a conservatory. Either will provide a better environment for taking a class "outside" than the usual practice of going out into the open, where wind and automotive noises often make discussion difficult.

Humanities education originated in public parks - the Academe; in shopping centers - the Stoa; near athletic fields - the Lyceum. In classical Greece, education went where the people were, which certainly should be considered as a suggestion for those of us today who are interested in adult and leisure education; but, more germane to modern institutionalized education, it should be noticed that the places and spaces of ancient learning are remembered in our languages almost as well as the topics of that learning. The word academic, therefore, should recall to us a symbiotic relationship between teachers, students, and the living, civic surroundings within which learning takes place. Bearing this in mind, we must identify those aspects of educational architecture that are passive and mechanistic, we must recognize them for what they are, and we must do what we can to make them active and organic for the future.

RANDOM THOUGHTS ABOUT THE HOUSE OF LIFE

** The very best classrooms will teach without the corporeal presence of the teacher But the teacher's mind and spirit should invigorate the space by metaphor.

** Don't neglect semi-permanent friezes and posters such as elementary schools use for the alphabet, and sciences use for the periodic table of elements. Use historical time lines, comparative alphabets, maps, architectural vocabularies, musical instruments and notation systems, portraits; you might even resurrect the black and white Atheneum Washington or the library's dusty bust of Shakespeare.

** If it is at all possible, use woodpanelling or vinyl wall-covering for some of your walls; Flash Gordon-Bauhaus decor is not the only aesthetic that has meaning for the humanities. I doubt that there is a classroom in America with a Japanese or Chinese decor, and yet I think these could be achieved quite as inexpensively as the usual bus station or operating room flushable decor, and a learning experience would be built into the room.

** Classrooms that "belong" to a teacher are not vandalized unless the teacher deserves it. All-purpose transient rooms usually get all the respect they deserve. Like a school bus.

** Not enough interdisciplinary humanities classes to justify a special learning space? Team up with the language department, or history, or theatre. A house of life is irresistable to creative teachers who have only been waiting for space and equipment that works with them.

** Most objections to unusual materials or designs are based on long outmoded ideas: practically anything can be made fireproof and washable; eyestrain is due to insufficient illumination and to glare, not to beautiful surroundings; the realization of fullest human potential is achieved in richly multi-sensory surroundings, not in people-factories; building for permanence just makes demolition harder in the near future when we replace things, anyway; the best deterrents to vandalism are not locks, but pride and respect.

** Schools should be like the theater, schoolrooms like the stage. Build a good theater with good exits, airconditioning, flexible lighting, comfortable seating and plenty of toilets, and you can change the stage settings with whatever imagination you have.

** Our astronomy teacher plays classical music concerts in the planetarium building early in the morning while he works. Students come in to listen or study. The planetarium is a nice place for quiet; so could be a beautiful humanities room. Active participation in the humanities can be silent.

** If you really care about making your room walls work, you'll understand why primary-grade teachers always leave conventions with shopping bags full of bulletin board materials.

** Why not get a star map painted on your ceiling in luminous paint? The ceiling can still be white and you will have useful referents for mythology, history of science, and literary references to constellations.

** Start accumulating museum reproductions of sculptural artworks, jewelry and glassware. Put them, singly, in your small display cabinet on a piece of velvet or period pattern cloth to exemplify your historical, thematic or ethnic teaching.

** Don't be dismayed if your students mature suddenly in a respectable room, but never demand it.

** Schroeder's Law: when you want to change your class discipline or teaching method, change your room arrangement or decor at the same time. To the student, a classroom is metaphor for the teacher.

** Hardboard panelling is inexpensive and available in a singularly rich variety of textures and patterns; but why not give a thought to old weathered wood in which students could carve their initials? If one of your students becomes President, your school can charge admission.

** Illuminate one chalkboard with "black light". You can use it while the room is darkened for slides, and it has quite a startling effect with colored chalks.

** Plan display cases in a variety of sizes, but be sure to have some about 18" x 24" for easy-to-change mini-museum displays. Make access from behind, and make the displays student responsibilities. Use museum tours for training.

Have you ever noticed that humanities classes get tossed into whatever containers are left over, but the sciences always have rooms designed for them? So they simply can't be moved. Also, if they have 24 stations in the lab, that's it, but we can always squeeze in another student body. It's not the disciplines that impart this power, it's the rooms. Still, the labs reflect the singular needs of the disciplines. We must demand rooms for the plural needs of inter-disciplines.

COPYRIGHT ISSUES IN THE HUMANITIES

BY FRANCIS M. NEVINS

ST. LOUIS UNIVERSITY
SCHOOL OF LAW

IV: COPYING MUSEUM-PIECES

THE PROBLEM:

A community college teacher prepared a videotape for her humanities classes on images of Christ. Now she has had invitations to put a copy of her tape in the local public library for general circulation and to broadcast it on the regional cable television network. Her question is about the large number of visuals that she included from slides of pictures that she photographed in various art museums, ranging from medieval icons to paintings by Rouault and Dali. She says that all pictures were taken in museums that have no restrictions on the use of hand-held cameras without flash, so she never asked for permissions.

PROFESSOR NEVINS' REPLY:

The situation you describe can best be broken down into its component parts, with each part answered separately---to the extent it can be answered at all.

1. First of all, the vast majority of the art works which the teacher photographed are obviously hundreds of years old and therefore unprotected by copyright. If an art work is in the public domain and the teacher's photographing it didn't violate any museum rule, clearly there is no legal problem when she includes a slide of that photograph in her videotape. If an art work is in the public domain and the teacher's photographing it did violate a museum rule, there is still no legal problem. Museums have the right to make rules governing the extent to which they will allow photographs to be taken on their property of works which they own or possess, but these rules

do not have the force of laws, and the museum can't sue for copyright infringement if someone takes a photograph contrary to the rules.

2. The above discussion assumes of course that the art works which the teacher photographed are in the public domain. Now suppose that some of the more recent works she photographed, such as the paintings by Rouault and Dali, are protected by copyright. In that case, photographing the art works may violate the exclusive right of reproduction, which is granted to the copyright owner by Section 106(1) of the Copyright Act, and including slides of those photographs in a videotape presentation may violate the exclusive right of public display, which is granted to the copyright owner by Section 106(5). Of course, if the museum in which the copyrighted art work is displayed is not the copyright owner of the work, it can't sue for copyright infringement. And it is possible that the teacher's taking and using photographs of the copyrighted works might be defended on grounds of fair use, which I've discussed in a previous article. (HUMANITIES EDUCATION I:3, September 1984)

3. Finally, assuming that all the above legal problems are taken care of---in other words, assuming that all the photographs the teacher are of works in the public domain or fall within fair use or have been cleared with the copyright owners---one question remains: may the teacher herself claim copyright in her videotape? The answer is Yes. The decision-making elements that went into each of her photographs, her choice of photographs and of their internal order, would clearly seem to satisfy the Copyright Act's requirement that in order to qualify for copyright protection a work must be an "original work of authorship." Copyright in a videotape of this sort will protect only those aspects of the work that were "original" with the teacher, for example the individual photographs she took and the selection pattern that went into the making of the compilation she put together. If she wants such protection, she must (a) make sure that a copyright notice is included in the videotape presentation, and (b) register the work pursuant to the statute's registration requirements. She should write to the Copyright Office, Library of Congress, Washington, D.C. 20559, asking for Registration Form VA, and then follow the instructions on the form. If she does this she will be protected.

Well, let me qualify that last statement a bit. If she does this, her work will be protected. But it's quite conceivable that the teacher as an individual will not be entitled to claim copyright in her work. Who owns the rights in the creative works prepared by school-teachers, the teachers or the institutions they work for? This is a hotly debated issue in copyright circles right now, and one that is directly relevant to most readers of *Humanities Education*. Next time I'll try to deal with that question.

PARTICIPATING IN THE PAST:

The Charleston Museum's Historical Archaeology Program

During the 1982-83 school year the Charleston Museum piloted a class for grades 5-8 about historical archaeology. The class was developed for several reasons. The archaeology staff at the Museum had been engaged in an ongoing program of archaeological and historical research about Charleston for the past few years and this aspect of the Museum's work was not covered in the educational curriculum. Also, Charleston is a city with a unique and highly visible heritage; archaeology is an important tool for expanding the public's knowledge of this heritage. Finally, although there are lectures, site tours, and organizational memberships available to adults, there were no comparable programs for children. The Museum archaeologists were eager to communicate the importance of their work to students.

The class is designed to meet several goals simultaneously. In addition to learning the basic techniques of archaeological research, students are exposed to the range of Revolutionary War period material culture and learn what information is available from the study of these objects. Finally, the students realize the value of archaeological research in providing a more objective view of Charleston's history, and the importance of preserving archaeological sites for future generations.

Before the students come to the Museum, the teacher is sent a previsit packet that contains a vocabulary list, suggested media materials and several follow-up activities designed to reinforce the Museum program. A booklet for students is also available.

Designed to last 45 minutes, the class is a combination lecture, discussion and "hands-on" experience, utilizing several props. For the classroom lecture, a miniature site was made using a ten gallon aquarium. Different colored and textured soils were layered in this clear glass box, simulating the different zones of soil that are present in a stratified, multi-component historic site. The soil for this box was obtained from local archaeological sites during routine excavations. Datable artifacts are visibly placed in these soil layers. Three archaeological zones are represented in the box: the late 17th century (1670), Colonial 18th century (1700-1780), and the Federal period (1780-1820). The top of the soil in the strata box contains modern artifacts, including plastic forks and pop tops, indicating that we are still making archaeological sites today.

Also utilized during the classroom lecture are two boards showing artifacts depicting the range of domestic material culture. Most important is the board containing different ceramic types. These are dated and correspond to artifacts visible in the strata box.

The final prop developed for the class is a 5'x5' "sand box" located in the Museum courtyard. This box represents one square within the whole site. Artifacts representing a sample from this site are buried for the students to excavate and analyze. They show the materials that could be recovered from a Federal period domestic site and include dishes, glassware, animal bones as well as leisure time, health and hygiene items. Some of the tools and equipment used regularly by archaeologists are also used by the students.

The classroom time is organized into five phases. The first three involve a lecture by the teacher, utilizing the artifact boards and glass strata box. Students are first given background information on historical archaeology as a discipline. They are told what it is, why it is important, what it contributes to the discipline of anthropology, and how it is different from pre-historic archaeology. During this phase of the class, students learn why archaeology can provide a more objective view of Charleston's history, and why it should only be conducted by trained professionals.

During the second phase of the class, students are told about the processes of site information. Using the glass strata box as an example, the instructor explains how the different activities of past peoples affect the soil and produce a site. Using as an example a homesite in Charleston, the students learn how such activities as house, well and fence construction, trash disposal and loss of small everyday objects might affect the ground surface. With the strata box, the instructor demonstrates that the soil and artifacts accumulate and that different peoples conducting different activities will produce different colors and types of soils.

Based on this information, students then are told how an archaeologist would study this site. Careful excavation is stressed; horizontal and vertical control is explained. Also emphasized is that the actual excavations are only part of an archaeological project; pre-excavation research, subsequent laboratory analysis, and report preparation are explained.

With this background, the students are then told that they will participate in all of the project phases. The students are then led outside to the sand box, or simulated excavation site. Some of the excavation methods are reiterated, including careful excavation and systematic recording of information. The site information on the artifact collection bags is pointed out. The students are then given trowels to recover the buried artifacts. Depending on the size and enthusiasm of the class, the actual excavation takes from 5 to 10 minutes. Students then return to the classroom with the recovered artifacts.

Sitting on the floor in a circle, the students have ample time to handle the artifacts as they discuss the interpretation of the materials. Students first divide the recovered artifacts into categories; each category is then discussed in terms of what can be learned about the imaginary site inhabitants. The least "attractive" artifacts are examined first; faunal remains often elicit a lively discussion of the diet of the people. Seafood remains indicate that the habitation was coastal. Utilizing the sherd board, the ceramics are then examined for clues as to the date of the occupation. Ceramics and glassware are studied for clues on the socio-economic status of the inhabitants. Special artifacts such as pipes and toys are checked to learn family composition. Students are often unable to identify all of the artifacts; determining the function of these items is an important part of the discussion.

To close the discussion of the artifacts, the students are given a brief review of what was learned about the site inhabitants through the artifacts. To emphasize the importance of sharing the results of archaeological research, students are asked to write a report on what they have learned when they return to their classroom. To monitor the success of the class, we ask that the written reports be returned to the Museum for review and evaluation. To date, over 2,000 students have participated in this program.

The reports so far indicate that the class is successful in increasing the awareness of the students in regard to the importance of proper archaeological research. The students have learned that archaeological research is capable of providing a possibly more objective view of Charleston's history than written records. Moreover, they have learned that it is important that sites be protected and studied by trained professionals, and that the information obtained be shared by everyone.

JONATHAN B. CONANT

BEST TRANSLATIONS

MEDIEVAL GERMAN NARRATIVE VERSE

Jeremiah Reedy speaks (Humanities Education, II-2) to the durable controversy about whether to translate verse narrative into verse or prose. His comments on translations of Homer apply with equal force to translations of the major heroic and courtly verse epics from the German high middle ages (1175-1225) and even to the shorter heroic poems of the dark ages (700-900) in Germany and England.

The Old High German Hildebrantlied (c. 770) may serve to exemplify the problem. The hero Hildebrant, returning home at the head of an army after an absence of thirty years, encounters his abandoned son Hadubrant, also heading an army. Hildebrant shortly recognizes Hadubrant and - without however identifying himself - offers him an armring. The arrogant son rejects the gift with the following pivotal words:

mit geru scal man geba infahan
ort widar orte. ....   (11.37-38)

The poetic glue of Germanic verse is alliteration, not rhyme, and that fact poses the first problem. Even if, at some expense to the literal meaning, one could capture the alliterative scheme, would the modern ear respond to the result as it is accustomed to respond to poetry?

with a spear ought one spoils to get
point against point. ....

The problem of scansion is equally intransigent. Germanic verse counts stressed syllables only. Following John C. Pope (The Rhythm of Beowulf, 1942), we may say that all lines in a given poem take up the same amount of time, just as do all measures in a given piece of music; a line with few unstressed syllables would sound quite ponderous, while a line with a lot of "filling" would be frenetic. Even if modern English and the various older dialects of German had similar proportions and distributions of stressed and unstressed syllables (which they do not), would a rendition faithful to the original scansion sound like anything but free verse, or like anything at all poetry-like?

Finally, except for the short folk ballad, the verse narrative has not been a productive fictional genre for a very long time. Even a well-read and receptive modern student is likely to find hundreds of lines of verse alienating, much as the medieval audience would have found pages of prose a colorless, indeed offensive way to treat worthy matter. That is, we have come to regard prose as the proper medium for the expression of ideas and themes and for the embodiment of myths. Thus, even if a slavish reproduction of medieval prosody were abandoned as impossible and some suitably modern equivalent verseform were found, it is doubtful that the result would be a recreation of the medieval audience's experience.

Rejection of the verse translation is only variously disturbing. What his contemporary Gottfried von Strassburg called the "crystaline wordlets" of the 12th century epicist Hartman von Aue do not suffer from transposition into a modern German prose setting (there are no English versions). Hartman was responsible for German versions of several stories also treated by the French poet Chrétien de Troyes (c. 1170, a decade or two earlier), and one can get an idea of his Erec and Iwein epics from W.W. Comfort's translation of Chrétien in the Everyman series.

Wolfram von Eschenbach's Parzival (faithfully rendered by Helen M. Mustard and Charles E. Passage in a Vintage paperback, 1961; and also well by A.T. Hatto in Penguin, 1974) is noted more for the complexity of its plot and ideas than the glow of its poetry. The strophic form of the anonymous Lay of the Nibelungs (the A.T. Hatto translation in Penguin, 1969, is excellent and well provided with apparatus) loses some of its portentiousness in prose, a fact which some regard a benefit.

Both the grail quest of the Parzival epic and the Nibelungen saga about Siegfried, Hagen, the Rhine gold, and the demise of the Burgundians at the hands of Attila and Kriemhild have suffered mightily at the hands of earlier translators and redactors - not the least of whom was Richard Wagner, who used the raw material in the service of ulterior motives which Adolf Hitler, for one, found very attractive. The reader is warned not to judge these two major creations by any rendition before the 1950's. Even the best of the earlier lot, whether in English or German translations, fall victim to the misapprehension that old poetry ought somehow to sound old and abound therefore in purple archaisms.

The Tristan of Gottfried von Strassburg (died 1210) exists in a faithful and readable prose translation by the already mentioned A.T. Hatto (Penguin, 1960, 1967). Hartman and Wolfram were knights, and the poet of the Nibelungen epic was probably a cleric, but Gottfried was a magnificently educated commoner, a well-read polyglot who (in Hatto's phrase) might almost be "a premonition of the Renaissance."

His epic abounds in an irony only possible in a poet distanced from the two elite classes of medieval society. It is also as knightly as Hartman and as thoughtful as Wolfram. In Tristan Gottfried takes on the indissoluble problem perhaps better known from the Arthur-Guenever-Lancelot love predicament, where the knightly system of virtues, the ethos of courtly love, and the practical requirements of the feudal system all conspire to destroy the three protagonists.

It is with Gottfried's poem that the convention of prose translation is most troublesome. He plays with language and prosody, reflecting in his verse the fabric of his plot. Generally, of course, prose is sufficient for the sense, but it's a shame to lose the resonance of such famous lines as:

> ein man ein wip, ein wip ein man,
> Tristan Isolt, Isolt Tristan. (11.129-130)

> "a man a woman, a woman a man,
> Tristan Isold, Isold Tristan."

Each of us in literature has favorites, and a Parzival buff might quibble with me, but I think that the Tristan epic is the only one discussed here which cannot adequately be appreciated in prose translation - or even in translation at all - and which the instructor would do well to support with a reading in the original and a line-by-line interpretation of at least a few of Gottfried's greatest passages.

In an editorial in the last issue of HUMANITIES EDUCATION, Associate Editor SHARON SCHOLL deplored the current state of commercial publication of humanities anthologies. She may have come up with a solution to the problem herself, but she needs everyone's help. Here's what she writes to us: "I have become aware of a rather large 'underground' publishing in the form of handbooks and collected essays," many of which are published by contract publishers who will print and bind small lots with a guaranteed sale of four hundred (more or less) each year. Ordinarily only very large universities can make such a guarantee, or liberal arts colleges that have a required basic course and sufficient freshman enrollment.

What Sharon has in mind are two things: first, to accumulate a list and samples of all such anthologies that she can (she has already learned of books of this type at Augusta College, Oklahoma State, Howard University, and St. Anselm's), and second, "because it is very hard for smaller colleges to take advantage of the publishing opportunities to do your own collection, maybe there is enough in common that we can begin going together and use the same book in several universities."

If you know of any specially prepared collections or handbooks, please write to Sharon. Better still, send her a copy and she will do reviews of these for HE-- something that might benefit everyone. Even the publishers! Professor Scholl's address is Jacksonville U., Jacksonville FL 32211.

While we're in Florida, ALEXIS I. DU PONT DE BIE is an NAHE member who combines psychology and humanities in programs for gifted and creativity education. He'd like to hear from educators with similar interests and concerns. Write to the Psychosynthesis Foundation of Florida, 164 Seaspray, Palm Beach FL 33480.

In Indiana, CHARLES BLANEY is doing preliminary work on a state network with potential affiliation with NAHE. Dr. Blaney is Executive Director of the Indiana Council of Teachers of English. His plans indicate a preliminary meeting of all teachers interested in interdisciplinary humanities. Write or call him at ISU, Terre Haute IN 47809.

From Arizona, VASANT MERCHANT sends a copy of the latest issue of ARIZONA HUMANITIES ASSOCIATION JOURNAL with over fifty pages of articles such as "Sociology as an Art," "The Tyranny of Mediocrity," and "New Frontiers in Art Education." If you'd like to subscribe, write to Dr. Vasant Merchant, Editor, AHA Journal, Box 6031, Humanities & Religious Studies, NAU Flagstaff AZ 86011.

From Minnesota, SUSAN GROSS writes that two new volumes in the Women in World Area Studies series are ready. These are:

> Volume I Women in Latin America - from Pre-Columbian Times to the 20th Century describes the lives of women in pre-Columbian times through the conquests by the Spanish and Portuguese and the wars for independence. The status of the Maya, Inca, and Aztec women is examined. Accounts by travelers to Latin America are used as sources of women's history.
>
> Volume II Women in Latin America - the 20th Century reviews two controversial issues that concerned women in the early 20th century: the struggle for the right to vote and for the right to receive an academic education.

The books are priced at $6.95 each, the teachers guide at $2.50. A sound filmstrip Women in Latin America is also available with two tapes, in both Spanish and English, priced at $40. They are available from Glenhurst Publications, Inc. Central Community Center, 6300 Walker St., St. Louis Park MN 55416.

If you are interested in enriching Afro-American studies in your teaching, the Visions Foundation is right now preparing what sounds like a Smithsonian-like sumptious, four-color magazine. For more information, write to The Visions Foundation, National Museum of American History, Smithsonian Institution, Washington DC 20560.

Speaking of sumptiousness, two recent grants relating to humanities education may be worth inquiring about:

CBS Inc. has made a $750,000 grant for the purpose of establishing a Corporate Council on the Liberal Arts at the American Academy of Arts and Sciences. The Council will be a vehicle for original research projects examining the influence which a liberal arts educational background has on effective business leadership. It is hoped that the existence and the work of the Council will represent encouragement to liberal arts institutions; that it will put into better perspective for young students and parents the specific strengths of a liberal arts education; that it will place corporations in a stronger position to determine to what degree and how best to affect the recruitment of undergraduates or graduate students with a liberal arts base; and that it will provide a clearinghouse for related information within the corporate community. The Council will not attempt to influence liberal arts curricula, although it will constitute a central accessible source of corporate information for academics who may wish to make use of it. Contact for information is John Voss, Executive Director, American Academy of Arts and Sciences, 136 Irving Street, Cambridge MA 02138.

Outstanding humanities programs for adults is the focus of a $190,000 grant awarded to Johns Hopkins University's School of Continuing Studies by the National Endowment for the Humanities.. Twelve presenting institutions - including Harvard, Duke, University of Chicago, St. Johns (Annapolis), Brooklyn College, Stanford, and Johns Hopkins - will conduct three regional workshops for colleges and universities who wish to upgrade or create humanities programs for non-traditional students. Public and private institutions of all sizes will be invited to apply for one of three regional meetings scheduled for November at Johns Hopkins University (Baltimore), February at the University of California-Berkeley, and May at Washington University (St. Louis). Endowment funds will support most participant expenses. Write to School of Continuing Studies, The Johns Hopkins University, Baltimore MD 21218.

And here's another new publication, SCAN, the newsletter of the Council of Liberal Learning. The first issue has engaging titles: "Higher Education in the Grip of Its Disciplines," "Business in the Liberal Arts," etc. Membership in the Council is $30/year. SCAN is bimonthly, and membership entitles one to attend regional seminars. Council of Liberal Learning of the Association of American Colleges, 1818 R Street NW, Washington DC 20009.

UPCOMING

The **Association for Integrative Studies** meets at Eastern Kentucky University on October 17 to 19, 1985. The theme will be "Higher Education at the Crossroads: Critical Choices and the Role of Interdisciplinary Studies." Dr. Joseph Kockelmans of Pennsylvania State University will be the keynote speaker. Dr. Kockelmans is the editor of Interdisciplinarity and Higher Education and one of the nation's most prominent philosophers. The newly combined Pedagogy and Politics Network will be conducting a workshop on the problems of teaching interdisciplinary courses on traditional campuses (as opposed to interdisciplinary or problem-oriented institutions). For general information, write to Professor Ann Brooks, Humanities, Eastern Kentucky University, Richmond KY 40475.

The Twenty-Fifth Annual Conference of the **Association for General and Liberal Studies** October 31 - November 2, 1985 at the Westin Peachtree Plaza Hotel, Atlanta, Georgia. The conference theme is "Liberal Education: Expanding Horizons in a Shrinking World." The conference will provide a forum to explore innovative ways of addressing issues such as: The need for general education reform to bring coherence to an everexpanding knowledge base; the challenge of developing students' ability to understand and contribute to the world community; the responsibility of enabling students to live productively in a technologically advanced society; and the importance of preparing students to make responsible value judgements in a rapidly changing environment. The registration fee for the conference $85. For conference information; call or write to: Dr. Elliott W. McElroy, Division of Humanities, Clayton Junior College, Morrow, GA 30260, (404) 961-3420.

"Games and Simulations in the Philosophy Classroom" will be a topic for a conference in Asheville, North Carolina on November 8-9. Contact Frans van der Bogert, Philosophy and Religion, Appalachian State University, Boone NC 28608.

Literature and Science Symposium November 14-15 on the campus of Georgia Tech. Speakers: Barbara Herrnstein Smith, literary theorist from the University of Pennsylvania; Allen Debus, historian of science from the University of Chicago; and Stephen Toulmin, philosopher of science from the University of Chicago. For information contact Paul B. Armstrong, College of Sciences and Liberal Studies, Georgia Institute of Technology, Atlanta GA 30332.

"Between Object and Child: The Teaching of Art History and Criticism in the Schools," a conference November 15-16 sponsored by the Maryland Institute, College of Art, 1300 West Mount Royal Avenue, Baltimore MD 21217.

The annual meeting of the **National Council for the Social Studies** will be held in Chicago this fall. The theme is "Successful Social Studies: Classroom Excellence." Meetings will be November 22-26, 1985. Contact Peter Stavros, Director of Meetings, NCSS, 3501 Newark Street, Washington DC 20016. 202-966-7840.

And in January (9-11), the **Association of American Colleges** annual meeting will be held at the Fairmont Hotel in New Orleans. The conference theme is "Liberal Learning in and the Working World." For information, write Annual Meeting Office, AAC, 1818 R Street NW, Washington DC 20009.

On the last two days of January, **Bard College** will sponsor its annual conference on for high-school and college teachers, with this years theme "Knowing How and Knowing That: The Teaching of Critical Inquiry in the High School and College Curriculum." Write to Amie Zeitler, Bard College, Annandale-on-Hudson, NY 12504.

The **American Culture Association** will hold its 1986 convention at the Atlanta Hilton Hotel April 2-6, meeting jointly as always with the Popular Culture Association. One of the sectional areas of ACA is on "Academics, Curricula and Teaching." The scope of this area is very broad, including not only historical papers on American education, but presentations on teaching and learning in contemporary American culture. The emphasis is on interdisciplinary approaches to humanities, American studies, history, women's and minority studies, gifted education, writing, etc. These conventions are lively and boundlessly varied with over one thousand participants giving research reports on folklore, popular television, material culture, science fiction, literature of the sea, sports, local history, medieval literature, cultural geography, regional writers and more.

You may procure general announcements by writing to "1986 PCA/ACA Convention," Popular Culture Building, Bowling Green State University, Bowling Green, OH 43403.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Senior Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to redraw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one or two pages (300-700 words) for practical tips, sample assignments, commentaries, etc.; and articles of four to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

*THEORY "Piaget and Theories of Integrated Study"

*ADMINISTRATION "Crediting Departments for Team Teaching"

*HISTORY "Nineteenth-Century Multi-Media at Chautauqua"

*RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

*"What you should know about teaching novels in a philosophy course"

*"Pre-teaching history students for an art museum field trip"

*"How to help non-musicians to follow a score"

*"A designer speaks of humanities bulletin boards"

*"Getting adults to role-play in public humanities programs"

*"Understanding Oedipus: An Actor's View"

What we don't want:

*Creative writing by teachers or students (it doesn't relate to our purpose)

*Syllabus outlines (curricula should be explained, not listed)

*"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

*"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

*"Humanistic counseling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

HUMANITIES EDUCATION

Dedicated to the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions.

ISSN 0882-5475

HUMANITIES EDUCATION is published by the National Association for Humanities Education
with editorial offices at the Department of Philosophy & Humanities
University of Minnesota, Duluth, Duluth, MN 55812

The University of Minnesota is an Equal Opportunity Educator and Employer.

VOLUME THREE: NUMBER ONE: JANUARY, 1986

STAFF

EDITOR: Fred E.H. Schroeder, Professor of Humanities, University of Minnesota-Duluth

ASSOCIATE EDITORS: Sharon Scholl, Professor of Humanities, Jacksonville University; Susan Coultrap-McQuin, Assistant Professor of Humanities and Women's Studies and Director of Women's Studies, University of Minnesota-Duluth

CONTRIBUTING EDITORS: Francis M. Nevins, Professor of Law, St. Louis University School of Law; Burton Raffel, Professor of English, University of Denver; Jeremiah Reedy, Professor of Classics, Macalester College

WORD PROCESSING: Barbara Williams, Word Processing Operator, University of Minnesota-Duluth

Published three times annually by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Assistance for the production of HUMANITIES EDUCATION has been provided by the College of Liberal Arts, UMD, Robert Franz, Acting Dean. Subscriptions are $12 per year. Checks should be made out to NAHE and sent to HUMANITIES EDUCATION, Department of Philosophy and Humanities, UMD, Duluth, MN 55812.

A MESSAGE FOR SUBSCRIBER-MEMBERS

We apologize for being once again late in getting your copy of HUMANITIES EDUCATION to you. An administrative change at UMD altered our production schedule. We hope to be back onto a stricter calendar by the end of the year.

CONTRIBUTOR INFORMATION

Contributors should consult the Editorial Policies sheet carefully. As will be seen, HE is wide-ranging, quite permissive and has no "party line" in respect to definitions of **humanities, interdisciplinary** and **education,** but the wide boundaries are nonetheless firm. Please do not submit articles over ten pages long unless you are planning to revise. We particularly seek brief (1-4 page) items of a "how-to" nature for CONNECTIONS. Deadline for Spring is Washington's Birthday; deadline for Fall, the Fourth of July; deadline for Winter, Columbus Day.

Copyright 1986 by HUMANITIES EDUCATION

PETER THORPE

ARTS, HUMANITIES & THE CRITICISM OF HAROLD BLOOM

Stimulating Thoughts About the Arts

One thing desired by all artists--poets, musicians, painters, film-makers, etc.--is to be original. Thus one of the problems faced by creative persons is how to avoid giving the impression that what they are doing has been done before. Yet in a manner of speaking there neither is nor can be anything new in art: the underlying dramatic structures in an absurdist play by Harold Pinter or Edward Albee are essentially the same ones exploited by Aristophanes twenty-five centuries ago, just as many of the unaffected shapes and lines in a Picasso painting were present in so-called "primitive" art several millennia before Picasso was born.

Forever charged with the responsibility of creating something new, under a sun under which there is nothing new, the modern artist seeks strategies through which to escape the influence of the past. One of the functions of critics is to understand these strategies and to pass the understanding on to the public. Few have done this more dramatically than Harold Bloom, author of The Anxiety of Influence (1973), A Map of Misreading (1975), Kabbalah and Criticism (1975), Poetry and Repression (1976), and several other works of high volatility. These are radical studies of poetry which shed light on the writer's never-ending pursuit of originality. Bloom's fundamental position is that there is really no such thing as true artistic uniqueness but that poets try (consciously and unconsciously) to achieve the illusion of originality by altering or misconstruing the poets who came before them.

According to Bloom, the poet uses any of six strategies or "revisionary ratios" to de-emphasize or disguise the precursor's influence. The purpose in the following paragraphs will be to take Bloom's ratios beyond the realm of poetry and to apply them to some of the other arts, both classical and popular, with the idea of showing how the artist struggles to overcome the burden of the past. Because Bloom's ideas are controversial, it is not likely that we'll agree with everything he says;

on the other hand, we will find that he causes us -- and our students -- to think about art in a manner that can be both fruitful and illuminating.

Bloom argues that one of the more common strategies used by the artist to avoid giving the impression of leaning too heavily on the precursor is to borrow but to do it in a way that suggests that the precursor somehow missed the point or got off the track. In The Anxiety of Influence and his subsequent books, Bloom's term for this strategy is clinamen, which implies a swerving motion. In the story of Faust, for instance, a good many of us as twentieth-century readers may prefer the later treatments of the theme, in which Dr. Faust undergoes redemption or salvation and escapes eternal damnation. This positivistic kind of Faust is the one we meet in Goethe, in several operas, and in more popular versions like the short story The Devil and Daniel Webster or the musical comedy Damn Yankees. We recall that in the medieval German legends about Faust and in Doctor Faustus, Christopher Marlowe's Renaissance play, the hero pays the price for his supernatural powers and is marched off to hell in the end. To a modern audience, these earlier versions of the Faustian tale may seem to swerve off on an undesirable tangent, while the later ones, in which Faust is saved, seem to march straight on to a more sensible and palatable conclusion. The modern Faust makes so much "aesthetic sense" to us that we can momentarily forget that without the grimmer precursors of the Renaissance and Middle Ages, there would be no Faust at all. What has happened is that the more recent artists have succeeded in giving the impression that their forerunners misunderstood the story altogether. Thus, paradoxically, the newcomers may seem more truthful and "original" than that which they're imitating.

We have seen how the later artist makes the earlier one seem to swerve off the correct path. Closely related to this clinamen maneuver is a second strategy which, according to Bloom, is to make the precursor's art seem unfinished, as though it was somehow cut off short. He labels this device tessera and takes the term "from the ancient mystery cults, where it meant a token of recognition, the fragment say of a small pot which with the other fragments would re-constitute the vessel. A poet antithetically 'completes' his precursor, by so reading the parent poem as to retain its terms but to mean them in another sense, as though the precursor had failed to go far enough."

The tessera principle obtains in the other arts and is especially noticeable in classical music as well as in rock and disco music. Some of the compositions of Paganini, especially the Capricci, may serve as examples. This eerie genius, who like Dr. Faustus was thought to have sold his soul to the devil, published very few of his compositions because he did not want to give away any of his secrets of virtuosity. After his death, however, his works became the inspiration for a number of composers, including Brahms, Rachmaninoff, Blacher, Schumann, and Busoni. It may seem to many listeners that what these later artists are doing is finishing what Paganini left unfinished, even though this is not actually the case. Yet a clever reworking of an earlier piece can make that piece seem incomplete and very much in need of "filling in" or adding flesh to the skeleton. And as we watch--or hear--the fleshing-out process occurring in the modern composer's music, we may be charmed into forgetting where it all came from in the first place.

Of course, an artist occasionally furnishes a clue, as in Judy Chicago's elaborate Dinner Party, a triangular sculpture reminiscent of the simple triangular cattle skulls of Georgia O'Keefe. Chicago openly admires the work of O'Keefe and has labeled a place for her at the three-sided table. However, the fullness and complexity of Chicago's art makes her precursor's paintings seem stark and incomplete by contrast. One implication here is that the revisionary ratios can function simultaneously to pay homage and to make criticisms of forerunners. Such is the ambivalent nature of art.

The tessera is also a principle in the world of popular or rock music. Thus, the recent craze for disco music is in reality a craze for something much older: the staggered rhythms of the rumba, samba, mambo, and other "Latin American" musics, from which much of the discotheque sound, with its slightly "stumbling" quality, derives. Yet the precursors, the Xavier Cugat sorts of tunes of the 1940s, will always sound scattered and incomplete indeed when compared to the electronic McLuhanesque ensilings of Studio 54. It may not be extravagant to see an analogy here between disco's use of Latin American music and the early Shakespeare's use of Seneca in Titus Andronicus and Plautus in The Comedy of Errors. Both plays seem to owe so much to the ancients and at the same time make the ancients sound patently unfinished, as if Plautus had completed only half of the "assigned task," which was to develop not one but two sets of twins.

A third meaning of giving the impression of originality is the kenosis, a term that Bloom derives from St. Paul's Epistle to the Philippians, which describes how Jesus gave up his divine status to become a human being, in order to serve God more effectively on earth. Bloom theorizes that recent poets act in a similar manner when they appear to abandon their lofty status as artists for the purpose of making their precursors seem to undergo the same kind of reduction. In short, the later writer lowers himself in order to lower the earlier one. This is really a defense mechanism, because the modern artist, knowing he can never compete with the great original may seem even more humble or ordinary than the later work which it inspired.

We can see this effect in some recent musical comedies modelled on the Bible, two of the most successful being Jesus Christ Superstar and Godspell. When the shows first appeared, there were objections from conservative Christian leaders, who were afraid that these colloquial and sometimes bawdy musicals would besmirch the dignity and holiness of the scriptures. When they are performed well, Godspell and Jesus Christ Superstar can have the effect of making the Bible, which is a consummate work of art, seem eminently approachable, easy to compete with, and even a little low-brow. In painting, too, we find the Bible powerfully humbled, as in Thomas Hart Benton's Susanna and the Elders, in which the heroine is a kind of dust-bowl farm girl and the Elders are impoverished farmers or hillbillies.

Of course, the kenosis or humbling-process is by no means restricted to religious art. Many secular poets, sculptors, painters, or musicians know the technique, as becomes all too clear when the slangy jazz, pop, or rock composer borrows themes or structures from classical music, as in the disco hit tune, "A Fifth of Beethoven." Though it made the flesh crawl on many lovers of the classics, it was good rock music in its own right. The Pop Art movement of recent years may also represent a kenosis, not against any particular precursor but against art in general. To think of the works of Andy Warhol, Claes Oldenburg, Roy Lichtenstein, or Robert Rauschenberg is to think of a "bringing down" of the whole ethic of creativity; yet Pop Art is a creative mode, too.

Still another strategy used by later artists to escape the influence of the past is daemonization or the "Counter Sublime." The earlier artist, whether it be Aeschylus, Fellini, Chopin, or Frank Lloyd Wright, has a certain uniqueness about him; he in in a class by himself, and those following him are confronted with the problem of trying to come up with their own uniqueness in the wake of a giant who seems already to have done everything, leaving nothing behind to be invented anew. The solution, as Bloom says, is to imitate in a way that seems to "generalize away the uniqueness of the earlier work."

Such a procedure can be seen in twentieth-century architecture, in which there is a widespread tendency to follow the works of the modern giants--the integrated, ground-hugging structures of Wright, the glass boxes of Mies van der Rohe, the grilles of Edward Stone, or the swoopings and cubisms of Le Corbusier. The influence of these famous architects can be seen everywhere now, not only in churches and restaurants and office buildings, but in inexpensive private homes as well. The proliferation is such that we tend to succumb to the illusion that what Frank Lloyd Wright and the others did is relatively easy to do. In effect, much of the uniqueness of the precursors in modern architecture has been generalized away.

The same phenomenon can be found in the other arts: the bold and blue strokes of Picasso are everywhere now; statues by unknowns recline or stretch in the manner of Henry Moore or Giacometti; and it seems that anyone can make a mobile after the manner of Alexander Calder or a wall-sculpture after Louise Nevelson. Gene Kellys and Fred Astaires are not hard to find today, along with the numerous Nijinskys in the ballet, creatively making the inimitable imitable. Four decades ago it was possible for Lillian Moore to write of Nijinsky that "with Vestris and Taglioni alone he shared the ability to create an illusion of actual suspension in the air." Today, with the routine flights of Rudolph Nureyev, Mikhail Baryshnikov, Alexander Gudonov, and many others, the uniqueness of Nijinsky and the select few has been thoroughly daemonized.

The fifth revisionary ratio detailed by Bloom is askesis, which is a gesture of "curtailing." Here the later poet, rather than humbling himself or herself as in the kenosis, undergoes a kind of "holding back" or self-discipline or self-restraint, with the result that the poem being imitated may also seem restrained or curtailed. The precursor appears to get reduced somewhat from its fullness, from its lofty and inimitable status. The askesis strategy is especially apparent in much of the "serious" poetry of the last several decades, which has existed more or less steadily in an academic mode of conservatism and quietude, from which it is just now emerging, helped along by the confessional outbursts of the feminist and minority poets of the sixties and seventies--people like Anne Sexton, Diane Wakoski, Baraka (LeRoi Jones), and Don Lee. Readers were beginning to tire of what they saw as a dry, oblique style which turned its back on the real blood and meat of the world.

The askesis is also very evident in the "progressive" jazz of the forties and fifties, a music which frequently has about it a smooth self-disciplined tone, giving rise to such critic's metaphors as "button-down" or simply "cool." In the compositions or performances of central jazz figures like Miles Davis, George Shearing, Dave Brubeck, Stan Getz, or the Modern Jazz Quartet, we detect the influences of earlier masters like Louis Armstrong, Bix Biederbeck or Scott Joplin; but we also detect a new sense of restraint or curtailing, with which the early masters would never have been comfortable. On the other hand, few listeners would object to the ultimate effect of the curtailing, which was to spawn a new kind of cool jazz that manifests itself in such delightful classics as "Four Brothers," "Take Five," "Boplicity," or "Django."

Among the painters and sculptors, one might think that Pop Art goes as far as any "anti-art" could go. However, the subsequent movement of "Minimal Art," with its stark, restrained geometry and huge blank spaces, can sometimes have the effect of seeming to over-restrain the Pop Art out of which it arose. To view the severely curtailed canvases of Frank Stella, Leon Polk Smith, or Al Held, for instance, is to be induced to sense a definite inadequacy in their precursors.

Bloom's sixth and final revisionary ratio is his most radical and controversial. Using as metaphor the apophrades or "the return of the dead," he argues that under certain circumstances the later writer actually seems to create the earlier writer's art: "the new poem's achievement makes it seem to us, not as though the precursor were writing it, but as though the later poet himself had written the precursor's characteristic work." Although this theory may at first strike us as far-fetched or slightly outrageous, it does furnish us with an insight into still another means through which the later artist can seem to "control" the overwhelming influence of the past.

The tradition of the movie remake is a case in point. One of the most active persons in this popular genre is Warren Beatty, whose Bonnie and Clyde and Heaven Can Wait, both successful, are lavish resuscitations of old black-and-white films about the same matters. When we return to the originals they seem somehow robbed of their power, hopelessly skeletal and superseded. As moviegoers, we ourselves are sometimes a party to the apophrades process, as in our "recalling" the line "Play it again, Sam" from Casablanca, a line which does not occur in the movie but which we have belatedly written into it and which somehow sounds more "convincing" and "authentic" than the original script. It is a refrain in Bloom's criticism that "misquoting" the greatness of the past is a viable means of transcending it.

Illusions of the later artist "creating" the earlier figure occur in nearly all of Shakepeare's plays, with the possible exception of Troilus and Cressida, which may fall short of Chaucer's treatment of the same essential story two hundred years before. In the other plays, however, Shakespeare so outstrips his sources that they take on the appearance of little skits or outlines that he did with his left hand. Stylistically, his chief source is Christopher Marlowe, who is frequently echoed in the early plays, especially the Henry VI trilogy and Richard II. But when we turn to Marlowe after reading Shakespeare, such works and Edward II and The Jew of Malta can seem like lesser items that Shakespeare composed in his apprenticeship, after which he went on to larger things.

In music, we see Bach "creating" his precursor Vivaldi by arranging his concertos, and in sculpture the achievements of Michelangelo--David, Moses, the Pieta--are so compelling and real that for many of us the ancient Greek and Roman statues seem like descendents instead of ancestors, so that "carefully researched" books like Benjamin Rowland's Classical Tradition in Western Art seem to miss the point when they confidently assert that "the immediate classical prototype for Michelangelo's David is Castor and Pollux on the Quirinal Hill."

Bloom's six revisionary ratios are applicable not only to individual artists but also to the broad shifts and changes in all of the arts from century to century. The effect of his insights is not merely to give new names to old revolutions--Romanticism, Pre-Raphaelites, the Bauhaus School, and so forth; on the contrary, his theories support the idea that a number of the so-called "revolutions" in the history of the arts are not revolutions at all, but rather evasive strategies on a vast cultural scale, through which the painters, sculptors, architects, writers, and musicians of a certain period attempt to be creative and original in the aftermath of major figures who seem already to have invented everything.

We can discern such patterns in the Romantic arts, and although there isn't room to survey all of them here, it can be noted briefly that the strategy of the tessera is very much at work in the areas of painting, architecture, and music. In the painters, for example, it is a kind of cliche among art historians that Delacroix as a powerful Romantic was instrumental in the revolution against the stiff academic classicism epitomized by David and Ingres. To look at The Horatii or Marat Assassinated or The Bather and then to turn to a Delacroix--or a Goya, for that matter--is to receive the impression that the motion and action in the neoclassical painters is merely implied and never presented, as in neoclassical plays by Corneille, Racine, Calderson, or Dryden, in which the violence is kept offstage. The trick of the Romantics is to show much more of the physical action and thus to make their precursors appear incomplete. How tame the exactitudes of the earlier painters might seem when compared to the unleashed fury of Delacroix's Lion Hunt or Heliodorus Driven From the Temple or Goya's Second of May! It will always look as though "the precursor had failed to go far enough."

I leave it to readers of HUMANITIES EDUCATION to apply these concepts further, but it seems clear that Harold Bloom's six revisionary ratios offer fertile opportunities for students of the several arts to examine relationships between individual artists or between significant movements or "revolutions" in the history of culture. Although Bloom's theories can by no means answer all the questions about painting, sculpture, architecture, poetry, and music, his findings can guide us toward the more productive avenues of inquiry. He is especially useful in studying the problem of originality in the arts, from the most popular to the most classical. Moreover, the revisionary ratios can be taken beyond the realm of the arts, into other humanistic areas such as history, philosophy and anthropology, to inquire into the ways in which "belated" thinkers in these disciplines cope with the influences of their great precursors--e.g., Gibbon, Plato, Sir James Frazer. The possibilities are more than intriguing.

CLAIRE HIRSHFIELD

MORAL CHOICES IN A CLOSED SOCIETY

Teaching the History of Fascism

How does conscience relate to the way in which we live our lives? How have ordinary individuals responded to the trauma which the events of the twentieth century have imposed upon them? To what degree have differing ethical perspectives shaped crucial decisions affecting the course of all people's lives in modern times?

These are a few of the questions which practicing historians must inevitably confront, if the events of our century are to acquire meaning for the often irreverent and largely ahistorical generation of students currently enrolled in our classes. Especially in a course which deals with a subject such as fascism, it is not enough simply to employ the traditional tools of the craft: chronological narrative, diplomatic exchange, statistical analysis, and so on. For although the "what" and the "how" of the era can be satisfactorily explained with the aid of such tools, the all-important questions of motivation and the overriding ethical dimension of the subject somehow fall through the cracks, leaving students numb by the atrocities unfolding before them but fundamentally unmoved. Surely this is not enough. Confronted by an era unlike any other in modern history, teachers must assume the duty and the privilege of evoking some degree of empathic understanding on the part of their students and ultimately of enlarging their capacity to draw the moral judgments which the cumulative experience of those years suggests.

In 1976 I inaugurated a course in the history of fascism and nazism at the Pennsylvania State University. For many years I used the somewhat traditional lecture-centered methods which came most easily to me and with which I felt most comfortable. Beginning with a standard analysis of the intellectual roots of fascism in the nineteenth century, I proceeded to survey the fascist phenomenon in the twentieth, with special emphasis upon the national socialist state in Germany, A briefer nod toward Italy under Mussolini and Japan in the 1930's was included.

Fascist movements in eastern Europe were also noted, as were their less successful counterparts in west European societies. In general my aim was the broadest possible coverage of fascism in its many forms between 1919 and 1945.

While student evaluations were generally positive, over the years I became increasingly dissatisfied with my syllabus. Cramming a class full of information about ten separate fascist movements in a fifteen-week semester left little time for an exploration of human motives and behavior or for consideration of the ethical and moral implications of the subject. While historians are trained to eschew value judgments in favor of "scientific" objectivity, surely one avoids a fundamental responsibility to truth if what transpired in the Nazi state is explained on the basis of value-free narrative alone.

A fact-filled lecture, moreover, may offer comprehensive coverage but it may also fail to suggest the texture of the times. The terrors and anxieties of ordinary Europeans and their simultaneous hunger for rebellion and order had eluded me. While I had examined in detail the lives of the great decision-makers, the forces determining the personal destinies of countless individuals and the difficult choices imposed upon them by the times were of necessity left unexplored. In recent years scholars have been increasingly attentive to "history from the bottom up." Many are now studying the experiences of small people whose lives have been profoundly influenced by history but who have nevertheless managed to maintain a personal system of values which has given them the strength to survive the rise and fall of political institutions and the subsequent shattering and reshattering of their lives. The need to incorporate the results of the new sociohistorical inquiry into an undergraduate course, while at the same time maintaining the integrity of the historical narrative became my principal motivation for a basic overhaul which has made my course one concerned as much with applied ethics as with standard history.

The restructuring of my syllabus was much influenced by my fortuitous choice of Simon Wiesenthal's The Sunflower as a reading assignment several years ago. Wiesenthal presents the reader with a parable-like situation which he personally faced upon liberation from a concentration camp. A young, conscience-stricken SS man on his deathbed confessed his sins to Wiesenthal and begged absolution for having participated in the crimes of the Nazi regime. "The dying man looked on me as a representative, as a symbol of the other Jews whom he could no longer reach or talk to," Wiesenthal writes. "And moreover he showed his repentance entirely of his own accord. Obviously he was not born a murderer. It was the Nazi who made him kill defenseless people." Unable to forgive the dying Karl, Wiesenthal left the room in silence.

The second half of the book consists of a symposium of responses to Wiesenthal's dilemma. Was he right to withhold forgiveness from a man who regretted his crimes and accepted his approaching death as a just punishment? It was a revelation to me to hear the reactions of my students to the various comments of well-known philosophers, theologians, and lawyers represented in the symposium. It was even more gratifying when they began to articulate personal responses to the profound moral issues implicit in the parable. Clearly these students had assimilated with ease the historical record encompassing the separate destinies of Simon and Karl, German and Jew, and had gone on from that point to approach the moral and ethical dimensions of that record. Even students uncomfortable with abstractions could grasp that while the young, innocent Simon had been shaped by a system of social and religious values, conditions of extremity had so altered him that to act upon those values would have required a heroism beyond all human capacity. They understood, too, that a residue of such values had miraculously survived within the SS man, although to have responded to them earlier would have required the superhuman coverage of a Kurt Gerstein who exchanged his SS insignia for a prisoner's rags when he became aware of the nature of the cause he was serving.

Convinced by the lively and intelligent reaction to The Sunflower that there indeed existed ways to evoke a thoughtful response from even bored and inarticulate students, I embarked upon an experiment which has transformed a traditional history offering, by shifting the principal focus to the moral and ethical choices with which ordinary people are confronted.

The new course begins with an effort to define such terms as conscience, duty, and morality. We contrast the Judeo-Christian tradition of "thou shalt not kill" with the imperatives of fascist idealogy. We debate relative versus absolute values, and we discuss the nature of situational ethics. We attempt to answer such questions as: Why be moral? When should authority be defined? Are moral values always a foundation for action? How relevant are moral constraints in an abnormal society?

Between ten and fifteen situations are next posted to serve as the organizational framework of the semester's research work. Each of the situations involves individuals and institutions facing critical moral dilemmas created by the pressures of life in a totalitarian society. Typical of these situations are the following which I have often made use of:

--an unemployed war veteran and a Nazi party recruiter
--a police chief and political demonstrations by extremists
--a Social Democratic tradesman and the local Nazi officials
--a doctor and the Nazi euthanasia program
--a Catholic priest or Protestant minister and the "Jewish Problem"
--an artist and the demands of the "new culture"
--a psychiatrist and a patient suffering from maladjustment to Nazi society
--a German soldier and his orders in eastern Europe
--a university student and his resistance to Hitler
--a German businessman and the offer of slave labor
--a member of the Judenrat or Jewish police in a Polish ghetto.

While the bulk of these situations pertain to the German experience it is also advisable to include examples pertaining to Italy and Japan such as the following:

--an Italian university professor and the loyalty oath
--a Japanese businessman and the co-prosperity sphere in Asia.

Several of these situations are drawn from the syllabus of Professor Richard Hunt of Harvard University. Professor Hunt pioneered the concept of using historical case studies to study moral dilemmas in a closed society. To his original list I have added a number of my own which I have developed on a trial and error basis over the years.

For each of the situations posed, students are asked to define the moral issues raised and to apply a variety of ethical assumptions that might lead to a decision in one direction of another. Among the ethical assumptions to be considered are duty, egotism, utilitarian, as well as the traditional Western core of social, national, and religious values whose common denominator is humanism.

As a preface to our classroom evaluation of the historical case studies, I ask my students to read Eric Hoffer's *The True Believer*, an extended essay dealing with such themes as the human longing for myth and the need to submerge oneself in a cause greater than the individual self -- all factors frequently in conflict with one's ability to sustain ethical and moral norms. Rabbi Richard Rubenstein's *The Cunning of History* is also of value. The author presents his reader with a series of painful vignettes, each serving to illustrate an "unspeakable truth" about the subconscious urges which have so often moved moral persons to commit immoral deeds both in repressive and in democratic societies.

Thus sensitized to the subtleties of ethical choice and human behavior, students are ready to begin research and to master the actual historical background of each of the situations posed in the syllabus. For while each has been chosen to illustrate the complexities implicit in the framing of adequate responses to moral dilemmas, illustrations drawn from the historical record are readily available. Because students are expected to research that record in the course of developing their presentations, the abstract quickly becomes clothed in flesh and blood. Students uncover the lives of little-known people, layer by layer; they evaluate the choices open to such people in difficult times; and they frame and debate appropriate responses on the basis of well-recognized ethical systems.

To illustrate how the course corks in actual practice I shall describe the way in which several of the given situations were handled by students. For the series of examples involving the police chief, the socialist tradesman, the artist eager to please, and the doctor anxious to serve, specific examples were assembled from such works as Richard Grunberger's *The Twelve Year Reich* and William Allen's *The Nazi Seizure of Power*. To cite but one of many examples used illustratively in class, the student presenter chose Karl Hengst of Thalburg as our representative Social Democratic tradesman confronting the local Nazi administration. Hengst was a leading figure in the town, long known for his opposition to Hitler. Although Hengst's courage did not extend to "fruitless heroics," in the beginning he chose to withdraw from civic life and to conspicuously refrain from all cooperation with the Nazis. But after his business was subjected to a boycott and he himself was placed under house arrest, he reluctantly gave in and joined the Nazi-run Peoples' Welfare Society as a sign of "repentance." Hengst faithfully paid his dues to the organization, but he also made practical use of his new connections to secure the release of several fellow socialists from Thalburg who were being detained in concentration camps.

Was life as a "tamed tiger" preferable to active resistance, students are asked at the conclusion of the narrative. Were Hengst's choices determined primarily by expediency or by a conscious need to compromise in order to remain a moderately effective force for rationality within the town? Was a natural instinct for self preservation at work? If so, was that a healthier response to the pressures of the times than an act of defiance which might have insured not only his own detention but that of his friends and family?

No consensus emerged despite the liveliness of the arguments marshalled on both sides of the questions. Instead students came to see that words such as "hero" and "coward", "valor" and "surrender" are often conveniently simple terms used to label the complex reactions of people to intolerable stress and that moral choice in such an ambiguous situation must be assessed in the light of conflicting imperatives.

Among the situations of greatest interest to my classes is that relating to the revolt of university students. For most of them the epic of the White Rose is particularly touching, and Richard Hanser's A Noble Treason permits them to attach the names and faces of Hans and Sophie Scholl and Christph Probst to the shadowy images of those few who summoned forth the courage to choose unambiguous Christian values in place of Nazi ideology. It is instructive to contrast the Scholls' defiance with the "accommodation" practiced by the equally anti-Nazi Karl Hengst and to measure the varying costs exacted from each.

The cases involving people who profited from the Nazi regime present students with even more difficult judgments. Thomas Keneally's Schindler's List has rescued from obscurity the German executive who managed to save thousands of Jews from consignment to Auschwitz, even as he personally hobnobbed with SS officers and enjoyed a life of privilege and material luxury admist the squalor of wartime Cracow. It is instructive for students to compare this episode and the somewhat rude treatment accorded Schindler by his fellow Germans after the war for the crime of "disloyalty," with the swift return to power and wealth of men like Albert Krupp, Friedreich Flick and the assorted executives of IG Farben whose unashamed use of slave labor has been amply documented. In each case students are forced to draw conclusions not only about the subversion of decent people by prospects of privilege, but also about the motives and fate of those who refuse under any circumstances to collaborate in wrongdoing.

The cases involving clergymen and doctors are even more replete with irony and ambiguity than those of the businessmen. It is a logical progression from Dr. Karl Brandt's post-war defense of euthanasia as "not a crime against man or humanity" but rather as "pity for the incurable" to the indefensible experiments undertaken by respectable, well-educated physicians at Auschwitz and Buchenwald? Students were indeed so shocked that people who had sworn to the Hippocratic Oath were capable of serving as functionaries in death camps - despite the well-documented case of Dr. Mengele - that it was difficult to follow the customary class practice of weighing alternatives and seeking a balance.

Several pre-med students were indeed inspired to make use of the oral archives housed at Gratz College in Philadelphia. The recorded testimony of survivors permitted them not only to affix names and identities to both victims and perpetrators but provided them with further proof of the malleability of medical ethics in a totalitarian society. The experiments of a Dr. Ding at the Typhus and Virus Center at Buchenwald upon an inmate named Kurt Kupferberg became the prism through which these ethics were seen and judged. Kupferberg records that he was injected by Dr. Ding, in company with other inmates, with typhus. After falling ill he was attended by the same Dr. Ding who treated him with various types of medicines, tablets, serums, and injections. Interestingly, Kupferberg's attitude toward Ding appears ambiguous. He appears to harbor little animosity against a man whom he saw as a minor cog in the vast machine of Buchenwald. Indeed, he comments upon Ding's polite manner and credits his recovery from typhus to the doctor's ministrations. Ironically, Ding emerges both as criminal and healer as one reads the deposition.

Student response to these revelations was interesting. They unanimously opposed such experiments as a subversion of medical ethics. They understood and applauded the post-war addition to the Hippocratic Oath which states: "I will not permit consideration of race, religion, nationality, party politics, or social standing to intervene between my duty to my patients. Even under threat I will not use my knowledge contrary to the laws of humanity." Yet there was no such unanimity when the question was asked: should scientific knowledge obtained through illegal experiments be utilized in the treatment of disease today? The majority condemned such experiments but expressed the view that if the experimental data obtained could be employed to save lives today, then it should be used. By moving beyond the actual historical case involving Dr. Ding and Kurt Kupferberg and by grappling with questions about which the scientific community is itself divided today, the class discerned the degree to which ambiguity cloaks choice even today-witness the recent disclosure that respectable Japanese drug companies have been routinely using formulae derived from experiments on unwilling prisoners of war in Manchuria with no compensation to victims who remain alive.

While the Holocaust provides one with the clearest exposition of unrelieved evil in an age of horrors, ambiguity here too occasionally intrudes, especially in the case of the Jewish ghetto policeman and the Judenrate members who were forced to choose which of their fellow Jews should live a little longer. Although the saintliness of a Dr. Janos Korczak who opted to remain with his orphans and to suffer their fate at Treblinka reminds students that for some rare individuals anguish burns away the dross and leaves a core of moral steel impact within, more instructive for our purposes were the cases of Rumkowski in Lodz, Merin in Sosnowiec, Gens in Vilna, and Czerniakow in Warsaw, all of whom served as chairmen of judenrate. Their diverse responses to the impossible pressures of the fate to which history had consigned them bears witness to the fact that a universal moral yardstick may well be inappropriate when applied to human beings in extremis. Victor Frankl's observation in Man's Search for Meaning, which had served us well throughout our study, was especially apt at this moment of reflection: "Sometimes the situation in which a man finds himself may require him to shape his own fate by action. At other times it is more advantageous for him to make use of an opportunity for contemplation and to realize assets in this way. Sometimes man may be required simply to accept fate, to bear his cross. ..."

Even the case of the German soldier following orders proved complex. For while there were numerous examples to be found of soldiers taking part in atrocities or looking the other way as the SS committed its crimes, there was also the case of Joseph Schultz, memorialized in a Yugoslav film, Joseph Schultz, which may be easily obtained from Audio-Visual Services, Pennsylvania State University. Schult was executed in 1942 by his fellow Wehrmacht when he refused to participate in the slaughter of innocent Serbian villagers during a reprisal raid against partisans. This case proved especially interesting to students, launching them on a search for analogies which clarified the ambiguous nature of guerrilla warfare. They also reconsidered the meaning of the soldier's oath and the imperative need to differentiate between legal and illegal orders, even though one wears the uniform of one's country.

The course I have briefly described prompts students to think for themselves and to express their ideas openly in class. Students are encouraged to speculated about the ways in which repression on the part of the state frequently breeds both compliance and revolt, heroism and cowardice, bravery and inertia. They are carried beyond the customary parameters of traditional history offerings in subtle but important ways. For by imposing a moral framework upon the raw material of history and forcing students to think themselves back into the skin of a single person tormented by conflicting choices and difficult alternatives, it is still possible to reattach human emotion to a study of the past and even to transmit a sense of what Frankl calls the "uniqueness and singleness which distinguishes each individual and gives a meaning to his existence."

A course on fascism can be one of the most significant students might take in a college career. It can have a profound effect by forcing each person to question fundamental values and to confront ethical and moral questions which go to the very heart of the relationship between human beings and their society in the twentieth century. It is a subject which in the end is too broad to be confined within a single discipline. Lord Bolingbroke remarked two hundred years ago that "history is philosophy teaching by example." Not all historians would agree that what they teach should be related either to philosophical truth or to moral practice; however, to present the past in terms of the terrible choices which a totalitarian society imposes upon ordinary people much like ourselves is not only to enrich the historical understanding of our students but inevitably to awaken the moral sensibility which must lie at the very heart of a humanistic education.

Sources and Recommended Readings

The most recent debate concerning the need to reattach values to the teaching of modern history took place at the American Historical Association's 1985 convention. The main points of the discussion are well covered in Karen Winkler's article, "A Historian Criticizes Value-Free Scholarship," The Chronicle of Higher Education, 8 Jan. 1986, p. 10. On the need to incorporate the experiences of ordinary people in the curriculum see Peter Stearns, "Toward a Wider Vision: Trends in Social History," The Past Before Us, ed. M. Kammen (New York, 1980), 213-218. In addition to the texts and films mentioned in the article several books have been especially useful in the development of the course. Among them are the following: John Hospers, Human Conduct (New York, 1961); Anna Pawelczynska, Values and Violence in Auschwitz (Los Angeles, 1979); Fred Mielke and Alexander Mitscherlich, Doctors of Infamy (New York, 1948); Victor Frankl, Man's Search for Meaning (New York, 1962); Saul Friedlander, Kurt Gerstein: The Ambiguity of Good (New York, 1967); Stanley Milgram, Obedience to Authority: An Experimental View (New York, 1974). A special issue of Moral Education Forum, vol. 6 no. 2 (Summer, 1981) contains a number of articles useful to the presentation of Holocaust-related material. The Anti-Defamation League of B'nai B'rith's anthology, Holocaust and Genocide: A Search for Conscience, edited by Harry Furman also is of great help in developing case studies and framing questions for classroom discussion. Of interest too is Gordon Mork's article "Teaching the Hitler Period: History and Morality," The History Teacher, vol. 13, no. 4 (Aug. 1980), 509-522. Mork describes a simulation game called Spiegeldorf, in which students develop an understanding of the situation of common people in Germany through role-playing techniques. On the important question of medical ethics and the Nazi euthanasia program see Gary Krum, "Nazi Bioethics and a Doctor's Defense," Human Life Review, vol. 8, no. 3 (Summer 1982), 57-61.

MS. PARTHENON

"Classic Drag: The Greek Creation of Female Parts", Sue-Ellen Case in Theatre Journal, October, 1985. The Johns Hopkins University Press, Journals Division, 701 West 40th Street, Baltimore, MN 21211. $15/year single issues $6.

We used to tell our classes that the Parthenon is the greatest architectural expression of the Spirit of Man. Now we have replaced this covert sexism by speaking of the Spirit of Humanity rather than of Man. We may have to go back, though, because the Parthenon, and its long/lost ivory and gold statue of Athena were actually instruments of male sexual politics. The Fifth Century in ancient Athens was a time of profound revolution, according to Case, who is an Assistant Professor of Drama at the University of Washington. While it is not clear whether Athens had been a matriarchal society prior to this time, a variety of changes occurred that firmly established patriarchal dominance. In the Sixth Century, women had not only participated in rituals and festivals, but they appear to have participated otherwise in public life. The underlying factor was a redefinition of the economic and political base as the family. The family became the key unit for the transmission of wealth and for citizenship.

Citizenship "was dependent upon family lines-- a son was granted citizenship only if his parents were citizens, but without a son the parents could not retain their citizenship." Women, therefore, became not only essential for the production of male offspring, but as a guarantee of absolute legitimacy, their access to other males was strictly limited. Their lives were relegated by the laws of Solon to the secure seclusion of private homes and their economic prerogatives were severely curtailed: "Women could only enter into inheritance transactions in the absence of a male and women were not allowed to barter for property over one bushel."

There is more than irony here; there is inconsistency. Women in the Athenian family were central to the power of free citizenship, but women were powerless commodities in the city-state. Enter myth, for when humans have recognized irreconcilable contradictions in behavior and values, we must invent a mediating rationale. The invention was "Woman," who "appeared as the opposite of man. This move can best be seen in the new myths and architectural depictions of amazons.... The new architecture of the Acropolis, the civic center of Athens, displays the downfall of the amazons and the rise of Athena." Amazons (the word means no breast) are the monstrous antithesis to all that is "natural" in Woman: they are warlike, they have no family units, they destroy male offspring, and they practice mastectomy, denying even that prime differentiating secondary sexual characteristic of Woman. Their defeat, illustrated on the frieze of the temple, is attributed to the rise of Athena, immaculately conceived by Zeus, born of brain, not womb. Indeed, Zeus assumes the power of reproduction by devouring his own wife, thus ending the line of the Titans and the dominance of the earth-mother-goddess. Athena, a virgin, defeats the Amazons, and over the decades, assumes divine governance of all the non-reproductive activities of the home and the polis.

At the same time, a new god, the effeminate Dionysus, takes on the female role of sexual reproduction, and his fertility rites evolve rapidly into all-male theatre. Yet the theatrical re-enactment of myths and legends requires female roles. The result, Case argues, is "the creation of female roles which lent themselves to generalization and stereotype" of the patriarchal images of Woman. In a feminist reading of the Oresteia trilogy, Case notes how the chorus, representing the male-dominated community congratulates Clytemnestra for "thinking like a man" and "mourns Agamemnon as one who had to fight a war for a woman and then be killed by one." In the final play, the old goddesses are represented as the hideous Eumenides, who ultimately are "confined to a cave and their function is no longer to revenge matricide, but to preside over marriages." This ending, Case says, sets the stage for the entire history of Western dramaturgy: "A majority of plays will conclude various kinds of civic, historical and psychological problems with the institution of marriage."

The final cap is applied by Aristotle, who in The Poetics, which has dominated dramatic theory to this day, denies goodness, bravery and cleverness to women and to slaves. Case concludes that, as many feminist writers have shown, the Greek plays are not guides to understanding the women of Greece, nor are they even representations of women as real humans. Plays like Aristophanes' "feminist" Lysistrata might become more authentic in production by playing the women like male actors in drag, indulging in the broad sexist vulgarities of Minsky's burlesque.

FAR & FORGOT...

"Say, it isn't so," by W. Walter Menninger in History News, December 1985. AASLH, P.O. Box 40983, Nashville TN 37205. $4/issue, $40/year.

Possibly nothing is quite so essential to the "humanities approach" than our insistence upon the validity of the human heritage (history) as touchstone and guide for experiencing life now. But just how valid is the heritage? After all, history is the community memory of human beings, and human memory, says Menninger, a psychiatrist who is chief of staff at the Menninger Foundation, is inherently and demonstratably faulty.

Faulty, that is, if faultless memory means total recall of all experiences in forms that admit no argument. This is a complete impossibility, indeed faultless memory is an absurdity. Even a computer remembers only what humans command it to remember, and the camera records objectively only what it is pointed toward, subjectively. And the most scrupulous of historians depends upon documents that are human artifacts, usually only those that have survived by way of selective preservation by humans. So let us rather call memory flawed than faulty.

Menninger, in this keynote address to the American Association for State and Local History cites a number of psychological studies of memory. In one, a psychologist recorded her daily experiences on cards over a five-year period and discovered her rate of forgetting was 30%. Moreover, what she remembered was not everyday experiences, but, unique, unrepeated" and "surprising events." In another thirty-year study of ninety-five people, it was found that memories became completed distorted, including memories of truly momentous changes. One subject in his youth was conservative, attended mass four times a week, and had a rather obsessive dream that was experienced forty times. Thirty years later, he insisted that he'd given up church altogether upon entering college, and he couldn't remember his recurrent dream. One conclusion, says Menniger, is that "there is a consistent potential to recall a part more consistent with their present views."

Studies of older people indicate what we have always suspected, that the brain-cells are impaired for short-term memory and immediate recall. But somewhat more surprising is that older people "re-write" their personal histories in epic terms," to make the uniqueness of themselves vivid. In this sense, the past becomes more real and more poignant. The myth is the reality."

History, and one might add historical anthologies and galleries, is a selection from the part of items deemed of value in the present, arranged in patterns that are consistent with individual perceptions of reality, right now.

EASY (?) AESTHETICS

"Developing Aesthetic Literacy Through Contested Concepts," by Karen Hamblen in Art Education, September 1985. National Art Education Association, 1916 Association Drive, Reston VA 22091. $50/year; single issues $9.

Aesthetics is a matter of choosing, in the final act. But in the final analysis, aesthetics is a matter of articulating one's choices. Teaching aesthetics as either philosophic exercise or dogmatic canons of rules, therefore, misses the boat in both act and analysis. Hamblen, who teaches art education at California State University in Long Beach, describes a learning activity that is disarming in its simplicity. Each student is asked to bring in two objects, one of which the student has decided is an art object, the other which is a non-art object. Thereupon the class is divided into small discussion groups who discuss their choices, try to explain their criteria and, if challenged, defend their decisions. Some students, of course, will select a "textbook example," but the assignment does not allow for outside certification as the justification, so every student must attempt to address issues of aesthetic valuation.

From observation, Hamblen has postulated seven thematic categories that emerge during unstructured discussion. These are Type, Media & Technology, Audience, Context, Time-Space, Artisan, and Function. In actual discussions, the categories overlap, and they probably are not strictly exclusive. In addition to thematic categories, she notes several "levels of experience." There are six such levels, but in this article, which is included in a magazine issue devoted to "Teaching Aesthetic Perception in the Elementary School," she provided detailed discussion of the first two levels, which can be handled by younger students (and which are essential at any level of sophistication). The "lowest" level is Description. Thus, students must describe the object in each of the thematic categories, e.g., in Type, students must "provide a linguistic object designation, such as a chair, a painting, a vase" as well as "definitional status, whether it is commercial, popular, folk," whether it is functional or natural, etc. In the category of Media & Technology, description tells of materials, techniques for creation, etc. In respect to Audience, the users of the object are described. Context: describe its socio-geographical locale of origin and use, its current environment (i.e., what may have been a coin in a purse now resides in a museum case), its social context (as being part of a birthday party or a High Mass). Description of Time-Space category provides a sequence of changing uses and values; description of Artisan may be by name of creator, or if anonymous, by class such as sculptor or weaver, or if manufactured, by collobortive process, or if natural (a rock, a piece of driftwood, etc.), by forces of nature. Finally, description of Function may include personal use or social use for practical or ornamental reasons.

The second "level of experience" is called Discussion. Hamblen gives four questions that may be asked about each object in reference to each of the seven thematic categories:

1. In reference to its [Type, Media & Technology, Audience, etc.] what influences its being or not being an art object?
2. In reference to its [Type, Media & Technology, etc.] what are the meanings and attitudes toward this object?
3. In reference to its [Type, etc.] what influences do these attitudes and meanings have on this object's art or non-art status?
4. In reference to its [Type, etc.] why is or is not this an art object?

The third "level of experience" is Criteria, wherein students try to achieve some degree of consensus about the standards that have operated in their Discussion Level, which, it will be remembered, provided only a structure for discussion, not a set of criteria for judgments of art or non-art. The next three levels are not spelled out in detail, but level four is Theory (are the Criteria elicited for this object compatible with an existing theory, or must a new theory be constructed?). Fifth is Meta-Theory (can the theory for the specific object be extended to other objects?). The sixth level is Multi-Disciplinary (is the Meta-Theory relevant to other fields, such as music, or architecture, literature, philosophy, etc.?).

The technique of "Contested Concepts" is indeed disarming in its simplicity at the outset, but as Hamblen concludes, "Far from the usual notion of aesthetics as a narrow and ascetic pursuit, aesthetics consists of contested concepts and issues that intrigue and beguile as they resist easy resolution."

LIFE'S REHEARSAL

"The Humanities and the Human Sciences: The Guide Hermeneutics Gives to the Study of Human Experience'" by Gary E. Overold

in Liberal Education, Fall, 1985.
Association of American Colleges,
1818 R Street NW Washington DC
20009. $20/year

"Hermeneutics" is the Greek word for interpretation. In the middle ages it came to be applied to the interpretation of difficult theological texts, and since then it has become the technical term for the science of interpretation of texts of all sorts. In an issue devoted to the theme of "Interpreting the Humanities," Overold, a philosopher at Clark University, proposes the reinstitution of what he calls an "ancient model" of hermeneutics as a means toward restoring student interest in the texts of humanities. The underlying difficulties will always be there, Overold admits, because one simply cannot expect people to be engaged in the study of the play of words and ideas when they may not be the least bit drawn to the materials of the humanities in their grossest forms. "Fascination of the text," he says, "is an acquired taste....the love of the thing for its own intrigue... requires an enormously high degree of sophistication."

But for much of this century practioners of hermeneutics have compounded the difficulty by separating the text from life. The motivation for such persons was a reaction to the "treacly sentimentalism of Victorianism," and what they produced in different disciplines and schools of interpretation was "scientism," New Criticism, "Formalism," Behaviorism and Logical Positivism, all of which asked us as students, teachers, critics and readers "to believe that the moments of life, of meaning, of truth, of the text, could be treated as atemporal occurrences with inherent sense-- that the meaning of the event was somehow in the event, like a hidden label." So much for the "recent model": how about the ancient model?

It will be familiar to all humanities teachers. The texts of humanities are the "rehearsal of life in imagination.... The text... becomes construed as an imaginative means for discovering value and disvalue in life." In short, texts of all kinds-- novels, poems, essays, plays, paintings, programmatic music-- are about Life. Now, a few facts about life. Life is an interdisciplinary experience, and as Overold quotes Williams James, the immediate experience of life is a "buzzing, blooming confusion." Thus the separation of texts by discipline, genre or critical approach to produce an achievable neat package for the hermeneut to interpret is probably more than a distortion; it is a lie. Furthermore, "Ambiguity is not a disease that needs a cure, as, for example, the Logical Positivists assumed; rather, it appears to be the salient feature of human understanding." Before we fiddle around with formal and aesthetic dimensions of the text, says Overold, we must remember that "the text is about some possible world to which it refers."

The inherent interconnectedness of life and of texts necessitates something of a revolution in the way we organize our disciplines and our academic administrative structure. Some European universities, and, in the United States, the University of Chicago have developed a new divisional designation, "The Human Sciences," to draw together the humanities and the social sciences. This is not merely a marriage of convenience; almost all of the critical schools that have emerged in the past three decades have had advocates and practitioners in the humanities and in the social sciences, all of whom are grappling with methodologies that will include rather than exclude all aspects of the buzzing, blooming confusion that is humanity. Structuralism, Semiotics, Cultural Marxism and other theoretical fields of study are not associated with any single one of the conventional disciplines.

To exemplify briefly what he means by the life-oriented hermeneutics, Overold suggests the "issue of sex roles," something that is of immediate and pragmatic concern for college-age people. Starting with Carol Gilligan's In A Different Voice, he suggests "empirically illustrating the gender-based tendency toward different forms of integration on moral matters "... examining" works of literature, painting, philosophy and religion for texts that speak to the core issue," whether defiantly or supportively, thereby providing for thoughtful textual analysis while maintaining the ambiguities and ambivalencies of the issue.

EAR FOR HISTORY

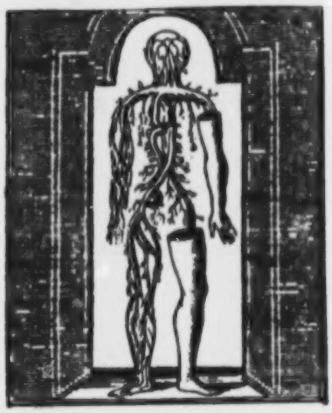
"Music (Horizons)" by Frederic Raimi in SCAN. Council for Liberal Learning of the Association of American Colleges, 1818 R Street N.W. Washington D.C. 20009. $30/year.

Plato would have outlawed most modes of music in his republic. Why? Were they equivalent to punk rock or like Stravinsky's compositions to Stalin's totalitarian government? Unfortunately, we will probably never know, but the question suggests some justification for the current movement in classical music for historical authenticity. The movement is only twenty-years old, although anticipated by composer Paul Hindemith who used Baroque period instruments in lectures in the 1920s.

There are research problems, not so much in the instruments themselves as in the make-up of ensembles and the nature of performances. Recently Joshua Rifkin has set Baroque fans on their ears by insisting that Bach's instrumental and vocal groups were very small, both because such was Bach's intent and because that's all he had available. Striving for authenticity should take into account the performance environment, too. The much smaller groups and softer toned instruments of the past were performed in small resonant rooms; transference of authentic performances into larger concert halls might almost cancel out the authenticity of the audience's experience.

It is doubtful that the experience is replicable: "We may now produce eighteenth-century sounds," writer Raimi, a cellist with a resident quartet at Duke University, "but we cannot reproduce eighteenth-century people, nor the conditions in which they live."

For one thing, today's listener hears authentic old sounds in comparison to the musical changes wrought since various developments in violins and bows greatly increased the volume of sound, both as cause and effect of larger and larger audiences. In other words, our ears, unlike those of previous generations, have the benefit of an aural repertoire of new and old (it was not until Felix Mendelssohn revived Bach's music that audiences or musicians included "oldies but goodies" in performances). Moreover, says Raimi, today we probably would not accept real sounds of the past: electronic recording methods have accustomed our ears to perfection, and the dazzling recordings have become as much the norm as an ideal for modern musicians.



"Understanding Science, Technology, and Engineering: An Essential Element of Cultural Literacy" by Stephen H. Cutliffe in Federation Review, July/August 1985. National Federation of State Humanities Councils, 12 South 6th Street Minneapolis, MN 55402. $1.25.

Simple-minded applications of the term "literacy" to modern learning abound, probably nowhere so simplistically as in "computer literacy" which often translates into typing via television screen. Yet understanding the languages science and technology are essential to cultural literacy today, for these "lie at the heart of networks of relations of interdependence that make contemporary social life more complex than ever before in Western cultural history." But how are we to achieve this literacy for all students, not merely for the science majors?

First, we should refurbish the old distinction between education and instruction. Instruction is an imposition of society's needs upon students. Society says we need engineers to beat Japan again, state funds are allotted to accelerate training in the skills needed for engineering, and presumably society will get what it paid for. But the educational significance of the science-technology literacies "is a function of their illuminating fundamental dimensions of human being in the world.... Not to have an appreciation of mathematics, of science, of engineering is simply not to know human nature, not to know of heroic things that human beings have done and are doing in the world and to the world."

Students who major in science or engineering may or may not develop the kind of literacy of which Cutliffe, an historian and editor of the Science, Technology and Society newsletter speaks, but the liberal arts students who is thrown into pre-major introductory courses is likely to come out illiterate. What should be provided is first, courses that present and examine the interrelationships between society and science and technology. Second are courses that develop understanding of science and engineering concepts, i.e., scientific reasoning, major methodologies and the most important theoretical models.

Engineering is most central to the achievement of this sort of literacy, Cutliffe maintains. Not that engineering is more important, but where "the sciences have always trumpeted their service to Truth, independent of what the implications of that truth might be for society" and technology has become a diffuse term that culminates in marketing of the products of engineering, often without any scientific or mathematical understanding, engineering is rooted in scientific concepts but "doubly rooted in society." Society defines the problems that engineers are to solve, and society tells what it is willing to pay and what it refuses to accept.

Schools and colleges are not the only arenas for developing cultural literacy that integrates mathematics, science, engineering technology and society: Cutliffe mentions museums of history and of science and industry, television programs like NOVA, and mass-circulation magazines like OMNI, Discovery and Scientific American.

1066 AGAIN

"Writing Games in the Bayeux Tapestry" by John Marshall Carter in English Journal, November 1985. National Council of Teachers of English, 1111 Kenyon Road, Urbana IL 61801. $30/year; $4/issue.

"If a picture is worth a thousand words," writes Carter, who teaches at East Carolina University, "a 230-foot by twenty inches picture might produce a lifetime of writing." Such are the dimensions of the famous eleventh-century tapestry depicting the events leading up to the Norman conquest of England and the subsequent events, and Carter makes a good case for his statement. As an introduction to writing games, he presents a series of twenty "Questions that Bayeux Tapestry Lovers Ask" including such items as "What was the purpose of the Tapestry?", "Was the artist a man or a woman?", "What does the tapestry tell us about the medieval view of folklore and mythology?", and "What does the tapestry tell us about kingship?" The writing games are lists of possible research and other topics gathered under some eight disciplinary headings. Here are a few:

> Write an essay about art forms contemporary with the Bayeux Tapestry.
> Create travel posters using the tapestry.
> Choose a number of peasants, give them names, and have them tell stories about events in the tapestry.
> Write an essay on the effects of the Conquest on England and Europe.
> Write an essay on sports and pastimes in the tapestry.
> Write a play in a modern setting in which the Bayeux Tapestry plays a central role.
> Write an itinerary for a trip to see the tapestry.

And so on. Carter provides a short bibliography keyed to some of the topics for teachers and students.

QUICKIES

"Who is an artist or musician whose works can be used successfully in English class?" by various authors in English Journal, November, 1985. NCTE, 1111 Kenyon Road, Urbana IL 61801. $30/year; $4/issue.

Readers of HUMANITIES EDUCATION will recall an insert in our magazine last year including a call for papers for a topical issue of English Journal on "Humanities and the English Teacher". The product of this includes not only the article abstracted above and provocative how-to articles such as "English by Any Name Is Still Humanities" but a score of 300-word responses to the question about pairing of artists or musicians with literary topics. Respondents included teachers in secondary and collegiate settings. (Several are also members of NAHE).

One teacher has for years used Paul Simon's "I am a Rock" with John Donne's "Meditation 17," but when she asked students to supply other parallels, their recommendation of Pink Floyd's "Another Brick in the Wall" was a revelation: "The lyrics speak of pain and isolation which seem much deeper than Paul Simon's broken heart." Another teacher finds the disturbing indefinable haze of Kurtz's haunting cry in Conrad's Heart of Darkness visually embodied in Edvard Munch's painting The Cry. Wagner's works, says another, integrate well with a unit on folklore, myth and legend, as for example with Lohengrin and Parsifal's relationship to Arthurian legends. Another respondent explained how William Hogarth's paintings and engravings can pair up with the satiric and moral writings of Swift and Fielding.

Some suggestions are for formal and structural relationships. The jazz vocal group of Lambert, Hendricks and Ross from a decade or so ago can help to clarify the differences between the prosody of Shakespearean sonnets and the "more rhythmically complex, counterpointed form of Gerard Manley Hoplins' 'sprung rhythm' sonnets." One junior high teacher uses the contemporary wood sculpture of Margaret Wharton as a cognate to poetry: "Wharton's chair art blends well with the study of poetry which allows pupils to manipulate verbal language forms and functions in a manner similar to the artist's restructuring of concrete, visual objects."

TALKING TO THE TREES

Review of Teaching Environmental Literature: Materials, Methods, Resources, edited by Frederick O. Waage, Modern Language Association of America, 1985. Reviewed by Sharon Scholl, Jacksonville University.

If you grade books as I do by the number of pages turned down with marginal comments written for future reference, this one rates a solid "A". It is about that wondrous land somewhere between the literary and the environmental and how to make one's way through it accompanied by a group of students. There is ample theoretical representation from such essays as "American Literary Environmentalism 1864-1920," by Frederick O. Waage, and "American Literary Environmentalism before Darwin," by Bruce Piasecki. However, the bulk of the book is devoted to classroom strategies and materials. There is one section on teaching environmental literature on site in cabins and down trails across the nation. There are three accounts of courses expressly created for regional application or for integration with professional major programs. As if this is not enough, we have the added convenience of a cumulative listing of all the works cited in the book and an additional listing of significant supplementary works. There is a list of bibliographies on environmental topics and addresses of information centers. There is a final listing of periodicals and organizations devoted to environmental concerns. This is not a humanities text in the sense of including materials from the fine arts systematically, nor from history or philosophy. However, for its wide range of literature and instructional designs the book is the mother lode.

An excellent preface essay by Walter H. Clarke, Jr. defines the range of environmental literature and its place in contemporary education. Seen as broadly inclusive, environmental concerns belong more properly to liberal education as a whole than to disciplines per se. They are regarded as one possible avenue to cure American myopia in our international relationships. Environmental literature is, by and large, personal -- the result of a deeply felt encounter between earth and self that balances the predominantly objective, instrumental approaches. Environmental literature is value-laden, encourages imaginative thinking and the connection of learning with living.

Environmental thinking has a long history in America that is concisely reviewed by Piasecki and Waage. Classic texts are mentioned, which reflect on such topics as the place of humans in a natural order, the age and purpose of humanity, and our effect upon the history of the earth. Richard Lillard's essay, "The Nature Book in Action," fairly bristles with the names and titles of famous American nature writers. The problem that one senses immediately is the need for some order in the accumulation of riches. Part two of the book presents five varied arrangements of these environmental materials, each directed toward some instructional goal. Four are carried on in conventional classroom situations.

The five models reveal the strategies of teaching that are practical and replicable. The place of the course in the curriculum, the student learners, the rationale for selecting readings, and the methods of evaluation are well detailed. One course stresses the personal element of the environmental encounter, uses such writers as Annie Dillard and Loren Eiseley, and assigns students to write personal journals. Another course is taught in tandem with a biologist, stresses varied views of humanity and nature (sufferer, defender, etc.), and includes student analysis of many forms of art. One course deals with the science-fiction genre, focuses on environmental problems, and encourages such student projects as films, cartoons, short stories, and musical scores. One seemingly reverts to the dustbins of tradition in adopting the Pastoral as its focus, but, surprisingly, finds representatives of that genre in Tolkien, Mailer, Agee, and Hemingway. The final model takes students who are life-long urbanites on nature explorations often based on the very texts they are reading and asks for their comparative responses in journals.

Part three deals with teaching writing through the study of the environment and nature literature. These courses deal with the basics of writing: point of view, comparison and contrast, argumentation, description. They do it through the encounter between humans and the natural world. It is writing, as Paul T. Bryant expresses it, that "must remain true to the objective facts of nature, but at the same time present the human response to nature" (p. 93). The writing has intellectual substance and often reflects on historic traditions about the world, the Judeo-Christian, Greek, Puritan, as well as the Romantic or strictly scientific. The writing may have a personal and expressly spiritual dimension and be directed through such materials as Georgia O'Keefe's paintings and poems by Hopkins, Frost, Hardy, and Dickinson. There can be writing workshops attached and activities as simple as an outdoor picnic with poetry readings to involve students in the active creation of literary ideas.

Some instructors value the field experience so much that they transfer the classroom to that setting. Three university-based programs using this model are detailed. There is the Yale seminar trip to Mt. Katahdin, which is linked to Thoreau's similar account. There is the trek through the North Woods of Minnesota, linked with Leopold's observations on country life in A Sand County Almanac and the trip to Arizona linked with Krutch's The Voice of the Desert. There is the trip to snow country in Maine's White Mountains that zigzags literarily between Stokes' A Guide to Nature in Winter and London's "To Build a Fire." One scholastic effort is linked with the National Audubon Society's expeditions and with an external degree program.

Finally, there are three courses chronicled that are based upon specific regions of the country and their unique situations and environmental issues. Thomas Tanner focuses upon the case of the Glen Canyon Dam on the Colorado River by using three different film interpretations, the case history, and Edward Abbey's Desert Solitaire. Lawrence Christensen and Larry Vonalt created a course for civil engineering students focussed on the Mississippi River. It is a thorough-going Freshman English course based upon the river theme and featuring paintings by Bingham and Benton, writing by Twain and Faulkner, and descriptions by engineers Eads, Ellet, and Shreve. Walter H. Clark, Jr. teaches in a New England Literature Program composed of two literary and one creative writing courses. The point of instruction is to teach the literature in its environment, specifically Camp Kehonka for a six-week residency.

Teaching Environmental Literature presents a fascinating array of raw materials and well-described models for their use. It is the paragon of what we all hope to find in a book when we first start contemplating a new instructional departure and haven't the foggiest notion of where to begin. Here are materials students can make sense of, and here are ways to present them that have immediate interest and intellectual integrity. All in all, this would be a most useful volume to acquire. (Sharon Scholl)

SKIDMORE COLLECTION

Review of Liberal Studies I Reader: The Human Experience. Source: Joanna S. Zangrando, Liberal Studies Program, Skidmore College, Saratoga Springs, N.Y. 12866. Reviewed by Sharon Scholl, Jacksonville University.

This liberal studies reader is the support document for a team-planned, team-taught interdisciplinary course that investigates the human situation interculturally and across time. Readings are drawn from philosophical sources, from natural and social sciences, history, literature, and the fine arts. Selections are arranged under the rubrics of the learning process, individual and social evolution, and the creation of culture. In sum, they hold together the instructional efforts of the 22 faculty members assigned to the program.

The collection is both imposing and awkward in its blue spiral notebook format. I suspect some student is going to apply for physical education credit just for carrying it around for a semester. It is more than simply a bunch of Xeroxed material, however. Each selection has a helpful introduction to the writer, the topic, and terminology (if any) that might stymie a reader unfamiliar with the field. There are also thought-provoking questions on each article that might be used for either general discussion or specific writing assignments. The excerpts are so diverse in topic, time of origin, and manner or expression that it would take a faculty thoroughly cognizant of the purpose of each segment and the larger design of the course to hold the daily activities together. Try as I may, I can't imagine reorganizing the materials to serve some different purpose; you teach "Liberal Studies I" with them or nothing. This is the weakness, from a commercial publisher's perspective, of some such collections; they are not likely to fit "anycourse U.S.A."

Section One pertains to education and the nature of the mind, containing fourteen selections starting with Dickens' portrait of the Gradgrind school and ending with the Behaviorists' version of mental activity. There is an enormity of time represented between Aristotle's _De Anima_ excerpt and Whorf's article on "Linguistic Relativity." There are some surprise inclusions, for example, "Sources of Ambiguity in the Prints of Maurice C. Escher" (separate purchase), and Suzanne Langer's reflections on dance. Artificial intelligence is represented in Turing's "Computing Machinery and Intelligence" and creative intelligence in Skinner's "On Having a Poem."

Section Two organizes ten items around the theme of developing humanity with a major focus on Becker's _The Birth and Death of Meaning_ (purchased separately). Interests range from theories of cosmic evolution with Carl Sagan to tribal creation myths. Writing styles range from Ornstein and Thompson's analysis, "The Individual Brain," to Thompson's satiric "The Mysterious Fall of Nacirema."

Section Three explores the nature of the self through six selections by Plato, Aristotle, Marx and Engels, Freud, Peirce, and Sartre. _The Flies_ is the most lengthy, treating such issues as personal values and the responsibility of freedom. This whole unit of the course underscores the dynamic relationship between self and society.

A complementary segment to the section on the self is a longer collection of 21 articles on society, its nature and activities. It begins with the reports of major judicial decisions on polygamy, compulsory education, and abortion rights and ranges outward to the role of recreation, work, and the arts. Social discrimination is one focus, partly represented by Mill's "The Subjection of Women," and more lengthily by the Hansberry play, "Les Blancs." There is a Jungian analysis of religious art and inquiry into the male domination of artistic production in Woolf's A Room of One's Own excerpt. Ecological issues surface in Means' "Fighting Words in the Future of the Earth."

Eclectic comes to mind when one searches for some general description of the reader's contents, but not irrational or dull. The typical length of articles is about five pages. The vast majority are discursive or argumentative rather than literary in the imaginative sense. However, the major inclusions, in terms of pages, are the Sartre and Hansberry plays. But with only brief narratives by Angelou and Dickens and several doggerel poems, we have a collection that leans precipitously toward the social sciences. After all, the title of the course the document supports is Liberal Studies, not Humanities. So the reader takes its place as a major instrument in the ongoing efforts of a large number of instructors to provide for students some introduction to the major human issues of this century. (Sharon Scholl)

CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

MURDER IN THE CLASSROOM

Two Teachers Offer Ideas for Teaching Mysteries

TONI HARPER

CLARICE ROSEEN

More than a few teachers of high school English have been surprised and perhaps a bit dismayed to find popular literature, especially mystery stories, in the newest anthologies of literature. This departure from the usual combination of traditional masterworks and works of adolescent literature is undoubtedly founded upon several rationales, but paramount among them is that these popular fiction genres are what most active adult readers actually read for leisure enjoyment. Even those of us whose chosen field of work is the classics of humanities do not live in an undiluted atmosphere of Great Books, art masterworks and string quartets; to varying degrees we participate in the conventional entertainments of sports, commercial television, comic strips and light reading. But, to borrow a term from literary scholar Leslie Fiedler, school, textbooks and libraries "ghettoize" popular entertainments, leaving young people with the mistaken idea that unless they are reading profound works, they should not read at all. This is a genuine disservice, especially for students who have not had the benefit of growing up in a reading family. For such young people, the schoolroom is the only place in which they are taught the almost magical techniques of converting flat symbols of language into boundless worlds of imagination. Yet, far too often, the techniques are presented as laborious acts of decoding antique language, momentous vocabularies and many-layered patterns of literary symbols. Add to this labor the frequent necessity of learning the alien complexities of historic, philosophic and aesthetic backgrounds; compound it all with "discussing" the mature psyches of foreign and fictional beings, and it is small wonder that many youngsters will not grow into readers who drop into libraries and bookstores for pleasure.

The keenest of pleasures in reading, we humanists would agree, is reading that stirs our minds and our souls into contemplation, self-discovery and further maturity as human beings. However, there is another sort of pleasure that could be argued as being a necessary prerequisite to the nobler end. This is the pleasure of the private escape into other worlds of fancy. To enter the world of the story, to surrender oneself to it, to participate in it is a creative act of imagination that cannot be duplicated in any other narrative medium.

So there is a responsible rationale for including escape fiction in the literary curriculum. Nevertheless there is a real problem in teaching, for many of the critical techniques and teaching strategies for "serious" literature simply will not work for mysteries, westerns and thrillers and fantasies. First of all, they are formula fiction. They do not lend themselves to the literary history approach that celebrates aesthetic revolutions like those of Wordsworth, Whitman, Zola and Joyce. Characterization never ranges far from stereotypes, and the revelation of character is achieved by way of action, rather than through the lengthy soliloquies, conversations and streams of consciousness that we associate with writers like Dostoevsky, James or Woolf. The humanistic conundrums of Who Am I, What Is It to be Human, What Is Reality are rarely explored, and certainly not in the depth that we associate with names like Shakespeare, Kafka or Faulkner. And stylistically, formula fiction does not indulge in the compressed imagery that most great fiction shares with poetry, and so all the classroom lessons that are so necessary and satisfying with Melville, Mann and Ellison will yield little. Even the panoramic historical sweep of Dickens, Twain and Tolstoy is not there to convert art into sociology.

Nevertheless the picture is not so gloomy as we have painted. For one thing, all of the above characteristics are present, but all are subordinated to narrative. There is a literary history, and persons like Poe, Collins, Doyle, Milne, Rinehart, Sayers, Hammett and others are innovators of major stature. As for characterization, mystery fiction has produced characters whose power is such that people believe in Holmes, Lord Peter, Nero Wolfe, Miss Marple and Spenser and travel to their home grounds. The humanistic questions listed above may not be there, but questions of justice, of the nature of evil and good, of responsible action, of the limits of morality are inherent. The style of writing is almost invariably economical and brisk (virtues well worth imitating), but particularly in the hands of people like Rex Stout, Edmund Crispin, Ngaio Marsh and Michael Innes, it is packed with sophisticated literary and historical allusions. As for being social documents, many of us know London by way of Doyle, New York by way Westlake, Australia by way of Upfield, and processes of universities from Sayers, Crispin and Innes, and police and legal procedures from Earl Stanley Gardner and countless others. There are also mystery writers who are meticulous historians. Umberto Ecco, whose Name of the Rose is at once a medieval Holmes-Watson story and a tour-de-force of semiotics, is one of the most sophisticated, but more strictly within the formula-story genre are Peter Lovesey's "Sergeant Cribb" stories and Ellis Peter's series set in the eleventh-century Shrewsbury. Even Dame Agatha did an historical mystery, set in ancient Egypt, which she knew well from many archaeological expeditions.

Thus, the rationale is clear for using these works, and general connections with the Great Traditions are there, but how can these be converted to classroom practices?

What follows are two sets of outlines and resources for teaching mysteries. Both were prepared as an outcome of the 1985 "English Mysteries in a Landscape" course at the University of Birmingham, England. (See HumaNews for announcement of the 1986 summer program). The first, prepared by Clarice Roseen of Ordean Junior High School in Duluth, Minnesota, is a unit built around Sir Arthur Conan Doyle's The Hound of the Baskervilles. It is essentially a literary approach, using an arsenal of innovative and traditional techniques for developing skills and concepts that are transferable to many other genres. The second, by Toni Harper of New Lexington (Ohio) High School, includes a wider variety of popular literary types, with some emphasis on the Brother Caedfel medieval mysteries of Ellis Peters (pseudonym of Edith Pargeter).

Both writers begin with the literary materials anthologized for English classes at junior high (Roseen) and senior high (Harper) age levels, but both expand resources and activities widely into drama, film, radio, museum exhibits, games (board, video, computer), historical and literary research, analytical and creative writing, crafts projects and performances. The rich array of ideas and materials should afford plenty for humanities teachers to draw upon in any context, but the writers remind readers that their purposes were not to prepare comprehensive bibliographies, but usable resources that are relevant to the courses and age levels that they teach. (F.S.)

SHERLOCK HOLMES UNIT
BY CLARICE ROSEEN

Suggested Schedule: 3 weeks

Day 1: Motivation and explanation of genre Read a mystery story. Do not identify it as such. Ask students what kind of story it is. Have them explain how they knew it was a mystery. List what they consider the elements of a mystery to be. Establish whether or not they enjoy reading mysteries, and if those who do can tell why. If time permits, establish some standards for evaluating a mystery story. What makes a mystery good? What makes a mystery bad? Assign the outside reading of Arthur Conan Doyles' Hound of the Baskervilles over the next two weeks; provide schedule of check quizzes for Ch. 1-5, 6-11, and 12-15.

Day 2: Providing context - A brief introduction to the origins of the detective mystery Have students list as many fictional detectives as they are familiar with from books, films, and t.v. Discuss distinguishing characteristics: specialties, assistants, role of police, physical qualities, recurring villains (if any), style of operation, etc. Introduce and read

Poe's "Murders in the Rue Morgue". (Voice version, 11/5/85).

Day 3: Instructional goals: Teach/review elements of fiction Establish and discuss elements of setting, character, and plot in "Murders in the Rue Morgue". Compare and contrast Poe's detective to modern counterparts.

Day 4: Motivational strategy Provide pairs of small groups of students with "mini-mysteries" to solve. Discuss what kind of thinking students had to do in order to solve the crime. Discuss the importance of paying attention to small details in solving the crimes. Have students suggest detectives who are particularly adept at such solutions. Assign optional "Process of Elimination" activity sheets and puzzles. Discuss "logic problems" and procedure for solving them.

Day 5: Instructional goals: Practice creative thinking and cooperative effort Give a list of details to each small group and assign them to create an "instant mystery" incorporating all the details in their list. After each group has presented its mystery, introduce "The Adventure of the Speckled Band" (Scope Play Series) by presenting the following details to the class in the form of actual objects or pictures: baboon, cheetah, gypsy, poker, bell rope, undertaker or coroner. Discuss the meaning and/or function of each and have students suggest how they might figure in a mystery.

Day 6: Instructional goals: Interpretive reading and critical thinking Read "Adventures of the Speckled Band" up to Holmes' explanation of the solution to the mystery. Discuss clues mentioned by Watson which seemed important to Holmes and compile a list on the board. Interpret the possible meanings of the details and determine which are most relevant/irrelevant to the case. Develop a theory about the crime and then read Holmes' explanation.

Day 7: Instructional goals: Recalling details and understanding plot structure/ sequence of events Using a floor plan to show arrangement of the bedrooms, have students show the location of the following on the night of Dr. Roylott's death: Dr. Roylott's bed, Julia's bed, the safe, the bell rope, the air vent, the saucer of milk, the leash. Establish the whereabouts of the characters at the beginning of the evening; then trace through the events of the evening on the floor plan emphasizing the placement of important objects. Following this, students should be able to reconstruct the evening's events by arranging sentence strips, each containing one of the events, in the proper order.

Day 8: Providing context for understanding the character of Sherlock Holmes Based on reading of "Speckled Band", briefly discuss Sherlock Holmes' methods as a detective. Using Ousby's comments from Bloodhounds of Heaven, present an outline of the development of Holmes' character from an historical perspective. If possible, supplement this with slides from the Sidney Paget illustration of Holmes which appeared in Strand magazine.

Day 9: Instructional goals: Understanding character and point of view Introduce story and vocabulary and review Part I of Hound of the Baskervilles. (Chapters 1-5) Establish and discuss the details which characterize the personalities and relationship of Holmes and Watson. Discuss point of view. What are the results or effects of having Watson tell the story? Discuss the character of Sir Henry and how it is communicated.

Day 10: Instructional goal: Building observation skills Do "shell" game. Have students carefully observe the details of a shell that is in every general way identical to the other students'. After studying it, pick out and describe the details that make it individual and different. See if you can retrieve it when mixed with several others like it. Choose an object which belongs to a friend or family member. Observe it closely and list all the details you've noticed. Based on your list of details, make a few inferences about the person to whom it belongs. Write a paragraph in which you support your inferences about the person with details observed about the object. Introduce vocabulary and assign review of Part II of "Hound". (Chapters 6-11)

Day 11: Instructional goal: Understanding setting Discuss how the very appearance of the moor helps establish an atmosphere of dread and what the specific dangers of the moor are. Have students create a mental image of these settings, and then show slides and illustrations of Dartmoor and "Baskerville Hall." As an optional project, encourage students to develop a model or pictorial map of Baskerville Hall and its environs using details supplied in the story; suggest they add to the map as further details become known. Assign vocabulary and review of Part III (Ch 12-15).

Day 12: Instructional goal: Understanding the elements of a "classic" mystery story Present and discuss the extent to which Hound of the Baskervilles fits the following standards for a classic mystery story:

A. The story must not contain any supernatural happenings or anything that could not be explained by rational means.

B. The criminal must be a fairly prominent figure in the story.

C. The criminal must have a personal motive - one understandable to the reader.

D. The crime must not result from accident, nor may the death be a suicide.

E. The reader must share in the detective's discoveries - either "seeing" the evidence as it is discovered or being told of its significance as soon as that is established.

Discussion should reveal that despite minor discrepancies, Hound of the Baskervilles is an excellent example of the genre.

Day 13: Instructional goal: Understanding structure: the plotting of "Hound of the Baskervilles" The main conflict in a mystery story is always the skill of the detective vs. the skill of the criminal. The climax or turning point in this conflict is the moment when one or the other triumphs; the criminal does or does not escape detection. The theme or meaning of the outcome of this conflict depends on the characters of the detective and the criminal--the values (means and ends) each represents. Given this fairly standard exegesis, the skill of the writer is challenged to present the sequence of events in a way that captures and maintains the interest of the reader. In Hound of the Baskervilles Conan Doyle demonstrates his skill at ingenious and economical plotting.

Discuss the following various forms of writing Doyle uses as devices to advance the plot and the purposes each serves:

A. Watson's narrative/memoir/biographical account of Holmes (i.e. acting as Holmes' Boswell) as the main frame for the story.

B. An old manuscript detailing the legend of the hound.

C. A newspaper story about the death of Sir Charles

D. Watson's reports in the form of letters to Holmes

E. Extracts from Watson's diary

Day 14: Instructional goal: Understanding genre Read and discuss excerpts from John Ball's article, "Murder at Large". Ask what students believe to be the reasons for the popularity of the genre; then read the concluding paragraphs of Ball's article. Establish to what extent students agree with him.

Day 15: Instructional goal: Evaluation Administer a test on interpretation of new material. Use R. K. Munkittrick's "The Sign of the '400'" (Arrangements in Literature, page 565).

ADDITIONAL RESOURCES

A PBS series of Sherlock Holmes mysteries planned for the winter of 1985-86.

Lectures and an art show on Sherlock Holmes presented by the University of Minnesota and sponsored by the Board of Education, Duluth, in April, 1985.

A play based on the script of the film, Young Sherlock Holmes, which was printed in Scholastic Scope, Nov. 29, 1985.

A play based on Hound of the Baskervilles which appears in Read, Jan. 18, 1985. (This might be used in place of the original with less developed readers).

Videotapes of Hound of the Baskervilles and Silver Blaze available from the Public Library.

LITERARY SUB-GENRES: POPULAR FICTION UNIT
BY TONI HARPER

I. Introduction: Three of the sub-genres of popular fiction will be examined. In class, students will read short stories for each-- Mystery-Detective, Westerns, Fantasy. Then students will choose books from one sub-genre to read out of class and on which to do a series of activities.

II. Goals of the Unit

A. To develop an appreciation for and a knowledge of three sub-genres of popular literature-- mystery-detective stories, westerns and fantasy.

B. To gain an insight into some of the techniques used by writers to unfold the plot of the story.
C. To develop an appreciation for a variety of character types and geographic locations offered in literature.
D. To become aware of how the historical and geographical settings contribute to the "reality" of fiction.

E. To understand that the writer's task involves more than simple composition, that it includes research skills as well as imagination.

F. To understand that short stories and books are not just things teachers make students read in class or for reports, and that many short stories in anthologies originated in popular literature like magazines.

III. Content Outline for each of the sub-genres (Mystery-Detective; Westerns; Fantasy)

A. Characteristics of the sub-genre
B. Historical Background
C. Short stories
  1. Elements of fiction (plot, character, setting, theme, point of view)
  2. inference
  3. stereotypes
  4. foreshadowing
D. Books (possible book report titles)

IV. Learning Objectives

A. To be able to determine and define the characteristics of each of the three sub-genres.

B. To be able to apply the elements of fiction - plot, character, setting, theme, and point of view - to each work studied.

C. To understand and be able to draw inferences from written material.

D. To recognize the author's clues to the importance of certain details and to remember these for the significance they will later develop.

E. To identify the historical and geographical settings of fiction.

F. To understand and be able to identify stereotypical characters.

G. To identify the steps a writer takes to create and have published a work of fiction.

V. Strategies To Be Employed For Learning

A. Students will READ:

1. "The Gift of Cocise" by Louis L'Amour
2. "The Man Who Shot Liberty Valance" by Dorothy Johnson
3. "Early Marriage" by Conrad Richter
4. "Camford Cottage" by Michael Gilbert
5. "The Man Who Knew How" by Dorothy Sayers
6. "Village Murders" by Agatha Christie
7. "The Speckled Band" by Arthur Conan Doyle
8. "The Magic Shop" by H.G. Wells
9. "The Rule of Names" by Ursula LeGuin

B. Students could READ:

1. Any novel by Louis L'Armour or Zane Grey

2. From a selection by Agatha Christie, Dorothy Sayers, or Ellis Peters or Hound of the Baskervilles by Arthur Conan Doyle
3. from a selection by H.G. Wells, Madeline L'Engle, or Ursula LeGuin.

C. Students can LOOK AT:

1. Filmstrip-cassette series: Elements of Fiction
2. How the West Was Won - video-cassette version of the movie
3. Hondo - videocassette version of the movie
4. The Hanging Tree - videocassette version of the movie
5. Evil Under the Sun - videocassette version of the movie
6. Death on the Nile - videocassette version of the movie
7. Murder on the Orient Express - videocassette version of the movie
8. Hound of the Baskervilles - videocassette version of the movie
9. Mystery television series - Sherlock Holmes (PBS)
   a. "Scandal in Bohemia"
   b. "The Dancing Men"
   c. "Adventure of the Speckled Band"
   d. "Adventure of the Naval Treaty"
   e. "The Solitary Cyclist"
   f. "The Crooked Man"
   g. "The Blue Carbuncle"

D. Students might PRODUCE:

1. Dioramas of scenes from books
2. Puppets of the characters
3. Costumes
4. Murder weapons or significant clues
5. Videocassette tape of a scene from a short story or novel
6. A music video of their own invention whose theme is the same as one of the works studied

E. Students may WRITE:

1. Alternate endings of stories
2. Guesses of endings after reading only part of the novel/story
3. Stories in their favorite sub-genre
4. Paragraphs that imitate the styles of featured authors
5. Papers that compare the characteristics of the sub-genres
6. Papers comparing the styles of the authors
7. Papers on the importance of foreshadowing to the plot
8. Lists of clues and "red herrings"
9. Letters to authors requesting information

F. Students may RESEARCH:

1. Historical backgrounds of novels
2. Biographical information of authors
3. The writer's craft - steps to writing a short story or novel
4. Geographical background of the story

G. Students could PLAY:

1. Clue - a game by Parker Brothers
2. Who Killed Roger Ellington - a Jamie Swise mystery game
3. Murder by Proxy - a Jamie Swise murder game

H. Students could SOLVE:

1. Snooper Troops (Case 1 & 2)- a computer mystery by Spinnaker
2. Murder on the Zinderneuf - a computer mystery by Electronic Arts
3. "Final Curtain" - Games magazine, 1-86
4. "The Soldier and the Silver" - Games anthology
5. "Murder at the Manor" - Games, 10-85
6. "Murder on the Montreal Express" - Games, 3-85
7. "Homecoming" - a photocrime in Games, 2-85

VI. Methodology

A. Large group instruction - to work through the short stories in the book

B. Small group instruction - learning centers dealing with historical backgrounds

C. Individual instruction - consultation as needed during the book report stage

D. Independent study - book report

E. Small group study and research - students working on the same book or author could work together. There could also be groups working on the same games.

VII. Evaluation Procedures

A. During the study of short stories, objective quizzes on each story would be given, and an essay test administered which would offer a choice of several topics related to the stories.

B. The book report phase employs Bloom's Taxonomy to guide students to activities which require different levels of thinking. Students have choices at each level of the taxonomy. The emphasis here is on the top three levels of the taxonomy, with creativity being encouraged.

Creative Activities - All Books

1. Design a T-shirt that would advertise your book. You may want to use one side of the shirt or both. Use color, please.

2. On (date-the last day of the unit or when projects are due), dress as your favorite character. 25 extra points if I can guess who you are!

3. Create a tongue-twister using ideas from the book you read.

4. Design a book jacket for your book. Cover a cereal box with your design. Your book jacket should include a synopsis of the plot (don't tell the ending!), a series of short comments from critics (use your classmates), and a short biography of the author in addition to an attractive design and lettering. Look at book jackets in the media center and the library uptown for ideas.

5. Create a series of items that together will help the class identify your book. For example, a sprig of dried herbs, a monk's costume, a stained glass window, and a horse for any of the Ellis Peters series. You should have at least four items. One of them could be a picture, but the rest should be three-dimensional.

6. Use information about plot, setting, character, etc., to create a crossword puzzle about the book. Relate the shape of the puzzle to the story. For example, the shape of a dog for "Hound of the Baskervilles."

7. Make up a classified ad for one of the characters in your book. It may be "Help Wanted," "Lost & Found," "For Sale'" or "Personal." Put the title of the story, the author, and the place of the ad on the back of your paper. Letter your ad nicely on colored paper, large enough to see from at least ten feet away.

8. Write a diary that a main character might have written. There should be at least seven entries, two paragraphs each.

9. Use letters of a character's name to create a "poetic" description of him/her. C=Crafty, A=Alert, D=Devious, F=Foxy, A=Aware, E=Energetic, L=Liberal.

10. Design and stitch a square for a quilt. Depict your favorite characters or scenes. Your square should be at least 12" by 12".

Creative and Research Activities for Ellis Peter's Mystery Series

1. Brother Cadfael was an herbalist. Name some plants he used and tell the purpose for which he used each. What treatments or medicines are used today for treating those ills? EXTRA: Make a model of what his garden might have looked like.

2. Draw up a schedule for a typical (non-detective) day in the life of Brother Cadfael. How does today's monk's schedule differ? EXTRA: Make drawings to illustrate the differences.

3. Name the people (jobs) of a monastery. Give a job description for each. Is each job obsolete today, or do we still have a need for people with those skills? Has the occupation undergone a name change? EXTRA: Use clay figures to show several different monks performing their duties.

4. Look at the map of Shrewsbury in the front of your book. Why is the castle in an excellent location to defend itself against attackers? Research methods of warfare of the time. What kinds of weapons were used? What would the townspeople do if the town were under attack? EXTRA: Make models of the castle, town, and abbey. Put them on a board to show the location of each in relation to the other.

5. Research social class in the medieval town. What roles did each class play? Was it possible to move from one class to another? EXTRA: Draw or make costumes typical of each social class.

6. What jobs did women have in everyday life? Write a typical day's schedule for Aline Beringar. EXTRA: Cook and present to the class a food that might have been served by her.

7. Make a model or drawing of a living room, dining room, bedroom, or kitchen in a medieval castle or in an abbey. Compare this room to a modern one with respect to furniture, wallcoverings, decoration, floor covering, etc.

8. Do some research on transportation and communication in medieval times. Explain incidents in the book in relation to what you found. Then compare with modern times. EXTRA: Draw or model scenes from the book illustrating transportation and communication.

9. Reference is made to a dispute between King Stephen and Empress Maud over who should rule England. Was this dispute real, or was it an imaginary incident? Was England a part of Great Britain at the time? Shrewsbury is near Wales. Tell why this was politically important. Write a report on the politics of the era. Extra: Make an illustrated chart to show how Maud and/or Stephen were related to each other--and how they're related to the present British monarch.

10. Report on the justice system -- "law" officers, "courts," and methods & degrees of punishment. Why could it be said, "We've come a long way, baby!" EXTRA: Make models of devices that were used to force prisoners to tell the truth.

COPYRIGHT ISSUES IN THE HUMANITIES

BY FRANCIS M. NEVINS

ST. LOUIS UNIVERSITY
SCHOOL OF LAW

V: WHO OWNS WHAT ACADEMICS CREATE?

THE PROBLEM:

In the last issue of HUMANITIES EDUCATION, Attorney Francis Nevins discussed the rights of a teacher to make photographic copies of museum art works for use in a video tape that might be available for cable TV airing. A subsequent question was raised by Nevins himself at the end: who has rights of ownership to the tape that the teacher prepared? Do teachers or their employing institutions own the publications prepared as part of the job?

PROFESSOR NEVINS' REPLY:

Academics quickly get used to the fact that one of the requirements of the job is publishing contributions to the field in which they teach. It's relatively rare for a professor to wonder who owns the rights in his or her scholarly output, since most such work, at least in humanities, is published by non-profit entities which pay little or nothing for submissions. But suppose you are Professor Samuelson, the author of a best-selling college text on economics? More realistically, suppose that a book of yours, published by a university press, brings in modest royalties which augment to a small extent your meager academic salary? In neither case would you welcome a claim by the school which employs you that it, not you, owns the rights in your work and hence the money it has generated. And yet such a claim is by no means outrageous as a matter of law.

Section 201(a) of the Copyright Act tells us that "Copyright in a work protected under this title vests initially in the author or authors of the work." If this were the only relevant provision of the law, the matter would be settled. Unfortunately, the very next paragraph, Section 201(b), creates a contrary rule for "works made for hire."

> "In the case of a work made for hire, the employer or other person for whom the work was prepared is considered the author for purposes of this title, and, unless the parties have expressly agreed otherwise in a written instrument signed by them, owns all of the rights compromised in the copyright."

The next question of course is: What does the Act mean by "work made for hire"? Section 101, which defines dozens of words and phrases used in the copyright law, divides works made for hire into two categories. The second, which does not concern us here, has to do with works especially ordered or commissioned from independent contractors. The first, which concerns us very much, includes within the category of work made for hire "a work prepared by an employee within the scope of his or her employment...."

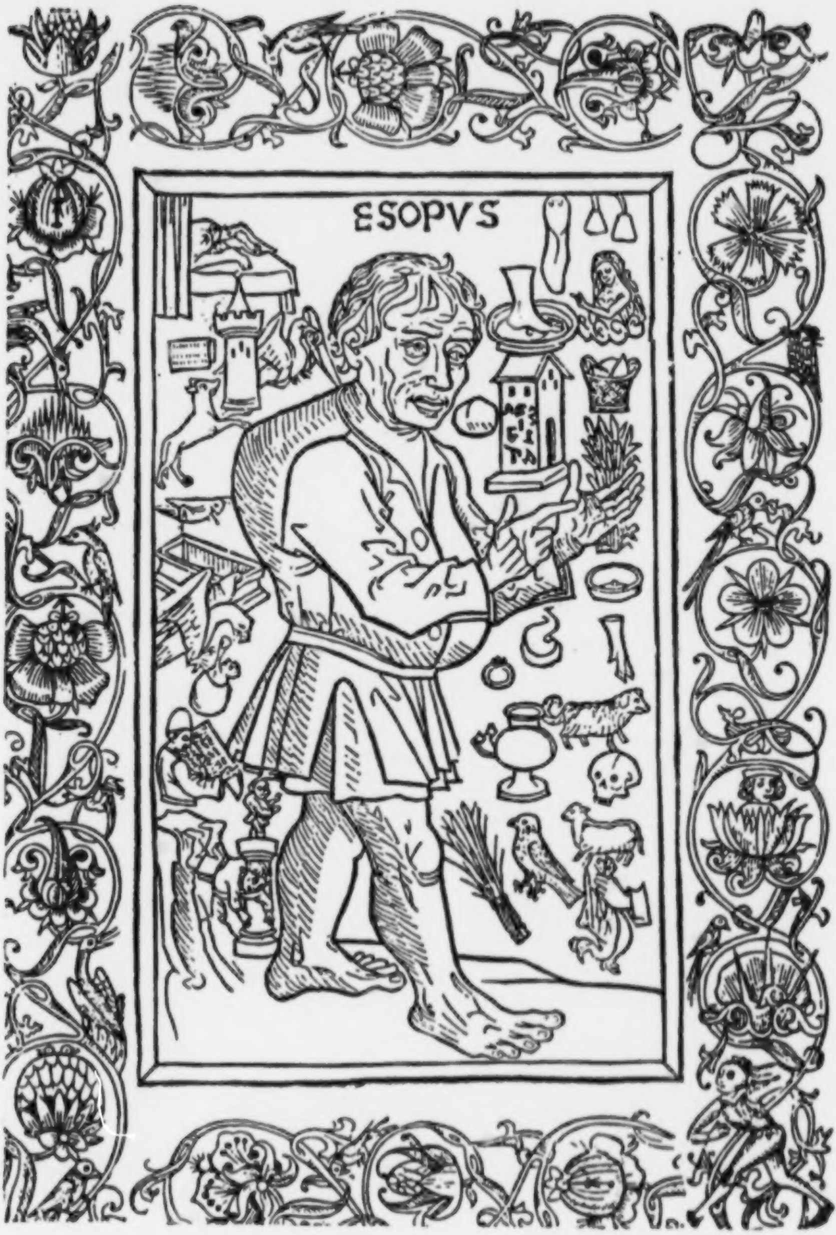
We are now faced with two new questions. Is a professor an "employee" of the institution paying his or her salary? Does a professor's scholarly output fall "within the scope of his or her employment"? The most thoughtful recent article on this issue argues that the answer to both questions is "Yes." In "An Academic's Copyright: Publish and Perish" (Journal of the Copyright Society of the U.S.A., October 1984), Professor Leonard D. DuBoff points out that, although the term "employee" is not defined in the Copyright Act, three criteria for determining the existence of an employer-employee relationship have evolved in other areas of the law. The most important of these, he says, is "whether the alleged employer has the right to direct and supervise the manner in which the individual performs." The second is whether or not there is "an express contract for hire" between the parties, and the third is "the nature and the amount of the compensation...received by an individual for his work." DuBoff concludes that under these common-law guidelines it "appears likely that most professors are employees...."

An employer-employee relationship, however, does not convert into works made for hire all the works of the employee but only those works "prepared by the employee within the scope of his or her employment." DuBoff identifies three criteria which courts have developed to resolve this issue: (1) "whether the work was produced at the employer's place of business," (2) "whether a work is completed within normal work hours" and (3) "whether the work is produced at the instance and expense of the employer." Only the third, he argues, is truly relevant to the academic situation. "Because universities generally consider writing and publishing to be part of a professor's job," he concludes, "copyrightable works produced by a professor within his field of expertise thus probably fall within the scope of the professor's employment."

DuBoff does not claim that Congress intended all academic work to be owned by the universities rather than the professors, but he does maintain that this unintended result flows inevitably from the language of the work-for-hire provision Congress enacted. The only system-wide solution, he says, is a revision of the Copyright Act, and in his article he suggests two amendments, either of which would reverse the present rule. Within a particular college or university, of course, there is an easier solution. Some academic institutions, perhaps a majority, have language in their faculty manuals which would seem to preclude them from claiming copyright in their professors' works. For example, the St. Louis University Faculty Manual (1982) provides: "Members of the University faculty or staff shall have full and free disposal of all their books, articles, and other publications, except in those individual cases in which their University duties have been notably curtailed specifically to allow for such writing." If the university's employment contract incorporates by reference the terms of the school's faculty manual, the situation seems to fall with the Section 201(b) exception covering cases where "the parties have expressly agreed otherwise in a written instrument signed by them...." Those who are concerned with this issue should check their faculty manuals for language similar to the provision from the St. Louis University manual quoted above. To the extent it exists, the problem has vanished for professors at that institution. To the extent it doesn't, steps should be taken to get the school to adopt it.

Of course, even if DuBoff's position is correct, a university that is legally free to claim ownership of its faculty's scholarly work will probably decline to do so for pragmatic reasons. Most works of scholarship are of little or no economic value. Any school that did claim ownership of a blockbuster would almost certainly lose the professor who wrote it. All sorts of institutional squabbles would arise whenever a work was written over a period of time when the author was on the faculty of more than one school. It's no wonder that few if any universities have so far asserted such a claim.

But if they were to do so, I am far less certain than Professor DuBoff that their claims would be upheld in court. It seems to me that a strong argument the other way can be based on the criterion of whether or not the alleged employer has the right to direct and supervise the manner in which the work is done. After all, in the standard instance of a creative work made for hire, at any given moment the employee is assigned by the employer to a specific task. The studio tells the contract screenplay writer to do an adaptation of the latest bestseller, or the advertising agency tells the copywriter to come up with a new toothpaste jingle. This is not the situation in academia. The professor is expected to write but isn't assigned to any specific project, and his or her scholarly writing is rarely if ever supervised by the university in any meaningful sense. I believe that an argument along this line would have at least a reasonable chance of prevailing if the issue ever went into litigation. I suspect, however, that if properly approached, most schools that haven't already done so will adopt language in their faculty manual that will make it clear that their faculty own the rights in scholarly work. Academic institutions have very little to gain economically from resisting and, from a public relations perspective, a great deal to lose.



ESOPUS

BEST TRANSLATIONS:
ROLAND & OEDIPUS

BURTON RAFFEL

LE CHANSON DE ROLAND

Unlike some of the other contributors to "Best Translations in the Humanities," I am unwilling to surrender to the inhumane compromise of rendering poetry as prose. Nonetheless, Twelfth-century French poetry presents the translator with some peculiarly difficult problems. (I am keenly aware of them, at the moment, having just finished a draft version of Chrêtien de Troyes' Yvain.) These are poems meant to be read aloud, for one thing, and poems written in rhyme-rich tongue. Poetry is meant to be read off the page, today, and English is distinctly not a rhyme-rich tongue.

But metre and rhythm are even more serious problems. Whether the translator has to deal with the octosyllabic lines of Chrêtien, or the decasyllabic lines of Le Chanson de Roland, "in this sort of verse the principal instrument is rhythm." I am quoting Patricia Terry, the best translator of the poem, and of course she is right. A narrative poem, meant to be sounded aloud, and reinforced by a rich rhyming tradition, is necessarily dependent on rhythm -- but English rhythm is not at all like French rhythm. Re-creation is to some extent possible, but never in literal terms. I myself employed a three-stress line, as the closest thing in English to Old French octsyllabics. Charles Harrison, another translator of Roland, does not explicitly state his choice, but plainly he uses the traditional heroic metre, the iambic pentameter line, without rhyme, known as blank verse.

> Charles the king, our mighty emperor,
> has been in Spain for all of seven years,
> has won that haughty land down to the sea.
> There is no castle still opposing him,
> nor town or wall remaining to be crushed,
> except the mountain city, Saragossa.

Marsilla holds it; he does not love God,
but serves Mohammed and invokes Apollo.
No matter what he does, his ruin will come. AOI.

This is basically competent work -- but exceedingly dulled by the fatally wrong metrical choice. Iambic pentameter is a literary metre. It works gorgeously in Milton's Paradise Lost, or Wordsworth's Prelude. Given the opportunity to have it spoken aloud, Shakespeare makes brilliant use of it in his plays. But the translator of Roland has to aim at a different solution, for his narrative poem will not be spoken, but read silently. And the original Old French itself dictates a different decision, for its movement, too, is not what in the twentieth century we would call "literary."

Carles li reis, nostre emperere magnes
set anz tuz pleins ad estet en Espaigne:
tresqu'en la mer cunquist la tere altaigne;
n'i ad castel ki devant lui remaigne,
mur ne citet n'i est remés a fraindre,
fors Saraguce, ki est en une muntaigne. ...

Any reasonably well-tuned ear should hear how the caesura in each line comes at the listener proudly, in a steady succession of careful suspensions. It is the placement of the caesura, indeed, that marks out the distinctive marching swing of Roland's music. And Patricia Terry has listened, and has heard it, and has to a large extent re-created it in stirring modern English:

The mighty Charles,   our emperor and king,
Seven long years   has been at war in Spain;
That lofty land   lies conquered to the sea.
No fortress now   is standing in his way,
No walls, no towns   remain for him to break,
Except for Saragossa,   high on its hill,
Ruled by Marsile,   who has no love for God;
He serves Apolla,   and to Mohammed prays --
But he will come,   and soon, to evil days! AOI

The successes of this translation are of course not limited to a strong, apt martial rhythm, sustaining all 4,002 lines of Roland. Even in this first laisse (or strophe) we can see the delicate rhyming of the final two lines, which evoke more than the casual reader might think of the original's flavor. We can see, too, that Terry knows how English uses more alliteration than does French, and that she understands the dangers of literary embroidery -- for no medieval poet would prefer Harrison's "There is no castle still opposing him" to Terry's "No fortress now is standing in his way." Says the Old French, "n'i ad castel ki devant lui remaige." It is plain and straightforward, and that is how Terry gives it to us.

Her version, in a Bobbs-Merrill paperback, is without question the one our students should use, the one they will prefer and learn more from.

JEREMIAH REEDY

SOPHOCLE'S OEDIPUS REX:

A Comparative Review of Translations

Research and reflection on translating the classics have led me to formulate the following general principles which I shall use in evaluating the various versions of Oedipus Rex (O.R. hereafter) that have come to my attention.

1. A translation should read like an original work; there should be no "translatorese" (John Ciardi), no "aura of exhumation" (Dudley Fitts).
2. The best translation is in the language the author of the original work would have used had he/she been writing in the translator's language and lifetime.
3. The translation should produce an effect on the reader or listener comparable to that of the original work. In the case of classics, since we have no way of determining what effect they had upon ancient audiences, this principle must be amended to read "the translation should produce an effect upon the reader or listener comparable to that which the original has on the translator and other competent scholars."
4. Translating represents an attempt "to accomplish an impossible task" (Wilhelm Humboldt). All attempts to translate literary masterpieces are doomed to failure; nevertheless translating is an absolutely necessary activity.
5. "All translation is a kind of illusion...those translations are always best in which the illusion is most complete..." (T.F. Higham)
6. Every translation is an interpretation.

Using these as guidelines and relying on experience, taste, intuition and common sense, I have examined translations of Sophocles' O.R. in an attempt to discover what is probably the best translation for use in humanities courses on the secondary school and college level. I have sought the best translation for reading and study not the best for performance, and I have rated them the way Michelin rates restaurants, five stars to no stars. (Anyone seeking an acting version of O. R. might consult Norma Bailey's 1976 U. of Wisconsin-Madison dissertation in which she compares the translations of Yeats, Berkowitz and Brunner, Knox and Burgess -- all of which were done for the stage -- with the 1883 translation of Sir Richard Jebb. Her study is flawed, however, by the fact that she did not consult the original Greek!)

Translations

*****David Grene in Sophocles I (Washington Square Press, 1967) from The Complete Greek Tragedies, edited by Grene and Richmond Lattimore (U. of Chicago, 1954) Grene's unrhymed verses are eminently readable, accurate, faithful to the original and occasionally moving. There is often an echo of the Greek meters. This has become the standard English translation, and it is unlikely to be replaced in the near future. It deserves five stars.

*****Dudley Fitts and Robert Fitzgerald, The Oedipus Cycle (Harcourt, Brace Jovanovich, 1967) A superb rendering by two of our most talented translators. This version, while reasonably faithful to the original text, still rises occasionally to poetic heights; for me Fitts' and Fitzgerald's effort passed the crucial personal test -- I felt drawn along, and I wanted to continue reading.

****Philip Vellacott, Sophocles and Oedipus (U. of Michigan Press, 1971) Vellacott has done what many translators have doubtless been tempted to do faced with the dilemma of fidelity to the original text vs. poetic creativity; he gives us two versions. On the left hand pages is a prose translation "as literal as possible;" on the right a verse translation "which aims at combining the greatest possible fidelity to the text with clarity and immediate impact of meaning, in a style which does not forget that the work is both a play and a poem." The second half of Vellacott's book consists of commentary in which he essays to establish the unusual and intriguing thesis that Oedipus was "aware of his true relationship to Laius and Jocasta ever since the time of his marriage." If Vellacott's verse translation were published separately in a paperback with an introduction and a moderate amount of commentary, it could serve as a good text. Few teachers, however, are likely to select Sophocles and Oedipus for their text unless they plan to spend a semester on this one play. Strongly recommended for background study.

***C. R. Walker, Oedipus the King and Oedipus at Colonus (Anchor Books, 1966) Walker, after majoring in Greek at Yale, spent his career in industry and technology without ever losing his interest in literature. (His other publications include Steel: the Diary of a Furnace Worker; Steeltown; Toward the Automatic Factory; The Man on the Assembly Line; Technology and Civilization and Iphigenia in Aulus!) Walker uses prose and free verse in this version which would be suitable for stage or classroom. He includes Oedipus at Colonus which should be read in conjunction with O.R. so students know that Sophocles didn't consider Oedipus guilty of anything. Walker doesn't give us Antigone which is a shame since students always enjoy it. He deserves three stars.

***Thomas Gould, Oedipus the King, A Translation with Commentary (Prentice-Hall, 1970). Translated as "literally as possible." Each line in English corresponds to a Greek line with the same number. An above-average version with a brilliant commentary. Where it was difficult to find an English equivalent, Gould discusses the problems in the commentary. This is a must reading for every teacher of O.R.

**H. D. F. Kitto, Sophocles, Three Tragedies (Antigone, O. the King, Electra) (Oxford, 1962) Kitto, one of the greatest modern authorities on Greek tragedy, was also a musician; the choral odes were, in fact, translated so they could be sung, and there are musical notations. Kitto thinks that "the modern doctrine that a new translation must be contemporary in style is fallacious in theory and dull in practice." One hesitates to disagree with such a distinguished scholar, but I fear our students would find Kitto's translation a bit too stiff and formal. It was done, of course, nearly twenty-five years ago, and that too makes a difference. Two stars.

Anthony Burgess, Sophocles, Oedipus the King (U of Minn., 1972) Burgess admits that his translation, if it is one, is so only in a "somewhat Pickwickian sense." He thinks that his having Oedipus blind himself onstage is an "unforgivable sin," but it strikes me as a peccadillo compared to other outrages: adding a scene with human sacrifice at the beginning, moving the dramatic date back to prehistoric times making the play a "synoptic gospel of all ancient cultures" and Oedipus a neanderthal! As if that weren't enough, the chorus chants modified Indo-European roots accompanied by Tibetan chants and Pygmy melodies. Burgess expected his version to be the most "astounding Oedipus ever to hit any stage," and he was right. He also expected his work to be "chewed over by captious scholars," and he anticipated "screams from outraged purists." Again he was not disappointed. There may have been some in the audience at the Guthrie who thought this translation/adaptation worked, but I was not one of them. Burgess' mangling of Sophocles' play is not for students of Humanities who want to experience the impact of Greek Tragedy. No stars.

R. C. Jebb, The Oedipus Tyrannus (Cambridge, 1887) Although Jebb was the greatest Sophoclean scholar of his day (and perhaps of all time), his rendition is hopelessly archaic for today's students: "Tell me, then, thou vulnerable man -- since it is thy natural part to speak for these..." No stars.

Handbooks

****J. Sanderson and E. Zimmerman, Oedipus, Myth and Dramatic Form (Houghton Mifflin, 1968) Contains five plays -- Sophocles' (translated by E. F. Watling), Seneca's, Voltaire's Gide's and Cocteau's, plus Aristotle's Poetics and quotations from Freud, R. Lattimore, F. Fergusson et al. The best of the anthologies, Watling's verse rendition compares favorably with Grene's.

***Luci Berkowitz and T. F. Brunner Sophocles' Oedipus Tyrannus This volume consists of their translation (prose and verse) "Passages from Ancient Authors" (Homer, Thucydies, Euripides), "Religion and Psychology" (Freud, Nilson, et al.), "Criticism" (Aristotle, Bowrd, Jebb, Jaeger, Nietzsche, et al.) and a special section entitled "The Problem of

Guilt" (Vellacott, Dodds, Gould, et al.) Useful for the serious student of Sophocles who is Greekless.

***M. Kallich, Andrew MacLeish and G. Schoebahm, Oedipus, Myth and Ritual (Odyssey Press, 1968). Contains Sophocles' Oedipus (Jebb slightly modernized), John Dryden and Nathaniel Lee's, and O.R. plus The Sphinx by Hugo von Hofmannsthal. A section of "Literary Criticism" has The Poetics, and passages from the work of Gilbert Murray, Bowra, Kitto, and others. A section entitled "Modern Anthropological and Psychological Interpretations" includes the views of Freud, Frazer, Jung, Lord Pagean, and others. For the serious student of comparative lit.

**Cook, Albert, Oedipus Rex, A Mirror for Greek Drama (Waveland Press, 1963) Following articles on the Greek theater and Graves' version of the myth we have Cook's translation of Sophocles play. This is followed predictably by The Poetics and quotations from such critics as Samuel Johnson, Voltaire, Schiller, Jebb, Else, Arrowsmith and others. Cook's translation strikes me as stilted, though others may find it pleasing and to their taste.

Lévi-Strauss has pointed out in his article "The Structural Study of Myth" that "Poetry is a kind of speech which cannot be translated except at the cost of serious distortions; whereas the mythical value of myth remains preserved, even through the worst translation." With myth "the formula traduttore, tradittore reaches its lowest truth-value." Translators of Greek tragedy thus have a unique opportunity and a unique challenge; unless they do violence to the story their versions are bound to work. Likewise the teacher of humanities can hardly fail with O.R. in the syllabus.

NOTICE OF EXECUTIVE COMMITTEE MEETING

The NAHE Executive Committee met at New York University on February 22 and 23. If there is some issue you think should be addressed, or if you have ideas for improving our organization and our publications, do not hesitate to call or write to any of the members listed on the previous page. Here are a few of the items we considered:

1985 annual report
Interpretation of 1985 Survey (see story below)
Membership campaign strategies
Membership fees
Review of By-Laws; governance procedures
Development of state, regional and metropolitan chapters
National conferences

A report of the meeting will be published in the next HumaNews.

REPORT OF THE 1985 SURVEY OF NAHE MEMBERS

The questionnaire (reproduced on the following page) yielded a 22% response from members of the Association. Executive Committee member Gary D. D'Lamater, who tallied responses, stated in his report that we should be "very pleased." He reports the following findings:

. Nearly all members want to receive HE quarterly

. Nearly all are willing to pay $16; 71% will pay $20, no way to know impact of $20 on 29% negatives

. 77% prefer a conference during the academic year; Little concern for specific month, October and March most often listed.

. 61% want weekend meetings, 39% prefer weekdays.
High school teachers have problems getting away on weekdays. A third of the respondents who prefer weekends are doubtful attendees; removing these from consideration makes a 50%/50% split

. 67% prefer meeting on a college campus; 22% downtown

. 50% of respondents want do-it-yourself conference; some of these voted twice to account for 47% wanting memorable activities

. 59% prefer independent convention.
Many of the 41% preferring combined are high school English teachers or art museum persons.
Some support for independence conditional on attracting enough people.

A QUARTERLY H.E. - WITH ART SLIDES?

We think that we can increase the frequency of publication of HUMANITIES EDUCATION to four issues per year instead of the current three issues for a modest rise in membership fee to $16.00 from the current $12.00.

However, we also have plans in the works for making the fourth issue into a special thematic package including several 35mm color slides selected by an art museum with strategies for incorporating these into various learning environments. To do this, we would have to increase the subscription rate to as much as $20.00 for four issues (including the special issue).

Would you like to receive HE quarterly? Yes_____ No_____
Are you willing to pay $16.00 for a quarterly HE? Yes_____ No_____
Are you willing to pay $20.00 for a quarterly HE
if it includes one "media pack" per year? Yes _____ No_____

AN N.A.H.E. NATIONAL CONVENTION?

TIME

As to time of meeting, it should be recognized that there is no good time. But one can choose between the academic year (September - June) or the summer. The advantage to the adademic year is greatest for college people, who usually can get away and make a bid for funds, and for museum people who are out of the tourist season. The advantage of the summer is for teachers who have limited professional development days and for anyone who wants to combine a convention and a vacation.

____________I prefer meeting during the adacemic year.

____________I prefer the summer.

____________is the month I prefer.

____________I prefer a weekend meeting.

____________I prefer meeting during the week.

PLACE

For place of meeting, our choices reduce to either campus or commercial. The advantage to campuses is that room rates are significantly lower. Most campuses have helpful conference administrators and fair to good food services; some are close to culture and retail districts. The advantage of commercial (hotel or convention center) is that they are in central urban locations for adjunct activities. Prices are high, but competitive, and accommodations generally are more comfortable. A third alternative is the rural or suburban resort conference center whose main advantages are a pleasant unhurried atmosphere and usually excellent inside food service.

____________I prefer to meet on a college or university campus.

____________I prefer meeting in a downtown convention location.

____________I prefer a conference resort setting.

FORMAT

As to format, we can aim for a spare, self-reliant conference of member presentations and discussions, or a cultural extravaganza of keynoters, concerts and tours. The advantage of self-reliance is economy and participation; the advantage of the extravaganza is intellectual and aesthetic stimulation.

____________I prefer a do-it-yourself conference of members only.

____________I prefer a conference with memorable outside activities.

____________I think the conference should be limited to 75 - 100 participants.

JOINT CONVENTIONS

We can meet independently or in association with some other group, such as the National Council of Teachers of English (NCTE), the Association for Integrative Studies (AIS), the Popular Culture/American Culture Association (PCA/ACA) or others. The advantage to independence is just that - independence; the advantage to collaboration varies with the group, but generally entails less financial risk and administrative labor. NCTE is very large, covers the gamut of teaching from elementary to graduate, includes many covert humanities teachers, has excellent book exhibits and always meets at Thanksgiving. AIS is small, mainly collegiate, exclusively interdisciplinary, runs stimulating, intimate conferences about teaching and theory usually in October. PCA/ACA is large, primarily but not exclusively made of college "papers" on a wide variety of cultural topics from media to literature to local history and folklore; the style is fairly easygoing and they are interested in teaching, generally meeting in April.

____________I prefer an independent NAHE convention.

____________I prefer a combined convention.
The group I'd recommend as a possible collaborator
is____
(please don't feel restricted to the above-named groups)

YOUR PARTICIPATION

____________It is doubtful that I could attend a convention except in my "back yard".

____________I could only attend if I were "on the program".

____________I would be a willing worker in any capacity to help make a successful convention.

COMMENTS

. 32% doubtful of attendance, 20% need to be on the program, 40% willing workers

At least a third of the respondents added narrative comments which are greatly appreciated. It is clear from these (and not surprisingly) that cost is an important consideration. Several remarked that in their experience, the quality of conference does not seem to bear any particular relationship to factors such as time or place; it has to do with the program itself.

ABOUT MEMBERS

Another award for VASANT MERCHANT: she was among the recipients of the Outstanding Educator Award from Arizona Governor Bruce Babbitt and the Arizona Women's Partnership. In accepting the award, Vasant said:

> "... artists, poets, writers, humanists and educators are the 'unacknowledged and unsung legislators of the world,' as Percy Bysshe Shelley would say, for they 'legislate' through their sensitiveness and originality, their power to create, their ability to develop and improve the life and mind of a society through their ideas and dedication which touch the human core. Their contributions and innovative power are sometimes discerned and embedded in the earth-memory through the intellectual, cultural and spiritual heritage of the race. For they symbolize the antenna of the human race in inspiring, transmitting and influencing the destiny of the future."

"HELP! "The 'out-of-print' syndrome that has afflicted some standard Humanities publications is being met across the country by an equally important 'OK, so we'll do it ourselves' response. The result is an undetermined number of privately produced collections of literature and interpretive writing that may be applicable to more than one institutional situation. Some publications have been the result of grant support to a larger program development effort; some are 'wits-end' solutions to unavailable reading materials. Together such ad hoc publications have the dimension of a small underground movement. I would like to collect as many of these documents as possible and produce reviews and acquisition notes for HUMANITIES EDUCATION. If you are using such materials or know of the existence of any, please do a review of them for us or write to let me know of a source of acquisition." Dr. Sharon Scholl, Jacksonville University, Jacksonville, FL 32211.

Speaking of reviews and reviewers, our book review editor, JAMES MEHL, reports that he has had a gratifying response to his search for volunteers for HUMANITIES EDUCATION book reviews. There is always room for others, so if you are interested, write to Jim for forms and guidelines. Dr. James Mehl, Missouri Western State College, 4525 Downs

Drive, St. Joseph MO 64507-2294.

As BURTON RAFFEL mentions in his "Best Translations" column in this issue, he is adding to his many translations from many languages with a new working of the medieval Yvain. NAHE members who attended the conference in Terre Haute in 1982 may recall a preview-showing of FRED SCHROEDER'S videotape "Interpreting the Humanities Through Museum Exhibits." The American Association for State and Local History has made this available for $75. (VHS). AASLH Education Division, 172 Second Avenue North, Nashville TN 37201. No rentals available.

UPCOMING

Some "Calls for Papers" that may be of interest to NAHE members include: "C.G. Jung and the Humanities--An International Interdisciplinary Conference to Assess Jung's Influence on the Humanities and the Arts." Send proposals to Karin Barnaby, Conference Coordinator, Hofstra University Cultural Center, Hempstead, NY 11550 by April 1. The conference is scheduled for November 24-26, 1986. INTERFACE '86, the Tenth Annual Humanities and Technology Conference, is familiar to many NAHE members from a joint conference several years ago. Papers and presentations that examine the interaction between humanistic concerns and technological development are invited. One-page proposals are due by April 30. Send to INTERFACE '86, Department of English and History, Southern Technical Institute, Marietta, GA 30060. The conference will take place October 23-24, 1986.

Coming up soon are the following conferences and conventions:
Southern Humanities Conference on "The Humanities: Ideology, Accountability and Academic Politics" at Converse College, Spartanburg, SC, February 13-15. For information, write to C. Edward Kaylor, Medical University of South Carolina, 171 Ashley Avenue, Charleston, SC 29425.

Two conferences of the Community College Humanities Association will be held in April: "Community Colleges: Pathways to the Future" will be in Orlando, Florida April 13-16, and "Liberal Education: Gateway to the American Dream" will be in New York City, April 16-18. Contact CCHA, Community College of Philadelphia, 1700 Spring Garden Street, Philadelphia, PA 19130 for further information.

The joint annual meeting of the American Culture/Popular Culture Associations will meet in Atlanta, April 2-5. For information, write to ACA-PCA Convention, Popular Culture Building, BGSU, Bowling Green, OH 43403.

The Fifth Annual Conference on Television Drama will be held at Michigan State University, May 17-21. For information, write to Department of American Thought and Language, MSU, East Lansing, MI

48824-1033.

"English Mysteries in a Landscape" will be offered once again by the University of Minnesota-Duluth on the campus of the University of Birmingham in England, July 14-August 12. The cost is $1700, including tuition, transportation from Minneapolis, dormitory residence, five English breakfasts per week, and all class tours. The instructor is Fred Schroeder. Tours are being planned to suitable moors, villages. stately homes and cities having associations with classic English mysteries. Contact G. Fox, Continuing Education and Extension, UMD, Duluth, MN 55812. A (paid) advertising brochure is enclosed with brief descriptions of all four summer offerings.

CORPORATE CAREERS FOR HUMANITIES GRADUATES is an 18-1/2-minute video-tape, produced by the Higher Education Council of Columbus with a grant from Exxon Education Foundation.

The purpose of this videotape and accompanying discussion booklet is to help students understand the applicability of their undergraduate studies in the humanities to careers after graduation.

The videotape features representatives from business, industry, and government, who advise students on career opportunities and describe the importance of humanities graduates in the workplace.

The accompanying discussion booklet is designed to stimulate interest and classroom discussion on the capabilities and skills which students develop as humanities majors. It also includes career-related information which students can use later: how to establish career interests and goals, identify potential employers, and prepare for the job interview. Cost is $70 for 1/2" tape. Order from HECC,c/o Columbus College of Actual Design, 47 N. Washington Avenue, Columbus, OH 42215-3875.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Senior Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to redraw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one or two pages (300-700 words) for practical tips, sample assignments, commentaries, etc.; and articles of four to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

*THEORY "Piaget and Theories of Integrated Study"

*ADMINISTRATION "Crediting Departments for Team Teaching"

*HISTORY "Nineteenth-Century Multi-Media at Chautauqua"

*RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

*"What you should know about teaching novels in a philosophy course"

*"Pre-teaching history students for an art museum field trip"

*"How to help non-musicians to follow a score"

*"A designer speaks of humanities bulletin boards"

*"Getting adults to role-play in public humanities programs"

*"Understanding Oedipus: An Actor's View"

What we don't want:

*Creative writing by teachers or students (it doesn't relate to our purpose)

*Syllabus outlines (curricula should be explained, not listed)

*"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

*"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

*"Humanistic counseling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

LESLIE M. THOMPSON

PUTTING HUMPTY DUMPTY TOGETHER AGAIN: INTEGRATING A SPECIALIZED SOCIETY

Experts and specialists wield awesome power in modern, technological society, and their influence will likely increase during the near future. Specialization makes possible great advances in science and technology, but it also creates a mindset and an accompanying bureaucracy and compartmentalization in many ways detrimental to the human spirit. While benefiting from medical and other advances, we must avoid training narrow, fragmented specialists unable to adapt and to cope with complete, multifaceted societal problems. Three Mile Island, growing military budgets, nuclear policy, medical ethics, and other similar problems cogently remind us that modern life and the vitality of the human spirit demand an imagination infused with general knowledge and not one solely dominated by specialized facts.

Soothsayers multiply in times of crisis, and experts in their roles as scientists, advisors, and respected authorities now often assume the elevated role of priests to lead us ordinary folks to the utopia promised by science and technology. Of course, we have long listened to spiritual leaders and gurus, but the twentieth century has witnessed the advent of the specialist as spiritual leader. In the 1930's Howard Scott and others popularized the gospel of technocracy, a state in which political power resides in the hands of technical experts who use their knowledge to gain power and to make policy. According to the technocrats, the complete subordination of society to technical experts would transform America into a land of prosperity. Such blandishments, off course, still allure people seeking simplistic solutions to complex problems.

Specialization creates a powerful new ruling class of administrators, bureaucrats, technicians and experts who retain few of the attributes normally associated with the ruling elite. In fact, the presence and influence of these groups usually go practically unnoticed; but in many instances their authority is absolute. These experts gain power over their clients and over the general public through the mastery of specific information, skills, techniques, and statistics.

In **Intermediate Man** John Lachs points out that "too many matters are too technical or require skills we could never master. In science, in law, in government we are surrounded by experts who devote their lives to studying what we will never know. Physicians and nurses, ministers and psychiatrists jealously guard their secret competence. We could never be experts in all things, and since there are experts in every field, we think it best to defer to their authority" (101). These experts, moreover, make key decisions about energy policy, national defense, atomic power, the economy, and other areas of vital concern. In frustration, many Americans now seek simple solutions to complex problems by turning to repressive censorship, aligning themselves with narrowly focused special-interest groups, or retreating nostalgically to a prior world that never existed. Under these circumstances, many people question whether complex problems can be resolved by citizens lacking the technical skills to understand the various choices or consequences. In fact, society tends to see the ascendancy of experts as an unavoidable condition of modern life. If it is indeed true that laypersons cannot make complex decisions and that such matters must be turned over to an elite, we must then ask ourselves if we are still capable of self-government and of freedom.

Experts, as a matter of fact, already do a great deal of thinking for us. As John Lachs notes in **Intermediate Man**: "When they do our thinking, they have our thoughts for us. But normally, once they make up their minds as to what we shall believe, we at least actually go ahead and believe it; there is then still a residue of activity left in us. The peculiarity in the case of feelings is that frequently when someone feels on our behalf, we think of him as feeling in our stead. Similarly, when someone performs a self-expressive act for us, we often leave the matter at that, feeling no need of further self-expression" (106). Families, for example, defer to certified experts for guidance on sexual matters, childrearing, and ethical dilemmas. Society relies on political technicians who furnish politicians with information and estimates on which to base decisions. The power of experts poignantly manifested itself a few years ago when a tiny group of bitter government technicians pitted themselves against the full force of the government and the law in the air controllers' strike.

Our reliance on experts, however, permeates most areas of modern society. Medical education, training, and practice are almost completely subject-oriented, and not centered on the user or patient; it is almost as if the patient gets in the way of medicine. As a result, physicians focus on analysis rather than on synthesis in viewing the patient, and patients predictably react negatively to being reduced to machines or deposits of disease rather than complex biological and spiritual beings. Medicine, too, has been seduced by the possibility of a science of humans, free from dependence on the traditional metaphorical understandings of the human condition.

In many respects experts benefit society, but the expanding reliance on experts makes each individual more and more dependent on the state, the corporation, and other bureaucracies. In **The Third Wave** Alvin

Toffler points out that industrialism "broke society into thousands of interlocking parts --factories, churches, schools, trade unions, prisons, hospitals, and the like. It broke the line of command between church, state, and individual. It broke knowledge into specialized disciplines. It broke jobs into fragments. It broke families into smaller units. In so doing, it shattered community life and culture" (61). Specialization, of course, has served a vital link in the Industrial Revolution, but in most areas of life specialists replaced people of multiple abilities. Alvin Toffler quotes Henry Ford as observing that only a small percentage of the jobs on his assembly lines required strong, able-bodied, and practically physically perfect men. The remainder of the jobs could be performed by women or older children, or proportionate numbers of the jobs could be filled by legless men, one-legged men, or armless men, and even ten of the jobs in Ford's factories could be filled by blind men. "In short," Toffler asserts, "the specialized job required not a whole person, but only a part. No more vivid evidence that overspecialization can be brutalizing has ever been adduced" (50). As this example and others indicate, the pursuit of specialized knowledge often narrows minds and stunts growth, thus fragmenting people.

Herman Kahn once warned us to beware educated incapacity, the creation of highly specialized professionals unable to deal with problems in the real world. Unfortunately, we have in many respects failed to heed this sage advice. Instead of institutionalizing society's ideals, higher education increasingly reflects society's prevalent interest in economic development. Such an approach enhances mere careerism in which parents and students in lieu of a liberal education demand a highly specialized education leading to a specific job. University administrators and faculty members abet this process by divorcing their courses from moral considerations. In many humanistic disciplines, in fact, an emphasis on methodology now replaces discussions on the great human dilemmas. Frank T. Rhodes, President of Cornell University, asserts, "Most faculty members, including humanists, are not particularly wise, in a large sense, not noticeably more committed, not even demonstratedly more humane than their neighbors. Many devote their lives to areas of high abstraction, decoding texts and deconstructing poems, while the larger issues of the world and humankind's place in it elude them. Of course there are some glorious exceptions. The life of science, art, and literature produces its saints and martyrs, but the number is small" (4).

Narrow departmentalization now plays a prominent role in most modern universities. Disciplinary specialization defines and supports the professional growth of faculty members who gain rewards and recognition through specialization and through national and international professional groups. In many instances such erudite specialization often rapidly isolates disciplines from each other, and now even members of the same university department sometimes have difficulty in understanding each other's individual fields of inquiry. This intense specialization generated power and authority, but this process also demonstrates that technical skill is more important than wisdom.

Humanists have also succumbed to this approach and while espousing esoteric knowledge about Sophocles, Shakespeare, or Frost, these literary specialists give no evidence of having been influenced by their writing. There is, moreover, an alarming gap between the pretensions of those who teach the liberal arts and their contribution. In his 1982 presidential address to the Modern Language Association Professor Wayne Booth deplores the sad state of general education with its hordes of neglected non-majors. "Give us lovers and we will love them," he concludes, "but do not expect us to study courtship. If we had decided to run up a flag on the quad saying that we care not a whit whether our society consists of people who practice critical understanding, so long as we are left free to teach advanced courses, we could not have given a clearer message" (319). A similar warning comes from Professor Philip Curtin in his 1983 presidential address to the American Historical Association. The study of history, he contends, has become "too specialized and parochial." He asserts: "We teach the history of Africa and Asia, but specialists in American history know no more about the history of Africa than their predecessors did in 1940. We have specialists in black history, women's history, and historical demography, but people outside these specialties pay little attention to their work" (1). He further stresses that historians must consider the ways in which the study of history might help citizens and national leaders understand and deal with society's problems. Within the context discussed by professors Booth and Curtin, is it any wonder that students emerge believing it is their task to analyze and explicate the parts rather than appreciate the whole.

Narrow specialties breed technicians often lacking the vision necessary to deal with broad social and ethical issues. Many years ago Sir Richard Livingston astutely observed that technicians understand everything about their job except its ultimate place in the order of the universe. This paraphrased warning speaks eloquently to all people living in modern industrial societies where specialization has become a commonplace response to complexity. Specialization, in fact, often absolves people from the responsibility of learning, much less upholding or practicing, traditional values. Specialization affords the advantages of specific, attainable, self-justifying, self-serving goals. Unfortunately, this justification is often not tested against a more comprehensive set of values.

Fragmented specialization now replaces a more comprehensive and holistic view of life. According to Joseph W. Cox, "Our first response to nearly any question has become the classic question, What do the data tell us? We absolutely cannot make it without our armor --our moral armor-- of quantitative analysis and the ubiquitous printouts which become our standard of proof. The trap we may have set for ourselves is that we have become absolutely terrified of making decisions on other than quantitative grounds" (35).

Specialization has in many ways enhanced our quality of life, but excessive specialization has also created many problems. Consequently, critics have recently mounted a barrage of criticism at the excesses of specialization. Despite these warnings, few people fully appreciate the extent to which technological metaphors have invaded our thought processes. This orientation predisposes us to seek technical solutions to human problems when, to the contrary, we must steadfastly deny technocrats the right to define human questions. George Keller asserts that "in education we have territorial fighters. We have more experts in small areas but more fragmentation and anarchic bickering. The trick is to move educated people into more integrative thinking, to see more connections and consequences, to realize the ties between present decisions and future quality, between their little area of work and the whole organization of which they are a part. . . . The hallmark of specialized experts is their sense of doubt and gloom. The mark of integrated thinkers is their sense of possibilities and action" (88-89).

Alvin Toffler and many other writers and critics see a pervasive new change in our attitude toward experts. Many people, these commentators feel, are seeking to integrate the various facets of their life as an antidote to over-specialization and reductionism. Reductionism, according to Paul Davies, seeks to uncover simple elements within complex structures, while holism directs attention to the complexity as a whole. People espousing holism want to take responsibility for their own physical, psychological, and spiritual well-being, using specialists only as more knowledgeable peer helpers. This approach attempts to integrate specialized training into the larger context of society and to give greater leeway to the human imagination and to interdisciplinary approaches.

Society can no longer afford the luxury of vast numbers of specialists confined to the limitations of their own methodologies. Even now advanced research in biology, certain areas of physics, genetics, and many other areas is leaping across departmental, disciplinary, and other boundaries. Such an approach is essential not only as a means of promoting the best scientific inquiry but also as a necessary requirement to allow us to deal meaningfully with current societal problems. Narrow specialists confined to fixed duties and narrow outlooks will not suffice to meet the needs of a global society. Special interest groups are fragmenting modern society, and to counter this trend we need leaders with vision. Since many of these leaders will have begun life as trained specialists, they must move beyond specialization to a holistic view of life and society. This process will be slow and painful, for contrary to the contentions of numerous self-help books, such intellectual and spiritual growth requires time and dedication. The following comment by Frank Rhodes about students applies equally to all persons seeking integrated approaches: "Students need time to take their world apart and put it back together again, discarding, modifying, embellishing, and augmenting as necessary to attain a sense of cohesion" (4).

Society must maintain a broad cultural context within which the recommendations and debates of experts take place. In reality, experts often disagree among themselves. We must ask, therefore, how far we can rely on experts. When the experts disagree, which expert do we trust? How reliable is our scientific and technical knowledge in issues of significant and social importance? To answer these and other questions, we need a social system to manage scientific knowledge and expert disagreements.

All thoughtful people agree that we now need and will continue to need specialized knowledge and experts to deal with complicated technical problems. Specialized knowledge, however, is not enough. We need to broaden the education of experts so that they become more than technicians. We must further seek imaginative but practical solutions to complex problems by combining the special knowledge of experts with sensitive, reflective, liberal education. The welfare of the country must not reside solely in the hands of various kinds of experts.

In **God and the New Physics**, Paul Davies says of his early research on Einstein, Bohr, Schrodinger, and Dirac, "I found that here were not clinical and detached men, but poetic and religious ones who imagined such unfamiliar immensities as to make what I have referred to as the 'paranormal' almost pedestrian by comparison. It is ironical that physics, which has led the way for all other sciences, is now moving towards a more accommodating view of mind, while the life sciences, following the path of last century's physics, are trying to abolish mind altogether" (8).

Wise people now realize the folly of viewing experts as soothsayers leading society to some technological utopia. As Alvin Toffler points out,

> Today I believe we stand on the edge of a new age of synthesis. In all intellectual fields, from the hard sciences to sociology, psychology, and economics--especially economics--we are likely to see a return to large-scale thinking, to general theory, to the putting of the pieces back together again. For it is beginning to dawn on us that our obsessive emphasis on quantified detail without context, on progressively finer and finer measurement of smaller and smaller problems, leaves us knowing more and more about less and less. (130)

Einstein and many other great scientists often achieved a poetic and imaginative vision that dwarfed most other creative endeavors. Faced with compelling experimental evidence, physicists have been moving away from strictly mechanical models of the universe to a view that sees the mind as playing an integral role in all physical events. A growing number of people believe, in fact, that the recent advances in fundamental science more meaningfully reveal the deeper meaning of existence than does traditional religion. Whatever the justice of this claim, the emerging new view of a dynamic, integrated universe offers great hope to fragmented human psyches. I agree with Toffler that we must integrate our thinking and avoid fragmented solutions, lacking in vision and bereft of human wisdom. We need to enlarge our expectations of the human mind and its ability to grapple with complex issues. Specialization must be the tool and not the master of human-kind. Changing mindsets, societal and organizational structure, and widely held norms of behavior will not be easy. In reality, we can challenge expert authority only when we liberate our imagination, expand our sensitivities, flex our moral fibers, engage society's great spiritual and societal dilemmas, and enter into debate on the role of specialized knowledge in an increasingly interdependent world.

RIDING THE PENDULUM WITH INTEGRITY: WESTERN VALUES FROM THE ANCIENT WORLD

During the 1960's Northern Michigan University had a core curriculum in Liberal Studies. The humanities sequence included courses in composition, the ancient world, the medieval-renaissance world, and the modern world. These last three interdisciplinary courses stressed the influence of Western values on past and present culture. For several years these courses flourished, but then NMU was struck by the trend toward liberalization of the curriculum which swept campuses nationwide at that time. Students demanded "relevance" and freedom to choose their courses. Faculty, many of whom were less than happy with teaching outside their own disciplines, supported change. Slowly, the core curriculum was replaced by the "smorgasbord" approach derided by National Endowment for the Humanities Chair William Bennett in his report of 1984.

By the early 1980's the humanities curriculum at NMU lacked coherence and a firm purpose. Students chose their two humanities courses from a list of over 42 courses, ranging from music, to British literature, to Spanish civilization. Worse, none of these courses attempted to show the evolution of values and the interrelatedness of cultural, artistic, social, and philosophical values throughout Western history. None of the courses, with the exception of History of Western Civilization and Introductory Philosophy treated our heritage from the classical and biblical cultures of the ancient worlds. Most students graduated from NMU without ever encountering Homer, Socrates, Job, or St. Paul.

Not all faculty were happy with the state of the humanities (not all had been displeased with the old core curriculum), and a group of us met and determined that perhaps NEH funds could be obtained to revive the first of the courses on the ancient world from the original humanities curriculum. Our primary goal was modest: we hoped to redesign and bring to life an excellent course which would be of benefit to our students. As we stated in the subsequent grant proposal, we hoped this course would "explore the contributions of the ancient Greeks and the Judeo-Christian heritage to Western Civilization." Beyond that, though, we hoped that our efforts might lead to reform in the Liberal Studies requirements at NMU. Curriculum reform was in the wind and a committee had been formed to study the Liberal Studies requirements and recommend changes.

In the summer of 1983, NEH accepted our proposal for released time funds for a project director (myself) and stipends for faculty working on the proposed course. We also received a budget for educational supplies, such as library books and audio-visual materials, and for advertising the course.

Our planning committee, which consisted of two faculty from English, two from History, and one from Philosophy, began meeting during the fall of 1983 to plan the first semester of the course. We decided to title the class "Western Values: Greeks and Bible" in order to describe the content to students as clearly as possible. One early issue we had to settle was the scope of the course. The original grant proposal had limited it to the Greeks and Judeo-Christian cultures, but now there was some pressure from interested faculty to include the Romans as well. After lengthy discussion, we concluded that since we were primarily interested in cultural, artistic, and philosophical contributions, it would be acceptable to exclude the Romans (they having borrowed so heavily from the Greeks), except in our treatment of early Christianity. A related issue was whether to limit the biblical portion to the Old Testament (the Hebraic heritage) or include some treatment of the New Testament as well. Our decision to include the Christians was based on two factors, one practical and the other pedagogical. (1) Our students are mostly Christians and many would be taking the course to learn more about their own religious heritage. We frankly hoped to attract students by including Christianity; and (2) The ethics of the New Testament, though closely related to the Jewish ethics on which they are based, do represent new developments in Western ethics.

Our decisions concerning which topics and texts to cover were based partly on the earlier humanities course, which some of us had taught years ago. We made many changes, however, and our final syllabus was truly a group effort. The first time through the course we studied the Greeks the first half of the course in a roughly chronological fashion, beginning with Homer and Hesoid and ending with the Hellenistic philosophers. Then, in the second part of the course we switched to the Bible, beginning with Genesis and the more primitive, anthropomorphic concepts of God during the age of the patriarchs, followed by the development of the Law, the Hebrew monarchy, and the contributions of the prophets. We also spent some time on the biblical literature such as **Job** and **Ecclesiastes**. We finished the course with a study of early Christianity, having the students read selected portions of the New Testament.

We decided the format of the course would be one common lecture a week by an instructor speaking on his/her area of expertise (typical topics would be "The Evolution of Greek Philosophy" and "Covenant and

Law"), and three discussion sections led by three professors teaching the course. Each professor would give his/her own exams and quizzes and make paper assignments.

The first time through the course, student reaction was very positive, though we discovered an obvious problem with the organization of the class. Covering the Greeks first and then the Bible made it difficult to make comparisons between the Hellenic and Hebraic contributions, one of the original goals of the course. By the time we were studying the Hebrews-Christians, students had dim recall of important concepts concerning the Greeks. Another, similar problem concerned coordination of the common lectures with the discussion sections. Students found it confusing to hear a lecture on Greek history on Monday and then discuss **Oedipus Rex** on Tuesday.

The first problem was remedied the second time the course was offered by radically rearranging the course material. This reorganization was done at the suggestion of a consultant from St. Olaf's College, Dr. Walter Stromseth, whom we met with in the summer of 1984. St. Olaf's has a humanities program called The Great Conversation, the first course of which is very like ours. Stromseth suggested organizing by topics and moving back and forth from the Greeks to the Bible as the topics changed. We would begin with a comparison of **Oedipus** and **Job**, two approaches to the issues of fate, the gods, and undeserved suffering. We would then look at each culture's early views of God and human beings, using as our texts **The Odyssey** and **Genesis**. Following that would be a consideration of the Greek polis and the Hebrew law (Torah) and monarchy.

This approach seemed more appropriate to the emphasis on values we wanted to achieve, while the chronological approach led to a more traditional historical survey, not what we wanted the course to do at all. We have used this type of organization all subsequent times we have offered the course. Though there are still problems (some students complain about jumping from Greeks to Bible and back again), we feel we can achieve our objective better in this way.

The course has now been offered four consecutive semesters. The NEH grant expired in May 1985 so now we are on our own. It does appear that we have for now achieved our primary goal of establishing this valuable new course in our humanities curriculum at NMU. This winter (1986) we will attempt a new experiment, designed to alleviate the problem of lack of coordination between lectures and discussion sections. The course will not be divided into three sections but will meet in one lecture hall with all three professors. Classes will consist of short lectures, followed by discussion and rebuttal from the other professors and students. The material of the class is divided between the three professors, who will serve as "forepersons" for those particular sections of the course. For example, the English professor will be in charge of **The Odyssey** and the Philosophy professor in charge of the sections on Greek philosophy. They will decide what will happen in class that particular day, whether it be a film, short lecture, guest lecture, quiz, or whatever. The assignments and grading will be handled by the team working together. It will be interesting to see if three strong willed Full Professors can work in harmony!

All four semesters the course has been offered student reaction has been extremely positive, with criticisms, as stated above, centering on problems of administration rather than content. Students cite the relevance of the material to their own developing values and perceptions of their culture. Many cite the class as the best they have had yet in college and state it should be required because it exposes students to material central to an understanding of Western civilization. The biblical section of the course probably receives more praise than the Greek, students saying that they have finally come to understand the spiritual and cultural values of Western Civilization derived from the Bible. From time to time there have been complaints from fundamentalists about our approach to the scriptures, but these complaints have not been serious, most such students saying the course actually strengthened or clarified their faith.

Two complaints students had in the early days of the course involved lack of perceived "relevance" and a too heavy stress on history. Some students felt the class emphasized too heavily the historical/political developments of the ancient cultures and neglected the values. Also, in some cases they failed to see the relation between the values of these people and twentieth century society. The first problem has been remedied by our topical organization. And, the second, we have found, must be dealt with very directly in class discussion. It might be obvious to us how the controversies aroused by the Sophists relate to present day quarrels between "secular humanists" and the Moral Majority, but it is not at all obvious to our students.

Though student reaction to this course has been highly positive right from the start, our biggest problem has been enrollment. We have never had more than 60 students a semester sign up for the course, despite spaces for 100+. It seems that once we can get students to enroll, we give them a positive experience, but it is difficult to lure them in. We believe this is due to a number of factors: (1) We are competing against many well established, popular courses, including several which have a reputation for being "easy." There is only so big a humanities "pie" to be divided at NMU, and therefore we are getting a small piece; (2) Students are not aware of what "Western Values" are, though they know what "History" or "Music" is; thus we have a problem of recognition; (3) Since credit hour production is important to departmental prosperity at NMU, it is in the self-interest of faculty to advise students to take their courses for humanities credit, rather than interdisciplinary humanities courses.

We have used our advertising budget to attract students in a number of ways: articles in the student newspaper, posters blanketing the campus during advising week, flyers to advisors, letters to students with high grade point averages, and each summer a letter promoting the course in the packet for every entering freshman. Still, enrollments remain modest. If we continue to offer the course, we will have to maintain or slowly increase enrollment. Low enrollment endangers the participation of faculty because NMU's Philosophy Department is a three person endeavor, and philosophers are needed in more heavily enrolled departmental courses. It is difficult to convince administrators to pay for three full Professors to teach 60 students! Still, all faculty involved are convinced the class makes a significant and sorely needed contribution to the study of the humanities for our students. We intend to persevere.

Has our project influenced change in the humanities requirements at NMU? Here we must say that our influence seems to be negligible. During the time the project has been in place, a faculty committee examined all the Liberal Studies requirements at the University and made recommendation for sweeping changes, including a required history or philosophy course for all students and a required literature course, as well as a required course in the fine arts. Our course would have been an option under this plan. Unfortunately, this proposal received strong opposition in the Academic Senate from professionally oriented departments, and in consequence the Senate finally passed a much weaker version of reform. Nevertheless, students will be required to take one more humanities course and this will undoubtedly help our course in the future.

We think our experience can be instructive for other institutions planning interdisciplinary courses. First, courses like ours seem to thrive best within the context of a required core curriculum. Unfortunately, at NMU many faculty still have bad memories of the required core curriculum of the 1960's. Further, to expect career-oriented students to voluntarily elect rigorous and demanding humanities courses when other well established and popular courses are available is perhaps unrealistic. In order to thrive, a course like ours needs strong university-wide support for the liberal arts, difficult to obtain at a university like NMU with a divergent faculty whose goals for students' educations sometimes work at cross purposes.

WE'RE GOING QUARTERLY

...in response to the 1985 survey of members HUMANITIES EDUCATION will be issued quarterly. Membership will now be $16 per annum. Current members should see page two for a special renewal offer.

Our next issue on RITES & RITUALS will include articles on rites of passage in folklore and literature, the religious rites of ancient Greece, sports as ritual in the ancient and modern worlds... and the issue will include a set of 35mm color slides of ritual objects from a major art museum along with ideas for interpreting them in a classroom.

And Volume IV will lead off the new year of quarterly publication with a special issue devoted to computers, technology and the humanities.

Have you considered spreading the word about the National Association for Humanities Education? New members are most welcome!

HUMANITIES EDUCATION
CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

DENNIS ALAN MANN

THE HOUSE OF MEMORY:

AN ARCHITECT RESPONDS TO "THE HOUSE OF LIFE"

In the September 1985 issue of **Humanities Education** Fred Schroeder's "The House of Life: Planning a Classroom for Interdisciplinary Humanities" describes the characteristics of the three classrooms that he remembered from his previous teaching experience, rooms that had "worked" for him. He then generalized from those three experiences and developed design criteria to be incorporated into his ideal classroom. He expected this ideal classroom to (1) combine warmth, humanness and flexibility, (2) be verbally intimate without being too small and (3) provide the rich performance and presentation capabilities using the variety of modern media available today. In addition, Professor Schroeder expected this ideal classroom to "produce a sense of community" and "promote free thought and conversation." Although I do not wish to be critical of his criteria, this last choice of words is unfortunate. It is **teachers** who promote a sense of community and promote free thought and conversation, **not rooms.** Free thought and a strong sense of community can take place in the most sterile of spaces and the most wonderfully conceived spaces cannot deter a tyrant from censoring thought and destroying community. Spaces can reinforce humane policies and programs, they cannot promote them. But more to his main points.

Following the development of general design criteria Schroeder provides the reader with a series of sketches and notes specifying the design requirements of this classroom. In a sense, these sketches represent what is "wrong" with Schroeder's recommendations, for they imply a **prescription** for good classroom design. Memorable design does not result from prescription, though, it results from **process.**

I suppose at some time or other every thoughtful and concerned teacher, frustrated by less than adequate working conditions, designs a "dream" classroom. Like designing a dream house, it is a valuable exercise. Everyone should have dreams. Dreams are more than pie-in-the-sky wishes. They are a rather fuzzy form of goal setting. Success is often measured by the ability to set goals and then achieve them. And classrooms are not merely spaces for disseminating knowledge but places where the seeds of dreams can be planted. Furthermore, the teacher is one of the primary participants in a space which is formative to a student's intellectual and social development. So the exercise of an experienced and perceptive teacher describing a space which would meet all of his or her needs for humanities teaching is not at all empty exercise or a simple release of pent-up frustrations.

To realize his ideas Professor Schroeder recommended making use of the "multi-purpose" rooms that exist in many modern schools built during the burst of school construction in the late 1950's and 1960's, construction brought on by the Post WW II baby boom. Multi-purpose rooms as it turned out were **no**-purpose rooms. They were least common denominator rooms which were incapable of supporting any function adequately. His "House of Life" would be a room with a purpose and be constructed within the room of no-purpose.

I applaud Professor Schroeder's effort to improve the condition of our physical environment. I wonder, though, whether his recommendations do not miss a number of very important aspects of what I believe to be implicit in the name of his spaces, "The House of Life". Those aspects are:

1. That we are all, in some way or other, responsible for **constructing** the environments that we **inhabit**;
2. That the process of constructing these environments is a **social, economic and political process** that requires goal setting, negotiation and eventually consensus;
3. That these environments do not happen all at once but **unfold over time**;
4. That this unfolding of an environment is a record of what is **valuable** to the group that has constructed it;
5. That when an environment is vacated it continues to exist in the mind as the physical shell for the **memories** of the events that occurred during the time it was inhabited;
6. And that a conscious **study** of the above five aspects make up an important part of humanities education.

I shall briefly discuss each of the six aspects.

At some time in everyone's life, we participate in the construction of the environment in which we live. At the grandest scale, human beings have changed the face of the earth, transforming raw resources into products for human use, covering the surface of the earth with cities, transportation networks, farms and factories and dumping their water wherever the fewest or least powerful people object. At the smallest scale we transform a single space, a room, by the artifacts that we bring to it. Even the urban homeless build temporary shelters with found materials or carry their shelters with them, instantly changing a doorway, an alley niche or a park bench into a one night shelter; all pulled from a single bag. Mircea Eliade in **The Sacred and the Profane** has suggested that when any human builds, it is a matter of undertaking "the creation of the world that one has chosen to inhabit." And Martin Heidegger in "Building Dwelling Thinking" (in **Poetry Language Thought**) has written that building is really **dwelling**, and dwelling is the manner in which mortals are on earth. This concept could be translated into "I dwell therefore I am."

All environments are, to some degree or other, constructed **on purpose**. Although most people may not be fully aware of why they construct what they do (to the same extent that an architect might be), both Eliade and Heidegger associate building with creation (in the sense of creating one's self) and being. Accepting this hypothesis is critical to my first point: we are all responsible for constructing the environments that we **inhabit**. Even though most of the spaces that we occupy have been built for us, they are empty shells until we make them over to suit our own specific needs. Actively taking part in this make-over is an important step in the socialization process. It teaches us more about who we are as individuals and who we are as a society.

Most environments, except personal spaces, are shared environments. We all live together in a variety of communities which are social constructions. These communities, whether they represent the unity and wholeness of the tribe or the complex priorities and values of modern social institutions, require a form of implicit or explicit agreement on the part of those who construct them. When a new environment is constructed, everyone who has a stake in its use ought to be consulted. This process of consultation is a microcosm of how society works. That is, we either intentionally participate in decisions which affect our lives, or we allow others to make those decisions for us.

By consciously examining this process we can observe struggles for power, the emergence of leadership, attitudes towards or against democratic decision-making, techniques of negotiation and eventually either consensus or capitulation. Those people involved in the process come to represent different points of view. In the case of the design of a classroom some people might be concerned with how the space functions from the standpoint of the teacher, others might be concerned with how easily the space can be maintained or with the security of valuable equipment and still others might want the classroom to impress outsiders with the quality of work that is going on inside. Of course, all points of view are valid.

If the process of decision-making, construction and then modification vis-a-vis the classroom is monitored and recorded over the academic year, a complete **social, economic and political process** will become visible. Then this process can intentionally be studied and, from time to time, discussed. The actions which have been observed and discussed can be compared to the social, economic and political theories which are fundamental to humanities education.

Yet no living environment is constructed all at once and remains forever unchanged. Only a House of the Dead --a mausoleum-- remains unchanged. Just as the original process of deciding what to build (or what functions should receive higher priority than others) reveals important **assumptions** about what is needed, the process of observing **changes over time** will not only be a critique of those original assumptions (theories measured against practice), but also will demonstrate changing priorities based on the actual use of the space. In some cases decisions made early in the year might need to be refined or fine-tuned. In other cases parts of the classroom might need to be radically modified or completely redone. Given a period of one academic year, most classrooms undergo many changes. When students occupy a classroom which they perceive to be already finished or which they feel powerless to change, then the classroom cannot become a record of the life of learning that occurred there. It is merely an historical artifact, a record of some past life untouched by its present inhabitants. Learning to pay attention to change and to study the environment as a record of change is a means of learning to read the environment as an important measure of the values of its users.

Archaeology is the scientific study of the life and culture of ancient people by studying the artifacts that they leave behind. Because of the human cost and effort required to build, architecture is one of the major artifacts studied. It is a built record of what a culture **valued**. Likewise, a simple classroom is a record of the values of the school administration, the curricular philosophy, the teacher's individual goals and objectives and the student's expectations. The space itself is imprinted with signs and symbols of academic values, by accepted exemplars of excellence and by artifacts of everyday use. Even the arrangement of the room itself can favor the value of discussion and participation or defer to the authority and power of the teacher. As anthropologist Edward T. Hall has pointed out, space speaks a hidden language. Yet we live in a world which emphasizes the verbal over the visual. We depend on words, written or spoken, to give direction. Since we no longer need to read the environment in order to survive, we have lost the ability to visually discriminate. But the unspoken, silent visual environment also contains important information. A classroom of students is, in some ways, a microcosm of culture and humanities education revolves around culture. Therefore the classroom itself should be studied as a measure of the values of that culture in miniature.

Physical environments not only exist in their corporeal form but they also exist in **mnemonic form**. Remembering is associated with the places that the significant events in one's life took place. Just as learning is a cumulative activity, the collection of memory places increases over a lifetime. It could be hypothesized that there is a dynamic and lasting relationship between events of significance and significant places. Even though the classroom space might be dismantled at the end of a school year and returned to a neutral state, the room as a space with a particular character will have been etched into the memories of those who participated in its making-over-time. The memory of the process of the making-of-the-space over time and the space as artifact have been cemented together by a pedagogy which promoted human interaction, consensus and the responsibility for place-making as a servant of human needs.

The systematic study of the gradual construction of a space, the human dynamics that occur during its use and the situation of the artifacts that identify the values of its users are all central to humanities education. If the classroom itself is structured with the primary items necessary to support humanities education and if an attitude that encourages the modification of the environment is fostered, then even the limitations that are bound to exist will not be detrimental to the goals of the educational process. It is the process of studying the above six factors that is crucial to the alternative to Professor Schroeder's "House of Life."

I offer no easy solutions to the anonymous space, those centrally scheduled classrooms in which both students and teachers come and go on a fifty-minute cycle. Classrooms which become enriched and animated by their users will remain with us for the rest of our lives. Although the effort to produce such places will cause us to rethink the way we use our educational facilities, perhaps the educational benefits will be worth the cost.

COPYRIGHT ISSUES IN THE HUMANITIES

BY FRANCIS M. NEVINS

ST. LOUIS UNIVERSITY
SCHOOL OF LAW

VI: THE RIGHT OF PUBLIC DISPLAY AND ITS LIMITATIONS

On January 1, 1978, when the present Copyright Act went into effect, it gifted most copyright owners with a new right that had never been mentioned in previous legislation and that created a host of fresh legal problems, including a few for schools at every level. Beginning on that day, Section 106(5) of the Act gave the owner of copyright in any sort of copyrightable work except sound recordings "the exclusive right....to display the copyrighted work publicly."

Before we can understand the impact of this provision on academia, we must look at the dimensions of the newly created right. Both of its key terms, "display" and "publicly," are defined in Section 101 of the statute.

> "To 'display' a work means to show a copy of it, either directly or by means of a film, slide, television image, or any other device or process or, in he case of a motion picture or other audio-visual work, to show individual images nonsequentially."
>
> "To ... display a work 'publicly' means---
>
> (1) to ... display it at a place open to the public or any place where a substantial number of persons outside of a normal circle of a family and its social acquaintances is gathered; or
>
> (2) to transmit or otherwise communicate a ... display of the work to any place specified by clause (1) or to the public, by means of any device or process, whether the members of the public capable of receiving the ... display receive it in the same place or in separate places and at the same time or at different times."

These definitions make it clear that, at first glance anyway, the right of public display is an extremely broad one. Section 106 seems to make it illegal to "show a copy of" almost any copyrighted work in the public areas of any school building, such as classrooms, corridors, auditoriums, and administrative offices, without the copyright owners' permission. If the only relevant portions of the Act were the ones I've already quoted, it would be illegal for a teacher to display a slide of a copyrighted art work in an art appreciation class, or even to cut a copyrighted cartoon out of a magazine or newspaper and post it on the message board outside his or her office, without getting permission from the copyright owner. It would be illegal for a drama department to use a copy of a copyrighted book or magazine or painting or sculpture as a prop on a stage set without the copyright owner's permission. A school couldn't purchase copyrighted art works and use them to make its public areas more attractive without obtaining permission from the copyright owners. In short, all sorts of routine activities within an academic institution would suddenly become unlawful if the above quoted sections of the Copyright Act were the only relevant parts of the statute.

Fortunately, they aren't. The general strategy of the Act is to define basic rights in extremely broad terms in Section 106, and then to cut down the scope of those rights by means of twenty closely printed pages of qualifications. These qualifications, which are found in Sections 107 through 118, take three forms. First and most frequently employed is the **exemption**. Even if at first glance an activity comes within the broad scope of a Section 106 right, there may very well be a provision in the next twelve sections that declares the activity exempt from all copyright liability. Two of these exemptions have the effect of cutting back drastically on the right of public display.

The first of these is in Section 109(c), which was designed to prevent most if not all possible display-right suits against the owner of a legitimate copy of a copyrighted work. "Notwithstanding the provisions of section 106(5), the owner of a particular copy lawfully made under this title, or any person authorized by such owner, is entitled, without the authority of the copyright owner, to display that copy publicly, either directly or by the projection of no more than one image at a time, to viewers present at the place where the copy is located." Of course, if you buy a copy of a copyrighted work and display it in your home, it's not a **public** display and you don't have to invoke Section 109(c). But if you want to display that copy in a public place, like a museum or art gallery, you may allow such a display without the permission of the copyright owner of the work. This is the standard instance of how Section 109(c) operates. But its language also clearly covers most of the hypotheticals I posed earlier in this article. If I buy a copy of a newspaper or magazine, then I am the owner of the particular copy of the cartoon in that issue which struck my fancy, and Garry Trudeau can't sue me for infringing his public display right if I post my copy of the Doonesbury strip on my message board. If a school purchases copies of copyrighted artworks, it may hang or place them in reception areas, corridors or anywhere else in the building without worrying about display-right suits by the artists. The drama department can safely use a copy of a copyrighted work as a stage prop as long as the use is authorized by the owner of a lawfully made copy. (Notice, however, that Section 109(c) doesn't exempt the use of a copy of a copyrighted work as a prop in a movie, because the viewers of the movie are not "present where the copy is located.") So let's all give thanks for Section 109(c), which protects schools and their faculty and staff from what might otherwise be a plague of nuisance litigation.

There remain a few factual situations to which the section does not apply. For example, the teacher's use of a slide in art appreciation class would not be covered if the slide was not a lawfully made copy of the artwork. But this case falls within another exemption. Section 110(1) of the Act provides that the "display of a work by instructors or pupils in the course of face-to-face teaching activities of a nonprofit educational institution, in a classroom or similar place devoted to instruction," does not violate the right of public display. This exemption does not require ownership of a lawfully made copy, as Section 109(c) does, and it would seem to apply, at least as far as the right of display is concerned, even if the teacher's slide was not authorized by the copyright owner. Readers of my earlier articles in this series may recall that Section 110(1) also exempts the public **performance** of copyrighted works in the classroom setting, an aspect of the law discussed in my articles in the September 1984 and May 1985 articles for this journal.

The second of the three forms of limitation on the rights of a copyright owner is the **compulsory license**. Where a compulsory license covers an activity, the activity is not totally free from liability as is the case with an exemption, but it's the law, not the process of bargaining with the copyright owner, that sets the terms. For example, under Section 118(d)(1) of the Act, public broadcasting entities enjoy a compulsory license to display copies of published pictorial, graphic or sculptural works over the air without having to seek permission from the copyright owners. They must pay something for exercising this right, but the amount and the terms are fixed by a Federal administrative body, the Copyright Royalty Tribunal.

Finally, the third form of limitation on a copyright owner's rights is the well-known doctrine of Fair Use, which is found in Section 107 of the Act, and which I've discussed at length in the January 1985 issue of this journal in connection with the photocopying issue. Fair use criteria also limit the right of public display, and if there are any display situations in academia which don't come within the exemptions described above, they may very well be defensible on the ground of fair use.

WE'RE GOING QUARTERLY

...in response to the 1985 survey of members HUMANITIES EDUCATION will be issued quarterly. Membership will now be $16 per annum. Current members should see page two for a special renewal offer.

Our next issue on RITES & RITUALS will include articles on rites of passage in folklore and literature, the religious rites of ancient Greece, sports as ritual in the ancient and modern worlds... and the issue will include a set of 35mm color slides of ritual objects from a major art museum along with ideas for interpreting them in a classroom.

And Volume IV will lead off the new year of quarterly publication with a special issue devoted to computers, technology and the humanities.

Have you considered spreading the word about the National Association for Humanities Education? New members are most welcome!

ADVANCED PLACEMENT HUMANITIES IN HIGH SCHOOL

The high school seniors in my Advanced Placement Seminar are bright, college bound, and, generally, aspiring engineers or systems analysts. On a success scale from one to ten, students usually rate money a Nine; conditioned by their upwardly mobile parents, high-technology society, and worrisome economy, these computer-literate preppies are products of a materialistic, synthetic food and fiber culture. Or at least they seem so. Nevertheless, since the students have already had college-preparatory courses in British literature, American literature, and writing, I have the delightful opportunity to go "Forward from Basics."

"Forward from the Basics" is a humanities course designed to expand the students' frame of reference, to explore cultural ideas, values, and ethics, to encourage emotional and intellectual responses, and to refine their analytical writing skills. Although students demonstrate increased thoughtfulness and gain a better perspective of themselves within our environment, the primary goal is to transmit the enduring truths of the past.

The course begins with humans confronting their relationships with their God(s) and the intrusion of **hubris**. Although students recognize allusions to Greek mythology, they are singularly unfamiliar with biblical references to the Old Testament! An introduction to Genesis and Exodus affords some background as well as an initial opportunity for discussion, disagreement, and an awareness of the discrepancies between preconceived ideas and analysis and those between translations. To examine the cause of human misery, humankind's ability to endure it, and the degree to which people can control it, the class compares **Job** and MacLeish's play **J.B.**, analyzes **Oedipus Rex**, and moves on to Dante's **Inferno**. The comparison of the characters Job and J.B. brings the issue to today-nuclear proliferation, the space shuttle tragedy, personal misfortunes. Students tend to admire the reaction of Oedipus more than that of J.B. in facing forces beyond the self.

Aristotle's theory of tragedy from the **Poetics**, Plato's "Analogy of the Cave" from **The Republic**, and the dramas of Sophocles allow students an exposure to a cultural ideal reflected in philosophy, science, art, architecture, and drama. Students analyze the fine line between pride and principle in **Antigone** as well as in 20th century issues. A session of the Socratic method is not only fun but enlightening; it invites the mind to question assumptions and bridges the gap between philosophy and science. Architecture, in particular, exemplifies the expression of an age. The parthenon, erected for inaccessible gods, reflects both its teleological society and the attitude that "man is the measure of all things." The Gothic cathedral, erected to the glory of God, reflects both its Christian society and the attitude that human reason is ever limited. Students read **Everyman** and then essay a parody of Dante with their conception of 20th century evils; guides such as Wordsworth, Thoreau, Faulkner, even Remington Steele lead sinners through circles of realization.

The movement from anonymity in art created for an Egyptian queen or for the medieval church to the signed works of the Renaissance accentuates the growth toward humanism and individualism. If controlling the world is impossible, at least one can try to be an individual; we explore the extraordinary beings who descend into their hearts of darkness and discover themselves, their relationship to nature, their roles in humanity, and, primarily, their lack of extraordinariness. **Doctor Faustus** investigates the tension between desire and responsibility; Edmund and Edgar in **King Lear** the tension between ambition and stoicism; Raskolnikov in **Crime and Punishment** the tension between intellectual pride and Christian ethics; and **Fathers and Sons** the tension between tradition and nihilism.

Analytical thinking involves not only seeing a work in its cultural and historical context but also perceiving patterns in literature, such as tragedy, and structure in human relationships. Both **King Lear** and **Fathers and Sons** invite role reversal. Although students do not appreciate one of my favorite lines --"How sharper than a serpent's tooth it is/ To have a thankless child!"-- as I do, their understanding encourages re-examination of their own roles. Recognition of the commonality of philosophical movements, artistic expression, and human behavior within an historical epoch raises the question whether the 1980's are primarily in a reactionary or liberal swing. Student reaction is interesting; they initially opt for eclecticism and only gradually realize our essential subjectivity within a cultural framework. The character of Raskolnikov and the philosophies of Hegel and Nietzsche both fascinate and concern students; they too are victims of their own intellectual insularity.

Heart of Darkness and **Apocalypse Now** explore human capacity for idealism as well as for regression and confront students with the necessity for self-awareness as their best chance for moral survival. Does power corrupt as Lord Acton held? Is there a reason to lie? Is humanity inherently evil? Is an educated person more likely to commit evil than an uneducated one? How can one make a responsible decision in situations where right and wrong are not clearly defined? These questions are perturbing for students, culminating in a list of goods and evils, such as stoicism and expression of emotion, rigid discipline and hedonism, loving and aggressive actions. After contributing about twenty pairs, students select three values they consider most sacred and three they consider most abominable. The disparity in priorities is remarkable. If these students from a common background can disagree, how much more confused they realize, must values be world wide.

If the extraordinary person ends in isolation, then we must examine our roles in society. **A Doll's House** examines the difference between appearance and reality; **Saint Joan** demonstrates the near impossibility of individualism; and **Major Barbara** investigates the value of socialism. The philosophies of Kierkegaard and Hedegger as well as "Metamorphosis" and **No Exit** introduce existentialism; the reaction is normally that people need self-actualization within a community, both freedom and responsibility.

High school students do not want to exist on an ice floe. I end with excerpts from **Don Quijote de La Mancha** and the film; like maturity, realism with its varied perceptions can be overrated. Students conclude the semester with their attempt at a philosophy paper, generally behaviors and philosophies they admire; of course, responses vary, and I am always aware that students are not the robots they seem, that the humanities can lift us to an awareness of our past and present, and that I am equally as uplifted as my students.

If teaching literature involves encountering different people and situations, encourages reflection and evaluation, then literature cannot be separated from moral values. The goal is to help students examine assumptions, respond perceptively to others, see how they are part of what has gone before as well as individuals, determine transient issues from enduring ones, and live more humanely and intelligently.

BEST TRANSLATIONS

TRANSLATING PROSE: SARTRE

It is sometimes hard for the non-translator, whether or not she or he can read the original being translated, to realize how powerfully and necessarily different from its original any decent translation must be. It is not simply syntax, though that too must change, nor it is simply lexicon or phonology, though those too suffer inevitable transformations. But it is literary tone, even technical point of view, that necessarily and always are shifted about. There is no value judgment involved: this is what happens because, **tout court**, it has to happen.

Let me use one of the most famous of twentieth-century French novels as an illustrative text. Sartre's **La Nausée** opens:

> Le mieux serait d'écrire les événements au jour le jour. Tenir un journal pour y voir clair. Ne pas laisser échapper les nuances, les petits faits, même s'ils n'ont l'air de rien, et surtout les classer. It faut dire comment je vois cette table, la rue, les gens, mon paquet de tabac, puisque c'est **cela** qui a changé. It faut déterminer exactement l'étendue et la nature de ce changement.

Fittingly, for the book is nothing if not clinical in tone, this first paragraph is rigidly objective. **Il faut dire**: It is necessary to say. **Il faut déterminer**: It is necessary to determine. **Le mieux serait**: It would be best to (or: The best thing would be). **Tenir un journal**: Keep a diary. And so on.

Some of this survives, in Lloyd Alexander's fine translation, but some does not.

> The best thing would be to write down events from day to day. Keep a diary to see clearly -- let none of the nuances or small happenings escape even though they might seem to mean nothing. And above all, classify them. I must tell how I see this table, this street, the people, my pacquet of tobacco, since **those** are the things which have changed. I must determine the exact extent and nature of this change.

The impersonal has been transmuted, in part, into the personal. **Il faut dire** has become "I must tell," and **il faut déterminer** has become "I must determine." And these shifts are linked to an equally important syntactic change, just before them. Sartre ends his third sentence with the clause,

et surtout les classer. Alexander has, quite legitimately, broken this off and refashioned it into a separate sentence: "And above all, classify them." Why has he done this? Plainly, the translator's sense of the book, and what is required to make it work properly in its new linguistic and cultural-literary environment, has obliged him to create a distinctly different emphasis. The narrator's compulsion for classification is not given the same strong emphasis in Sartre. For Alexander, and in his view for English literature (which is after all the domain into which he is trying to take a book written for the very different literature of France), the emphasis must be heightened -- and the shift from impersonal third-person to more intimate first-person must then, logically, accompany the shift in emphasis.

I cannot quarrel with his decision; his translation works extremely well. But changes like this occur all through the book's English version. They are inevitable, and they help to explain why it is equally inevitable that a translation is not only not the original from which it comes, but also why it becomes, to some absolutely obligatory extent, no longer the original writer's book, sole and entire, but also to some degree the translator's book. If the translator has conveyed life to his new creation, it is to a degree necessarily his/her life, and not that of the original author. Mr. Alexander is a distinguished writer, but he is not Sartre, and there is no criticism of either man even implied in that statement. It is sheer ineluctable fact.

There is nothing to deplore about any of this: as I say, there is in my judgment no value judgment involved. Only those who think that translation is a process of mechanical transmutation -- only those who think that so-called "literal" translation actually occurs, or ever could occur -- could possibly see a value judgment arising. Sartre has used, in the final sentence of this paragraph, the adverb **exactement**. Alexander, shifting matters about, has made the adverb into an adjective, "exact." Literally, this is impossible. One should match the original point for point, straight down the line. But that is quite simply nonsense. And if the readers of translation have not known it, translators have had to know it, vividly and in great (and sometime painful) detail, for a very long time.

--Burton Raffel

JOHN LOW
KAREN OLSON

VIETNAM IN THE CLASSROOM: FACT, FICTION & TRUTH

In 1983 Americans marked the 10th Anniversary of the withdrawal of the U.S. troops from Vietnam. With lingering uncertainty about the virtues of that war, we erected a monument to the men and women who died in Southeast Asia and acknowledged the war as history with television documentaries and book-length monographs. As the animosities between supporters and protesters have subsided, however, the fading memory of our agony in Southeast Asia leaves us vulnerable to repeating past mistakes. In the fifties and early sixties American colleges and universities shied away from courses about communist insurgencies because of the repressive influence of McCarthyism. Vietnam was studiously eliminated from classroom investigation, forcing students to take the issue to the streets. There is doubt that left wing insurgencies will continue to erupt in Third World countries well into the next century. Can we as educators and citizens learn from Vietnam some of what we need to know to make thoughtful and informed foreign policy decisions about Latin America, or Africa or the Philippines? Can we, at the same time that we are being unflinchingly critical about our role in Vietnam, take sufficient national responsibility for that war to effectively reintegrate Vietnam veterans into our society? Can we recognize their acts of heroism and courage at the same time that we acknowledge their difficulties as the often confused victims of a war we lost and, perhaps, should not have fought.

Our own efforts to develop a course about the Vietnam war at Dundalk Community College in Baltimore Maryland, proved successful and encouraging and might provide a useful model to others. "Reading and Writing About Vietnam" evolved out of the personal and professional commitments of two colleagues, John Low from the English Department and Karen Olson from the History Department. Our success in conducting this course was due to three crucial factors: We gave very careful thought to the purposes of the course and were clear about what we hoped to accomplish. We actively recruited students who were diverse in their backgrounds and eager to examine difficult issues. And we established an instructional process that allowed all participants in the course to express the strong feelings they had about Vietnam but also enabled them to move beyond those feelings and examine the issues in a rigorous and dispassionate way. Let us be more specific about the organization of the course.

Goals and Purposes: Both instructors had been active opponents of the U.S. involvement in Vietnam in the 1960's. We had also encountered many Vietnam veterans in our decade of community college teaching. We felt passion about Vietnam and that turned out to be an asset because we taught the course as an issue that is alive and troublesome, rather than as past history, finished and complete.

We determined that our goals for "Reading and Writing About Vietnam" would be multidimensional:

1. As the title indicates, we saw the course as an exploration of a very complex topic, rather than a definitive statement on some limited aspect of the war.
2. We decided to take an interdisciplinary approach, to look at the war from many different angles, using history, literature, film, journalism, and personal accounts.
3. We wanted to work on two levels simultaneously, to study the international political dimensions of Vietnam but also to listen to the personal voices of G.I.s for a stater and to peasants from the Mekong Delta. We hoped to make some connection between personal experiences and their political implications.
4. We hoped the course would allow veterans and other students to sort out feelings, but we didn't want (and couldn't have managed) a therapy group.
5. We wanted a rigorous examination of the most significant issues raised by the Vietnam war: What is the nature of the Cold War? What do we know about the characteristics of communist insurgencies in Vietnam and elsewhere? What assumptions and decisions catapulted the U.S. into a major, undeclared war in Southeast Asia? What were the effects of that war on U.S. foreign policy, on the men and women who fought there, and on the Vietnamese nation?

Recruitment: "Reading and Writing About Vietnam" was widely publicized and open to any interested students. It was clear, however, that accomplishing our goals would require recruiting thoughtful students who had a variety of perspectives on war. Going through rosters from previous semesters, we sent individual letters to 50 students --male and female, black and white, young and not-so-young-- describing the course and its goals and urging them to enroll.

The class we ended up with was diverse, serious, and, on occasion, profoundly challenging. Our fifteen students included three Vietnamese veterans with sharply contrasting experiences of the war and its consequences. Rick had been badly wounded and was attending a community college as part of a rehabilitation plan. The violence he experienced in Vietnam was not unlike the recurring violence that erupted in his large Hispanic family. He was and is struggling to get training and a job despite enormous medical problems and a history of drug abuse. At the time of the dedication of the Vietnam memorial his letter to the editor, published in **The Washington Post**, ended on this note: "Not in all cases, but in many, the courageous soldier of yesterday is the broken man of today. This recognition is long overdue and for some a little too late."

John went to Vietnam from a patriotic working-class community, and returned to become a militant activist in Vietnam Veterans Against the War. He went on to get a bachelor's degree in history and a professional job in industry. He had read about our course in the newspaper and seized the opportunity to re-examine his own quixotic history as a soldier and a protestor. He wrote poetry about Vietnam throughout the semester and was frustrated by the less sensitive, know-nothing attitudes of some other vets.

George was assigned to Vietnam after the U.S. had officially stopped sending troops there. He was full of **Catch-22** stories, and when a badly crippled former officer addressed our class, George vented all of his enlisted man's anger, showing no deference to the wheelchair. George was the most expressive of the three veterans; he shared the internal process of re-examination most forthrightly, and rewarded us at the end of the semester by announcing, "I served in Vietnam for a year and I never knew until I took this course what that war was all about."

The middle-aged wife of a psychiatrist brought to the course her perspective as a private citizen who had supported the war effort in its early stages. As much as the Vietnam veterans in the class wanted to know why they had fought in Southeast Asia, Catherine wanted to know how the American democratic process made it possible for us to get so deeply embroiled. She also attempted to unravel the tension between her own generally patriotic sensibilities and her determination, by the late 1960s, that none of her children would go to Vietnam.

We were pretty close to a cross-section once you add a black steelworker, a quality control analyst from McCormick Spice, and some younger students who had no experience of Vietnam in their backgrounds. Having gathered together such an interesting group of students we made efforts to establish an atmosphere that would enable us to trust one another emotionally and intellectually.

Journal-writing was our most effective tool in establishing trust and thoughtfulness. We asked students to keep a journal, and to make several entries each week in response to reading assignments, films, comments by other students, and the questions that were raised in their own minds. At the same time we made it clear that we were keeping parallel journals. In class, all of us wrote in our journals at the beginning of discussions or at any point when we felt a need to stop and reflect or clarify the confusion we had stirred up for each other. We paused frequently during the semester to read aloud from the journals.

The instructors generated discussion questions and topics that were designed to summarize information, express personal feelings, clarify positions, or identify alternatives. For example, when we got bogged down in a debate about whether or not the U.S. could have won in Vietnam, we asked everyone to write in his or her journal for ten minutes in response to the following question: "How much would you have been willing to spend to win the war in Vietnam? State your answer specifically in terms of the amount of money, the number of American lives, and the number of Vietnamese lives." This journal-writing exercise forced each of us to go beyond our rhetoric and make a precise individual commitment.

On another occasion, when we ran into apparent contradictory evaluations of our various source materials, we worked out a very useful process for determining reliability. First we agreed on a definition of reliable, and then each of us rank-ordered our eight sources, beginning with the most reliable and ending with the least reliable. Given the diversity of the class, the lists were significantly different, and a comparison led to an enlightening discussion of whom do you trust and why.

Often after a writing session, we simply asked if anyone wanted to read his or her entry; occasionally we went around the room and each read part of what he or she had written. We all listened to readers without commenting or judging, and this established a pattern. Thoughtful opinions could be extended without fear of disapproval, and disagreement wasn't threatening because we had a mechanism for presenting discordant statements without attacking one another.

There are very fine materials available on the Vietnam war (more now than when we taught the course), and we chose for our course a sampling that gave students a solid background in the historical developments surrounding the war as well as an introduction to some of the best literary, philosophical and political writing about Vietnam. We used films to explore the propaganda postures of hawks and doves, and brought in speakers who were active in current Vietnam-related issues. Following are the specific materials we used:

-- **America's Longest War: The United States and Vietnam, 1950-1975**, by George C. Herring, was our basic historical text.

-- Philip Caputo's memoir, **A Rumor of War**, provided an example of the excellent and polemical journalism that came out of the war.

-- **Going After Cacciato**, by Tim O'Brien, represented one of the many outstanding novels that have been published by Vietnam veterans.

-- **The Wounded Generation: America After Vietnam**, edited by A. D. Horne, provided several essays by Vietnam veterans about the political issues that the war raised for them.

-- Our films included **The Sixties**, a ten-minute montage of images from the 1960s; **Why We Are in Vietnam**, the Pentagon movie justifying U.S. involvement in Vietnam; **Hearts and Minds**, the classic anti-war film; **The Anderson Platoon**, a documentary about a black unit in Vietnam; and **Coming Home**, an example of the presentation of Vietnam war themes in the popular culture by opponents of the war.

-- Speakers who came into our class included a former officer who applauded our efforts in Vietnam, and a former anti-war activist who deplored them; a counsellor from a veterans' center who discussed problems of Vietnam veterans; and two members of the Christopher Foundation who described a recent trip to Vietnam and the efforts of the Vietnamese to recover from the war. In addition, several students brought in information and petitions about the M I A issue and presented them to the class.

Our final assignment was a 5-10 page research paper on some specific aspect of the war, which for many of our students was an opportunity to make their own definitive statements about the significance and consequences of the war in Southeast Asia.

At the conclusion of "Reading and Writing About Vietnam" students and instructors alike knew that we had looked that war full in the face. Intellectually we were satisfied that our exploration of the issues had been both wide and deep. As human beings we had listened carefully to experiences and points-of-view alien to our own. And as citizens we were certain that we would be among those who would take responsibility for thoughtful judgment the next time our country went to war.

HUMANITIES EDUCATION
ABSTRACTS & REVIEWS

Summaries of significant reports about interdisciplinary humanities education.

CRITICIZING CRITICAL THINKING

"Critical Thinking and Trivial Pursuit" by John McPeck in **Teaching Philosophy** 8:4 October, 1985. Philosophy Documentation Center, Bowling Green University, Bowling Green, OH 45221 $16/yr, $5 single issue.

Anyone connected with the 'critical thinking movement' needs to engage in some sober reflection, if not critical thinking, about the criticisms McPeck makes about the attempt to teach general courses in critical thinking and informal logic.

He attacks the presuppositions of such courses based on three common sense assumptions about thinking: 1) Thinking is always about some particular subject matter, therefore attempts to teach thinking in general are absurd; 2) Effective thinking in one subject area is not transferable to another; the differences in reasoning among areas are much greater than the similarities; 3) To say that someone is a critical thinker **means** not just that the person has a propensity to ask questions, but that the person has the relevant knowledge and understanding in a field which makes productive questioning possible. In sum, McPeck argues that improving reasoning and understanding in particular subject areas will bring about an improvement in critical thinking abilities, whereas those in the critical thinking movement have reversed the causal ordering and mistakenly believe that teaching critical thinking **simpliciter** will improve reasoning across the disciplines.

Before we try to teach it, test for it, or require courses in it we need to know whether critical thinking is a general ability or whether it is a matter of having specific skills. A great deal of literature as well as a number of tests, including The Watson Glaser Critical Thinking Appraisal, assume critical thinking to be a general ability which is context-free and which can be broken down into definable sub-abilities. However, given that the sub-abilities include such things as the ability to recognize stated and unstated assumptions, the ability to formulate hypotheses, and the ability to draw conclusions and judge inferences it becomes clear that critical thinking means the same thing as general intelligence. From this it follows that we should be skeptical of claims that courses can improve critical thinking given that general intelligence (I.Q.) is resistant to improvement. McPeck is equally critical of the Informal Logic Approach which asserts that there is a small set of specific skills that can be learned and applied to any area of critical thought. Interestingly, teachers of informal logic course often point to improvements in Watson Glaser test scores as evidence of the benefits of informal logic courses; however, since it turns out that the courses are tantamount to direct training or "coaching" for the tests the results are trivial. What is needed is evidence that learning textbook-skills is transferable to non-test and non-textbook problems, but this seems to be sadly lacking. Moreover, McPeck questions whether learning the specific skills are either a necessary or sufficient condition for being a critical thinker. There are many people who display critical thinking and have never been directly taught critical skills. More importantly, learning the so-called specific skills is not sufficient since it turns out, according to McPeck, that they are not singular specific abilities or skills at all. For instance, the ability to select the right information to solve a problem is like the ability to win at games. The wide diversity of "problems" and types of information which are encountered make it highly unlikely that there are any true abilities and certainly no specific skills involved. In short there are many types of understanding which are needed to solve the immense variety of problems, and the specific skills taught in informal logic form only a very small subset of reasoning abilities. More knowledge and understanding of the aspects of particular problems and the context within which they occur is much more likely to lead to solutions than an abstract bunch of supposedly context free logical skills.

McPeck believes that there is an oversimplified view of knowledge and facts, which he calls the "trivial pursuit" theory of knowledge, which is the central (and mistaken) presupposition of the critical thinking movement. Knowledge is not a matter of gathering unambiguous uninterpreted facts in answer to simple trivial questions. Gathering information requires a complex background of assessment, interpretation and judgment which varies depending on the type of problem, and the critical component of critical thinking is parasitic on the complex processes involved in the knowledge component. There are no short cuts to critical thinking; it must be learned hand in hand within the various disciplines and within the various forms of human discourse. A broad liberal education is still most likely to provide the sorts of knowledge and understanding which are of most value since these disciplines are rooted in the human condition and are most likely to give the insights needed to solve the problems facing humanity.

It is important that learning in the liberal arts not be merely a matter of absorbing information; the sorts of questions, the methodology, and the processes of reasoning used should be an essential component of liberal arts courses. Instead of more general courses in critical thinking there need to be more materials for teachers in the specific disciplines on the epistemological and logical features peculiar to the discipline. Such 'philosophy of' materials are increasingly available; McPeck recommends an article by Israel Sheffler entitled "Philosophies-of and the Curriculum" in **Educational Judgments** edited by James Doyle [RKP, London, 1973] as a start.

Postscript: McPeck's book, **Critical Thinking and Education** [Martin Robertson Ltd., Oxford, 1981] as well as a number of other articles and books in recent developments in critical thinking and informal logic are reviewed in an excellent article in **American Philosophical Quarterly** by Ralph H. Johnson and J. Anthony Blair entitled "Informal Logic: The Past Five Years 1978-1983," July, 1985, pp. 181-196.

GOOD OLD DAYS?

"Conflict and Community at Old Sturbridge Village and Conner Prairie" by Andrew Baker, Warren Leon and John Patterson in **History News** 41:3 (March 1986). AASLH, 172 Second Avenue North, Nashville TN 37201. $4/issue.

"Living history" museums are more vulnerable to attack from both the public and the academy than any other type of museum. Because of their attempt to re-enact the lives of communities of long ago, their task is overwhelming in its comprehensiveness. Authentic buildings, authentic furnishings, authentic costumes, authentic tools and work processes, authentic foods, animals, plants, dialects--all are problems of researching and reviving, and each invites the criticisms of outside specialists, professional and amateur alike.

Even more challenging is the task of re-enacting human social dynamics, and until recently, living history museums have restricted interpretations to the vocational activities of individual persons--in short, work and production of hand manufactures in homes, family farms and village shops. Many aspects of human life are thereby ignored, especially those of the dynamic interrelationships among members of the community, which include both cooperation and conflict.

Old Sturbridge Village in Massachusetts now incorporates a variety of such issues. As a New England town, it has an ideal tradition as well as a fund of resources in the Town Meeting, where public issues were thoroughly thrashed out by members of the community from all walks of life. One issue of the 1830s that OSV re-enacts is temperance. Should the selectmen stop licensing retailers of ardent spirits? Should they continue to use public monies to supply alcohol for road-maintenance workers and for residents of the poor farm? Citizens who argue pro and con include ministers, workers who regard tavern leisure as wholesome and essential recreation, progressive farmers and manufacturers who have seen production go up with restricted liquor supplies. Museum visitors are asked to join in the vote, but responding as if they were 1830s citizens.

Town meetings (and every four years, re-enactment of the 1840 presidential election) are not the only arenas for community interaction. Minding Alexis de Tocqueville's observation of Americans' penchant for voluntary associations, the OSV staff has created the "Sturbridge Charitable Society." The monthly meetings in various houses reproduce the structure of nineteenth century women's societies, complete with constitution and officers, and the ladies work together to provide clothing and textiles for the sick and destitute. Last year, though, the role-players began to introduce controversy into the "thimble club." Careful research, scripting and professional direction "introduced the formidable presence of Abigail Kelley, an important abolitionist speaker and organizer active in the New England countryside in the late 1830s." Her exhortations sharply divide the society, and, incidentally, challenge the abilities of historical role-players who may be asked to espouse views that offend their real 1986 feelings!

The Connor Prairie program resulted from a self-study that showed that their presentation of 1836 Indiana life was not merely unauthentically harmonious: "The past we presented was boring." The rewriting included a number of conflicts in values. Newcomers take over the local inn, but the husband dies and the wife continues to operate the inn, despite the disapproval of some local people. A 67-year-old-veteran has applied for a pension, but in the meantime, as a pauper, the contract for his support is sold to the lowest bidder. Both welfare systems and the condition of old people are discussed.

The most recent addition to Connor Prairie's interpretation is a funeral. Because they couldn't afford to waste one of the residents (all of whom are carefully researched and needed for interpretation of the living), the staff introduced a traveling salesman who succumbed to influenza. The funeral attracted over six hundred visitors on a Sunday in September. Visitors were forewarned in case they preferred not to confront death history. Public reaction was favorable, thoughtful, and sometimes emotional; several visitors wept at the graveside. Other topics in recent interpretations include religion (a camp meeting), temperance, and a black view of slavery, still undergoing preparation. However, "none of us can portray the past exactly; the source materials have not survived, and no one would pay to walk through raw sewerage on Main Street."

INFUSING VALUES

"An Experimental Method for Infusing STS into Secondary School Curricula" by Richard F. Brinckerhoff in **Bulletin of Science, Technology and Society** 5:2 (1985). Pergamon Press Journals Division, Elmsford NY 10523. $85/year.

"DISEASE, abortion, wars, murder, famine, accidents and pollution REDUCE the world's population; its INCREASE is promoted by motherhood, medicine, public health, peace, law and order, scientific agriculture, accident prevention and clean air. Therefore, the population explosion is desirable." Statements of this sort, written on the blackboard, represent one method of infusing the science curriculum with STS (Science, Technology and Society). Infusion is necessary, says Brinckerhoff, a science teacher at Phillips Exeter Academy, because not only is there usually no room in the curriculum for an additional course in science-technology values, but the conventional science courses in the secondary schools adhere to a strict schedule of topics and learning experiences that brook no interruptions. The strategy that Brinckerhoff and others who are concerned about the potentially dangerous posture of "value-free" science have developed is a large-- a very large-- collection of very short items that can be tossed out to students with or without comment or expenditure of classtime.

The controversial statement on the blackboard is left without comment for one or two weeks under the assumption that students will read it, think about it casually or critically, and when the teacher is ready to use it as a text for discussion, they will be more or less prepared. Class discussion is only one option; the teacher may want to ask students to post their written responses to the statement on the bulletin board. Several other methods of infusion are suggested, but Brinckerhoff points out that teachers should remember that what is important is not the amount of classtime devoted to the issues but "the year-round **consistency** of the shower of reminders of all the enormous variety and relevance of societal issues." Where does one find such a multitude of issues? Everywhere: newspapers, scientific journals, popular magazines, radio call-in shows, advertising. Advertising, incidentally, is the source of Brinckerhoff's faith in this method. Ad executives know well that short, pungent and frequent statements are more effective in getting a message out than long, discursive, rare treatises.

And it does work: "...it is striking that students constantly refer to these STS questions on their own in class, on their way out the door, and in conversation in subsequent weeks."

IDENTITY CRISIS

"Art Museums in Academe" by Terry Zeller in **The Museologist** 49:171 (Summer/Fall 1985)

There are over 200 campus art museums or galleries in the United States, but precisely what they are or what they should be is an open question. Too often they are "step-children" in the academic world, having no faculty, no students, no curriculum, no alumni, no tuition, no booster clubs, fans, school spirit or gate receipts. Few college administrators have any sense of what a museum should do, and the faculty powers that run academic affairs by way of committees and departments bypass the museum as being outside the real business of a university: churning out graduates, research grants, publications and promotions. And when the museum is connected to an academic department, it usually becomes a "weak sister" of either Art History or Studio Arts. In the former case, the museum becomes a 3-D supplement to a textbook of historical cliches; in the latter, it becomes an exhibit hall for the faculty and a few anointed students.

In styles of exhibitions, campus museums seem to follow the leads of "big-city role models," although given their smaller collections, less comprehensive scope-- usually spotty--, and few if any "star" attractions, the effect is one of mimicry rather than successful imitation of the great public museums. Other factors add to the confusion of definition for the campus museum's role. Land-grant universities indicate the need for an active outreach program, while campuses that are located at distances from metropolitan centers must operate as the public museums for their locales.

Such are the problems; are there any answers? Yes, says Zeller who is a Deputy Director at the Rochester (NY) Museum and Science Center. First, the campus museum should capitalize on some of its limitations in serving its primary audience, the campus community. "Stressing only the masters does not provide students with a realistic and balanced picture of the history of art....The campus museum should provide art history students with the opportunity to practice their critical/connoisseurship skills." Second, the university museum should play a major part in training museum professionals. Third, it should play an equally active role in teacher training, not only for art teachers, but for humanities teachers at all levels. Related to this is Zeller's fourth recommendation, to enhance college-level humanities courses by encouraging interdisciplinary connections. "By taking an interdisciplinary, humanistic approach, the campus art museum can combine the visual, literary and performing arts in ways that could .... promote visual literacy and counter the boorishness of higher education." Zeller's last recommendation is to exploit the opportunity to take risks, experimenting with "innovative exhibition techniques, nontraditional methods of labeling and didactics, interdisciplinary thematic approaches to exhibitions, and a variety of evaluation strategies." Unlike public museums that are obligated to attract and serve hordes of visitors, appease trustees, and generate gate income, the campus museum can afford to be adventurous, and it often has an untapped pool of experts near at hand. One caveat, however. In the current state of economics in higher education, the campus museum cannot depend upon the academy for funding, particularly if it adheres to the "suicidal" narrow missions and exclusive constituencies of art historians and resident studio artists.

3-RING CENTERS

"The Evolution of a Body of Knowledge" by Julie Thompson Klein in **Knowledge: Creation, Diffusion, Utilization**, Vol. 7, No. 2, December 1985. Sage Publication, 275 South Beverly Drive, Beverly Hills CA 90212. $25/year.

How old is interdisciplinarity? As old as humanity, some might say, since everything is interrelated. But if we speak of consciously planned attempts to bridge the specialties toward the solution of complex problems, the story is not at all venerable. Teams were developed in the 1940s to deal with agricultural experiment stations and land grant universities. The Manhattan Project to develop the atomic bomb was another early example of interdisciplinary problem-focussed research, abbreviated IDR by Klein, who is an interdisciplinary theorist and teacher at Wayne State University.

Theory is what is generally missing from these teams. The problem or problems at hand are the reasons for being, and from this we derive the organization, administration and methodology of each IDR. This pragmatism is reflected in the literature of IDR, which tends to be made up of "case studies, anecdotal wisdom, and small empirical studies characterized by statistical description of limited samples." Published material shows little knowledge or interest in other interdisciplinary research by team members. Klein's article draws upon a wide array of studies as an attempt toward generalizing about the dynamics of interdisciplinary research. Nearly all her information derives from technological, scientific and social services, yet relevance to humanities research and teaching is clear.

The key element of IDR are team efforts centered on a problem or problems. Both elements run counter to the structures and traditions of research universities, which are discipline-based. A discipline has a language in common. A discipline has an administrative structure that frustrates cooperative research. A discipline has a linear tradition of topics suitable for study, and it has evaluation and reward systems tied to individual achievements within the departmental/disciplinary organization. Ideally, universities should adapt their organization to the needs of interdisciplinary researchers, but Klein reports mixed success at best.

Structurally, the most successful form seems to be the **Center**, which "creates an interdisciplinary environment for dealing with complex problems" along with a degree of visibility that an informal team could not attain. However, a Center requires money, and as a quasi-departmental entity, its team-members are likely to maintain allegiance only while the money lasts. Moreover, an interdisciplinary Center seems to be a delicate plant, requiring an unusual combination of leadership talents for success.

Language and communication are absolutely central. Klein finds that the planning stage -- "sometimes perceived as a 'wallowing' stage because of the length of start-up time" -- is essential. Oddly, when there is a preponderance of multidisciplinarians, successful research and continuity are not quite so likely as with widely disparate disciplinary teams. The reason seems to be hasty assumption of commonalities: leaders and team-members assume that they understand the problems which have brought them together and they assume that when team-members talk, they are sharing the same language. Inexperienced team-members, on the other hand, are wary and uncertain and will spend more time hashing out problems of definition, language and basic premises. A good leader is necessary, and the descriptive terms from the literature show how unusual the leader must be: **ringmaster, bridge scientist, ombudsman, specialist/generalist, polymath** and **dynamo.** Klein presents a hypothetical job description for an ideal IDR leader. The last requirement is "enormous energy."

FOOT-TAPPING

"Motion and E-Motion in Music" by Olga McDonald Meidner in **British Journal of Aesthetics** 25:4 (Autumn 1985) Oxford University Press, Oxford OX26PD England. $50/year.

Music arouses emotions in humans; many of us have wept as the result of a musical experience. Sometimes this can be explained by personal associations as when a piece of music arouses memories that are emotionally charged. With vocal music, emotions may be explained by the poetry, as in "The Vacant Chair," "Sentimental Journey," "Eleanor Rigby" or a thousand other songs, hymns and arias. Nevertheless, there are songs without words, piano sonatas, unnamed string quartets that are acknowledged by many as "sad" or "joyful" irrespective of language and private memories. How does this happen?

Meidner's attempt to answer this conundrum was prompted by a paper written by the President of the British Society of Aesthetics advising philosophers to give up as hopeless the whole set of problems about expressiveness in the arts. In actual practice, this is what has been happening over the past half century. Psychologists have intimidated aestheticians, Meidner says, and there's been nothing newer and better than Carroll Pratt's 1931 **The Meaning of Music.** From this work, she accepts the thesis that "music is motion and that motion and e-motion are inextricably connected."

Drawing on a passage from William Golding's novel of prehistoric humanity **The Inheritors,** Meidner argues that **empathy** is not only basic to human beings, but that the empathic "losing oneself" in a work of art is essentially kinesthetic. That is, we **feel** in our muscles phenomena that are outside ourselves in an imitative mode. (Some people empathize with a person who is slipping on a floor; others empathize in their jaws with a scissors cutting through resistant material, etc.). Unsophisticated listeners to strongly rhythmic music invariably participate with overt motions. While this is internalized and subtler for other listeners to other music, "listeners sitting perfectly still may be enjoying a highly civilized participatory response...." Movement, she says, is the link among the empathic perception of the arts acting, mime, dancing, sculpture and music.

But what moves and where? The sounds, of course. They move through "space" -- pitch space, up and down, and time space, "horizontally." Both are elements of the melodic line, something that not only moves, but that we experience by **gestalt** rather than as individual notes and spaces. Much like emotion. The technical language of western music underscores the interrelatedness of motion and emotion: **vivace, nobilmente, graziso,** etc. Meidner concludes "If we find that music is most apt to suggest human emotional behavior, that is chiefly because even if not performing we ourselves participate; but also partly because we want our music to fill that role."

BETTER JOB NEWS

"Why Hire Humanities Graduates?" by Robert W. Goddard in **Personnel Journal** (February, 1986). A.C. Croft Inc., Box 2440, Costa Mesa CA 92628. $26/year.

Personnel managers are the gatekeepers for jobs in business and industry, and, as an article in HUMANITIES EDUCATION has demonstrated, they tend to clone themselves and other technical specialists. Moreover, they appear to do this in direct opposition to the stated views of top executives who frequently tout the superiority of liberal arts education over business administration, technological studies and narrow personnel training.

A number of recent reports decidedly support the idea that liberal arts graduates are effective workers in non-academic business. A few findings will suffice here. Specialists, it is found, "function very well in early years of employment," but their narrowness handicaps them for advancement. Although liberal arts majors do not have a corner on all desirable characteristics for management, they are especially strong in four "education-related predictors of academic performance and life outcomes": Self-definition, achievement motivation, maturity of adaptation and leadership patterns. An At&T study showed that over a 27-year period, nearly half of their employees who were humanities and social science graduates reach "mid to higher levels of management" as opposed to only a quarter of engineering graduates and fewer than one-third of business graduates. In administrative skills, they are equal to business graduates, but well ahead of engineers.

Which sounds all very well, but how can personnel managers change their anti-liberal arts prejudices? There are seven changes that will help, says Goddard, who is Director of Publications for Liberty Mutual Life Insurance Company of Boston. First, pay less attention to specific majors and more to a "solid record of academic and extra curricular achievement." High honors scores grades do not seem to have a long-lasting effect. Second, personnel should review job descriptions, which are often so specific and narrow, that employees are unable to adapt to change. Further "more than half the people who go to college end up in careers they hadn't...trained for." Third, broaden the recruitment base; there are many more good schools than recruiters conventionally aim for. The fourth change is related: target recruitment at high-scholarship schools. Goddard recommends The **Gourman Report: A Rating of Undergraduate Programs** for a quick read on quality.

The last three changes have to do with the liberal arts development of personnel on the job. "Encourage technical people to broaden their knowledge base," "Upgrade in-house management education" to include psychology, philosophy, ethics, society and business. Finally, enroll executives in "special liberal arts and humanities programs" (such as have been reported in previous issues of HUMANITIES EDUCATION).

TEEPEES & SHOTGUNS

"In the Vernacular: Classifying American Folk and Popular Architecture" by Thomas C. Hubka in **The Forum: Bulletin of the Committee on Preservation** VII:2, December 1985. Society of Architectural Historians, 1700 Walnut Street, Philadelphia PA 19103.

Originally, "vernacular" referred to the language as it is spoken by The People, as distinguished from the languages of scholars, lawyers, diplomacy and the court. In architectural terms, the vernacular includes homes and buildings ranging from home-made **folk** structures (usually a separate sub-category) to mass-designed stores, gas stations, and motels. For most newcomers to the field, it is safe to assume that almost every house, apartment or mobile home you have lived in was vernacular -- as were the garages, barns and chicken coops you have known.

Until recent years, the only interests in vernacular architecture was evinced by rather maverick students of folklife and cultural geography, pioneers in material popular culture, and some historical societies stuck with an undistinguished piece of real estate.

Matters have changed dramatically: now preservationists, social historians, and architectural historians have moved from elitist restrictions of what constitutes "true" architecture to almost madcap comprehensiveness. Having every building in the world now a candidate for serious attention is not the end of the problem. There has also been a burgeoning of critical and evaluative approaches to understanding the gamut of dwellings from tepees to shotguns, I's, duplexes and split-levels. "But," says architect Hubka, "this kind of spirited interdisciplinary growth has caused a subtle problem: How to accommodate the new theoretical interpretations while still maintaining a unified, historically comprehensive vision of the whole" (structure and history)? Most of the conventional criteria of architectural historians don't apply. Not only do we lack "great architects" whose biographies might be illustrated in these anonymous buildings, but we lack clear-cut "influences" from seminal works, and even the old reliable Styles-- Baroque, Greek Revival, International etc. -- are usually so muddled, modified and minimized that classification seems hopeless.

Not to worry, says Hubka, who recommends two sets of classification. The first is a set of five criteria that includes not only the buildings **per se** but their places in social and environmental history. These criteria are **spatial organization, architectural style, structural system, social usage,** and **context.** The important fact, Hubka states, is not that his are original ideas, but that all five should be employed with every building under study.

This seems straightforward, but it is complicated by two "persistent myths" about American architecture. First is "The Myth of Adequate Data." The actual fact is that there is too much classification based upon inadequate data, "the ubiquitous windshield survey employed in many geography, landscape and American studies programs." Detailed measurements, architectural drawings and other data are necessary and should relate to the specific building and not to some inferred type. Which introduces the second barrier to accurate classification, "The Myth of Purity and Statis." Traditionally trained architectural historians "frequently enter vernacular studies with a bias toward the study of buildings which are pure, unaltered and readily identified according to particular stylistic category or form type." This is a bias that can distort interpretation, because most vernacular buildings have a far more organic life history.

One more problem should be addressed. Traditionally, architectural historians look for unique subjects. This, Hubka says, won't do. "Keeping in mind the persistent myths I have just outlined, I recommend the need for a populist classification," in other words, the significance of vernacular structures is in direct proportion to their number. This time, "less" is not "more."

OUT OF THE DARK

Renaissances Before the Renaissance: Cultural Revivals of Late Antiquity and the Middle Ages, ed. by Warren Treadgold. Stanford, California: Stanford University Press, 1984. 238 pp. $28.50. Reviewed by James V. Mehl.

For those of us who must define and interpret such concepts as "Classicism," the "Dark Ages," and "Renaissance" for students in humanities classes, this volume should prove useful. Originally presented as papers for a Stanford University seminar in 1981, the seven essays in this collection constitute, according to the editor, "the first book to provide a comprehensive survey" of the renaissances or cultural revivals which occurred in the Latin West and the Greek East prior to the Italian Renaissance. Each of the renaissances is treated by a distinguished scholar: the Second Sophistic (B.P. Reardon), the Fourth-Century Latin Revival (Alan Cameron), the Carolinian Renaissance (John J. Contreni), the Macedonian Renaissance (Warren Treadgold), the Anglo-Saxon Monastic Revival (George Hardin Brown), the Twelfth-Century Renaissance (Stephen C. Ferruolo), and the Palaeologan Renaissance (Ihor Sevcenko). Treadgold also contributes a lengthy introduction in order to establish the context for the specialized essays, as well as a conclusion of major points which may be derived from the studies. Selected and annotated bibliographies accompany each essay, and there is an index.

In the introduction, Treadgold attempts to set the perimeters of the inquiry by defining a renaissance as "any revival of knowledge of Greek and Latin literature after a 'dark age,' which can be defined as a setback to such knowledge" (p. 2). He excludes from the definition any consideration of vernacular literature, art, or theology. The editor maintains that such revivals of Greek and Latin classical culture occurred in nearly parallel chronology, beginning with the Second Sophistic in the second century A.D. and the Latin renaissance in the fourth century. These were followed by periods of darkness, with revivals coming again under Charlemagne in the West and under the Macedonian emperors in the Byzantine East. The final medieval revivals were the Twelfth-Century Renaissance in Europe and the more limited Greek renaissance under the last Byzantine dynasty. The authors of the individual studies stray a great deal, however, from the definitional boundaries fixed by the editor. The authors of the Greek revivals, for example, include much evidence from art history. Ferruolo challenges Treadgold's narrow view of renaissance as strictly a literary revival by siding with more recent scholars (Southern and Chenu) who interpret the Twelfth-Century Renaissance as essentially a cultural-religious reform movement. And Sevcenko prefers to call the Palaeologan Renaissance simply a revival.

These inconsistencies of definition and interpretation not only suggest serious differences of opinion among specialists in the field, but also raise such issues for the attention of humanities instructors. What exactly is a "renaissance" and a "dark age"? Is it appropriate to define a renaissance only as a revival of classical literature without also considering art, philosophy, and all the other ingredients of a cultural movement? How do Humanism and Scholasticism relate to these renaissances? And the issues extend beyond the scope of the book. What is a proper approach to the Renaissance of the fourteenth and fifteenth centuries and to the various classical revivals of the modern period? A careful reading of this volume should clarify and encourage reflection on these important questions of cultural interpretation. Some further reading of Erwin Panofsky's **Renaissance and Renaissances in Western Art** (paperback ed. New York, 1969; Stockholm, 1960), Jean Seznec's **The Survival of the Ancient Gods** (New York, 1961), and Wallace K. Ferguson's **The Renaissance in Historical Thought** (Cambridge, Mass., 1948) should bring additional insights.

FOR NEWCOMERS

THE NATIONAL ASSOCIATION FOR HUMANITIES EDUCATION: A POCKET HISTORY FOR NEW MEMBERS

NAHE originated in 1968 as a product of a series of programs sponsored by the New York State Department of Education. The organization grew rapidly and from the outset has had a membership that encompasses the spectrum of American education, including college professors of humanities and fine arts, secondary and elementary school teachers and professional education instructors, consultants and administrators. While espousing no dogma or theoretical school, NAHE and its members have adhered firmly to a core of great works of human thought and expression, to the integration of these around major themes of human values and issues, and to a continuous quest to relate the arts and humanities to contemporary issues and to our students.

During the decade of the 1970s the organization was extremely active, publishing guidelines for teacher preparation in interdisciplinary humanities and related arts in response to the revolution in curricula that spawned so many elective courses nationwide. NAHE also published for a decade HUMANITIES JOURNAL and the newsletter HumaNews, and it sponsored major biennial conventions. As with many professional educational organizations, the hard times of recent years forced NAHE to cut back on conventions and redefine publication programs.

When the National Association for Humanities Education revamped itself in 1983, it reasserted the decade-old mission to serve and promote "the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions." NAHE also proposed to publish a journal that was "too useful to throw away." That is an ambitious goal for an organization (the only one now or ever) dedicated to interdisciplinary humanities teaching in all settings: colleges, secondary schools, museums, and public programs. This is the reason we have chosen the innovative looseleaf format: members can easily preserve their "own" magazine and send other articles on to friends.

Membership in NAHE continues to grow steadily. More than half the members are professors in liberal arts colleges and universities, but we have been seeing a significant increase among museum educators, secondary school teachers and community college instructors. We like this variety and enjoy the challenge of trying to achieve a balanced offering in the magazine.

On the following pages, you will learn the latest news about our organization.

MINUTES

Meeting of the Executive Committee of the National Association for Humanities Education, Babst Library, New York University.
February 22-23, 1986

Present: Gary D'Lamater, Robert Frazier, Sharon Scholl, Fred Schroeder, David Stringer, Inez Wolins

1. Fred Schroeder presented the 1985 annual report of activities, finances, membership. The Association is solvent, having a bank balance of approximately $2400. After two full years' experience of publication and a year of staggered renewals, the average cost of publication and membership services indicates that we could go to quarterly publication.

   Despite a predictable pattern of non-renewals, and only two modest membership campaigns, we showed a 21% increase in membership. (Down from 400% in 1984!). Schroeder pointed out that the bulk of renewals will come up in March, and that both renewals and a drive for new members are important.

   Membership demography: 20% of members are in Minnesota and California. The Midwest (including Missouri and Minnesota) represents one-third of the membership. The five states that do not have members are Alaska, Mississippi, Montana, Rhode Island and Vermont. We have not made a precise count of member affiliations, but approximately two-thirds are in universities, colleges and community colleges, with the remainder distributed more or less evenly among secondary schools, museums and state humanities councils.

2. Much of the Saturday session was devoted to brainstorming ideas for increasing membership. Schroeder said that he would purchase a new mailing list of about 2000 labels. The 1984 experience with direct mailing of fliers indicates a 4% return is likely. The Committee agreed that we should try to involve members in promotional campaigns. The 1985 survey form showed a number of members who would "be willing to help in any way to make a convention a success." The Committee will try to develop a packet of promotional materials and strategies to send to some of these members, who might be designated as "state representatives." Gary D'Lamater agreed to prepare a new promotional brochure.

3. Inez Wolins reported on her unsuccessful attempts to win foundation interest in underwriting a special issue and coordinated publicity campaign. Foundations were uniformly skeptical of underwriting a publication or organization, but they showed interest in funding specific projects. She will pursue this further. Fred Schroeder reported that a pilot project for advertising inserts was a failure; Wolins proposed another method that has been successful with a media-in-museums publication. David Stringer suggested corporate funding for issues that are tied closely to utilizing

commercial materials, e.g., media packets, films, computers, etc.

4. Sharon Scholl proposed the general question "What is our direction and are we all going in the same direction?" The Committee reaffirmed our commitment to serving humanities educators in all institutional and non-institutional settings. Schroeder said that keeping a balance among these interests in the magazine is a challenge, but that the Abstracts and Reviews section and the "Upcoming" announcements in HumaNews help greatly, as well as the looseleaf format that permits members to select relevant material to save.

   The Committee endorsed the current magazine format as economical and effective. A few college members have expressed a desire for a bound, printed format that is more impressive in promotion-tenure files; the Committee agreed that we are in the business of service to teachers rather than college committees.

5. Fred Schroeder reported on his plans for Humanities Education, primarily to become indexed in Education Index. Libraries do not ordinarily subscribe to un-indexed periodicals, and library subscriptions are extremely valuable as a solid income base. The 1985 survey indicated almost unanimous desire for a quarterly magazine and willingness to pay a higher fee for this service. He stated that we will do this after we have a somewhat larger membership and a comfortable backing of articles.

   We definitely need a good HumaNews editor. A one-page HumaNews could be mailed out five or six times each year, thereby keeping NAHE more regularly in the members' minds, having relevant upcoming events announced more frequently, and making the editing of a quarterly magazine less burdensome.

   Schroeder also suggested having special issues of Humanities Education developed by guest editors. David Stringer volunteered as guest editor for an issue devoted to "technology in the humanities."

6. The NAHE Constitution and By-Laws were reviewed briefly. They need revision to bring them more in line with recent changes in practice. This was tabled for later consideration by a subcommittee.

7. The question of state/regional chapters was discussed. Very few associations are successful in maintaining state chapters nationwide. The Committee endorsed the idea of encouraging members to develop state, metropolitan or regional associations, or any other combinations that make sense to members.

8. Most of the above concerns relate directly to the need for a national conference/convention. We noted that the peculiarities of our Association and our membership (interdisciplinary and varied institutional bases) will generally make NAHE an organization of "secondary allegiance." Most members, therefore, would not be able to make possible regular attendance at a NAHE annual convention

(the 1985 survey underscored this problem).

The second day of meeting was devoted entirely to exploration of the best strategy for a conference. The following general decisions were made:

a. We will have biennial conferences, encouraging state and regional conferences in off-years.
b. We will not attempt to establish a fixed calendar for NAHE conferences, but select times best suited to conference sites.
c. We will aim for conferences with restricted numbers of participants rather than tying success to large turnouts.
d. Conferences should maximize individual participation and include stimulating special events, such as concerts, tours, theatre, etc.
e. Conferences should not separate participants by discipline or institutional affiliation (e.g. college, secondary, museum, literature, arts, etc.)
f. Conference sites should be easily accessible.

Desirable sites were discussed, especially Minneapolis/St. Paul, Washington, D.C., St. Louis, Indianapolis, Louisville, Phoenix, Boston.

9. NAHE will have a 1987 Conference in the Twin Cities. The University of Minnesota Department of Conferences will assist in planning. We will limit participation to approximately 75. The Executive Committee will serve as Conference Committee, enlisting wide participation of members in developing a dynamic, fruitful program. The tentative thematic title is "the humanities--a national dialogue." Inez Wolins will try to raise funds to bring the Conference Committee together in the Twin Cities in Fall of 1986.

10. Fred Schroeder commended members of the Executive Committee (including Vasant Merchant and Bryan Lindsay who were unable to attend the New York meeting) for invaluable assistance with the magazine and membership promotion. He thanked those present for their willingness to spend time and money on this meeting, and all thanked Inez Wolins for arranging the meeting.

UPCOMING

Excellence in Teacher Education through the Liberal Arts is a conference to be held at Muhlenberg College; May 20-21, 1986. Major speakers include: Theodore R. Sizer, professor of Education, Brown University; Maxine Greene, William F. Russell, Teachers College, Columbia University; Hugh Petrie, Dean, Faculty of Education Studies, SUNY Buffalo; Edward J. Meade, Jr., Chief Program Officer, The Ford Foundation. For reservations or information, contact: Department of Education, Muhlenberg College, Allentown, PA 18104, tel. 215/433-3191.

There's a May 31 deadline for papers on **Humanities and Medicine.**

For possible presentation at a conference of the Association for Faculty in the Medical Humanities, to be held in October in New Orleans, Contact: Robert Nelson, U-587, University of California, San Francisco, Cal. 94143; (415) 66402150. And just a day later for proposals for the Eighth Annual Conference of the Association for Integrative Studies on **"The Contexts of Interdisciplinary Studies: Pedagogy, Politics, and Research."** Guidelines: One or two page abstracts of proposed papers, panels, workshop/demonstrations by **June 1, 1986**. Topics: Strategies for effective interdisciplinary instruction; issues in interdisciplinary research; models of collaboration and analyses of curricular design; interdisciplinary general education; problem-focused research in applied areas; the social political contexts of interdisciplinarity. **Conference dates November 15-17. Proposal Submissions and Conference Information:** Dr. Beth A. Casey, Director, Center for Academic Options, Bowling Green State University, Bowling Green, Ohio 43403; (419) 372-8202.

May 31 to June 1 are also the dates for **"The Future Shape of Teacher Education: The Independent Liberal Arts Colleges' Perspective,"** national forum, Marycrest College and Association of Independent Liberal Arts Colleges for Teacher Education, Holiday Inn, Davenport, Iowa. Contact: Michelle Schiffgens, Department of Education, Marycrest College, Davenport, Iowa 52804; (319) 326-9241. Always sumptuous and high priced is the June 8-12 **Annual meeting, American Association of Museums**, New York Hilton Hotel, New York. Contact: Marifred Cilella, AAM, Suite 428, 1055 Thomas Jefferson Street, Washington 20007; (202) 338-5300. June 9-11, it's **Teaching Ethics: Incorporating Values into Professional and Liberal Studies**, conference, Alverno College, Milwaukee. Contact: Alverno Institute, Alverno College, 3401 South 39th Street, Milwaukee 53215; (414) 647-3966. For another kind of philosophy, try the June 11-13 **"Social Philosophy and the U.S. Constitution"** International Social Philosophy Conference, Charlotte, N.C. Contact: David M. Spark, Department of Political Science, Georgia Southern College, Statesboro, Ga. 30460-8101.

Non-Traditional and Interdisciplinary Programs, national conference, June 30 - July 2 at George Mason University, Arlington, Va. Contact: Sally J. Reithlingshoefer, Division of Continuing Education, George Mason University, Fairfax, Va. 22030; (703) 323-2342.

A call for Papers on Humanities and Aging has a July 1 deadline. The conference, **For The Aging: Equity And Quality Of Life** will be on October 16-18, 1986. Particularly welcome are subjects involving the disciplines of history; music & art history; folklore; philosophy; classics; political science; literature; law & equity; economics; humanistic approaches to anthropology, psychology, sociology, and social policy; older adult education in the humanities. Publication of selected presentations is anticipated. Deadline for submission of abstracts is July 1, 1986. **For further information write:** Dr. Patricia Morrow, Aging Program Specialist, Lincoln University, Jefferson City, Missouri 65101.

In July (13-18) there will be an **"Institute for Music in General Studies,"** College Music Society, University of Colorado, Boulder, Colo. Contact: CMS, 1444 15th Street, Boulder, Colo. 80302; (303) 449-1611. The first week in August, it's **"When Worlds Collide: Cinema Looks at Television and Video,"** annual conference, University Film and Video

Association, Ohio University, Athens, Ohio. Contact: David O. Thomas, Department of Film, Ohio University, Athens, Ohio 45701; (614) 594-6373 or Timothy J. Lyons, College of Fine and Performing Arts, Youngstown State University, Youngstown, Ohio 44555; (216) 742-3625. And figure this one out: **"International Nanny Conference,"** Scripps College, Claremont, Cal. Contact: International Nanny Conference, Suite 591, 976 West Foothill Boulevard. Claremont, Cal. 91711. Don't miss it, or there'll be no sweets tonight. The conference is August 21-24.

Taking us to the Fall, when you are invited to attend the **National Association for Core Curriculum's** 34th annual conference. October 9-11, 1986 (Thursday-Saturday) at Kent, Ohio. Featuring: experiences in a variety of environments schools, universities, National Recreation Area, Theatre, Amish area. Key-note speaker Dr. Bob Samples, of Boulder, Colorado, author **The Metaphoric Mind**, etc. There will be school visits in the Akron, Ohio, area; all-day core curriculum concept sessions outdoors, at the Cuyahoga Valley National Recreation Area (speakers-Mr. Ron Thomas, of the park staff, Chief of Interpretation and Visitor Services; Dr. Herb Broda, Assistant Superintendent, Wayne County, Ohio, Public Schools); and the annual meeting (speakers - Dr. Gary Weedman, 1986 President, N.A.C.C. Academic Dean, Lincoln Christian College, Illinois; Dr. Wayne Jennings, Director of Staff Development, St. Paul Public Schools). For more information and registration blank, write to: Dr. Gordon F. Vars, N.A.C.C. Executive Secretary-Treasurer, 404-E White Hall, Kent State University, Kent, Ohio 44240, phone (216) 672-2792.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Senior Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to redraw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one or two pages (300-700 words) for practical tips, sample assignments, commentaries, etc.; and articles of four to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

*THEORY "Piaget and Theories of Integrated Study"

*ADMINISTRATION "Crediting Departments for Team Teaching"

*HISTORY "Nineteenth-Century Multi-Media at Chautauqua"

*RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

*"What you should know about teaching novels in a philosophy course"

*"Pre-teaching history students for an art museum field trip"

*"How to help non-musicians to follow a score"

*"A designer speaks of humanities bulletin boards"

*"Getting adults to role-play in public humanities programs"

*"Understanding Oedipus: An Actor's View"

What we don't want:

*Creative writing by teachers or students (it doesn't relate to our purpose)

*Syllabus outlines (curricula should be explained, not listed)

*"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

*"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

*"Humanistic counselling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

HUMANITIES EDUCATION is published by the National Association for Humanities Education

with editorial offices at the Department of Philosophy & Humanities

University of Minnesota, Duluth, Duluth, MN 55812

The University of Minnesota is an Equal Opportunity Educator and Employer.

VOLUME THREE: NUMBER THREE: SEPTEMBER, 1986

STAFF

EDITOR: Fred E.H. Schroeder, Professor of Humanities, University of Minnesota-Duluth
ASSOCIATE EDITORS: Sharon Scholl, Professor of Humanities, Jacksonville University; Susan Coultrap-McQuin, Assistant Professor of Humanities and Women's Studies and Director of Women's Studies, University of Minnesota-Duluth
BOOK REVIEW EDITOR: James V. Mehl, Professor of Humanities, Missouri Western State College
CONTRIBUTING EDITORS: Francis M. Nevins, Professor of Law, St. Louis University School of Law; Burton Raffel, Professor of English, University of Denver; Jeremiah Reedy, Professor of Classics, Macalester College
WORD PROCESSING: Barbara Williams, Word Processing Operator, University of Minnesota-Duluth

Published by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Assistance for the production of HUMANITIES EDUCATION has been provided by the College of Liberal Arts, UMD, Judith Gillespie, Dean. Subscriptions are $16 per year. Checks should be made out to NAHE and sent to HUMANITIES EDUCATION, Department of Philosophy and Humanities, UMD, Duluth, MN 55812.

AN IMPORTANT MESSAGE FOR SUBSCRIBER-MEMBERS

Due to the length of this special issue, the HumaNews newsletter of NAHE is postponed. Beginning with Volume IV, **HUMANITIES EDUCATION** will be published **quarterly** rather than three times annually. All new subscriptions and renewals will be at the **$16 quarterly** rate. When renewing, please be sure to include your **expiration code** from the mailing label or **enclose the label**.

CONTRIBUTOR INFORMATION

Contributors should consult the Editorial Policies sheet carefully. As will be seen, HE is wide-ranging, quite permissive and has no "party line" in respect to definitions of **humanities, interdisciplinary** and **education**, but the wide boundaries are nonetheless firm. Please do not submit articles over ten pages long unless you are planning to revise.

Copyright 1986 by HUMANITIES EDUCATION

RITES, RITUALS & HUMANITIES EDUCATION: A PREFACE TO THIS SPECIAL ISSUE OF HUMANITIES EDUCATION

When we first planned the format of **HUMANITIES EDUCATION** it occurred to us that along with other benefits of looseleaf publication, it would be easy to include relevant non-print material with the magazine. Two years ago we approached the Educational Department of the Minneapolis Institute of Art about the possible inclusion of slides of works from their collection. We discussed several thematic ideas, among them "landscape" and "self-portraits" but when Tad Park mentioned that "ritual objects" had been found by the museum staff to be especially productive of humanities connections for groups of all ages, we felt certain of our first thematic emphasis. The five slides and Tad Park's informative comments on each form the core of this special issue.

As work proceeded, we discovered that almost the entire issue would be on Rites & Rituals, including book reviews, journal abstracts and the regular feature of "Best Translations." However, there are no ideological or critical links among the contributions other than the belief that rites and rituals are profoundly important to human beings, no less today than in the past. Indeed, there is something of a division among our authors on the nature of that importance. Several maintain that our modern culture is woefully impoverished by the lack of meaningful ritual, not merely because we have become alienated from the aesthetic meanings of old objects, literatures and ceremonies, but because we have lost touch with the community of humans, natural objects and infinite spirit that is the ultimate end of ritual acts that strive to remind, refresh and reaffirm the place of the individual human in the cosmic scheme. Not everyone views this loss with alarm, though, for it may be that what we regret is only the loss of antique rites, ignoring the fact that our society abounds in rituals, transformed into appropriate forms for a mass, national and international individualistic world. We may long for the unified views of the early Greeks, the medieval Roman Catholics, or the traditional cultures of the Bakongo, Lakota and Shoshoni, but we cannot adopt their rites. We must make our own.

Nevertheless, antique rites can inform and enrich our culture, our lives, our needs and aspirations. As teachers, we must help our charges to comprehend the rituals of remote and bygone societies. In one way or another, this is a matter of translation, which Lois Bragg examines as it relates to a dead language of a society whose artificial and documentary residue is sadly limited: the challenge is to bring Old English art back to life in New English words. John Dutra explores a religion that has not been practiced for centuries and that had many of its rites hidden in its day; the Dionysiac mysteries become more accessible through one of Euripides' plays and through comparison with Christianity. Some rituals are still alive in often startling transformations. George O'Brien places sport into a long historic perspective and unfolds deeper significance than many might anticipate. Willard Moore examines continuities in folk celebrations that are alive and well in the modern American midwest. A strong subtheme throughout this issue has to do with a special kind of rite that is particularly important to school-age people: these are the "Rites of Passage" marking important transitions in individual lives. David Smith contrasts the coming-of-age rites of passage of Australian males with the protracted series of rites in modern American schooling. Ken Turino and Ruth Hohl describe a year-long program in which high-school students developed a museum exhibit on nineteenth-century adolescent rites of passage, while Francis Henninger categorizes the many ambiguities of rites of passage in literature. Roberta Markman takes us into the undiscovered country of the unconscious in fairy tales, providing insights for students to approach more complex literature. Review essays introduce one to Robert Bellah's influential **Habits of the Heart**, to Ronald Grimes' recent examinations of the state of ritual studies, to Susan L. Cole's ideas on the interrelationships among tragedy and death rites, along with summarized forays into the meanings of sacred numbers and ritual objects of Christianity.

The theme of Rites & Rituals is not likely to become the primary thrust for anyone's school or college course in humanities, yet serious contemplation of the articles, essays and artifacts that follow cannot but invigorate our thinking about humanities and about human values.

Possibly the reason for this is that rites make the unknowable tangible and the uncontrollable comprehensible. Thus, while on the one hand rituals carry and embody vital associations with physical settings, material objects and sharply defined sensations of sight, sound, tastes and smells, on the other hand, the meanings of rituals are sixth-sensory abstractions, spiritual metamorphoses, and human identification with the divinity.

Fred E. H. Schroeder, Editor

John A. Dutra

Christianity and the Cult of Dionysus

Mythology is an important component in humanities education. Within our Western tradition, Greek mythology occupies a fundamental position and every age from the Hellenistic to the present has adapted and utilized Greek mythology, each in its own way. Greek mythology endures because it contains enduring principles.

Teaching Greek mythology can be an exciting and rewarding experience for many reasons, including the opportunities such a course provides for making cross-cultural comparisons. Nevertheless, there are aspects of such a course which tend to present challenges and difficulties when it comes to maintaining the interest, enthusiasm, and learning experience of students. Students usually are interested in myths about human heroes because they are able to relate with relative ease to characters who while heroic are at least human. When it comes to the Greek divinities, however, problems arise. There are a number of reasons for this, not the least of which is the difficulty many students have when they attempt to understand the Greek deities and the religious and social concepts associated with them in the same facile way in which they claim to be able to relate to the human heroes. This is especially true concerning the mainstream orthodox Olympian religions of the Greeks. The cults associated with the Olympian divinities appear to be unexciting and even mundane. It can be difficult for a student to identify a meaningful religious experience in the myths surrounding the Olympian deities. The Olympians do not seize the imagination and attention of many teachers and students, and some say that connections between the Olympian religion and contemporary religions can be drawn only with effort. Indeed, teaching units on the Greek divinities is regarded by a fair number of instructors as a task rather than a pleasure. However valid that may be, there is at least one area where the distance between the Greek religions and one popular contemporary religion can be narrowed. The contemporary religion is Christianity and the Greek religions are those known as the Mystery Religions. Indeed, because Christianity is a mystery religion, it lends itself readily to comparison. Christianity, a religion alive in our society, known to most students, and practiced by many can be a vehicle by which students become familiar with the "dead" mystery religions.

This article, therefore, will attempt to suggest some connections between Christianity and one of the Greek mystery religions, the cult of Dionysus, and do so in the context of bridging the gap between the student's relative knowledge of Christianity and the usually total ignorance of the Greek mystery religions. The article will interweave the formal aspects of the cult of Dionysus and an ancient Greek tragedy, **The Bacchae**, in which Dionysus and his cult play a central role. As this is done, suggestions will be made, some implicit and some explicit, about cross-cultural connections, the linkage between the religion of Dionysus and the religion of Christ. Many assumptions will be made about the reader's knowledge of Christianity and there will be no attempt to present in a formal way a survey of Christian beliefs and practices because, as stated above, this basic knowledge is assumed on the part of the student; should this be a hazardous assumption to make, the challenge to the teacher will increase. The reader may not agree with some of my suggestions and that is fine. In those instances the purpose of humanities education will have been served: to provide an opportunity for constructive dialogue. Indeed, many of my suggestions have been stated in the form of questions to emphasize that there are few dogmatic answers to the issues raised. Finally, it should become apparent that a unit on Dionysus and Christianity can be a valuable part of a humanities course.

The religion of Dionysus provides a powerful subject because it contains so many elements which students consider outrageous, abhorrent, incomprehensible, even crazy, and yet these same elements have parallels of one kind or another in Christianity. It is possible to capitalize on student interest in these mad elements of the Dionysiac mysteries, interest inculcated by a natural curiosity about what is strange, different, and taboo, and then to suggest that these are mysteries which Christianity itself cannot dismiss as meaningless nonsense, though from the Christian perspective they appear quite repugnant. In doing this it cannot be suggested too strongly that the instructor be sensitive to and respectful of the values of the students. It may be forbidden territory which the instructor is entering. Proceed with caution.

Perhaps the most well-known aspect of the Dionysiac rites are the so-called orgies. Descriptions of these orgies are found in various pieces of classical literature, but the most complete description appears in the tragedy of Euripides (485-406 BC) entitled **The Bacchae**. **The Bacchae** in many ways is a powerful play, as is the god Dionysus, and teachers should consider making it required reading in a mythology or humanities course. It can easily be the focus of the study of Dionysus. Indeed, I do not think that Dionysus can be approached without taking **The Bacchae** into account. Of course, the very word "orgy" is an attention getter, even in an 8 a.m. Monday morning class. Few will know that in Greek the word simply means "secret rites" or "mysteries" of some kind. For most the immediate reaction will be to identify orgy with excessive drinking and/or excessive sex. It is here where **The Bacchae** is essential. In this important and rather complete account of a Dionysiac orgy, wine and sex are conspicuously absent although both may have played some role in the cult of Dionysus. To be sure, madness abounds but not in the context of wine or sex. This is a different kind of madness, a madness which cannot be dismissed easily as the ravings of drunken, sex-craved perverts. What, after all, could that kind of madness have to do with Christianity? No, this is the madness of absolute devotion to a being who demands unconditional commitment. This is a madness less easily dismissed.

At this point a few words about **The Bacchae** are necessary. The action of **The Bacchae** revolves around Dionysus and his worship. A stranger arrives at the Greek city of Thebes and demands that the cult of Dionysus be received into the city and that the god be worshipped by all with the strange rites to which he is accustomed. The stranger is Dionysus in human disguise. Pentheus, the king, refuses to submit to the strange, wild rites though urged to do so by representatives of the political and religious establishments. King Pentheus will use his political and military authority to control this stranger. But the stranger cannot be controlled. We must realize that Pentheus is no evil person. He is trying to preserve the order of his society against this strange interloper. It is bad enough that the women of the city have already gone off to the hilltop to worship Dionysus. Pentheus represents us, straight-thinking members of the establishment, playing the game according to the accepted rules. As the drama continues, Pentheus realizes that he cannot control this powerful stranger, and finally agrees to dress in the clothes of a worshipper of Dionysus, the clothes of a woman, and to go out to the hilltop, not as a genuine devotee of Dionysus but to fulfill his desire to witness what he is sure will be wanton orgies. And soon, near the end of the play, Pentheus is killed, sacrificed in a Dionysiac orgy, an offering to the god.

Just what are the essential elements of a Dionysiac orgy? It usually takes place at night, often out on a hilltop. The worshippers of Dionysus are more frequently women than men, though both sexes worship the god. The devotees are led by a male priest, who is youthful and feminine in appearance. The worshippers, dressed in fawnskins, carry the ivy-covered thyrsus (staff), have ivy wreaths on them, carry snakes entwined about them. They dance wildly to the accompaniment of the tympanum, the hide drum, and the shrill reed flute and shout and cry as they dance. Their figures are dimly illuminated by the fire of torches, the smoke from which casts an eerie aura on these strange proceedings. So enraptured do the worshippers become that they pull apart living animals, especially goats, feast on the flesh uncooked, and take upon themselves the god so completely that they call themselves by the very name of the god, "Bacchae." As stated above, this description, based on **The Bacchae**, is devoid of the drinking of wine, and sexual interest or action is absent from the worshippers. Only king Pentheus, the representative of the establishment and of saner religion, now playing the role of a voyeur, hopes to see perverted sexual rites; he is disappointed. As Dionysus says in the play, the god is not a corrupter of chaste women.

The Bacchae, then, presents us with a rather complete account of a Dionysiac orgy although the play was written at a time when the earlier more barbaric aspects of the cult had been eliminated or transformed. We know, for example, from other non-Euripidean accounts that children were torn apart and eaten instead of goats. Indeed, this rather gruesome practice would commemorate Dionysus' own dismemberment. At the time of his birth, the Olympian goddess, Hera, hated Dionysus because her husband, Zeus, had fathered him by another goddess. Hera, therefore, persuaded the Titans to pull apart the new born Dionysus and consume his flesh. Zeus destroyed the Titans for doing this and from their ashes, containing the remains of Dionysus, arose the human race.

Zeus, however, saved the heart of Dionysus, impregnated a human woman, Semele, and Dionysus is born again, a son of god and of woman, a god who has arisen from the dead. Even in the play, however, Pentheus is killed by his mother and his body dismembered by her and the other women of Thebes. Thus, the tamer **Bacchae** account of a Dionysiac orgy is replete with madness. How, then, do we explain this madness?

There are different answers, of course, but it is essential that this madness be set in its social and historical context. The Olympian religion was the religion of the establishment and in it was to be found the official view of the hierarchy of being within the universe. It was a statement of the natural order of things. Gods are divine (immortal), and humans can never approach the divine. Within that same natural order, humans, by keeping their place, must respect the gods just as the inferior within human society must yield to the superior. In Greek society, women especially must accept their domestic position, frequently expressed in Greek literature by the image of women laboring at the loom. In fact, in **The Bacchae**, Dionysus takes the women of Thebes away from their looms and homes. In such a system change is to be avoided and order is to be maintained. This, I think, is a model which students can understand. All of us experience it, in one way or another, daily. And it is just this kind of a society into which Dionysus comes. He always comes unexpectedly and certainly unbidden. He is the stranger in our midst, dressing and looking and acting differently. He is totally confident of his authority, authority rooted within himself and independent of all external reality. What does he say to those he meets? "Follow me." To the question, "Why follow you?" he grants no reply. Those who need to ask such a question may be lost already. He does, however, offer liberation--liberation from what? From the hierarchy! Come, leave your looms, your homes, your social roles. Pull apart this goat and eat its uncooked flesh for I am the goat. When you eat this flesh, untainted by the art of cooking, you commune with me. Filled with **ecstasy** (Greek meaning to stand outside of oneself) and with **enthusiasm** (Greek meaning to be filled with the god), you can become, for a limited time, divine; leaving the mortal behind, you do become, for a limited time, immortal.

Certainly, no student can be unaware of the parallels with Christianity. There are, of course, the technical terms of ritual: **sparagmos**, the pulling apart of the animal; **omophagy**, the eating of the flesh of the animal; **theophagy**, the eating of the god, the very act of communion. But the technical terms should not be a barrier. As Dionysus is broken on his mountain altar, so also is Christ on Mt. Calvary. As Dionysus is consumed by his followers, so also is Christ. As ecstasy and enthusiasm play a central role in the cult of Dionysus, so do they in the cult of Christ. Dionysus and Christ bring liberation to the oppressed, perhaps not the same kind, but liberation none the less. The liberation of Christ and Dionysus frees their followers from the ordinary and the limited and raises them up to the experience of immortality. Dionysiac immortality is temporary and endures only during the religious experience of the orgy. Christian immortality is eternal, experienced fully only in the next life. It is something deep within the human psyche to which both saviours appeal and their appeal is shrouded in the darkness, or brightness, of mysteries which only initiated believers can enter. There are, of course, cultic differences but strong connections can nevertheless be made. Dionysus beckons us away from the worldly and bids us to become unworldly, as does Christ.

Is it possible to resist or reject this stranger in the midst? Resist, perhaps for a while, but reject only at your peril. In **The Bacchae**, King Pentheus resists and rejects. After all, how can an ordered society accept such an intrusion of disorder? The leader of a society must maintain the established order and protect his own position within the hierarchy of the universe. So Pentheus rejects and imprisons the disguised Dionysus. The women of the city, however, accept Dionysus as their liberator, their saviour. They flock to the hilltop at night, are filled with the holy spirit of the god and revel in his, in their, power and glory, as does their leader Agave, mother of the king. But the power of a mere mortal, even a king, pales in contrast to Dionysus who cannot be held in by prison bars. Dionysus escapes, leaving in his cell his animal incarnation, a bull. Dionysus and what he represents are amorphous and he constantly slips out of one's control as he slips out of Pentheus' control. It is Dionysus who is in control or out of control, depending on one's perspective. To the straight-thinking establishment mind, operating according to the customary parameters of right and wrong, the king for rejecting should be punished by Dionysus, and Agave for accepting should be rewarded. And Pentheus is punished, his head severed from his body, but this gruesome act is perpetrated by his own mother while she is under the spell of Dionysus. She and the women dismember Pentheus and scatter the pieces of his body all about the sacred ground of the place of ritual. How can we explain Agave's "reward" for her Dionysiac piety?

So many points of similarity between the wild cult of Dionysus and the peaceful religion of Christ! The impulse is for us to reject as repellent the orgies of Dionysus. This is understandable but it must be resisted, otherwise all that one has is an exciting but irrelevant foray into an apparently barbaric ritual.

The pedagogical possibilities present a feast. What are the cross-cultural connections with Christianity? What possible fundamental sameness can this wild cult have with Christianity? Should it not be compared rather with wild contemporary cults? There are, of course, close parallels with Christianity, just as there are profound differences: the ritual eating of sacred flesh; the divine child who loses his life to the forces of the established order, represented by Hera; the close association between the divine child and the human race from whose ashes it springs; the possibility that there is an alternative to the accepted religious hierarchy; the belief that it is possible for human nature somehow to participate in the divine and that the great gap between mortality and immortality, so emphasized in the Olympian religion, can be narrowed. Are the obvious external similarities with Christianity disturbing and if so, why? Does the Christian perceive a threat and what would be its nature? Is it possible to see through the external rituals--sparagmos, omophagy, theophagy--and to attempt to understand the religious experience inherent in the ritual? Can we conceive of a religious experience in terms other than our own? Is it possible for us to admit that the orgiastic rites were for the believers a true religious experience? Is it possible for a Christian to think like a pagan? What insight into Christianity and into ourselves comes as a result of the comparison of the two cults? What are the social ramifications of these two mystery religions?

The opportunities for productive discussion increase even more, I think, when attention is turned to the god who moves (for he never stands still) at the center of the ritual. To be sure, there may be some resistance to comparing Dionysus with Christ, but the effort is worth it. What kind of a god is Dionysus? What concepts or values can be predicated of him? Does he represent good or evil, morality or immorality, thinking or feeling, rationality or irrationality? Or does he escape (as he always does) our structured, hierarchical categories? Does he force us, as he forced Pentheus, to accept him on his own terms, terms which we cannot comprehend but only apprehend? What are we to think of a god who rewards the submission of Agave to his will with the severed head of her son? What is the nature of submission to the unfathomable? Are the ways of god the ways of humans? Is the hierarchy a trap in which we, like Pentheus and Agave, have been caught? Can we expect any guarantees from god?

Of course, there are numerous external differences between the mysteries of Dionysus and those of Christianity, and students easily and quickly discern them. The challenge to the teacher lies in identifying the amazing internal similarities which are hidden beneath the external differences. A comparison of these two cults allows the teacher and the students, together, to explore many of the issues which are basic to humanistic education, not only the nature of the divine but also of human nature itself.

Bibliographic Essay

Highly recommended is the translation of **The Bacchae** by William Arrowsmith found in the **Complete Greek Tragedies** edited by David Grene and Richmond Lattimore and available in paperback from the University of Chicago Press. The pertinent volume is known as **Euripides V**.

Among secondary sources, W. K. C. Guthrie in **The Greeks and Their Gods** provides a brief and clear account of the god and his cult and myths. His chapter on Dionysus is a fine introduction. A brief but excellent summary of the myths of Dionysus can be found under the name of the god in the **Meridian Handbook of Classical Mythology** by Edward Tripp, the conclusion of which contains a source listing of the ancient writers who provide information about Dionysus.

For those who wish to delve more deeply into Dionysus, a good starting point is Park McGinty's **Interpretation and Dionysus, Method in the Study of a God** (1978, Moulton Publishers). This book provides a survey

of basic approaches to Dionysiac interpretation employed this century; including the approaches of Erwin Rohde, Jane Harrison, Martin Nilsson, Walter Otto, and to a lesser extent, E. R. Dodds and W. K. C. Guthrie.

From Fairy Tales to Great Masterpieces

Professors of mathematics are always aware of the need to build on the earlier background of their students, moving from the familiar to the more complex stages of mathematical thought. Professors of literature, on the other hand, often begin work with the great masterpieces as entities in themselves and forget that there is a whole body of common and familiar experience and understanding on which to build a study of the difficult and more sophisticated areas of great literature. It helps to remind students, who are prepared only to think in terms of "book reports," that there is much with which they are already familiar that will help them to come to terms with more complex works. I used to rely on life's experiences to serve this function, but I learned that although students may have had many experiences, it wasn't necessarily true that they had ever analyzed or thought about them and so, in a sense, those experiences were lost. They had neither the wonderful excitement of realizing the symbolic significance of some specific episode in their own lives nor the understanding of the ritualistic process through which their own earlier development took place. How then could they think about Melville's Ahab or Goethe's Faust? Of Shakespeare's Hamlet or Flaubert's Emma or even Homer's Odysseus?

In a course in world literature I searched for an area that my students shared and from which we could work with some sophisticated ideas for literary analysis. Happily, I discovered the world of the fairy tale. Analyzing some representative fairy tales enabled us to talk about some very important and basic concepts: the ideas of the literary symbol and metaphor; the concepts of the male and female principles; the ritualistic process of the hero who moves from a lower to a higher state of being and consciousness; and to appreciate the sensation of the mystical that is a basic ingredient in all great literature. As Einstein expressed it: "The most beautiful and most profound emotion we can experience is the sensation of the mystical. It is the sower of all true science. He to whom this emotion is a stranger, who can no longer stand rapt in awe, is as good as dead." Perhaps that conviction was what prompted him to say on many occasions that reading fairy tales was the most valuable part of his own early education. I was intrigued by the idea of bringing fairy tales into the course in order to draw upon a shared experience that seemed relevant to the various literary problems at hand. It worked; students were fascinated by the connections they were able to make, and I was excited by the stimulating discussions that the comparisons generated.

When I saw the excellent results of the experiment, I decided to introduce a course in the fairy tale into the curriculum. Students were attracted to it because they felt they had something in their backgrounds to start with, and they were intrigued by the idea of "studying" something they were sure they already knew. Then, by the end of a semester of intensive study, having realized how much there was that they hadn't thought about in a seemingly simple, familiar tale, the students were much more confident of their ability to analyze more complex works and to appreciate the nuances of those works with a sensitivity and insight they had not experienced before. They also realized that by understanding the process of many of the tales as a metaphor of the creative process itself, they were considerably more conscious of the procedure of their own creative activity and therefore more sensitive to their personal creative development and the relevance of the tales to it.

We discussed Cinderella's search for identity, the loss of which is symbolized in the tale by the loss of her clothes after her mother's death. Without them, her stepmother admonishes her, she cannot dance, that is live creatively. Having been given the task of sorting lentils, she learns with the help of the birds, which symbolize her inner spiritual resources, to prioritize her values by placing "the good in the pot, the bad into the crop." She is thereby able to regain clothes (i.e. identity) that are not only more beautiful than those she lost, but that also permit her to live a life that represents the integration of male and female principles, an integration that is necessary not only for her, but but for the prince whose land would perish without it.

Before we discussed more of the tales we needed to consider some important concepts, such as the difference between reality and truth, the meaning of metaphor, the common ingredients of a sense of magic that provide the aura of the mystical, and the distinctions between the idea of masculine and feminine **principles** and that of masculine and feminine **roles**-- distinctions that we found both essential to recognize for any study of the fairy tale and important to consider in the analysis of much great literature from Homer to Thomas Mann.

In spite of the pejorative connotations that our society has heaped on such words as **myth** and **fairy tale**, students were quick to see that fairy tales are, in their broadest sense, "true" insofar as they express the essence of experiences rather than any specific reality of them. Every fairy tale we discussed substantiated this claim, and when they realized that this was accomplished without jeopardizing our conscious scientific categories of the reality of space, time, and causality they were well on their way to understanding the meaning and the power of metaphor and the basic difference between metaphor and symbol.

Students seemed to have learned in high school that a metaphor is an implied analogy that identifies one object with another, but it was important for them to consider the basic relationship of the two objects and the transformative power these objects have as they impinge on each other; they needed to realize the ability of these objects to serve as catalysts between unconscious layers of the psyche and the outer manifestations of experience. The tension and energy created by the juxtaposition of the two images provide an immediate but ephemeral expression of insight into the relationships and feelings through external events and visible objects. The union results, not in a symbol or a statement of a literal truth, but in one ephemeral process during which each of the components loses its individual character in a moment of transcendence and a newly created evanescent image emerges. Understanding this, students are ready even on the first reading to analyze such fairy tales as "The Frog Prince" as an extended metaphor.

The aura of magic that is created by the ephemeral aspect of a metaphor is enhanced by the "once-upon-a-time" beginning of most fairy tales which quickly suggests a world that is an alternative to our own and a temporal sphere that is both timeless and eternal. It is also enhanced by the repetitive pattern of words and events that creates a sense of sacred ritual and intensifies the significance of the repeated words or function by separating them from any single specific reference. By transcending space and time they become part of a magic world, a world from which the mundane is exempt and one in which all things are possible.

Having considered the way fairy tales begin, we needed to discuss the implications of their "happily-ever-after" endings. Should we conclude that the tales ended with the idealization of marriage and that the female character achieved her ultimate goal by marrying the prince? It was important here to differentiate between feminine and masculine **roles** and feminine and masculine **principles** and then look again at the tales with these distinctions in mind. By defining the masculine principles in terms of the Appolonian, as it is related to the sun, intellect, outer form and mind-related activity and the feminine principles in terms of the Dionysian, the moon (mystery, changing, menstrual cycle), feeling, inner impulse, and earth-related/creative, the meaning of the tales was transformed from a narrow view of demeaning personal relationships to a world with universal and significant implications. These considerations provided an expanded angle of vision that enhanced our study of other great literary works.

We began our study with "Hansel and Gretel" because it is familiar to most students, and it is a good illustration of the importance of taking all specifics into account in the analytic process. Nothing in this short tale can be dismissed as irrelevant, and the particular elements clearly seemed to suggest a landscape that transcends the physical world. It provides an excellent illustration of the familiar fairy-tale technique of expressing contradictory attitudes and feelings by splitting a central image, as for example here, of one parent into mother, step-mother and witch. Students who were familiar with Dostoevsky's **The Brothers Karamazov** were excited by the recognition of a similar split of the brothers as different aspects of a single concept or person in a narrative that served as a vehicle for examining the dynamics of the interaction of the parts. Others applied this insight to Sartre's "No Exit," Hawthorne's **Scarlet Letter**, and Faulkner's **The Sound and the Fury**.

When we discussed the thematic structure of "Hansel and Gretel" and some of its dominant motifs, students pointed out that the basic pattern of the piece was that of a ritualistic process in the development of consciousness and ultimately a definition of the creative process itself. When "a great dearth falls upon the land," the children are forced out of the security of their home and tradition. Reluctant to leave the womb, they enter the forest of uncharted paths. Hansel marks the way with stones for an immediate return to the warmth of the past, which is symbolized by the little white cat that he sees on the roof as he looks back to the comfort that "home" still signifies for him and to which he and Gretel manage to return. The second journey is less formidable; the children seemed more spiritually ready for departure as indicated by the cat's being replaced by a little white pigeon symbolizing the transcendent flight and the crossing of the first threshold.

Once they were cut off from the tradition, the first part of the ritualistic journey is characterized by total abandon and lack of control; they indulge in a gluttonous night journey and revel in the witch's enticements even before she offers them. This represents the liminal stage in the ritual process, the stage that is between the tradition, law, and custom and the return. In the development of many heroes, this stage often takes the form of a symbolic death, a night journey, a return to the womb. It is what Victor Turner delineates as a "moment in and out of time" and this tale appropriately tells us that "they thought they were in heaven" until they are subjected to the threats of the witch which represent the ordeals and humiliations that Turner describes as typically of "a grossly physiological character" and essential to the ritual process because it marks a destruction of their previous status. The initiates are then ready to take the jewels which represent spiritual truths and superior knowledge from every corner of the witch's house; "they had no longer any need to fear her." They are also ready to return by a different route from the one they came, making the pattern of their journey a spiral rather than a circle. They must cross through water, a symbol identified with intuitive wisdom and the washing away of old forms. With a new respect for nature and for their own individuality, Gretel says that they will be "too heavy for the little duck" and suggests that each must cross the water separately. Returning with the jewels, they bring spiritual insight into the once-sterile land and they can live with the father "in perfect happiness" without fear of what was earlier repressed and unknown.

The ritual process that one experiences in this wonderful tale comes to mind over and over again in reading more sophisticated and difficult literature. Although hardly comparable to **Dante's Divine Comedy**, this fairy tale suggests striking parallels: finding oneself in a dark wood, confronting the demonic of the inner self and being diverted by false pleasures, crossing a stream in order to return with the jewels in "The Paradiso" and to reach the ecstasy of total harmony when "joy becomes eternal." Recognizing the process helps to facilitate the analytic study of the more difficult work and to remove it from the temptation of solely literal interpretation.

Other applications with fascinating variations came to mind with the same results and provided us with the same stimulus for discussion. In each case the metaphoric pattern led us to a discussion of crucial concerns: to the night journey in Hawthorne's "Young Goodman Brown," to the journey to the lighthouse in Woolf's **To the Lighthouse**, to the nighttown sections of Joyce's **Ulysses** with the final "yes" of Molly, to the inward journey on the mountain and the process of the return in Mann's **The Magic Mountain**, to the tempting labyrinth of Daedalus in Gide's **Theseus**, to the return of Odysseus while his men succumb to the lure of the "dark side" with the Sirens, Circe, and the lotus eaters in

Homer's **Odyssey**, and to Faulkner's Quentin in **The Sound and the Fury** who does all he can not to make a return journey by trying to trick his shadow and finally by choosing death. Identifying the formidable leavetaking from the comfort of the tradition to the unchartered course of discovery and the return by means of a higher level of consciousness which makes possible the union of the Dionysian dark with the Apollonian form provided us with an exciting way in to the more difficult works and gave us a basis for perceptive analysis.

The ironic stance used by many modern writers was a difficult one for many students to handle. In our discussions of Mann's **Magic Mountain**, for example, I observed that many students were reluctant to identify with Hans Castorp, "the delicate child of life," who seemed very slow to learn. Certainly, they felt, Mann could not expect us to consider him a hero since the author himself actually seemed to be making fun of him. He was a simpleton, they decided, who was too introspectively obsessed with disease and death. At that point I suggested that we read the Grimm's version of "Three Feathers," a tale about a king whose kingdom was dying because it lacked the presence of a female, creative principle from which a productive future could follow. He sent his three sons out on three successive journeys to ascertain which is most capable of inheriting and restoring his dying kingdom. They are to find a carpet, a ring and a beautiful maiden who "could leap through a ring which hung in the centre of the hall" -- each of which is a symbol of unity, of the integration of opposites. The carpet, a weaving of warp and woof, the ring a symbol of continuity and wholeness, and the beautiful woman able to transcend the earthly and mundane to enter the spiritual realm above them and thereby unite with the prince to form a fruitful wedding of opposites -- all symbolized the unity that was missing from the dying land. In each case the brothers were given a feather by which to guide their pursuits and in each instance the two "clever" brothers followed their feathers to wordly, uninspiring places and came back with useless and sterile objects from the external world. Simpleton's feather went straight to the ground and led him to a discovery of the feminine principle symbolic of the earth mother in the form of "a great, fat toad." It is she, of course, who can supply the carpet and the jewelled ring, and it is through her guidance that he is able to transform one of her offspring into a beautiful maiden so that the integration of all opposites can be achieved and unity restored.

The few pages of the tale contributed much to our discussion. It became clear that the naivete of both Simpleton and Hans Castorp was the essential condition for the initiate who was slowly moving through the ritual that would take him from a lower level of consciousness to a higher one through his initiation into the various realms of the earth which students recognized in the tale as the world of the toad who could supply the insights for which Simpleton's search is made. Having previously studies Goethe's **Faust**, many students explained that by identifying this as a kind of realm of "the Mothers" they could understand the transformative power this experience had on Faust's development and they could see that like the magic mountain itself, it was separated in time and space from the world of everyday activity that both Hans and Simpleton had left behind. They realized that it was a place one had to experience in order to understand the principles of the human condition and come to terms with them to achieve within oneself a union of opposites: the masculine and feminine principles that had to be integrated within Hans just as they had to be in Simpleton's world if the creative process were to continue. At the core of each of Mann's novels and short works was the problem of finding the balance between the Apollonian and Dionysian; students could see the dynamics involved after a study of the many fairy tales that deal with them.

Our analysis of the repetitive elements in "Three Fathers" alerted us to the unifying affect and to the ritualistic power that they created; each repetition called attention to the nuances of the differences that each reiteration represented. Mann's characteristic use of leitmotifs could then be appreciated as more than simple repetition; they served to mark the subtle changes in Hans' and his other characters' development.

There seemed to be no end to the intriguing possibilities just below the literal surface of the tales. It became clear that the development of consciousness that was basic to almost all of the tales was equally basic to the process of a creative life and manifested itself in all of the great works of literature. Consequently, while students were enjoying the game of recognizing parallels, they were also experiencing a more sophisticated understanding of the human condition through a compelling realization of how pervasive and ubiquitous is the progression of the ritual through which we pass as we move from the stages of the "simpleton" to the development of an integrated and creative personality. They thanked the fairy tales for revealing to them the fundamental truth of that vital and exciting process.

Rites of Passage in the Basic Literature Course

Since literature depicts crises and, often, the passage of human beings from one status to another, it makes good sense to structure a course around rites of passage in literature. And, because the crises essential to maturing are among the ones writers commonly portray, some planning can make a course of that kind especially appropriate for those experiencing such crises. Initially, there are some basic quesions to be pondered: Must college youth inevitably experience a rite of passage? "Passage," from what to what? From ignorance and innocence to knowledge, responsibility and guilt? And would a celebratory rite ease the difficulties of adolescent status? Working through these and similar issues in a course can yield not only valuable considerations but, for the students particularly, some other benefits.

First, living itself becomes easier when we begin to understand our experiences and their causes. Second, a better understanding of their own maturing helps students learn about each other and, by extension, about the maturation of complex phenomena like nations and scientific methodologies and modes of understanding in themselves. Third, a better understanding of "growing up" clarifies ideas about the proprieties and the possibilities for adult life.

Such a course could be organized into three segments. In part one, focusing their thinking about the rite of passage using the **Webster's Third New International Dictionary** definition ("a ritual procedure associated with a non-periodic crisis or a transitional change of status for an individual [as initiation, marriage, illness or death],"), the course participants would preface their treatment of specific types of such rites with a study of the general truths about rites of passage that thoughtful discussions could reveal. These following twelve truths would be among the most rewarding to consider.

I. A rite of passage can either cause a crisis or change or just mark one. The vision quest experience of some of the Plains Indian men, for example, causes a change in the status of he who undergoes it; thereafter he is considered an adult with an adult's rights and responsibilities. Some peoples, on the other hand, mark the onset of menses with celebratory rites. However, this second case is complex; the onset of menses, obviously, is not caused by the social rite, but the rank of adolescence is awarded the girl only because through that rite her changed status has been recognized. In a different sort of literary situation, Robin's joining the rebellion ritual by laughing at his cousin in Hawthorne's "My Kinsman, Major Molineaux" both marks and causes; it marks the young man's willingness to accept the mob's behavior, and it also causes him to be accepted as one of their compatriots.

II. **Rituals may be difficult to recognize as such.** Steinbeck's **In Dubious Battle** shows the communist organizer, Mac, seeing a campfire ahead and telling Jim, his apprentice, to do nothing on his own. They squat at the fire in the circle of men; Mac offers cigarettes and waits to be spoken to before speaking. For the moment Jim is as unaware as the reader that Mac is going through a ritual which finally allows the two of them to be accepted as members of the migrant group. **The Grapes of Wrath**, viewed this way, is almost all ritual.

III. **Though a rite of passage can hardly persist unless the culture in which it exists is certain that the rite promotes the commonweal, people are not always better off for having experienced such a rite.** Othello is a tough and aged soldier. More wooed than wooer, he is unprepared for the marriage relationship and for the trust his new state requires. Were he younger and softer and less used to the arbitrary distinctions characteristic of mercenary warfare, he might be less quick to believe Iago's deceptions and less willing and able to carry out so hastily the naive decision to which they lead him.

IV. **Having experienced a rite of passage can sometimes restrict an individual more than it frees.** Adam's passage through the gates of Eden diminished his options. Captain Vere, in Melville's **Billy Budd**, is well aware of Billy's innocence, saying that the seaman will be acquitted at the "Last Assizes," yet he sends him to the gallows nevertheless. Though some readers regard this act as selfish, a greater number believe the Captain's implication that he is unable to free Billy because the buttons they wear attest their allegiance "to the King." As a result of his rite of passage into the navy and his swearing to uphold the royal law, he is now prevented from doing what he would prefer.

V. **Those who experience such rites do not always do so willingly.** Fraternity and sorority initiations and the King Neptune's Court harassments of sailors crossing the equator for the first time are described in literature, as are more difficult involuntary ritual experiences. In **The Red Badge of Courage**, Henry Fleming, without having enlisted to do so, must "face the Great Death" advancing upon him in the Confederate infantry charge. In **And No Birds Sang**, Farley Mowat describes a similar rite endured while fighting the Germans in World War II Italy.

VI. **A rite of passage can be more satisfying to the others in a culture than to the one experiencing the rite.** The young heroes of **All Quiet on the Western Front** suffer a basic training which neither satisfies them nor prepares them for combat, but their superiors and the people at home are confident that those dismal weeks are just what the recruits need.

VII. **Sometimes those who experience such rites do not even know they are experiencing them.** Hemingway's Francis Macomber decides to accompany the white hunter into tall grass in pursuit of a wounded but dangerous lion. He doesn't understand until later that he has chosen to experience a rite of passage opening for him a shortened but happy life.

VIII. **Rites of passage can last for greatly different periods of time, and it can be difficult to decide when one has ended.** When Sam Clemens' persona started to learn the river from his tutor in "Old Times on the Mississippi," he didn't realize that his ritual training, both marking and causing his passage from inability into capable piloting, would go on and on through apparently interminable weeks during which he often mistakenly felt he had completed the passage into maturity.

IX. **Sometimes a rite of passage causes and/or marks a change in status at a time of life other than that at which such a change normally occurs.** An aged king, a man both accomplished and powerful as well as of recognized station, would seem to be the least likely person to require any rite of passage other than that marking his death. Yet by suffering through the process he himself initiates, King Lear learns that ignorance and insensitivity can change even a king's status even late in life. More positively, Ebenezer Scrooge passes through a rite towards the end of life which enables him to reacquire the wisdom of childhood and, for the first time, to love others loyally.

X. **A rite of passage can fail to achieve its purpose.** Feeling she has suffered long enough and that she must save her lover from further pain, **The Scarlet Letter's** Hester Prynne removes her cap and lets her hair fall loose to signal Arthur Dimmesdale that it is time for them to change their lives and enjoy a new status. But their child's refusal to recognize her forces Hester to put up her hair, and Arthur, though temporarily agreeing to Hester's proposal, later rejects it. In **Moby-Dick** Ahab uses St. Elmo's fire in a ritual designed to confirm his crew's support, but even their united strength is inadequate to kill the white whale.

XI. **One can fail to make it through a rite of passage.** In Tennyson's "The Holy Grail," Lancelot, despite heroic efforts, cannot separate his noble elements from his soul's one sin and so, unable to complete the rite of passage, he fails to gain the Grail.

XII. **Rites of passage can be openly undemocratic, emphasizing the differences among people and establishing elite groups.** The ritualized training of the Jedi Knights in **Star Wars** is not offered to everyone; its result is the formation of an extremely rare and powerful elite.

This first part of the course should not absorb more than about two weeks of class time, so none of the students can be expected to read more than a small percentage of the works used as examples. But everyone should be able to read at least one of the major works, and students assigned the shorter ones can be expected to have read the short stories as well. Probing the twelve truths should develop an awareness in the students which will enable them to help select some of the best possible texts for their course's next parts.

IN PART TWO of the course the participants look briefly in literature at rites of passage other than that of maturing. These might include the passages from ignorance to wisdom, from life to death and from death to life, from denial to acceptance, and from hate to love. Here are some ideas for deserving exemplifying works:

Ransom, the major character in C.S. Lewis's **Perelandra** moves from ignorance to wisdom. He formally debates the scientist possessed by Satan in order to prevent him from leading the Eve figure of another planet into repeating our Eve's race-crushing mistake of disobeying God. Gradually, during this weeks-long encounter, Ransom learns much of the nature of good and evil and of what he must do to overcome the forces of darkness.

The dignified old man in Hemingway's "A Clean Well-lighted Place," having failed in his attempt to commit suicide, now spends his evenings drinking himself into mind-death. Carefully, gradually, he sips brandy after brandy, never allowing himself to become too drunk to walk home without weaving.

The New Testament story of Lazarus in which Jesus speaks to him from without the tomb reveals, of course, a passage from death to life, but so does the account of the relationship between Elizabeth and Darcy in Jane Austen's **Pride and Prejudice**. Obviously beyond hope of life, their love grows from the ashes of deceit and self-deception.

Denial becomes acceptance for two very different characters in Stephen Crane's "The Bride Comes to Yellow Sky" and Thornton Wilder's **Our Town**. In the former work Scratchy Wilson, trying to revivify his moribund older West, has been going through his regular challenge ritual to tempt Sheriff Potter to face him once again with a gun, but when Potter turns up unarmed and accompanied by his new bride, Scratchy drags off, instinctively aware that things will never be the same again. Emily Webb Gibbs, Wilder's heroine who died young, insists upon coming back -- significantly, on a birthday --just once, to revivify her memories of living on this planet through a little ritual of trying to talk to her mother once again. But when she senses how little human beings appreciate life, and how fast it all goes by, she accepts her new status and returns to the other dead in the cemetery.

Pierre, Tolstoy's hero in **War and Peace**, passes from hate to love. Outraged by the French invasion of Russia, he develops such hatred of Napoleon that he tries to assassinate him. Later, shaken by nearly being executed, he goes through a long and physically painful rite of passage through which he learns from the captive peasant who befriends him that hate is self-destructive and that only love can survive and make life worthwhile.

Like the first part of the course, this segment should use about two weeks of class time. Passages from **War and Peace** could be excerpted, but every student should find any of the other suggested texts easily readable in that span. Anyone choosing to read **Our Town** would also have time to study the two short stories and the Biblical account.

PART THREE of the course, about ten weeks in a semester, is the major one. With the help of the students, the teacher will have chosen works featuring rites of passage experienced by those growing from immaturity into maturity. Every teacher of literature can think of works suitable for this segment. The following list, reflecting my greater familiarity with literature of America, contains only some of many titles that merit serious consideration. (And this list, like that of the works mentioned above, can obviously be adapted for application in high schools.)

The Journal of the Quaker preacher John Woolman contains a short but telling passage about his repeated conversion to and backsliding from his ultimate mature commitment to devout ways.

Benjamin Franklin's **Autobiography**, in its early pages, tells about his attempt to apply a reasonable but mechanical and ultimately unsuccessful process to the challenge of developing himself into a flawless adult.

"Rip Van Winkle" shows Washington Irving's protagonist failing to grow up partly because a serendipitous rite skips him past the time of his life in which he would have to be most mature.

One chapter of **The Deerslayer** describes the young Natty Bumppo's first killing of another human, a moment inevitable for Cooper's hero but difficult nevertheless.

Hawthorne's "Rappaccini's Daughter," "The Maypole of Merrymount," and "Young Goodman Brown" describe, in order, the damage done one young lover by another who is, perhaps, too immature to love unselfishly, the rejection of earlier folly by a young couple now truly in love, and the permanent injury done a young husband determined to develop his acquaintance with evil.

In one of Herman Melville's several treatments of the naive youngster who needs to grow up, **Redburn** certainly undergoes a ritualized process among the experienced sailors at sea and through other experiences ashore. Students can enjoy trying to decide whether those experiences had any lasting effect.

"Out of the Cradle Endlessly Rocking," Walt Whitman's great poem about the birth of a poet, describes a primitive and moving rite of passage.

In **The Prince and the Pauper** Mark Twain has Edward VI suffer a series of privations, sufferings, and dangers which initiate him into an understanding of the lives of his subjects while his double is learning that the passage from princely privilege to kingly authority is not all cakes and beer.

"Four Meetings" allows Henry James to register his doubts, first, that all transitions from immaturity to maturity, even later in life than usual, are everything they could be, and, second, that we always know what type of life to choose for ourselves or even for others.

Martin Eden is Jack London's alter ego. He suffers and strives with terrible intensity to elevate his status only to discover, when finally triumphant, that success can be far less rewarding than he had dreamed.

Theodore Dreiser's **Sister Carrie** undergoes a book-long process of moving from status to status, becoming, like a butterfly emerging from its cocoon, ever more fortunate and important with each change. Like a butterfly's, however, her good fortune may well be ephermeral.

In **Laughing Boy** Oliver LaFarge paints a picture of the young man and woman who are physically and psychologically but not yet culturally mature. Together, but in their own ways, they grope toward their Indian heritage through learning and suffering.

We, Charles Lindbergh's account of his solo flight across the Atlantic, still excites those who recognize that the transition from potential to potency is always endangered both byen route forces that can strike from without and by those that can strike from within.

"My Old Man," Ernest Hemingway's story of the American jockey's son in Europe, illustrates the type of dependency relationship that can fail a young person just as he or she begins the most difficult part of the journey into adulthood.

Look Homeward, Angel is Thomas Wolfe's fictional recounting of his own slow and awkward development, through a series of trials, towards acceptance of his anger with his deeply felt past, of his imperfect self, and of his nebulous future.

"The Bonfire" lets its reader eavesdrop on Robert Frost's conversation with children he thinks need to be told about the challenges the world poses for them, an aural rite of passage he hopes will reduce their suffering.

The Bear, by William Faulkner, chronicles the annual rituals which subject the protagonist to a series of tests. He finally becomes a sensitive adult who, different readers will decide, may or may not be the man his teacher would have wanted him to be.

The Catcher in the Rye, by J.D. Salinger, still captures that moment in which the adolescent en route to maturity seems most fragile and most easily injured by the irrationalities and obscenities, both real and imagined, of adult life.

In John Knowles' **A Separate Peace**, the protagonist commits a terrible crime for which, though he escapes detection, he will have to suffer throughout his life. But the consequence of his crime is maturity because through it he has emptied himself of anger and buried his hatred.

The Autobiography of Malcolm X shows how the difficulties of growing up can postpone the process of maturing, and that maturity can be achieved only by finally coming to see the nature of the world with a clarity undistorted by prejudices absorbed earlier.

Claude Brown finally did mature, but his **Manchild in the Promised Land**, the story of his crime-ridden and endangered Harlem childhood, illustrates how society can produce people who are adults in years but not in spirit or mind.

The Electric Kool-Aid Acid Test is Tom Wolfe's journalistic appreciation of the hippie sub-culture. Each of its members matures in strange ways through rituals designed partly to keep them from becoming the kinds of adults who characterize the despised surrounding society.

At least twenty weeks would be absorbed in any responsible attempt to read and discuss all these works, so no student can be expected to read all of them for one course. The works cited should suggest myriad adaptations variously stressing women, regional literature, ethnic groups, world literature or folk and ethnographic types. A variety of wonderful courses can be constructed from these materials by alert students and by the teacher who inspires them to come to grips thoughtfully with one of life's most significant, challenging, and rewarding experiences.

Rites of Passage and Education for Meaning

I. Ethnographic Perspective: The Meaning of Male Initiation in Aboriginal Australia

In his classic study, **The Australian Aborigines**, A.P. Elkin observes that only through attempting to understand initiatory rites into manhood can one ever hope to appreciate the meaning life holds for Aboriginal Australians (1964:164).* For these rites do more than transform the individual from an asexual to a sexual state of being; incorporation as an adult does more than forcefully internalize adult responsibilities. The individual is transformed from a secular to a sacred state, privy to all the secrets of The Dreaming. Revealed in myths and rites, The Dreaming is, according to Stanner, "many things in one... A kind of narrative of things that once happened; a kind of charter of things that still happen; and a kind of **logos** or principle of order transcending everything significant." It is knowledge of The Dreaming which gives meaning to life. It is through initiation that people feel the pervasive totemic force which makes the individual, society and nature--past, present and future--One. Such an experience of wholeness has been, through the ages, the archetypal experience with meaning.

Western minds, conditioned as they are by a materialistic/mechanistic mode of thought and a desacralized world-view, find it difficult to understand the holistic meaning The Dreaming provides. Nor have all outsiders appreciated the stability and harmony that rites of initiation give to Aboriginal Australians and to other tribal peoples. In the case of the autochthonous Australians, it took Europeans more than 100 years to realize that, beneath the patina of an astonishingly simple material culture, there existed equally astonishing social and ideational complexity. Even after a century of contact, while indigenous Australians found some material items of European culture desirable, the rest of European culture held little meaning for them. Whites saw, in shocked amazement, Blacks work six months of the year on stations--during which time they ate, dressed and washed themselves in accordance with European norms--subsequently to purchase the few things they desired, shed their clothes, paint their faces, and return to their ancestral homes to live the traditional life, performing their sacred ceremonies. Even today, in the 1980s, John Bodley notes that there are nearly 150 outstations, "...decentralized communities, where small groups of Aborigines [are] reestablishing the traditional life on their own ancestral lands away from the crowded, dependent conditions of the missions and government posts." For many Aborigines, traditional culture still provides the wellspring of life's meaning. It comes as little surprise that Australian Black activists describe the struggle for cultural survival as the struggle to save The Dreaming.

---

* Aboriginal Australian society was a male-dominated society. Initiated men were regarded as the all-important guardians of the sacred knowledge (especially elderly men). Yet, it must be said that women played critical subsidiary roles in male initiation, and that women performed their own important ceremonies associated with The Dreaming. It also can be noted that in some cultures, certain California Indian tribes come to mind, it was the women who were the guardians of the sacred knowledge and female initiation that was paramount.

II. Modern Life and the Crisis of Meaning

In recent years it has become increasingly common to note that, among the numerous crises we face, "is a crisis of meaning." This crisis concerns the inability of so many in modern industrial societies to really feel, as most tribalists have felt, inextricably a part of social and natural orders from the local to the global and even to the cosmic level. Certainly, few today can really relate "deep down", to the words of the old Navajo chant:

> The mountains, I become part of it...
> The herbs, the fir tree, I become part of it.
> The morning mists, the clouds, the gathering
> waters,
> I become part of it.
> The wilderness, the dew drops, the pollen...
> I become part of it.
>
> (Quoted in Brown)

For that matter, how many of us really understand, much less feel, the universal oneness expressed in the following statement by the biophysicist, Erwin Schrodinger? "Inconceivable as it seems to ordinary reason, you--and all your conscious being as such--are all in all. Hence this life of yours which you are living is not merely a piece of the entire existence, but is in a certain sense the whole." (Quoted in Leeming)

Without a sense of the oneness of life, it has become ever more difficult in our nation to deal with our environmental, psychological, social and geopolitical problems. Commentators from Tocqueville to Riesman and most recently, Bellah and his colleagues, have called attention to how our "rugged" individualism prevents most Americans from understanding, much less becoming genuinely committed to solving, the many serious problems we face today.

Rites of passage, whether rites of initiation into adulthood or other rites of initiation which human beings have universally performed--rituals associated with birth, presentation and naming of children, with entrance into religious societies (e.g., Grand Medicine Society of the Ojibway or the Katchina societies of the Hopi) and, of course, rituals associated with death--nearly always stress the unity of life and the responsibilities humans have as inextricable parts of the cosmic whole. To be sure, rites of passage still exist in modern society, but as the distinguished historian of religion, the late Mircea Eliade has remarked, such rituals have, for most people, lost their aura. The rise of modern science and the control over nature it provided, our thermodynamically insane commitment to perpetual material progress and our exaggerated stress on individualism--all have alienated us from ourselves, from other humans and from nature in general. In our desacralized world, it is quite difficult to find comprehensive meaning in an existence where rites of passage have lost their power to really move people.

In his provocative "Modern Man's Need to Understand the Rites of Passage," Eliade addresses our need to experience symbolic death and rebirth when, for instance, we must assume adult responsibilities or when, as we enter middle age, we realize the dreams we dreamed as youths regarding what we wanted to become must be modified or abandoned. And then of course, there is the matter of our physical deaths. Not withstanding the fact that, in recent years, books on the subject of death have become a veritable light industry in our nation, most of us still find death a subject we would rather not address, even though it is the fact of our ultimately dying that brings into question the whole meaning of our lives. In traditions where individualism of the sort which exists in most modern industrial nations is absent, where persons are not preoccupied with the survival of the individual ego but with becoming aware that one is a part of the universal whole--Zen Buddhism for example--death hardly presents the problem it does for us. As Hyers reveals, death can be faced with alacrity. In any case, rites of passage associated with death in tribal cultures stress not merely that death marks the transition from corporeal to a purely spiritual status, but, in good Taoist fashion, the rites stress that life can not exist without death, that life has no meaning without death. Perhaps it is true that, as Hazel Henderson has said, most of our contemporary problems stem ultimately from the vain attempt, through our applications of science, to eliminate death.

In a most poignant article, the Benedictine monk, David Steindly-Rast, addresses the crisis of meaning in our culture, making a very interesting distinction between **purpose** and **meaning**. Purpose has to do with our goal-oriented behavior and with what we do to achieve our goals. In other words, purposeful behavior is action-oriented behavior, for instance, the measures we take to be "successful." Meaning, on the other hand, is something that must "flow-in" to our daily experience. Meaning has to do with the sense that our daily lives are genuinely satisfying and significant. Satisfaction and significance in life has to do with our feelings of being persons **connected with the social and natural world**, and not just distinct, separate individuals. While purpose and meaning are never really separate matters in our individual or collective lives, the two can be, and I think are, confused. It may well be said that ours is a purpose-ridden society but whether or not all our purposes have meaning is another question entirely. With respect to the matter of being successful, we learn from our parents, in school and from many other sources that we should strive to "get ahead." But does success and getting ahead of others have any real significance if judged simply by materialistic criteria? Can it be said that a human life is successful apart from any really significant contribution to society or apart from a recognition of the articulation of that life with Life? It seems to me that our stressing material progress has diminished the significance we give to matters of who we are, and it has lessened our satisfaction with what we have now, both collectively and as individuals. It hardly needs to be added that, given our many environmental and other planetary crises, we are going to have to learn to find satisfaction and significance in the present, and at once acknowledge and feel our relatedness to other beings and things.

All of this is not to suggest that I am wholly "anti-individualism" or "anti-progress." After all, each human is a unique cosmic event with potentially something uniquely beneficial to contribute. And progress is fine, so long as it is acknowledged that biogeochemical cycles must be maintained, and that other people and nations have a right, as citizens of the planet, to a fair share of its resources.

Then, too, progress can take non-material forms; we have a lot of spiritual progress to achieve. What is called for, I think, is to give as much importance to the **meaning** of our lives as we give to our **purposes** in life. We must somehow learn, and teach our children, that a human life is inextricably a part of the total process of Life; that a human life has no meaning apart from its social and ecological context.

III. Meaningful Rites of Passage and Modern Education

Meaningful rites of passage can only exist in a society when the value-orientations of that society lead not merely to purposes, but permit holistic meaning to "flow-in" to everyday life. Our present value-orientations, which place an extreme emphasis upon individual goal-seeking and material progress, are inimical to holistic meaning. Accordingly, our rites of passage have not simply lost their aura; they have lost the fundamental moral essence needed to convey to the individual the social and ecological responsibilities which follow from knowing and feeling the interrelated nature of existence.

Coming-of-age ceremonies, such as **Bar Mitzvah** and **Bat Mitzvah**, may provide considerable meaning with respect to one's part within a particular community of faith or within a particular subculture, but in modern American culture as a whole, there is an absence of even so much as a clear perception of definition of when one is an adult. Thus, the legal ages at which one can drink alcoholic beverages, vote, marry or serve in the military do not correspond. Some of us are obliged to assume important adult roles on graduation from high school; others of us go on to college where assumption of adult roles is often postponed. Definitional ambiguity regarding the assumption of adulthood not only militates against meaningful rites of passage, it also reflects the crisis of meaning pervasive in our culture.

The most important rites of passage that are meant to prepare the individual for adulthood in our society are within the process of formal education or schooling. Schooling is a primary institution in our culture, consuming a tremendous amount of time, money and energy. While we ordinarily associate rites of passage with magic and religion, as Fisher suggests, schooling is nevertheless an extremely protracted series of rituals marking the "separation from, transition through and incorporation into culturally recognized statuses and roles." Like all rites of initiation into adulthood, it has its ordeals, e.g., examinations, testing the individual's readiness to continue along in the initiatory process. Although we view it as a largely secular process, certainly schooling involves at least quasi-religious ceremonials. Thus, the whole ritual process of schooling ends with "commencement," obstensibly meaning we are certifiably ready to "commence" with adulthood and the rights, privileges and responsibilities associated with that status.

But does the schooling ritual really prepare us for adult responsibilities? Does the schooling ritual have meaning as well as purpose? That is, are we, as a result of this rite of passage, conditioned to see ourselves as a part of our social and natural world?

It is again important to note that meaningful rites of passage can only exist where the value-orientations of society permit holistic meaning to exist. Schooling, as with any rite of passage into adulthood, reflects, and is meant to indoctrinate the individual with the value-orientations of society. Hence, in addition to the usual academic curricula, there always exists the "hidden curriculum", which both Jules Henry and Ivan Illich characterize as stressing competition so the individual may join the materialistic elite of society. A teacher in literature class may convey to her/his students that **Walden** is a wonderful book; but the message of the hidden curriculum in school, as the message received in life beyond the school, is certainly not that Thoreau is to be taken seriously.

Since neither our schools nor the customs and institutions of society at large communicates meaning, it should come as no surprise that so many students today view education cynically as being little more than a means to the banal ends of personal, material success. In a recent Carnegie Commission survey of American undergraduates, students were pessimistic about the future of our nation, but often wildly optimistic about their personal futures. When asked why they were personally optimistic, the following response was typical: "Because I have a high grade point average, and I'm going to get a good job, make a lot of money, and live in a nice house." (Quoted in Levine)

Such a statement, of course, reflects the pervasive meaninglessness in our culture--the sense that the individual is detached, that his/her fate has little to do with the fate of others; that one's personal affluence, and affluence in general, has little or nothing to do with the fact that one-half of the world's children are malnourished. It is needless to note that such an attitude is absurdly irresponsible. Indeed, in an interdependent world, such an attitude is insanely dangerous.

The question, of course, becomes, what do humanistic educators and other concerned people do about the dangerous obsession with individualism and materialism? How do we begin to change the most important rite of initiation into adulthood in our society--schooling--so that meaning can "flow in" to our lives and the lives of our students? There is an old saying to the effect that one can not do anything about the existence of poisonous snakes in the world, but one can grab a stick and hit a poisonous snake about to strike a friend. There is, perhaps, little we can do to reform our schools, at least so long as the national obsession remains being materially foremost, as individuals and as a nation.

Yet, we can at least attempt to dampen the impact of the hidden curriculum in our classes. In science classes we can stress what the implications of modern science truly show: the "new physics" reveals **interrelationship** to be the essence of reality; biology reveals a complex, interconnected, interdependent web of life undergirded by vulnerable biogeochemical cycles. In history classes one can emphasize those events, processes and conditions which resulted in the human condition being what it is today. One can discuss Jefferson's image of democracy and his warning with respect to how an ill-informed public, unwilling to participate in democratic processes, prepare the way for tyranny. And surely an important reason for studying the Roman Empire is for the lessons that can be learned regarding the fate of modern industrialized nations if they continue to exploit the whole of the earth. In literature there have always been great writers, like Thoreau, who have had the vision necessary to see through the superficialities, to see what a genuinely humane existence requires. One can learn about, and teach about, the great myths which in nearly all cultures communicate profound meaning to the intuitions. And an underlying lesson of cultural anthropology has always been that truly successful cultures are characterized by egalitarianism and low entropy. Such cultures socialize their children so they understand that survival requires commitment to society and a reverential respect for nature. These societies also provide ample avenues for the expression of individuality.

There are many things we can do which only require a change of emphasis in doing what we already do. But we can also learn and teach about the creative minorities in our own nation and abroad who are working to establish just, humane and sustainable ways of life. The efforts of such creative minorities may sometimes be unrealistic; they may not have the expertise they need to do what they seek to do. Yet, they are not content to remain on the sidelines. With courage they participate while those with the needed expertise often do nothing (except sometimes criticize). Perhaps the latter lack real courage, the courage to place their professional reputations on the line by actively helping with the work that must be done to ensure survival.

Participation in life is the key to understanding the meaning of life. We must learn, and teach our students that it is not enough to learn **about** the world, one must learn **from** the world. Only then can the pervasive oneness of life be appreciated; only then can the schooling rite of passage have real meaning.

In mythological terms, we face the hero's challenge to adventure. The quest is a lonely and sometimes terrifying journey, but since it is the human journey we have, in the end, little choice but to accept the challenge. On the journey we find the meaning of our lives and return to found a new order. It is time to discover our Dreaming, the **logos** which underlies all things important.

Rites of Passage:
Growing Up In Nineteenth Century Alexandria
An exhibition about
nineteenth century young adults
researched and produced by
twentieth century young adults.

Sunday, June 16, 1985
Reception 6:00 p.m. to 8:00 p.m.
The Lyceum
201 South Washington Street
Alexandria, Virginia 22314
RSVP 838-4994

Adolescence is a period of growth often perceived as a very unsettling time. For this reason, museums have found it easier and less threatening to address other audiences. In addition, high school students have rotating schedules and numerous after-school activities that make it difficult for teachers both in schools and in museums to coordinate field trips and consistent museum activities. For example, one major Virginia high school offers over sixty extra-curricular activities. To reach the high school audience, museums must compete with work, sports, and clubs. Nevertheless, high school students can be involved in museums with particularly rewarding and innovative results.

The staff of the Lyceum Museum in Alexandria, VA. was strongly interested in working with the adolescents. **Rights of Passage: Growing up in Nineteenth Century Alexandria** was funded by the National Endowment for the Humanities Youth Projects Grant program in 1985 and designed to introduce high school students to local history and the principles and practices of museum work. By studying the lifestyles of their contemporaries of a hundred years ago, participating students would have a greater understanding of cultural values in the nineteenth century and the basic functions of a local history museum. It was believed that high school students would be more interested in learning about history be examining their adolescent counterparts in the nineteenth century.

Students would work with material culture, improve their skills in research, analytical and communication, and be exposed to the concepts of interpreting history. The program was designed to coincide with the academic school year, culminating in a spring exhibition. Under the guidance of museum staff and a local historian, participating students used primary source material to explore six themes in nineteenth century adolescent life: education, family life, recreation, and the Civil War and work from 1840 to 1900. All students were involved in the design and mounting of an exhibition.

The project started in October. Ken Turino, co-director of the project and assistant director of the Lyceum visited area schools and discussed the project with the Social Studies Coordinators and students. The project, which could not be used for classroom credit according to NEH guidelines, was presented as one which would offer practical experience to the students as well as a good deal of fun. Interested students had to apply with a written letter explaining their interest. Thirty-seven students from several public and private Northern Virginia schools were selected. (Over the nine months of the project only six students withdrew. This attests to the students' commitment and to the popularity of the program).

Students met weekly for two hours after school and were required to do additional research on their own. After introducing lecture-discussions on Alexandria history, research groups were founded. Students within each group completed an overview of their subject areas and began their investigation. A staff leader, including our local historian, the project directors and personnel from the Ft. Ward Museum and Historic Site, were assigned to assist the students with their research. Bibliographies for each group had been prepared and from these assignments were made.

The after school sessions were intentionally designed to involve students actively. The teenagers had been sitting in school all day and another two hours of lectures were not needed. One of the first programs took place at the Lloyd House, the library devoted to Alexandria history. A tour was arranged to introduce the materials which would be of most use for student research.

The concept and study of material culture was very new to these students and one that seemed to excite them. A favorite program was the "Lady in a Trunk" developed by Charles Mayo of the National Park Service. A trunk, containing correspondence, report cards, photographs and artifacts, all relating to a woman's life was examined by the students. Working in groups the students pieced this woman's life together. It was a fascinating program which dramatically demonstrated to the students just how much could be learned about someone's life by looking at documents and artifacts. Another popular program included a visit to the Alexandria Archaeology Museum where the Director, Pamela Cressey, had students look at the diverse materials a historical archaeologist examines in evaluating a site.

As the project progressed and research continued, the programs introduced students to museum practices and principles. These programs included visits to several museums. A workshop on the care and handling of artifacts was conducted by Julia Claypool, administrator of the Carlyle House. Ms. Claypool made a strong point to students on how important it is to follow curatorial practices when handling objects. In passing a coffee cup to a student, Ms. Claypool intentionally mishandled the cup which consequently shattered. The young man participant was shocked until she revealed that he had been "set up" to convey the importance of proper object care. Ruth Hohl, Lyceum Museum Exhibition Specialist, and co-director of the **Rites of Passage** project, presented workshops on exhibition design and label writing.

As work progressed, the students decided each group would have their own section in the exhibition. Since the Lyceum has no collection, students needed to borrow artifacts, photographs, and documents from the National Archives, Library of Congress, the Virginia State Archives, Arlington Historical Museum, Fairfax County Park Authority and the Lloyd House. After visits to these institutions, the artifacts were selected and rooms arranged.

A press release was then prepared by the students in a workshop conducted by Diane Bechtal of the Alexandria Tourist Council. Labels were submitted, edited, and resubmitted. The local historian was consulted on final label copy. As the exhibition plan was being drawn the Projects Directors made an effort to involve representatives from each of the groups in all decisions, such as choosing the frames, mats, photographs and documents.

With any project of this type there are bound to be problems. **"Rites of Passage"** was no exception. The Lyceum, which had closed for renovations, did not reopen as anticipated, delaying the **"Rites of Passage"** for one month. The timing was the worst possible for the students. This new opening, which could not be delayed further, came right in the middle of the all-important rites of passage of final exams, graduations and proms! Some momentum was lost due to these delays, some weeks we did not meet, others had small attendance. The students did rally at the end, working after school and on weekends to transport the loan objects, write condition reports, proof labels and move exhibition cases, paint and install the exhibition.

The exhibition **"Rites of Passage: Growing Up in 19th century Alexandria"** was divided into sections separated by a Victorian style border of wallpaper and painted one of two colors. Each group of students chose to show what life was like for adolescents during the period of study. The Education group chose to partially recreate an 1890's classroom complete with teacher and student desks, a blackboard and books. A wall of photographs and cases complemented the classroom.

Each group chose a quotation to set the tone for their section. The Work section began with the following: "In 1843 Smoot took me (aged 19) with him as clerk and doctor. I was rather taken aback at the latter, but he told me to learn how to use a spring lancet by practicing on the ribs of a cabbage leaf. I laid in a supply of salts, oil, No. 6 composition and while on the subject may say I was a very successful practitioner."

Alexandria, which was still basically rural in the late 19th century, offered many occupations for adolescents ranging from farm work to machinists. Other sections depicted Family Life with a recreated 1890's Christmas, Recreation with sports equipment, such as golf clubs, and the Civil War with military memorabilia.

The exhibition opened on June 16, 1985 and was extremely popular with the students, their families, teachers and classmates. The general public attended in large numbers and were impressed and enthusiastic about the students' work. The media was very interested in the project and coverage was widespread; several articles appeared in local and regional papers and newsletters. A number of students were interviewed for an article in the **Washington Post**. Alexandria's high school sent a video crew to the exhibition where students were interviewed. This video tape was broadcast for several weeks over the local cable network.

The project did not end with the exhibition. Many of the students made presentations on the project and their research at their schools. One young man made presentations to over 125 teachers and students. Evaluation had been on-going through weekly logs turned in by each of the students, although the practice of keeping a log was difficult for many of them. Nevertheless, this was a very useful tool allowing the staff to maintain progress and keep abreast of any difficulties. A graduate intern conducted an evaluation by interviewing each of the students. This was also very valuable in judging the success of the project.

To conclude, we believe that the **"Rites of Passage"** project is a good example of how historical societies and museums can work with high school students by offering a challenging experience designed to draw on and improve research and writing skills. The students gained a better understanding of adolescent life between 1840-1900 and of the function of a local museum. One student captured a general feeling of the project; when asked what he enjoyed most about **"Rites of Passage,"** he responded "What I liked most ... learning to do an entire exhibit from scratch from research to planning to laying out the exhibit."

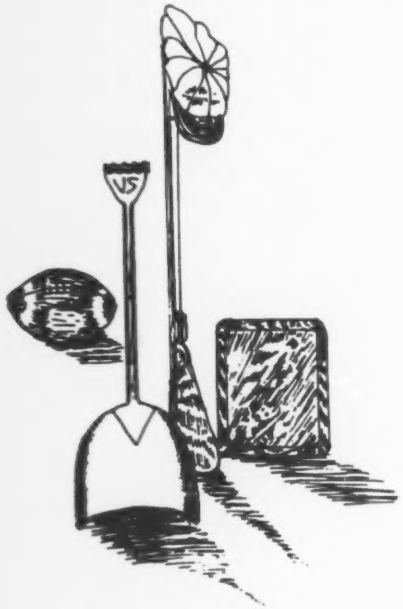
Rites of Passage



George M. O'Brien

Sports as Ritual

At times it must seem to all secondary school teachers and most college teachers that sports are the prime mission of their institutions and that subjects like humanities run a poor third in the minds of their students. Indeed, school athletics appear to be the very antithesis of serious thought and deeper human values. Viewed historically, however, profound connections with both religions and arts emerge. The common denominator is ritual: ritual space, ritual time, ritual behavior.

Though dictionaries tend to restrict the use of **rite** and **ritual** to formal prescribed religious ceremonial acts, there is historic as well as metaphoric propriety in applying the terms to the nearly cultic function sports have reassumed in modern life. As the ritual religious site in antiquity and later the medieval cathedral were central to earlier societies, so today the domed stadium or arena complex has become a focus for civic identity and life. In each era, the recurrent ritual activities performed at the site are carefully determined--by calendar calculated from the heavens for the ancients, by the liturgical year for medieval Christendom, and by the sporting cycle of seasons, playoffs, cups and games for the modern city. Of course, this is not to say that contemporary sport fulfills the same role as ritual in an earlier age; the attraction of simile, after all, is in the tension between identity and difference.

Puritanical minds of earlier times rejected sport, play and games out of hand as being, at best, childish frivolity or, at worst, profligate indulgence. It was not until the twentieth century that philosophers, historians, anthropologists, psychologists and sociologists could probe sport properly as a central experience in the life of both the individual and of society. A seminal contribution was made by the Dutch thinker Johan Huizinga, who studied the play element in culture because he had become convinced that civilization arises and unfolds in play. From the many examples of play among animals and little children, Huizinga concluded that play **precedes** culture and is not an outgrowth of human society. Consequently, attempts at explaining the origin and purpose of play fail because they derive from theories of human history and culture which are of later origin. The pleasure of play, for example, evades logical categorization and exists in its own right. There is an unresolved paradox in that human beings at play, while displaying animal energy and aptitude, strive to transcend human limits in the arena and on the playing field. It may be that in the very attempt at transcendence lies the ritual core of sport.

An ironic line by the French sport sociologist Roger Caillois illustrates the absence of human purpose and the work ethic in play. He quipped that play is an occasion of pure waste: waste of time, energy, ingenuity, skill. But then, as the modern liturgist Romano Guardini noted in regard to religious rites, we can say that sports are useless but **meaningful**. Play and its outgrowth, sport, antedate primitive society and the intervening centuries of economic systems such as feudalism and early capitalism which relegated play be adults to the realm of unbecoming wasteful behavior, if not sin.

Yet today's locales for play, like the two other ritual settings from antiquity on--the sanctuary and the theater--are places carefully set aside. Action there is free of mundane purpose and real item. The whole activity, controlled in its sacred space by rule and authority, assumes its own life and its own time as it progresses at its own pace to its unique conclusion. This is true of all three ritual places. The very exemption of sport from ordinary law suggests the ritual, yes, even the **sacred** role of the activity. Where else in civilized society but on the playing field or in the ring may one individual assault another without criminal proceedings? The recurrent scandals involving collegiate and professional athletics stem, in part, from the ritual exemption of sport from ordinary life. This is more than hero worship gone awry; there is a sense of sacrilege.

Viewing sport as ritual can help the modern rational skeptic understand the perceived excesses of sport in our society. "Ritual has been at most times and for most people, the most important thing in the world. From it have come music, dancing, painting and sculpture," states Lord Raglan, an expert on myths (133-4). "All these...were sacred long before they were secular, and the same applies to storytelling," which means for Raglan, myths. I would add sport to his list. Raglan is merely shifting the anthropological view of primitive and early societies in which work, play and religion were not rationally categorized but were all simply parts of the group's life. In other words, primitive peoples had no secular life since religious life included the total culture. Carl Diem, author of the most thorough history of world sport, follows this position when he claims that all physical exercises were originally cultic.

The variety of English vocabulary for physical exercises adds some insight as well as confusion. Physical **exercise** itself includes many activities seen as non-competitive--such as swimming, canoeing and jogging--which are at times structured as contests. **Play** implies freedom and unencumbered activity that is not basically contest but still may be controlled by implicit rules. How often do children complain that a mate is not playing fair or is spoiling the fun by not taking play seriously? A **game** can, of course, be a contest as in the Olympic Games but is often not competitive. An example of this would be leapfrog. Then there is **sport** itself which is defined as diversion, pastime, recreation and entertainment but is clearly understood today as contest whether amateur, scholastic or professional. Though individuals voluntarily participate in all these activities nowadays, still the diversions retain a curious seriousness and importance that is puzzling to the rationalist. As George Bernard Shaw noted: "Men trifle with their business and their politics, but they never trifle with their games." Children and adults may readily complain when a companion takes the game too seriously, but they are not tolerant of the spoilsport who ruins the game. Could what really is wrong be that the uncommitted player has introduced prosaic reality into the realm of ritual activity?

Play was originally not simply pastime or entertainment and, indeed, maybe is not so today. The hunting, warfare and mating ways developed in primitive societies for survival lived on later as ritual games and activities even after they may have lost their original importance for the group. The totemism of clan or family carried over to ritual sport in deciding teams and in identifying groups or individuals by attributing to them animal names and qualities. This aspect of sport has certainly continued on through the heraldry of medieval jousting to the names of modern teams such as Hawks or Cougars and even to individual athletes being called Bull, Bear, Mad-Dog or such deliberate distortions of the tradition as the playful coinage, Refrigerator. The use of animal names in team nomenclature and personal epithets plus the custom of team mascots keep sport in touch with its ritual origins. Other names even celebrate ancient associations: Trojans, Spartans, Vikings. This is quite in contrast to the rationalist tendency in modern times to create similes from recent inventions. Not long ago, for example, children were taught nutrition by comparing food to fuel, and their bodies to machines. Most recently human thought and behavior have been increasingly reduced to terminology appropriated from electronic computing--interface, burnout, digital, word processing. In its **hubris** modern imagination seems quite impoverished when compared to the verbal imagery of simpler days. If sport does nothing else, it maintains mythic totemism in our day. Modern athletics also continue the tradition of clan or family by fostering local, civic or state pride of identity with a given team. The national anthem was first played regularly at games during the patriotic days of World War II, but now no major sporting event would be complete without "The Star Spangled Banner." Today most citizens know no occasions other than athletic events where the rites of patriotism are performed with flag and anthem. With the certainty of the "Amen" at the end of prayer, the ritual of sport begets the rites of clan, and of nation.

Sport is at times atavistic in recreating ancient work as modern play. In this regard it is **a rite of recall** just as formal holidays honor specific historic events. The sociologist Gregory Stone noted that an important function of play was the recreation and maintenance of obsolete work forms. Unwritten history thus becomes living reality for people living in a very different era. Obsolete work activities such as archery, canoeing, camping, fishing, hunting, horseback riding, hurling the javelin, wrestling and even running persist in society today as play and formalized sport. Play here is not used as a synonym for simple frivolity or unstructured leisure activity. For example, wrestling as play rather than warfare or defense has often been a very serious endeavor indeed. It has been a formal rite prescribed for special occasions such as the funeral games described in the **Iliad**, or the harvest festivals of ancient Japan, or an activity required of bachelors prior to mating dances among the people of Kau up to our own day.

In classical Greece athletics clearly became recognizable as sport. To what extent they were ritual in a strict sense remains hotly debated since Greek athletics were diverse and complex. This befits a culture which developed over 1500 years of recorded history and spread outward from a small homeland sung in epic by Homer, to the Hellenic world prospering on three continents following the conquests of Alexander. In later days both Romans and Greeks traced their games to mythic, often conflicting, beginnings. Some experts point out that even the Homeric narratives of funeral games betray love of contest and pure impromptu sport rather than serious ritual activity. The original funeral games, it is argued, were simply a device for distributing the possessions of a dead leader among his noble followers. Opposing scholars document over thirty panhellenic festivals, or games traced back to funeral rites in honor of mythic heroes including the Olympics in honor of Pelops and an equal number of funeral games held to honor historic personages including those who died at Marathon and several games called by Alexander who declared them a legitimate claim of the dead. For the ritual purist, it must be noted that the origin of some Greek games is thought to be prehistoric human sacrifice. In any case, the debate is perhaps misfocused. The Greeks, conservative by nature and free of modern distinctions between work, play and religion, did establish canons for their sports festivals which manifest many similarities to recognized ritual rubric.

On the other hand, it was the Greeks who first secularized sport, as might be expected of a rational people who placed so much importance on the arts and games. Training techniques, coaching and practice became the norm. Physical education curricula for youths were developed and advocated by philosophers. The gymnasium and palaestra, both schools for the formal education of young people, were places where adults as well could exercise, relax and conduct business much as in the modern health spa or country club. Unfortunately, the seamy side of sport developed also in Greece. Professionalism became so widespread that eventually most contests were won by fulltime athletes. Cities vied for their services and bribed them into representing them at the games. The degeneration of sport by Roman times is well known. It was the satirist Juvenal who first uttered the phrase "mens sana in corpore sana" while watching a young Roman athlete perform, but he prefaced his words: "It is to be hoped that there is a sound mind in that sound body." From this period on it is difficult to see civic ritual as living values in the late classical era of professional games and circus spectacle.

Early Christians had good reason to shun all athletics since they as outsiders and victims knew only too well the degenerate gladiatorial contests of Rome. Among the early church fathers, Augustine wrote from personal experience when he warned that violent spectator sports could become a debasing, consuming passion. For centuries religious teaching rejected the flesh, the body, as one of the three sources of sin. Christendom had little room for organized sport or bodily exercise. And yet there is much evidence of popular sport in feudal Europe. Not only did incessant warfare require men skilled in martial exercises such as wrestling and archery, but frequent folk festivals gave rise naturally to sporting competition. Figures from illuminated manuscripts, carvings and stained-glass as well as manuscripts with repeated clerical injunctions against games, betting and dancing all document the continuation of impromptu play, if not ritual sport, among the peasants when [illegible] for [illegible] and holy days in medieval times. Beyond the apparent spontaneity of such games, [illegible] be cultic

tradition at work as well. In Britain and France early ball games and wrestling tournaments are tied to ancient seasonal rites which later became interwoven with celebrations during the liturgical year. For example, wrestling tournaments were held in London on the feasts of St. James, St. Bartholomew and, surprisingly, Good Friday. The early football matches of Merry Old England were loosely structured, rowdy annual folk contests between rival towns or groups including even monks. Dating back to pagan rites of spring, they became games associated in the middle ages with specific seasons, especially Shrove and Eastertide. While they were highly ritualized in that individuals did not freely choose to partake in what was socially expected behavior, these proto football games were, as the sport sociologist Eric Denning notes, more spontaneous and far less sombre and pre-planned than modern rituals and ceremonies tend to be. For present purposes, their ritual origin and annual celebration are significant.

Scholars rightfully differentiate between early ritual folk games and the regulated athletic contests of today. Yet much about modern sport still suggests the cultic and the ritualistic. While our games are no longer simply an integral part of the seamless flow of social life, they still remain activities set apart from ordinary space and time. There is paradox in that today, when machines have lifted us to accomplishments which in earlier times would have been mythic feats of speed or prowess, we still seek transcendence in the agony of athletic rite. In the age of mathematical science and technology, we take the tools of statistics and records. The ancients, after all, never did concern themselves with who ran the fastest race ever; the very concept of **record** is a late nineteenth century idea. Today record is nearly synonymous with sports. The serious preoccupation in athletics with statistics and recordkeeping can be seen not as a break with the games of former times but rather as a modern attempt to give special status, ritual sanction to sport in our day.

Myths surround the origin of modern sports, as they did those of the ancients. The secular canonization of Abner Doubleday for his reputed creation of baseball is probably the most interesting example of a young nation intent on defining its distinctive native virtues through sport. The saccharin piety and solemn ceremonies surrounding the bogus modern Olympics are but another example of the desire for rites of transcendence and unity, for something still sacred in today's world, and when television discovered Aaron Copland's **Fanfare for the Common Man**, the ceremony became complete. For both fans and athletes, sports creates a momentary unity that may signify nothing beyond the activity itself. Nevertheless, the lives of the participants become transformed for the moment through the donning of uniforms; spectators, too, are transformed as they rally to the symbolic colors and cheers of their team. The action, unlike religious ritual, may no longer have significance beyond the game itself. Still a player or a fan is often sustained in humdrum reality by the rites that were performed on the playing field. In a secular age, sport is for many their sole experience of transcendent unity and even of religious ecstasy.

Humanists are properly concerned about a society that favors athletes over artists, a society that seems perilously close to the excesses of the Roman gladiatorial arena. Yet we should not be binded to what philosophers, historians, anthropologists and sociologists have to tell us about ourselves when they probe sport and ritual.

Ritual and Remembrance in Minnesota Folk Celebrations

In George R. Stewart's apocalyptic novel, **Earth Abides** (1948), we are confronted with abrupt and dramatic changes wrought by a mysterious virus which leaves only small clusters of survivors in various spots throughout the world. Stewart's characters live in Berkeley, California, and they experience, among other things, a new sense of time --how they spend their days, new attitudes about deadlines, and an emerging tradition about marking the passage of time. The old holidays, by and large, lose their meaning. July 4th, Thanksgiving, and even Christmas go unobserved because the initial survivors are deprived of their crucial social contexts. New-born members of these tribes retain little connection to "the old ways," but for certain reasons they attach special importance to some holidays --Groundhog Day, the Solstices, Hallowe'en-- and to newly-conceived holidays based upon recent and memorable events their lives.

This pattern shows us the basic function and meaning of holidays. Humans need to "number their days," however their culture and powers of remembering allow. In so doing, we remark the processes of life: work and play, death and rebirth, and the contemplation of the past or the future. Further, we learn, holidays that lack significant symbolic meanings and roots in the memories of the celebrants soon wither and fade. A modern example is Jackson Day, January 8, a popular national holiday in 1836 but today observed only in New Orleans, the site of the hero's successful defense of that city in 1815.

In a recent survey of Minnesota's traditional arts and culture, I came across evidence of folk celebrations much like those in **Earth Abides**. One should not suppose, however, that these are new holidays created out of the shambles of an old civilization. Indeed, they are very old celebrations with ancient origins. However, they are not "official" holidays, listed on nationally distributed calendars or printed in the list of legal school closings at district offices. More important to the folklorist who studies them, these celebrations demonstrate how ordinary people follow traditions in marking days or seasons, putting their own stamp on dates and events which are unique to their communities or are widely recognized parts of mainstream American life. For the educator, understanding of the process of holidays at the grass roots level reveals the values of the community and the image it has fashioned for itself over time. Too, it allows one to achieve some perspective of our propensity for nationally coordinated celebrations which serve more to extend the weekend and reduce administrative accounting than to note with feeling an event of historical or spiritual significance. Finally, it demonstrates how folk communities maintain public expression and negotiate this expression with local "official" institutions within the bounds of what is deemed "appropriate" or functional by those two social bodies.

A good example from Minnesota is the "shivaree" (charivari), the good-natured mocking of a newly-wedded couple through rowdy songs, pranks, and often the kidnapping and abrupt abandonment of the bride and groom in some distant corner of the county. Minnesotans in their early sixties distinctly remember this custom and many experienced it first-hand. Though modern weddings in small rural communities are very different today from those of the 1930s and 1940s, pranksters survive and newlyweds must beware. One couple in west-central Minnesota recently left their ceremony and reception, expecting to spend a peaceful week in the rustic setting of the family farm. When they arrived, they found the yard and outbuildings adorned in a garish manner: scarecrow-like figures, some in lewd positions, perched on shed roofs; an old bicycle welded to a twenty-five foot pole which was set in concrete in the ground; a tangle of coathangers encircled the house; the front door was nailed shut; and a local sculptor had created a "tree" of tractor parts and planted it in the middle of the driveway! Wedding pranks have a long pedigree and one need look no further than folktales and rhymes to connect the practice of tying old shoes to a couple's car and the venerable, "Cock-a-doodle doo, my dame has lost her shoe..." with the sexual symbols which pervade the time of a marriage ceremony.

The ancient celebration of May Day is yet another example. On this day in Moscow, Paris and San Francisco, workers organizations take to the streets with time-honored slogans. In Minneapolis and elsewhere, peace marches bring together families, church congregations, politicians and civic organizations. The Heart of the Beast Puppet Theater dramatizes a story of current issue and a local department store holds a giant sale.

Meanwhile, young rural Minnesotans carry on a long-remembered and gentle May Day tradition of honoring their friends. Elders at a recent county historical society meeting recalled that when they were young, they gathered fresh wild flowers in a basket and hung them on a friend's doorknob, rang the bell and ran to hide nearby. When the youngster answered the door and found the basket, she was obliged to find the donor. Some testify that if the donor was a boy, he deserved a kiss. In any event, the recipient then joined her friend and they went off, gathering more flowers, ringing more doorbells, and accumulating a large hoard of May Day celebrants.

Following the Second World War, schools began to support the observance, allowing time for children to construct baskets of paper. Soon after, candy replaced flowers (perhaps because vacant lots where wild flowers grew had been "developed"), and young folks ventured forth with numerous prepared baskets on their arms to observe May Day as their grandparents had years before, but now with community approval and "official" sanction. Here was a true folk holiday, observed according to local tradition while, elsewhere on the same day, issues of national and international moment are celebrated in a far different manner. One cannot help but observe that some small part of its meaning is lost in the transition from a spontaneous folk expression to an item on the school's community projects agenda.

Of all folk celebrations, one of the most ancient and complex is Christmas mumming. It is essentially a house visitation in mask and costume during the holiday season, with the ostensible purpose of "fooling" neighbors and townsfolk, making them guess the visitors' identity and demanding refreshments. The practice has origins in Western and Eastern Europe, Great Britain, Scandinavia and Turkey and can be found today in Equador, Ireland and Newfoundland in various forms and with many different meanings, interpretations and functions. Tolstoy mentions it in **War and Peace** and Thomas Hardy recounts the cheerful mumming performances in **The Return of the Native**. An ethnographic study of mumming in Newfoundland's outports is thoroughly described in Herbert Halpert and G. M. Story's **Christmas Mumming in Newfoundland: Essays in Anthropology, Folklore and History** (1969).

To modern Americans, mumming resembles Hallowe'en, and the attempts to create grotesque costumes and masks evolved from an old practice of imitating spirits who could threaten the populace at the end of the harvest season unless properly rewarded with a portion of the yield. Eventually, these holidays took on religious meanings. In Minnesota, there is evidence of mumming in Polish communities where it was referred to simply as "koza," or "the goat." In the Czech-American communities near New Prague, Minnesota, the practice was referred to as the visitation of a hideously masked and padded St. Nicholas who was usually accompanied by two others: "Black Peter" and "The Jew." This trio, as in the Polish version, visited parish homes and demanded that children perform in front of the gathered family, reciting prayers or catechism verses. Shy or uncompliant children were chased and taunted by the masked figures, but able performers received gifts and praise from these threatening visitors while parents looked on and older siblings, who had recently outgrown the experience, smirked, yet participated in the ritual.

With the modernization of church life in the latter half of the twentieth century and a simultaneous trend toward standardization of lifestyles at the cost of ethnic distinction, practices such as these dwindled or became diluted. Public pressure was brought to bear on youths who too much enjoyed being the "koza" or "St. Nicholas" or had become rowdy or overly presumptuous in their licentious behavior.

It is therefore with some surprise that one discovers the practice of **Julebukking** in Minnesota rural communities which have predominantly Norwegian-American populations. As with the Polish-American example and examples in many parts of Europe, Norwegian-American mumming focuses upon the goat (buk) as a nominal figure in the exercise, though now any costume whatsoever serves as proper disguise. In fact, the contemporary Julebukking costume usually achieves a sense of the grotesque through padding, distorted features and, most important, role reversals. Women attempt to appear manly while men may dress as women --all to disguise their true identity to neighbors who otherwise could easily guess who is behind the mask. By contrast, Swedish-Americans in Minnesota have retained the word "Julbock" in their holiday vocabulary but, for them, it refers to a straw goat which is placed in a prominent place in the home during the Christmas season as an Old World symbol of marking the season; masked visitations or "mumming" has never been practiced by this ethnic group.

While the celebration has strong currency in Minnesota, little has been done to investigate its history in this country. A photo in the archive of the Minnesota Historical Society shows two young men dressed for Julebukking in Madison, Minnesota, 1908. The practice, at that time, was well-established in the community and apparently important enough to make a local photographer document the costumes. A retired Norwegian-American farmer in Lyle, MN, recalls going out "Christmas Fooling," a synonym for the practice, in the 1920s and 1930s in sleighs. Individuals and families went off together, gathering others from the households they visited, putting together costumes spontaneously, and having a good time. He remembers that visitors loved the ritual of making people guess their identity and then demanding refreshments --sweet breads, home-made grape wine or whatever was at hand for the holidays. Another man from southern Minnesota recalls that they always wore loud colors and women dressed in overalls, which was very rare at that time. Among some Julebukkers were musicians who carried their instruments to play and enliven the party. Groups usually numbered from ten to twenty. Sixty years ago alcohol was less acceptable among "proper" people, and one usually looked forward to "treats" from things prepared for the holidays. Many also recall that the practice faded from popularity in the late 1930s and during the Second World War. For reasons as yet unknown, it was revived in the 1970s.

A typical modern experience in Julebukking can be described by giving an account in which I participated in December 1985 in Spring Grove, MN, supplemented with research carried on from 1984 through 1986. I was one of three "outsiders," individuals interested in documenting and understanding the event from an academic point of view. We gathered at the home of a well-known veterinarian, a relative newcomer who, together with his wife, had achieved a significant place in the community. Their popularity in the area was achieved not only through their work but through their understanding and acceptance of local practices, Julebukking being one. We were joined by a local farmer and his two teenaged daughters and as soon as all were properly disguised, we departed in cars for the first visit.

In small rural communities, people easily recognize everyone else's cars, so in approaching the farm yard, we turned off car lights and parked some distance from the house to improve our chances of deception. We crept up to the house, knocked and scratched on windows, and we could tell by the occupants' expressions as we attempted to appear monsterlike that they were surprised, yet they were also pleased to be included in this year's round of visitations.

We stomped heavily onto the porch and, with appropriate groans and giggles, banged the door knocker. The door was opened by the expectant farmer and we strode in as if we owned the place, beginning the typical licentious behavior of Julebukkers by **not** removing overshoes and **not** ceremoniously wiping our feet as local custom always requires in other circumstances. Crowding into the parlour, we stood in a circle, gesturing silently in what we hoped was a grotesque manner, awaiting the hosts to begin the ritual guessing-game.

Guessing the Julebukkers' identity is fun and challenging. The host always attempts to trick a visitor into revealing identity through some characteristic mannerism-- a way of standing or walking, a voice inflection, hands, or body shape. Julebukkers, traditionally, remain still, alter their way of standing by hunching over or standing on one foot, dress with a great deal of padding (such as oranges for breasts or pillows around the waist), and remain silent except for disguised sounds. Men tend to respond to questions with a high-pitched "no"; women often reply to the hosts' questions with a shake of the head. Mummers in Newfoundland typically respond by talking only during a sharp intake of breath, but this in not the practice in Minnesota.

Inevitably, some or all of the masked visitors are identified. (On this particular evening, we three outsiders were never known and we had to unmask and be introduced --a completely unique turn of events in the ritual). We were then offered refreshments from the holiday store-- fruitcake, soft drinks, brandy, and Norwegian traditional pastries such as **fatigman** and rosettes. Then, after some brief conversation, we outlined the names of the households on our itinerary and urged the hosts to join us. Often they did, scurrying to closets and trunks for something to disguise their identity. One retired farmer in his 80s merely cut holes in a brown grocery bag and put it over his head, a poor deception because he continued to walk with his easily-recognized cane. A young Lutheran minister, known for his conservative nature and lean frame, padded his body and acted so outrageously that he was never named during the guessing ritual.

At the end of the evening, there were seventeen in our party and we had visited seven homes. We had consumed champagne, fruit juice, and port wine; we had nibbled on turkey and ham sandwiches, nuts, candies, potato chips, Norwegian holiday pastries and Ritz crackers with cheese. We returned to the home of the veterinarian and sat down to a midnight supper where we were able to question our companions about the history and patterns of Christmas mumming in that locale. What we learned was most interesting.

First, the practice of Julebukking is not known as "mumming" and is commonly referred to as "fooling." As in many other "folk" practices, participants are unaware of its historic origins and the fact that the practice is carried on in other parts of the world in basically similar forms. When we asked how long people had "gone Julebukking" in the locale, our friends' answers revealed that their history of the practice was learned from the oldest participant they knew. Julebukking remained, then, as a folk custom whose characteristics, rules and antecedents depended upon oral tradition. As such, these elements are open to constant change and interpretation as succeeding generations extend the folk custom during their socially active years. Most important, no person interviewed knew of any time or place in which Julebukking had been organized by an institution or received any "official" community approbation.

Second, since everyone who is part of the community is familiar with the pattern of behavior, no explanations are ever necessary. From this, we learn two things. First, in order to appear part of the community, one must know what Julebukking is and accept it, preferably as a participant, but minimally as a potential host, if called upon. Thus, the holiday practice serves as an initiation rite for newcomers and an outward sign of community membership. Second, julebukking can serve as a subtle form of social control or as an avenue for unexpressed social hostility. In small, tightly-knit rural communities arguments and feuds are socially dysfunctional. Individuals who did not appear to accept the good-natured behavior of the Christmas Fools may be set aside as marginal in status. Others who have achieved an unfortunate degree of ill will (such as an unfair school teacher), will be omitted from Christmas visits or, if visited, will receive unmerciful treatment at the hands of the Fools.

Third, while Julebukking ostensibly is a form of harmless entertainment and is socially approved for the holiday season, it allows the participants to behave in a manner commonly known as "role-reversals"-- a pattern typical for mumming throughout the world. Stalking into a home in winter without removing overshoes is but one sign of what is allowed, but it is a strong sign in the tidy Norwegian-American hones of Minnesota. But a male Julebukker may put his arms around a hostess or even sit on her lap and the gestures are interpreted as inoffensive and within the bounds of "proper behavior for Fools." Shy persons may therefore act assertively or in an overly-familiar way in order to disguise their identity. Julebukking also may bring together individuals of varying age and social status in a way that is not expected at other times of the year. Our group consisted of men and women whose ages ranged from 16 to 80. In addition to our hosts who were professional people, there were two farmers, a gas station attendant, a beautician, and several teenagers. Despite their dissimilar backgrounds, all had something to say about Julebukking-- how it works, why it continues, and the stories that are connected with it.

Finally, Julebukking in Minnesota has experienced periodic lapses in popularity. From time to time, there have occurred public sanctions against the practice, supposedly stemming from the unintended suffering of uninitiated individuals at the hands of Christmas Fools. The problem is not without historical antedendents. According to Halpert, mumming in Philadelphia was banned in 1808 until the development of the more formal and orderly Mummers' Parade in the late nineteenth century. New Orleans's Mardi Gras suffered similarly in 1806 but was reinstated in 1827. Halpert remarks that

> The point to be noted is that when mumming (i.e. disguising) was legalized once again in Philadelphia and New Orleans, it reappeared in the guise of formal parades-- this time under the sponsorship of particular societies which could be held accountable for the behavior of the mummers. Indeed, it was pressure from these societies and organizations which led to the repeal of prohibitions.... What this shows clearly in each case is that the violence and disrespect for authority concommitant to the reversal of roles common to masking by the "lower orders," whether at Carnival or Christmas seasons, disturbed the dominant, well-to-do middle class, who succeeded in having masking officially banned; that the deep-seated custom in certain areas of expression through disguises and parades was so strong that it found vent in a compromise through which organized societies accepted responsibility for

> the behavior of their members. Today, we have the phenomenon whereby an originally spontaneous folk tradition is present in Trinidad, Philadelphia and New Orleans on civic sufferance, and subject to civic censorship. A recent example of such civic censorship is that the universal phenomenon of mummers blackening their faces was banned in Philadelphia in 1963 for fear of the sensitive color issues.
>
> Halpert and Story, pp. 54-55

Julebukking, the Minnesota version of Christmas mumming, was apparently brought here by Norwegian immigrants in the nineteenth century. Their settlement in various areas of southern Minnesota where farmland is rich and their traditional grain and dairy practices could be continued is well-documented in **They Chose Minnesota**. It was here that, in some manner, Julebukking was continued in its American form. However, Norwegians were not the sole occupants of this land. Yankees, mainly of English descent, had also settled these towns and, holding the outlook, if not the privileges of the "first families," they sometimes looked upon the customs of their immigrant neighbors with sharp disdain.

In Spring Grove, MN, a town now dominated by Norwegian heritage, to judge from outward appearances, the beneficent view of Christmas Fooling has not always prevailed. Apparently, the role-inversion characteristic of the hideously masked revelers and, more important, their unannounced appearance late at night, gave rise to a host of legends which still are told and retold among persons of all ages. And, as oral tradition is often corroborated by historical record, the following article is relevant. It seems to have originated from the hamlet of Newhouse, once located about five miles west of Spring Grove, and appeared in that town's newspaper, the Spring Grove **Herald**, 11 January 1894:

> **STOP IT**
>
> During the holiday season, it is a common custom among our young sports to put on false face and all the outlandish toggery to be had and make the rounds of the village --and sometimes a part of the country-- during the evening hours, calling at residences and other places of habitation, regardless of the wishes or condition of the inmates. This they call "Jule buk" or perhaps more appropriate, "Christmas Fools." On last Friday evening, some of these characters called at the residence of station agent D.R. Moore and they may be very thankful if they escape the penalty of their folly. As Mr. and Mrs. Moore were expecting friends that evening, Mrs. Moore answered the knock at the door and was so horrified and frightened at the unexpected sight of hideous faces that she was only able to give one scream and was instantly overcome with nervous prostration. She was so badly frightened that a physician had to be called. As a rule, these parties are composed of good boys-- and we are sorry to say sometimes girls-- who start out for an evening of innocent fun and amusement, little thinking of the possible injury their thoughtlessness may inflict upon others to say nothing of the

risk they are taking themselves.

The article goes on to describe the "sad experience" of two such parties from the neighboring state of Iowa (only a few miles away) who, visited local households. In one instance, three Julebukkers entered a home unannounced where a mother was holding her eight year old daughter who was "sick with fever."

> The little girl was so badly frightened that she went into spasms and before a doctor could be secured, she was a corpse.

The young men, according to the article, were convicted of manslaughter and sentenced to the penitentiary. In another instance, two Julebukkers visited the home of one fellow's uncle. Unfortunately, the uncle had only recently been warned that burglars were aboard and when the young men in masks appeared

> He grabbed his gun and shot them both. Don't do it any more. It is not only silly and dangerous, but a direct violation of the law.

There are two main points of interest here. First, the editor and possibly the author of the article was Frank Bartholomew, suspected of being a Yankee or, at least, "of English descent." He and all of the invaded parties, except the gun-toting uncle, are non-Norwegians, conveying in an understated manner that the offenders are from the immigrant population, or the "lower order," to use Halpert's quote. In this manner, the difference in social image between early and later settlers is reinforced and perpetuated through appeals for conformity to norms established by the Yankees and conveyed by the newspaper whose editor is also a Yankee.

Second, the editorial mirrors oral tradition among Norwegian-Americans in their respective Minnesota communities today. Colorful legends and anecdotes of more contemporary incidents abound. Teenaged 4-H members, already veteran Julebukkers, recount tales of near-tragedy among other teenagers, though never themselves. Older Minnesotans, too, claim to know of households upset by this irreverent behavior, of bloody noses, and shotguns discharged in the night to drive off Christmas Fools mistaken for thieves.

What is absolutely clear in these examples from oral tradition is that the practice of Julebukking is not condemned, as it was in the article in the Spring Grove **Herald** of 1894. In fact, the manner of telling the stories, including individual comments by the raconteurs, pointedly sanction this behavior. The tales are told to indicate risk, boldness, high spirits and the colorfulness of life in that community. In all examples, specific names, places and dates are usually vague, confused or simply unknown.

And this leads us to question the authenticity of the article's complaints. Could it possibly be that the editor responded to local prejudice about Norwegian farm folks and the folklore about Julebukking? How is it that the story line and motifs of both the article and local legend about Julebukking are so similar and so stable? And, finally, what is the law that the Julebukkers violated? We might possibly learn that what was broken was, in reality, a social norm, one established by a segment of the social strata without visible or declared roots in that folk tradition and therefore outside its understanding.

Julebukking is not indigenous to Minnesota. It is also found in Iowa, North Dakota, Wisconsin and very possibly elsewhere in the Midwest wherever Norwegians have settled. What is known of its antecedents in Christmas mumming generally among Old World cultures is vast and complex. And within this complex of ritual and celebration are a multitude of functions and symbolic meanings which vary from place to place and from one era to another. The first records of mumming, dating from 1515, cite the Byzantine Court and the Christmas processions of the Varangian guard around the year 950. Nineteenth century sources show that Julebukking in its older forms, was celebrated after New Years, during that time when early Scandinavians celebrated the season through January 13, St. Knute's Day and coinciding, in the sixteenth century, with the celebration of the end of the beer brewing season.

How the celebrations of Julebuks and the rich and revealing matrix of history and patterned behavior was overlooked in the exhaustive historical studies of Minnesota is unclear. Perhaps we are too intent upon the past and ignore what is close at hand. What teachers may now do is recognize the usefulness of the techniques employed by folklorists and anthropologists as they examine contemporary behavior in their search for larger truths.

Educators who would know a community's roots and values should not rely solely upon the memories of community authorities or the Cliomania of local historical societies and genealogists. Instead, they should recognize that expressions of identity are an ongoing and constantly negotiated process. One cannot but hope that Julebukking will not fall prey to well-intentioned community organizers but will continue as a complex social phenomenon, at once of, by, and for the people.

HUMANITIES EDUCATION CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

Tad Park

Five Ritual Objects

EDITORIAL FOREWORD:

The five slides that Tad Park selected represent a rich variety of ritual objects, or more precisely, objects that relate to ritual behaviors. The Delacroix painting of the **Fanatics of Tangier** and the Katsikodi elkhide painting of a Sun Dance of the Shoshoni, for example, depict rituals rather than serving as ritual paraphernalia themselves. The Bakongo nail figure, on the other hand, is studded with nails, blades and screws that record in a very material sense the dynamic social and spiritual function of the woodcarving, while the medieval Limoges sculpture and the classical Greek krater have double functions. As ritual objects, the sculpture served as an altarpiece and the krater as a vessel for symposia, but the former also depicts a funerary ritual of anointment while the latter depicts Dionysiac ceremonies. This variety of types and functions, not to mention the ethnic, geographical and historical sweep of the objects will suggest many possible teaching strategies. Tad Park's commentary on each of the slides will assist readers to observe and interpret details from several perspectives: ritual function, cultural context, historical style and formal design.

Most humanities teachers are unlikely to find a practical and relevant classroom use for all five slides, but a few words about possible connections may be suggestive. There are three or four methods of integrating slides (or objects) such as these into courses. The most common connection is to use the slide as an illustration in the context of **cultural history**. Thus the krater might connect with a classical history course, or with Plato's **Symposium**, or with Euripides' **Bacchae**. The Limoges sculpture is particularly relevant to medieval studies in styles of art and architecture, lying in a middle ground between the frequently reproduced illustrations of purely Romanesque and purely high Gothic. The elkhide and the nail figure similarly could enhance and illuminate courses on American Indian or traditional African cultures.

A second kind of pedagogical connection is cross-cultural, which includes comparisons with entirely different cultures as well as comparisons across time with fairly similar societies. The medieval sculpture, for example, relates to funerary rituals and death rites of passage--behaviors that are universally human and widely varied from Hindu suttees to Irish wakes to Forest Lawn's eternal Muzak, while the nail-figure relates to means of validating contracts with cross-cultural cognates ranging from simple handshakes to a novice taking the veil.

A third kind of connection is to relate one art form to others, each of which can help to increase the understanding of the others. The Bakongo figure is in itself a static museum piece, but used in connection with such books as Camara Laye's autobiographical **The Dark Child** or Elechi Amadi's novel **The Dark Ponds**, students can gain insight into cultures in which ancestor-figures are invested with spiritual power and where rites serve to interanimate individual persons, their living communities, their ancestral families and nature. Such literary cognates abound for each of the slides, but also each suggests connections with music, dance and theater. Attendance at a Roman Catholic High Mass, for example, could do much toward helping students to see the Limoges with feelings of reverence as well as with the eyes of an art historian.

A fourth (though closely related) kind of connection is to use the objects to explore abstract themes without particular emphasis on learning about other cultures, about history, or about art qua art. **Ecstasy** is one such theme. The Delacroix, the Shoshoni and the Attic paintings all depicit ecstatic rites of self-transcendence. Each and all of these can spur contemplation of the human needs for escape from individuality, from reality into unity with the cosmos and higher realities.

Attributed to the Methyse Painter
Greek, Attic, 5th Century B.C.

Red-figure Volute Krater, 455-450 B.C.
Slip-gazed earthenware

Gift of Mr. and Mrs. Donald C. Dayton 83.80

In ancient Greece, the production of painted ceramic vessels reached its apogee in Athenian workshops of the sixth and fifth centuries B.C. From this period comes this red-figure krater attributed to the Methyse Painter. The krater, which is characterized by a large, round body and a wide mouth, was used to mix wine with water and as such was often the centerpiece at lively drinking parties (**symposia**). Appropriately, the krater in the Minneapolis Institute of Art's collection is painted with scenes of Dionysian revelry.

The museum's vase is of the specific type called a volute krater. The ancient name of this type is unknown, but scholars have seen in the spiralling handles that distinguish it from other kraters an echo of the scroll-like ornaments (volutes) of Ionic capitals. The shape is relatively uncommon, though not rare, accounting for only a small percentage of the many thousands of known Attic vases. Produced over three centuries, the volute krater remained essentially unchanged in its basic components: flanged handles rising from cylindrical arches on the shoulder to spiral atop the rim; a steep shoulder and wide neck; the mouth divided into two or more zones, evoking an ensemble of cornice and frieze. While early examples were nearly as wide as they were tall, the Minneapolis krater, dating from the canonical Early Classical period, is more slender, nearly half again as tall as it is wide, with a correspondingly narrower mouth.

The vase is decorated with a scene common to kraters of all periods: Dionysus amid his entourage of satyrs and maenads. Unlike other depictions, however, where the woozy wine god leans heavily on his attendants, here Dionysus strides forth unassisted, turning back for a drink from a two-handled vessel. A head taller than his followers, the god wears a full-length linen **chiton** and over his shoulder a **himation**. Long, corkscrew tresses fall across the pleated garments, and a crown of ivy mirrors the leafy fennel stalk or **thyrsos** in his hand. Before him, a satyr brandishing a lyre wheels about to touch his master's arm. His goggle-eyed expression, which suggests that he is too drunk to play his instrument, is rendered in a fore-shortened three-quarter view, a convention rare before the mid-fifth century. The source of the satyr's inebriation is in the wineskin flung about by the **chiton**-clad maenad at the right, who kicks up her heels in ecstatic dance. She wears an ivy wreath and has her hair tied at the back of her neck, secured by a white fillet. A similar coiffure is affected by the maenad at left, who with one hand holds a **thyrsos** and with the other clutches the leg of a little satyr-boy riding on her shoulder. The fawnskin she wears over her would be the remnant of some nocturnal hunt, when she and her sisters coursed through the hills in a bacchic frenzy, tearing to pieces any creature that crossed their path. A second satyr, lithe yet muscular, follows the maenad at the end of the procession. His eyes and cheeks bulge dramatically as he sets the tune for the dance on his double flute (**aulos**).

Of all the figures in the procession, the most intriguing is the little boy, whose balding pate, pointed ears and stubby tail are proof of his membership in the libidinous fraternity of satyrs. Child satyrs are not mentioned in ancient literature, but they are represented on nearly a hundred Attic vases of the fifth century, often similarly carried in procession. Usually, however, they appear in a family context, with satyr fathers or mothers; the pairing of maenad and satyr-boy is apparently unique. Perhaps the Methyse Painter was inspired by a contemporary satyr play that included in its cast or chorus a mischievous little satyr. This hypothesis is strengthened by the pose of one of the two satyrs shown accosting a maenad on the reverse of the krater. Scholars have shown this stance to be derived from the **sikinnis**, the dance of the satyrs, in the satyr drama, and thus both satyrs, boy and adult, may be related to contemporary theatre.

French, Limoges, 13th Century
The Anointing of the Body, 1240-60
Gilt copper and enamel
The William Hood Dunwoody Fund 58.8

The primary source for the life of Christ is found in the four New Testament accounts of Matthew, Mark, Luke and John, but the life of Christ is only partially represented in Medieval art. The whole New Testament is so forcibly summed up in the figure of the teaching Christ on the trumeaux of the French cathedrals that to the Middle Ages it did not seem necessary to depict the Gospel scenes at any length. As one might expect, this strict rule came from the Church. The Church would not offer Christians the whole life of Christ any more than she would place the four Gospels in their hands, but rather chose out a few events of profound significance as suggestions for the meditation of the faithful. These events were precisely those which the Church celebrated each year in her festivals, and thus for the most part the artist had to be contented with simply illustrating the liturgical calendar.

By the thirteenth century, cycles in which scenes of the Nativity and the Passion are juxtaposed--befitting the unity of the events of Christ's life and suffering--had become common features of the decoration of most churches and monasteries. They appeared most often in altarpieces and on altar finishing, for Christ's Incarnation and Death are both active elements in the celebration of the mass. This gilt copper relief, **The Anointing of the Body**, was originally part of such a Christological cycle, probably intended for a major shrine, retable, or altar frontal. The scene is a variant of the Entombment, the conclusion of the Passion narrative, and its iconography is derived from the Gospel of John, which describes how Joseph of Arimathea and the pharisee Nicodemus anointed and carefully wrapped Christ's body before laying it in the Tomb (John 19: 39-40). The anonymous artist's choice of John as his source reflects the increasing thirteenth-century emphasis on venerating the Body of Christ, both as sacrificed on the Cross and as present in the consecrated bread of the eucharist. Further, rather than showing the shrouded body being laid in the tomb, the artist chose to depict Christ undressed to the waist, displayed to the faithful on a raised bier that bears a strong resemblance to an altar.

The emotional content of the Passion images often took them beyond representation of the Biblical narrative and brought them close to devotional images. Thus, interpreting the Gospel in the light of contemporary meditative piety as well as liturgy, the artist has also changed the cast of characters. Identified by the traditional conical cap he wears, Joseph of Arimathea remains as a reminder of the Gospel's words that the anointing was a Jewish custom, but Nicodemus has been replaced by the Virgin Mary, Mary Magdalene, and St. John himself. The presence of these three--the bereft Mother of God, the repentant sinner, and the well-beloved discipline--is directly in line with the humanizing tendencies of Gothic art. In contrast with the somewhat stiff and remote figure of Joseph, they were regarded as the types of those who suffered with Christ and with whom spectators could easily identify.

In its choice of theme and treatment of subject, **The Anointing of the Body** is definitely a work in transition. Iconographically it represents a stage in the growing emotional involvement of Gothic art, but one has only to think of later pietas (the last step in this evolution), with their extravagance of gesture and violent emotionalism, to appreciate the unique restraint and delicacy of feeling in the handling of death which are shown here. Stylistically too, and parallel to this treatment of theme, there is a sense of restraint which speaks to the conservative background of Limoges work. Yet there is a new simplicity and monumentality of composition, derived from the cathedral sculptural programs of the day, which goes beyond the Romanesque roots toward Gothic realism. The result is a work that grips us by its tension and blending of oppositions, both formal and psychological: of a naive realism and idealization; of flat, geometric patterns and a strong sense of cubic volumes; of the natural human image and the mystical icon. Standing midway between the vital stylization of the Romanesque and the gracious humanization of the High Gothic, the relief is the conception of a sculptor of genius. Working with small forms and within a convention of silhouette and surface ornament, he has achieved monumental scale and a grave and serious beauty. Such a work is a masterpiece in itself, but as part of a cycle of similar works, proclaiming from the altar the tangible expression of the mysteries of the Life and Passion of Christ, it is an invaluable part of the Christian heritage.

Eugene Delacroix
French, 1798-1863
The Fanatics of Tangier, 1838
Oil on canvas
Bequest of Jerome Hill 73.42.3

The Isāwayyiah sufi Brotherhood was founded in Meknes by Sīdī Muhammed ibn Isā (1452-1524) and quickly spread throughout western Islamic lands. Its ceremonies were particularly strenuous, involving jumping, leaping and other activities that seemed particularly to have alarmed European travellers. At certain periods the sufis gathered outside the towns and after working themselves up with prayer, dancing and stimulants such as hashish, burst forth into the streets, abandoning themselves to a mad ecstacy of contortions, frenzied cries and dangerous acts. Both the local populace and visiting foreigners found themselves spellbound by the spectacle with its throbbing musical accompaniment.

Delacroix had occasion to witness the event while travelling with a French diplomatic mission to the Sultan of Morocco in 1832. He and the Comte de Mornay watched the scene from the attic of a neighboring house, peering through the slats of the attic window. He made a rapid sketch of the fanatics on the spot and later that summer produced a more carefully executed watercolor, from which the painting was done five years later.

Delacroix was especially taken with Morocco, finding there a living counterpart of the violent, chivalric, picturesque past evoked in Romantic literature. His journal and sketchbooks are filled with detailed observations of the events, people and places that so impressed him. In **The Fanatics of Tangier**, he drew upon these notations to pay careful attention to details of costume and religious custom. The sheik, the serene leader of the procession, is shown on horseback next to a green flag, the color of Islam. The child moving ahead of the onslaught is shaven except for the lock by which Allah can pull him up to heaven. The women watch from their traditional outposts on the terraces, and the unveiled woman to the upper right is surely Jewish. Delacroix's keen eye has even recorded, in the seemingly wild gestures of the six central sufis, exaggerations by three of them of the ritualistic gestures of a devout Muslim at prayer.

To nineteenth-century Paris the painting was a complete revelation, both for its subject and its treatment. When it appeared in the Salon of 1838, the work drew praise for its use of color, dramatic (though to some distasteful) subject matter and realistic treatment, but was generally criticized for its lack of finish, sketch-like nature and small size. This tension between academic expectations of style and the

Romantic desire to represent impassioned experience was one faced by many artists in the 1830s and '40s and it appears often in Delacroix's work.

Delacroix saw paintings as a bridge between the painter and the spectator, with brushstroke (which gave immediate contact by betraying the painter's presence) and color as the most important elements. Thus, in **The Fanatics of Tangier**, in addition to the convulsive gestures of the central group of fanatics, the frenzy of the occasion is successfully evoked through the coloring (red and green especially). In places the rhythmic staccato of the brushwork is also used to accentuate the ecstatic state of the participants. Yet the brilliant colors of the procession are played down by the surrounding white masonry and the white robes of the spectators to the left and right. Similarly, the strong centrifugal energy of the wildly gesturing sufis is controlled by the classical calm and stability of the surrounding architecture, bringing a note of sobriety to an otherwise turbulent scene of emotional excess. Finally, the spectators, in a semi-circle around the fanatics, both focus the viewer's attention on the central figures and help to contain their energy. In the sharp contrasts of action and passive observation, Delzcroix clearly expresses the confrontation of a European rationality with a totally alien culture, steeped in mysticism and secret rites.

Zaire, Congo, Africa
Kongo (Bakongo) Tribe, 19th Century
Nail Figure (n'Kisi n'Konde)
Wood, natural fibers, nails
The Christina N. and Swan J. Turnblad Memorial Fund, 71.3

The majority of Africans lived--and still do--in rural villages. The African's principal loyalty is to their tribe, a group of families who live and work together. Tribal members feel an identity with one another, have a distinct name for themselves, and possess a special loyalty to their particular group as a whole. Sharing common ancestors, language, and culture, the tribe places the social harmony and welfare of itself above all else. Moreover, religion is a dominating force, something inseparable from everyday life. Believing in a divinity that takes many forms--trees, rivers, carved figures, and so on--Africans have many gods and spirits to whom they can go for help and guidance. These spirits include those of their tribal ancestors who are believed to be benevolent and when called upon, enter the symbolic forms of African sculpture. In this way, African art often serves religion, as a link with the tribe's gods and ancestors who both shaped the world and created rules for daily conduct.

Among the people of the Southern Savannah, the most common such sculptures are the n'kisi figures (plural **minkinsi**), called fetishes in most popular African literature. The word "fetish" itself comes from the Portuguese **fetico**, from the Latin **factitius**, meaning an object made by human hands. In the case of the n'kisi figure it refers to the fact that they are often made up of additive materials by a ritual expert, a practitioner combining somewhat the skills of a lawyer and a doctor and as well versed in the ways of the supernatural as in medical and social matters. Thus, while the fundamental medium of the **n'kisi** figures is wood, the statuette that comes from the hand of the carver remains only a prosaic piece of sculpture until after a ceremony in which the force or power is called in to the image. This important aspect is achieved by the ritual expert who places magical substances on the figure, in a receptacle in the body and often in the head as well. These medicines are believed to attract spirits which, in turn, could be called upon to perform a variety of services: to abate diseases or spiritual illnesses, to settle disputes, to seal important agreements, or to destroy enemies or antisocial beings.

Certainly the most dramatic of all fetishes are the **n'kisi n'konde** figures (plural **minkinsi minkonde**). The term **n'konde** relates to the verb **konda** (to hunt), and the spirits inhabiting the **minkonde**, like seasoned hunters, were believed by the Congo tribes to lurk in ambush for liars, thieves and evil-doers and for all sorts of persons who might undermine societal structure. The museum's **n'konde** is a typical example: an anthropomorphic figure, neither male nor female, its arm raised and holding a weapon (here missing), and balanced on its toes and leaning forward aggressively, ready to strike. The head is finely carved, showing a face with large, almond-shaped eyes, a broad nose with flaring nostrils, and a full-lipped, half-opened mouth. The mouth is open, ready to speak the truth, signifying that the figure is alert and has power. To this basic structure the ritual expert attached a rectangular container which holds the image's magical medicines; a mirror seals the outlet. (The mirror had a two-fold purpose in regards to the **n'kondi**: its shininess helped attract dead spirits which were needed to activate the charm, and its face caught and reflected the images of simmers.) Shells, string, and pieces of bone, as well as bundles fill with extra potions (such as the cotton-covered yoke around the figure's neck) were also added.

Most importantly, and the feature that gives the **n'konde** its striking appearance, the statue is covered with iron nails and other paraphernalia which were added during the course of its use. Each of the blades, nails, screws and other sharply pointed objects driven into the **n'konde** thus represents a specific occasion when the "client" signed a vow or activated medicines of punishment or restoration. If two warring parties came before the image to make peace with each other, the conditions agreed upon were symbolically hammered into the **n'konde** with a nail, similar to the Western tradition of signing a contract. Or if one person accused another of stealing his property, both would go before the **n'konde** and while driving in a nail which activated the spirit's power, ask to be destroyed by the image if caught telling a lie.

Minkonde were thus viewed as givers of supernatural justice, healing or protecting the innocent, punishing or killing the guilty, and reaping revenge on those who broke their oaths to one another. Playing an important role in maintaining the social fabric, a **n'konde** figure was treated as a sacred object, but also as the property-in-common of the entire village. As such it was kept in an obvious place so that everyone could see it and remember its power and the vows or judgments it represented.

Elkhide with Representation of a Sun Dance, 1880-90
Elkhide with pigment
Gift of Bruce B. Dayton 85.92

From its invention in the early 1700s until the mid-nineteenth century, the sun dance was the grandest of all Plains Indian ceremonies. A complex group activity involving singers, dancers, and musicians, it was held at midsummer, the period of the New Year and a season of rejuvenation. Through the ritual of the dance, participants sought to re-establish spiritual links with the natural world, thereby acquiring power and prestige for themselves and insuring prosperity in war, a successful outcome in the hunt, and a bountiful supply of buffalo for the tribe. To achieve this goal, young males danced in place for hours over a period of three or four days, going without food or water, until they achieved a dehydration-induced trance. In this state they experienced visions in which they associated with the spirits, becoming cleansed and obtaining supernatural strength and guidance.

Each ceremony was preceded by a hunt to procure a buffalo head to be used as the centerpiece of the dance. Once killed, the chosen animal was carefully dismembered and its hooves and bones buried with great respect. Implicit in this process was the idea of a spiritual communion through which the buffalo could be made to understand the need to give up its life for the tribe. Accordingly, mounted on a forked pole around which the dancers spaced themselves, the head served as the agent of transformation, communicating the power of the spirit world to the participants. The buffalo had long been a mainstay of Plains Indian economy, as it provided both food and clothing. With the introduction of the horse, however, and the subsequent shift from a settled, agricultural way of life to one that was semi-nomadic and more dependent on the hunt, this relationship became more fragile. By the mid-nineteenth century it was increasingly strained by overhunting, intertribal competition for dwindling resources, and Euro-American expansion into formerly Indian territories. Thus, as the crisis of the Plains people escalated, the sun dance began to take place more frequently, in a desperate attempt to return to the earlier idyllic state of human/natural co-existence.

On this painted elkhide by Katsikodi, a member of the Wind River Shoshoni of Wyoming, the sun dance and the hunt are shown simultaneously. At first glance the work appears to lack coherent structure--multiple figures of animals and humans seem randomly scattered across the composition. In fact, Katsikodi's is a rather sophisticated arrangement: concentric and chronological in organization, it starts at the periphery with the hunt and careful butchering and ends at the center with the dance itself. While the circular composition may refer to the cosmic cycle celebrated in the sun dance ceremony, spreading out the figures also allows Katsikodi to execute virtuoso animals. Great attention has been given to rendering the sleek horses and lumpy buffalo, more so than to the human figures, a reminder of the most profound problem addressed by the sun dance: the disruption of human-animal relations. Here the animals are loosely, freely rendered and are more naturalistic and suggestive of movement than the relatively static human forms. Still, because Katsikodi was painting for external sale in a style influenced by Euro-American pictorial conventions, the bodies are more curvilinear, more anatomically correct than those appearing in earlier Plains depictions. There is even an attempt to represent foreshortening, in the "hump" of the drawn bow-arm. Other Western in-roads appear in the use of bright commercial colors and the suggestion of perspective depth created by the overlapping of forms and figures in the central grouping.

By the time Katsikodi painted the elkhide the buffalo were gone, and in 1881 the sun dance itself had been outlawed. The intensity of its observance apparently caused the white government to perceive it as a threat to the newly established order. The painting thus represents a memory of old ways gone forever, harking back to a period where there was still the semblance of a viable and self-sufficient native economy and polity. Ironically, this nostalgia for the past reveals more about Katsikodi's audience--Euro-American collectors and "nativists"--than the artist himself. For the Reservation Period Shoshoni the hide probably represented a pragmatic response to conditions of the present, adapting traditional Plains pictorial style to the demands of a new economic structure, new materials, and a new market.

Lois Bragg

Whale-Roads and Mead-Seats: Four Ways of Translating Beowulf

EDITORIAL COMMENT: Knowledgeable scholars will find Professor Bragg's disscussion of Beowulf refreshing and authoritative, but we recommend it highly also to readers who are unfamiliar with the epic poem Beowulf or with the long-dead Old English language. To help newcomers, the author has prepared a short glossary that is printed as a sidebar on pages 66-67. Throughout the essay, readers will discern that translating an ancient language requires the translation of ancient rites and rituals as well.

Beowulf is an excellent text for courses in history, Western civilization, and the humanities, as well as English and comparative literature, for it introduces students to a world view quite unlike any most have encountered. However, the very things that make **Beowulf** valuable also make it difficult. Its high style, formulaic expressions, and digressiveness, and its almost unrelieved moral seriousness often seem ludicrous to students when read in translation. Furthermore, American high school and college students often resist rather than engage its pagan values of vengeance and honor and such ritual speech acts as boasting and rehearsing genealogies. What is grand and moving in the original can seem merely bizarre in translation. My purpose in this article is to suggest what the various approaches to translation do well and what they do poorly, and to encourage instructors to consider how translations made by criteria other than verbatim accuracy may enhance student response to the poem.

LITERAL TRANSLATIONS

I define literal or verbatim translations as those that aim to replace each Old English word with the new English word that comes closest to its semantic range and to make minimal changes in syntax and word order. These translations are the most favored by college English instructors today, yet this approach has not met with much critical favor since the beginning of this century. In fact, to my knowledge only one major theorist and translator, Vladimir Nabokov, has endorsed this approach in recent years, and his translations, especially that of Pushkin's **Eugene Onegin**, as well as his theoretical writings have been met with dismay and even indignation from his fellow translators and specialists in Russian literature. Nabokov's theory is simple: "fidelity to one's author comes first, no matter how bizarre the result" (Foreword, vii). For Nabokov, fidelity means "total accuracy and completeness of meaning," as if such a thing could ever be known, is not found solely in the denotations of the poem's words, but also in its sound and movement--in those formal aspects that Nabokov is so willing to sacrifice. The Soviet translator and theorist Kornei Chukovsky does not overstate his case in writing that "[a] precise, literal copy of a poetic work is the most imprecise and false of all translations" (49). Literal translations do perform a genuine service to students of Old English, who are plunged immediately into the complexities of the poetic syntax, but presenting a literal translation of a poem as a substitute for the original text is now generally regarded by many translators and theorists as an out-dated concept. Nevertheless, instructors who are familiar with the merits and shortcomings of other approaches can make good use of a literal translation by demonstrating to their students just what is sacrificed and what is retained by this method.

E. Talbot Donaldson's literal translation appears in the Norton anthologies and is therefore one of the most widely used translations of **Beowulf**. I print below Klaeber's text of the first eleven lines of the Old English **Beowulf**, followed by Donaldson's prose translation (including his notes):

  HWÆT, WĒ GĀR-DEna in gēardagum,
þēodcyninga þrym gefrūnon,
hū ðā æþelingas ellen fremedon!
  Oft Scyld Scēfing sceaþena þrēatum,

egsode eorl[as], syððan ǣrest wearþ
fēasceaft funden; hē þæs frōfre gebād,
wēox under wolcnum weorþmyndum þāh,
oð þæt him ǣghwylc ymsittendra
ofer hronrāde hȳran scolde,
gomban gyldan; þæt wæs gōd cyning!

[prologue: the Earlier History of the Danes]

Yes, we have heard of the glory of the Spear-Danes' kings in the old days--how the princes of that people did brave deeds.

Often Scyld Scefing[2] took mead-benches away from enemy bands, from many tribes, terrified their nobles--after the time that he was first found helpless.[3] He lived to find comfort for that, became great under the skies, prospered in honors until every one of those who lived about him, across the whale-road, had to obey him, pay him tribute. That was a good king.

2. The meaning is probably "son of Sceaf," although Scyld's origins are mysterious.

3. As is made clear shortly below, Scyld arrived in Denmark as a child alone in a ship loaded with treasures.

These eleven lines demonstrate several of the problems literal translators face and often fail in. For one, the phatic (serving to open or close channels of communication) word **hwaet** (line 1) is not translatable literally because there is no corresponding New English word. Our vocabulary does contain a wide array of phatic openings, words or phrases that function not to convey information but rather only to indicate that an utterance will begin, such as "Hello," "Hey," "Dear John," "Ladies and Gentlemen," "Dearly Beloved," and "Once upon a time." Unfortunately for translators of heroic epic literature, none of these is appropriate for the beginning of an epic, either written or sung. Because we do not compose epics in New English, we do not have a traditional way to begin them. Donaldson's choice, **yes**, is sometimes used as a phatic expression in New English, but it lacks the conventionality of **hwaet** as well as its wonderfully explosive sound and what **Humanities Education** Contributing Editor Burton Raffel calls its "vigorous, active nature" (rev. 93), which many translators apparently seek to reproduce by punctuating their openings with an exclamation mark.

The name "Scyld Scefing" in the Old English text may be understood as either proper or common nouns, or both at once. **Scyld** ('shield') does not seem to have been used as a name by anyone except this legendary or mythological character, who appears in some royal genealogies as a descendent of Wodin. **Scefing**, as Donaldson points out in his footnote, does indeed mean "son of Sceaf," or "son of sheaf," to translate fully; and **sceaf**, like **scield**, denotes the common noun in all cases but this. Clearly, the Anglo-Saxon audience would have noticed that the founder of the Danish dynasty was named "Shield, Sheaf's son," and that such a name alludes to legendary or mythological material. Literal translators must choose between translating this king's name so that modern readers can understand it as the Anglo-Saxon readers did, or leaving it untranslated so that modern readers can refer to the character properly. The literal approach does not allow them to introduce the meanings of these words elsewhere in the text: thus, Donaldson's brief footnote. The point here is that when this name is not translated, the modern reader has every right to ask, as many students do, what the purpose of introducing the story of Beowulf with the story of Scyld Scefing might be. The translator's choice in this crux may actually constitute the loss of an important legendary or mythological layer from the text of the literal translation.

The phrase "meodosetla ofteah" is a prime example of Old English figurative language, for it is both an instance of litotes and a metonym. Translated verbatim, the phrase is "took away mead places (or seats)," that is, "the places in which warriors were entitled to sit in the meadhall." The Old English expression takes for granted that the reader understand that having a place in the meadhall means that one is a warrior in good standing and attached to a particular lord who is powerful enough to have a meadhall. Therefore, to take away from warriors their places in the meadhall means to strip them of their social

þ, Þ "thorn," represents the sounds written **th** in **thin** and **then**.

ð, Ð "eth," or "crossed D," represents the same sounds as þ, and is interchangeable with it.

æ, Æ "ash," represents the vowel sound in **cat**.

alexandrine--a six-foot (twelve syllable) verse line, commonly used in Old French romances. Cf."pentameter."

alliteration--initial rime. Old English versification is based on the repetition of identical initial consonants or consonant clusters, or of any initial vowels, on three of the four stressed syllables of the line.

analytic language--a language, like English or Spanish, that relies chiefly on word order, prepositions, and auxiliary verbs rather than on inflections. Cf."synthetic."

automatize--see "foreground"

caesura--a pause in the meter of the line. The Old English verse line included a caesura, which separated the first two stressed syllables from the second two.

cognate--a word derived from the same root, like father, vater, pater, etc.

dead/fresh figures--A dead figure of speech is one that has been used so often it is no longer seen as figurative, as in "You're a peach (or a turkey)." A fresh figure of speech calls the reader's attention to its figurative value, as when Shakespeare calls the leafless boughs of a tree "bare, ruined choirs."

enjambment--the continuation of a clause into the next line of verse.

foreground--to use a device or style that surprises one's readers and draws their attention from the contents of the work to its language. When language is not foregrounded, it is automatized. Both **foreground** and **automatize** are translations of Czech terms coined by the linguist Jan Mukarovsky.

status, or of their freedom, or perhaps even of their lives, and is thus both litotic, since it is a vast understatement, and a metonym, since it uses a part (the place in the meadhall) for the whole (high social status). A literalist translator will translate this phrase verbatim: Donaldson has "took mead-benches away from enemy bands," with no further explanation of what this might imply. His translation retains both the expression which is so typical of Old English figurative speech and the image of the meadhall which will figure so largely in the poem as a whole, but it does so at the cost of the implication of the phrase, which is that Scyld killed or enslaved his enemies. Those modern readers not aware of the Anglo-Saxons' system of status symbols (that is, most of our students) will see in the verbatim translation only the visual image of Scyld yanking a bench of some sort away from another person who is in physical possession of it--an inaccurate interpretation of the phrase founded directly on an accurate translation.

The final trouble spot to be examined here is the kenning in "ofer hronrade," an adjective phrase modifying the nations neighboring Scyld's kingson, and indicating to the reader that Scyld's seat is on an island but that his control extends beyond that island's boundaries. The kenning **hronrad** is literally translated 'whale road (or path)': the sea is the place where the whale makes journeys similar to those the poet and his audience make on horseback in their own element. If the kenning had been fresh for the Anglo-Saxons, it would have introduced this complex idea into the poem at

flite--a ritualistic debate or dispute.

kenning--a metaphoric phrase or compound noun used in place of the noun; a standard poetic device in Old English and Old Norse poetry.

koine--a common language formed from several languages. In the case of Old English, a common literary dialect formed from the several dialects spoken in Anglo-Saxon England.

litotes--a figure of speech employing understatement, (Viet Nam War as "the late unpleasantness") common in Old English poetry. Opposite of hyperbole.

metonymy--a figure of speech by which the intended noun is replaced by the term for something in close association with it, as in "the White House" for "the President."

Old English--The name modern scholars have given to the dialects spoken by the Anglo-Saxons in England from the fifth through the twelfth centuries. Also called "Anglo=Saxon."

pentameter--a five-foot verse line, the line most commonly used in English verse from Chaucer until the modern period.

phatic--serving merely to open or close channels of communication.

prosody--system of versification.

syllabic verse--versification by the number of syllables in the line, regardless of stress (which governs English versification) or quantity (which governs Latin versification).

synthetic language--a language, like Old English or Latin, that relies chiefly on inflections rather than word order, prepositions, and auxiliary verbs.

this point, but if it was dead for the author and his intended readers, then it would have implied only 'sea.' The theory of verbatim translation does not take into account whether a figure is fresh or dead, however, so the phrase appears in Donaldson as "the whale-road." Unlike the mead-benches, the whale-road is readily comprehensible to modern readers, but it introduces an image that may not have been intended by the poet, who may have chosen, for the sake of alliteration, what was to him dead metaphor. After all, the point here is that Scyld is a powerful enough king to subdue all the neighboring kingdoms even though they are separated from him by the sea, which is a simple enough statement; the island location does not seem to point toward any major themes of the poem. Translating this idea literally, however, foregrounds the kenning, and modern readers find themselves thinking more of whales and less of military might than they should be at this point.

Thus, literal translations can fall short in purely practical terms. The literal translation of a single word or phrase may be impossible, as in the case of **hwaet**; or a word or phrase may have a double meaning which cannot be translated in one word, as in the case of Scyld's name, where the meaning of the common noun contains the clue to the entire excerpt; or a figurative expression may be either nonsensical in translation, as is the business with the mead-benches, or merely inappropriately foregrounded, as is the whale. One final problem with literal translations is caused by the greater length required by an analytic language to convey the same information given originally in a synthetic language. As a synthetic language, Old English is capable of a conciseness and a freedom in word order which is not available to and cannot be imitated by New English, which depends upon word order and prepositions to make sense of a sentence. The first eleven lines of **Beowulf** contain fifty-three words in the Old English text and eighty-seven in Donaldson's. Some of these additional thirty-four words are required by the lack of a single word equivalent in New English--**ellen**, for example, becomes 'brave deeds'--but most are simply articles, prepositions, and auxiliary verbs. Fred Robinson's facetious sample of a literal translation of the first three lines demonstrates the problem: "Lo! Of Spear-Danes in yore days, of nation-ruling scions of the family,--concerning their surging power our questions have been answered: how sons of landed nobility fulfilled their competitive zeal then" (xi). In this extreme example of literal translation, presented by Robinson to show its impracticality, the thirteen words of the original are accurately translated by thirty words.

This example also points out in extreme form another problem with all literal translations, and that is their over-dependence on punctuation --in many cases unusual or extremely complex punctuation--to help convey the syntax that is perfectly clear in a synthetic language. A far greater number of words in a translation is thus not only permissible, but necessary, and it should be justifiable to add even more words and to change even further the word order to avoid the awkward punctuation found in literal translations. The use of prose eases these problems somewhat, and is thus a far more practical vehicle for a literal translation than verse. This is not to say that literal translations should be avoided under any circumstances, but rather to show how instructors using a literal translation can evaluate it on its own terms, anticipate problems their students may have, and, perhaps, introduce students to snatches of the Old English text in an effort to explain the imprecise precision that will mislead or confuse in certain key spots.

IMITATIVE TRANSLATIONS

A second approach to translation, what I have called the imitation approach, has been used with considerable success by Marijane Osborn in her recent translation of **Beowulf**. Osborn herself calls her work a "true impression" (123), but since this phrase is used by advocates of the equivalency theory to mean something far different, I use the term "imitation" with the hope that it does not distort her intention.

The immediate problem facing an imitative translator is that there is no accepted Old English style--prosodic, lexical, or thematic--in New English. Modernizers of Middle English literature can depend upon their readers' familiarity with the vocabulary and concepts of the romance. Knights with lances and damsels on palfreys, universal Christianity and feudal society are all part of the literate person's expectations in a work of the High Middle Ages. But translators from Old English cannot count on their readers having even a glancing acquaintance with thanes who brandish ashes, wear byrnies, and live in small wooden structures called meadhalls, where they are waited on at table by their king's wife. Readers who do not know what **wyrd** means are not likely to understand the concept, whether the word is allowed to stand or is translated as "fate." Aside from these conceptual and lexical problems, translators cannot expect familiarity with the prosody: in fact, my experience with sophomores is that they expect **Beowulf** in the original to sound something like **The Faerie Queene**.

The imitative translator from Old English **par excellence** is, of course, Ezra Pound, whose "Seafarer" many Old English scholars refuse to call a translation. In his effort to imitate as far as possible the Old English alliterative line, Pound relied greatly on New English cognates, so that he gives 'keel' rather than 'ship' for **ceol**, and so on. That his translation is nevertheless successful as a poem in its own right is not usually taken into consideration by those, like John Hollander, who deplore his method. Thus, the imitative translator has a difficult task: only those who can read the original and do not need the translation can fully appreciate its virtues, but these are the same readers most likely to be critical of its lack of literalness. In addition, an imitative translation of **Beowulf** will be an intensive learning experience for first-time readers, who are asked to absorb not only the plot, which many find difficult enough, and the thematic concepts of **wyrd** and revenge, which many resist, but a new prosody and vocabulary as well.

Osborn's first eleven lines are as follows:

What of the Spear-Danes in days of yore?
We have heard of the glory of the great folk-leaders,
how those athelings* did arduous deeds!
Often Shield Shefing shattered the courage
of troops of marauders by taking their mead-seats.
He terrified those nobles--long after the time
he appeared as a foundling. Comfort for that fate
came when he grew and prospered in glory
until those who lived in the neighboring lands
over the whale's road had to obey him,
yield him tribute. Yes--a good king!
    ***athelings**: noblemen

Osborn's translation not only conveys a "true impression" of the sound and movement of the original, but it is truly poetic in its own right: the reader of these lines reads poetry, not prose written out in short lines. The alliteration is as faithful as it can be in New English, which is not nearly so easily alliterated as is Old English. A natural caesura is present in every line, which is reasonably end-stopped, and words such as "athelings" which have no modern equivalent are kept with glosses, which is a boon to both conciseness and precision. However, the imitation is not extended to every aspect of the original. Osborn states that although compound nouns are a major element in Old English poetic diction and one of the chief causes of its extreme conciseness, she has used them only sparingly (126), and she has likewise reluctantly given up consistent imitation of the poem's formulaic expressions (125).

Osborn's rendition of the opening line is typical of her method, although, as she acknowledges in the back matter, it is the only instance in which she has "allowed the sound actually to dictate meaning" (126). She has changed a statement to a question and eliminated a phatic opening, but she has retained that wonderfully explosive initial syllable **hwaet**, whose qualities are not accurately conveyed by the liquids and semi-vowels of 'Lo,' 'Listen,' 'Hear,' or 'Yes.' In fact, the interrogative sentence is not really off the track at all, since the verb of the main clause in the original statement, **gefrunon**, means 'have inquired' or 'have learned by inquiring.'

The name **Scyld** is translated 'Shield' and **Scefing** is re-spelled so that it will be properly pronounced. This decision to translate the shield but not the sheaf seems a good compromise between losing the connotations of his name entirely and confusing the reader by introducing a sheaf that cannot be explained in the text of her line-for-line translation and would thus necessitate a footnote.

Osborn retains the mead-seats of the original, translating **setl** as 'seat,' rather than 'bench.' The difference here is the same as the difference between taking one's seat, which is to sit down, and taking one's bench, which is to pick the thing up and walk away with it. So, Shield here takes his enemies' seats, which is an accurate literal translation and not inordinately misleading, although not completely clear as it surely was for the intended audience. The compound **hronrad** is given here in the far more natural New English construction 'whale's road.' This construction foregrounds the whale, as does a literal transaction, but does not foreground the diction, as does the literally translated compound, with the result that the whale is still there, but it is not quite so obtrusive.

Osborn's translation is successful because it is authentically, although not thoroughly, imitative, and because it is also nearly as literal as those translations that have no other aim. Since Osborn is constrained by her policy of matching line for line whenever possible, there is no place for explanations that may be required by the modern reader, such as for the mead-seat figure, but this shortcoming is partly compensated for by the use of key Old English words in the text. The glosses she provides for these key words are very brief (**wyrd** is glossed merely as 'fate'), but the consistent use of these words allows readers to define them from context, which is a far better method of getting at foreign concepts than any gloss could be. Finally, a successful imitative translation such as Osborn's results in a poem in its own right, a poem that eliminates the need of asking skeptical students to accept the instructor's word for it that **Beowulf** is actually a great poem in the original.

EQUIVALENT TRANSLATIONS

A third approach to translation aims at producing a text for modern readers that is in some way an equivalent of what the Old English poem must have been for its readers. This equivalency approach has been proposed or endorsed by a great many modern translators, such as Vladimir Prochazka, Jackson Mathews, and Kornei Chukovsky, who writes, "I think it is not necessary to translate the **words**, and sometimes not even the **sense**, but it is essential to translate the **impression**" (80), and by Dudley Fitts, who speaks of "a comparable experience" (34). The equivalency approach is straightforward enough with regard to translations between contemporary languages that reflect a common cultural heritage, but it becomes problematic when applied to translating a thousand-year-old text from a dead language and an unfamiliar culture. For one thing, we have no way of knowing what sort of impression **Beowulf** might have made on the poet's contemporaries, since we have neither any other Old English epics nor any contemporary references or allusions to **Beowulf**. We can be more certain about the impression its prosody and diction would have had on its readers, for the four-stress alliterative line was ancient and authentically ethnic, and the language was perhaps something of a koine, certainly conservative and just as certainly specialized, since it included a large number of words not found in Old English prose.

Knowing only that the poem's prosody was traditional and its lexicon specialized and archaic, a translator could then respond to those aspects by using what modern English speakers would consider a traditional verse form and a poetic lexicon. Translators wishing to produce an equivalent to the original would clearly not choose to imitate the Anglo-Saxon prosody, since this form is just the opposite of traditional to our ears: it is startlingly new and different. Jackson Mathews writes that "[t]he translator has to invent formal effects in his own language that give a sense of those produced by the original in its own" and gives as an example the translation of French alexandrines into English pentameter (67-68). Another example of this method, this having to do with an archaic diction, is H. T. Lowe-Porter's translation of Mann's **Dr. Faustus**, in which passages written in Luther's German are plausibly rendered in the English of Wycliffe, Tyndale, and More.

But what exactly is an equivalent verse form and diction in New English for what the Anglo-Saxons found in the original? J. R. R. Tolkien, in his 1950 preface to the translation of J. R. Clark Hall, revised by C. L. Wrenn, explains their use of a poetic diction as just such an equivalent: "If you wish to translate, not rewrite, **Beowulf**, your language must be literary and traditional . . . because the diction of **Beowulf** was poetical, archaic, artificial (if you will), in the day that the poem was made" (xviii). Although plausible in theory, in practice words such as 'Lo,' 'throve,' and 'dwelt' and sentences such as "A noble king was he!" recall the Romantic tradition rather than the heroic, the nineteenth century rather than the sixth. This is inevitable, of course, for, as Richmond Lattimore, writing of his translations of Homer, concludes: "In 1951, we do not have a poetic dialect . . . ."

One way to address this question of equivalent style is through the modern reader's expectations. If the Anglo-Saxon audience met with exactly what it expected, at least with regard to the verse and diction, what, then, will meet the expectations of a modern reader looking forward to reading a heroic epic? Slightly old-fashioned prose is probably the best answer-- certainly not the florid prose of Clark Hall. Everett H. Emerson wrote that the use of prose "falsifies the original" (372), and in one sense it does, since the original is a poem and the prose translation is not. But in another sense it represents a valid equivalent to the Anglo-Saxon prosody, as no verse form can in the twentieth century. The Anglo-Saxon line was used for every genre--heroic epic, saints' lives, proverbs, riddles, charms, didactic pieces, some chronicle entries, and lyrics whose topics range from love to war to religious devotion. The only possible modern equivalent to such a pervasive form is prose. David Wright's translation best illustrates this attempt at an equivalent prose style:

> Hear! We know of the bygone glory of the Danish kings, and the heroic exploits of those princes. Scyld Scefing, in the face of hostile armies, used often to bring nations into subjection, and strike terror in the hearts of their leaders. In the beginning he had been picked up as a castaway; but he afterwards found consolation for this misfortune. For his power and fame increased until each of his overseas neighbours was forced to submit and pay him tribute. He was an excellent king.

Wright explains his use of this effortless prose in place of the difficult syntax and lexicon of the original: "The Anglo-Saxon **scop** was able to employ a highly formalized and artificial diction because his audience was trained and accustomed to that kind of idiom. But his translator must remember that he is a writer of contemporary English prose competing with other writers of contemporary English prose for the attention of his readers" (25). Wright's prose is nevertheless not that of modern narratives: it is slow and heavy, and self-consciously literary, too, without being noticeably archaic or artificial or outside modern grammatical constraints. Unlike the literal translations, which inadvertently foreground diction and syntax, and the imitative translation, which intentionally foregrounds diction and syntax, Wright's non-figurative language is more precisely the equivalent of the original than any attempt to retain the figures of speech can be.

Stanley Greenfield's more recent equivalent translation is as unlike Wright's as is imaginable, for, although his theory is the same, he has a far different idea of what equivalency means for a New English translation of **Beowulf**.

> Indeed, we have heard of the Spear-Danes'[1]
> glory, and their kings' in days gone by,
> how princes displayed their courage then.
> Often Scyld Scefing shattered the hosts,[2]
> unsettled many a nation's mead-hall,
> terrorized tribes, since first he was found
> abandoned; comfort and abundance
> later came his way, and wordly fame,
> until neighboring nations, near or
> far over whale-big seas, obeyed him,
> gave tribute: a good king indeed!

[1] Spear-Danes] The Danes are called, further, Bright-Danes, East-Danes, North-Danes, South-Danes, West-Danes, etc. Other tribes or nations have similar compound names, the first element serving for purposes of alliteration, though some critics have suggested they may bear specific meanings in their local contexts.

[2] Scyld Scefling] The **-ing** ending may, as here, probably, be a patronymic (Scyld, the son of Scef), or it may indicate a dynasty, as in **Scyldings**, or it may indicate a sword name, as in **Hrunting** and **Naegling**, among other things. Earlier critics associated Scyld Scefing with martial (shield) and agricultural (sheaf) gods. On the pronunciation of **sc**, see On the Translation.

Greenfield has rendered the poem in syllabic verse, which he believes gives an effect equivalent to that of the Anglo-Saxon line (**Beowulf**, 32). Greenfield's reasoning is hard to follow here. He admits that syllabic verse is not used much in English poetry, and explains why: English--Old, Middle, and New--is a strongly accentual language, and therefore unfitted for a verse form that gives each syllable equal stress (31). Particularly when read aloud, Greenfield's translation produces an effect quite unlike that of the four-stress Anglo-Saxon line. Syllabic verse is not only non-traditional in English, but seems to be antithetical to it as well. Greenfield's syllabic verse is halting where the Old English is rhythmic, eccentric where the Old English is traditional. Furthermore, the subtle alliteration that Greenfield attempts becomes nearly imperceptible in a line deprived of natural stress, and the frequent grammatical enjambment only increases the awkwardness of the rhythm.

Burton Raffel has taken Greenfield to task for his diction, which tends to be, in Raffel's words, tepid, cliched, and sentimental (rev. 93-94): the opening "Indeed" and its echo in line 11 is a case in point. However, Greenfield's handling of the mead-seat and whale figures is more interesting. In an essay apparently written while he was engaged in the translation, he explains: "The etymological pun in my 'mead-hall unsettled' may appeal only to the scholar, yet it echoes the litotes of **meodosetla ofteah**" ("Esthetics" 102).

Whether even scholars would catch the pun, or the "Indeed/in deed" envelope, for that matter, had not Greenfield flagged it for us is questionable, but the translation of this verse is certainly brilliant, retaining litotes, metonym, and image. On the kenning, Greenfield explains in his prefatory essay: "My lexical transformation of the kenning 'hronrad' of line 10 into 'whale-big seas' is both modern-sounding and expansive in its ambiguity, suggesting, even as the Old English does, the huge domain Scyld has built and, additionally, the birth of the Scylding dynasty" (**Beowulf** 33). Again, Greenfield's translation is brilliant in having retained the whale and the sense of poetic language. Nevertheless, for all Greenfield's approval of Jackson Mathews and the idea of equivalency ("Esthetics" 95, n. 9), his translation is more a scholarly curiosity, of great interest to the specialist but of little use to instructors who wish to provide their students with a readable equivalent of the original text.

RE-CREATIVE TRANSLATIONS

Re-creating the poem is an approach to translation usually dismissed by scholars but welcomed by undergraduates who are still reading great books primarily for pleasure. Burton Raffel's translation, for example, which is now more than twenty years old and conservative as re-creations go, is still only grudgingly accepted by many specialists, although it is one of the most widely used and certainly the best enjoyed by undergraduates. The classicist D. S. Carne-Ross uses the word 'translation' specifically for re-creations, which he defines thus: "where a crib [i.e., literal translation] proposes to take care of the letter of the original, a translation must attend to its spirit" (3). Describing the process of making a re-creative translation, he writes that "[at] its highest, a translation comes into existence in the same way as a work of original literature: a man experiences something--in this case, a foreign text--which he has got to find words for if he is to have any peace" (4). If the author of a re-creation works in some way close to this, then it is no wonder that re-creative translators seem more likely to be poets than scholars. Jean Paris provides an analogy to make the idea of re-creation more explicit: "we can imagine the [original] poem itself as a version of some absolute poem which would be less the sum of its meanings, symbols, images, than their source, structure, and secret essence. This absolute poem . . . would then be to the written one what Plato's Forms or Aristotle's Archetypes were to visible things: their supreme reality" (62). The translator must penetrate to the absolute poem and give an expression of it, not of the original poem, in the new language. Such a translation would not be the offspring of the original, but rather its sibling, since both have proceeded from the parent absolute (63). Paris uses the word "equivalent" with regard to such a re-creation, and perhaps to re-create is the only way to produce an authentic equivalent of a poetic text.[2] (For an interesting argument against this concept of translation, see Raymond Tripp, Jr.).

In any case, this approach to translation has the undoubted benefits of producing a work that is a poem (or tale, or whatever) in its own right, and of allowing for the possibility that the translation may legitimately improve on the original. Although this second is not likely to happen with a work such as **Beowulf**, the idea of improving on the original by re-creating it in another language is common in medieval literature: Chaucer is, of course, the outstanding example of a translator of this kind in English. It is hard to imagine preferring a literal translation of Boccaccio's **Il Filostrato** over **Troilus and Criseyde** for any purpose but a study of Boccaccio's text. An example more analogous to that of modern re-creations of **Beowulf** is John Steinbeck's **The Acts of King Arthur and His Noble Knights**, a re-creation of Malory's **Morte Darthur**. **The Acts** is clearly no substitute for Malory in the context of a college course on English literary history, but it is hard to see why it cannot be read as a substitute for Malory in any other context. If the Arthurian material is timeless and very much alive in twentieth-century America, it is because modern writers from Tennyson to T. H. White have lovingly and capably re-created the story. Not only is Malory's text still available to those who want it, but his work is all the better known because of the popularity of modern re-creations. The same is true with the continental Arthurian literature. Chretien's **Contes du Graal** is still available in literal translation, but the legend has been immeasurably enriched first by Wolfram's re-creation of Chretien and then by Wagner's re-creation of Wolfram. Chretien is none the worse off, and we are all the richer for these re-creations.

I have gone on at some length with these analogies to make the point that the concept of re-creating a medieval text is common rather than exceptional, beneficial to the original text rather than harmful to it. Again, other than in the case of students of literary history, who, if they are serious, will read the text in its original language, there is no reason to eschew a thoughtful re-creation for the sake of literal accuracy.

Raffel's translation, as mentioned above, is a conservative re-creation.

Hear me! We've heard of Danish heroes,
Ancient kings and the glory they cut
For themselves, swinging mighty swords!
How Shild made slaves of soldiers from every
Land, crowds of captives he'd beaten
Into terror; he'd traveled to Denmark alone,
An abandoned child, but changed his own fate,
Lived to be rich and much honored. He ruled
Lands on all sides: wherever the sea
Would take them his soldiers sailed, returned
With tribute and obedience. There was a brave
King! . . . .

Raffel's re-creation has exactly 3182 lines, the same number as the original, and the sense of each line in his version corresponds remarkably closely to that in the same line of the original. His verse form is a loose version of the Anglo-Saxon: a four-stress line with a varying number of unstressed syllables, and some alliteration on the stressed syllables. Syntax and word order is completely modern and, therefore, unobtrusive, or automized: it reads well both silently and aloud.

Raffel has respelled "Scyld" as "Shild" so that it will not be too radically mispronounced, and "Scefing" is gone from the text. And so are the mead-seats. Greenfield complains at length about Raffel's first eleven lines, writing that his translation of line 5 "totally ignores the litotical effect of **meodosetla ofteah**, not to mention its introduction of the significant image, for the poem as a whole, of the hall" ("Esthetics" 99). This is all true, but what Raffel loses, he makes up for in sense: the line in question means what Raffel writes: "Shild made slaves of soldiers from every/ Land." Greenfield likewise finds fault with the replacement of the whale image with the prosaic 'sea,' on the grounds that this translation is "de-poeticizing a poetic component of the original," and with the introduction of Scyld's soldiers, who were ignored by the original author ("Esthetics" 99). True again, and also true, but not mentioned by Greenfield, is that Raffel has drastically changed the syntax here: the original has "each one of the neighboring nations" as the subject of this clause, while Raffel has three clauses whose subjects are "He," i. e. Scyld, "the sea," and "his soldiers." If the sense of these lines is to show that Scyld has reduced the neighboring nations to obedience and their warriors to slaves, then Raffel's syntax reflects the relationship between Scyld and these subjected others in a way that the original, which has the subjected nations as the subject of an active verb, does not. Whether this constitutes an improvement on the original is a subjective judgement, but it is clearly faithful to the spirit and sense of the original, and does the Old English no disservice. Raffel comments on his method in his book on translation, **The Forked Tongue** and in the prefatory material in **Poems from the Old English**.

Robert Nye's re-creation of **Beowulf** is a re-creation in the full sense of the word. While Raffel has allowed himself to add to the text Scyld's soldiers and swinging swords, and to delete from the text mead-seats and whale-roads, Nye actually retells the story, amplifying some aspects, reducing or deleting others, and even introducing some new twists to the plot that provide the greater sense of closure to which modern readers are accustomed. For instance, Nye's Unferth does not simply drop from sight after the wonderful fliting scene only to reappear briefly at the mere with an apparent change of heart. Nye's Unferth continues to claim the reader's interest from that scene on until he meets the gruesome end Nye has arranged for him. The other significant departure from the plot has to do with the dragon and Wiglaf's far more important role in that battle, which Nye has prepared the reader for with his greatly amplified rendition of the Sigemund digression. Nye writes ostensibly for children--a bright fourth grader can read and understand the tale--but, like all good literature written for young people, his **Beowulf** does not bore or patronize intelligent adults. Here is Nye's re-creation of the first eleven line of the original:

> Long ago there was no king in the land of the Danes, and they all wanted one. When a ship without sails or sailors came drifting in from the sea, they went to meet it looking for a wonder, and sure enough there was a child in the ship. The child was curled asleep on a sheaf of ripe corn, with gold and swords heaped round about him. A golden flag flapped at the mast.
>
> "This is Odin's doing!" cried a fisherman with a big white beard that blew in the wind like spin-drift. "We need a king, and he sends us this child across the sea. I'm sure he is a prince."
>
> "Of course he is," said someone else. "Look at his clenched fists and the way he smiles in his dreams. Oh, he's royal all right!"
>
> "Perhaps he is Odin's son," said a third.
>
> Now, Odin was a great god. So the child was taken gently from the ship and wrapped in rich robes and hailed as ruler of all the Danes. They called him Scyld Scefing.
>
> Scyld grew up to be strong and brave, the terror of his enemies. He was tall as a tower and his eyes blazed like bonfires when he was angry. Running into battle, he could shout so loud that men felt the cry like a hammer on their heads, and fell down dead of fright. His sword was so long and heavy that no one else could lift it. His horned helmet was big enough to put an eagle in. When he sat down to supper, in a chair carved out of a whole oak tree, the cooks ran to and fro bringing him bulls to eat, and barrels of beer that he drained in one go. His laughter cracked stones.
>
> For all this, Scyld Scefying was kind and wise, and his people loved him. Under his rule, peace came to the land of the Danes, because none of the neighbor countries dared to fight with such a giant. Instead, they brought him gifts and tributes so that he would not go to war against them. The treasury swelled until it was like a hill of jewels.

Where did all this additional information come from? Nye may have invented the old fisherman and his clever companions, but he did not invent Scyld's genealogy, nor did he invent the sheaf of corn, the golden flag, the clenched fist, the bonfires, the hammer, the heavy sword, the helmet, the eagle, the oak tree, the bulls, the beer, and the treasury like a hill of jewels. Most of these things are present in the

Old English text somewhere or other, and all were present in this particular place in the minds of the poet and his intended audience in the mere mention of Scyld's name. In re-creating the mythological prologue to Beowulf's story, Nye has simply written into the text what modern readers cannot bring to their reading. Nye explains his method in his prefatory note:

> One retells old myths and legends hoping to be rewarded with the discovery that their meaning is still very much alive and creative. I feel in writing this that I discovered something about **Beowulf**. I hope that the reader will find what I found and enjoy it. To me, it is an essential story, and therefore never to be fixed.

Any reader coming to Nye's text without literalist prejudice will discover at least one thing about **Beowulf**: that we need not be so jealous of the text as we have been, for it not only can survive a re-telling, but can be enriched by it as well.

My intention in this essay was not to evaluate or recommend any particular translations, although I have made no effort to conceal my preferences, nor have I had in mind any particular application of this survey cum illustrations. My own practice at Middle Tennessee State University, whose 11,000 students come mostly from rural counties, is to order Wright for my freshman composition class and to provide the students with brief excerpts from several other translations as an exercise in the effects of style, tone, detail, figurative language, and so on. I also have them read John Gardner's **Grendel** in conjunction with Wright's **Beowulf** as a study in point of view. For my sophomore class in English literature and for my junior class in medieval English literature, I order Raffel, which I supplement with brief excerpts from each of the other translations discussed here and an explanation of some of the problems a translator faces, the purpose of which is to open up discussion of Old English and its literature. However, this process of looking into different approaches to translation and examining a wide variety of translations for oneself is also useful for the instructor whose only need is to find a more workable translation of **Beowulf** for a particular course and, not least, for any reader who loves **Beowulf** and wants to continue to learn from its essential story.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with **content** that draws upon the human cultural heritage, **methods** that derive from the humanistic disciplines, and a **purpose** that is concerned with human values.

What is an "integrated humanities course"? Courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Seniors Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but do not feel constrained to be colloquial. Avoid sexist implications in your diction by referring to **humanities, humans** or **people** rather than **man** or **mankind**. Usually awkward "he/she" constructions can be avoided by recasting pronouns in the plural. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed double-space on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. For the present we are unable to print half-tone illustrations or photographs and we are not staffed to draw charts and diagrams, but camera-ready line work is very welcome. We can use written material of two lengths: one to three pages (300-1000 words) for practical tips, sample assignments, commentaries, etc.; and articles of six to ten pages (3500 word maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are **HUMANITIES, EDUCATION** and **INTEGRATED**, but we are not necessarily limited to interdisciplinary classroom practices and curricula. Thus, for example we are interested in:

•THEORY: "Piaget and Theories of Integrated Study"

•ADMINISTRATION: "Crediting Departments for Team Teaching"

•HISTORY: "Nineteenth-Century Multi-Media at Chautauqua"

•RESEARCH: "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a disciplinary mode are valid if they are presented as strategies for use in interdisciplinary settings:

•"What you should know about teaching novels in a philosophy course"

•"Pre-teaching history students for an art museum field trip"

•"How to help non-musicians to follow a score"

•"A designer speaks of humanities bulletin boards"

•"Getting adults to role-play in public humanities programs"

•"Understanding Oedipus: An Actor's View"

What we **don't** want:

•Creative writing by teachers or students (it doesn't relate to our purpose)

•Syllabus outlines (curricula should be explained, not listed)

•"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

•"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

•"Humanistic counseling in the admissions office" (this is a **behavioral** definition of humanism, not a cultural one)

HUMANITIES EDUCATION ABSTRACTS & REVIEWS

Summaries of significant reports about interdisciplinary humanities education.

RITUAL RESEARCH

Ronald L. Grimes, **Research in Ritual Studies: A Programmatic Essay and Bibliography** (ATLA Bibliography Series, No. 14) Metuchen, NJ & London: Scarecrowpress, 1985. Pp. ix + 165. Paper, $15.00. Ronald L. Grimes, **Beginnings in Ritual Studies.** Lanham, MD: University Press of American, 1982. Pp. xix + 293. Paper, $14.00. Reviewed by Walter B. Gulick, Eastern Montana College.

Together these works by Ronald Grimes help define the parameters of the contemporary study of rituals. **Research in Ritual Studies** contains a bibliography of 1649 books and articles, and the scope of the entries substantiates Grimes' claim that ritual studies is interdisciplinary in its aspirations. The vast majority of these English language bibliographic entries is materials published in the last twenty years.

In his eighteen page programmatic essay introducing the bibliographic work, Grimes states that his interest is not so much to reflect the field of ritual scholarship as it is to shape the field through selective emphasis within his own classificatory scheme. His entries are classified under four main headings: ritual components, ritual types (he locates sixteen subcategories here), ritual descriptions, and "General Works in Various Field-Clusters." An index of authors helps the reader to navigate through the various listings.

Research in Ritual Studies is useful, then, because it is not simply an aggregation of titles that the aspiring researcher must examine on an item-by-item basis. Grimes is a knowing guide who helps one see the connection between ritual study in the theater and in sports, in ethnography and biology, liturgy and literary criticism, and so on. One area of potential fruitfulness that he ignores, however, is performance art, that contemporary hybrid rooted in the visual arts and concerned with overcoming the chasm between the expressive artist and the passive viewer, the creator and the consumer. Such works as Gregory Battcock and Robert Nickas, **The Art of Performance: A Critical Anthology,** RoseLee Goldberg, **Performance: Live Art 1909 to the Present,** and Lucy Lippard, **Overlay: Contemporary Art and the Art of Prehistory** each have much to offer the student of rituals.

Grimes is well qualified to bring greater depth and coherence to the study of rituals. He has been involved in a variety of experiments with rituals as a participant, teacher and theoretician (evident in his creative involvement with the Consultation on Ritual Studies of the American Academy of Religion). In **Beginnings in Ritual Studies** he describes in some detail such diverse expressions of ritual activity as the annual fiesta in Santa Fe; the training provided by the Actor's Lab, now in Toronto; the various types of masking; the ritual activities of sitting and talking in Zen Buddhism; the contemporary efforts to utilize shamanism as a device for integrating education, therapy, drama and religion, and the post-modern "ritual theater" of Jerzy Grotowski. The cross-cultural breadth and experiential grounding of the book are no doubt important contributors to its freshness and vitality.

While **Beginnings in Ritual Studies** includes a number of independently published articles, it has an inner coherence based on Grimes' insight that ritual at its best involves an embodied way of creating meaning that transcends adequate linguistic paraphrase. His mapping of ritual activity into six distinct modes of expression (ritualization, decorum, ceremony, liturgy, magic, celebration) represents a masterful ordering of a confusing field of study.

Sometimes in reaching for new insight Grimes seems to overreach. For example, he states that ritual creativity is exercised "as animated persons enact formative gestures in the face of receptivity during crucial times in founded places" (p. 55). Yet his ensuing discussion clarifies this rather exalted language and shows how his definition represents an improvement upon those definitions which restrict ritual to repeated, sacred, prescribed, traditional enactments.

One example of the power of his analysis from a rich array of possibilities will have to do. During a year in which Lady Liberty's centennial was the occasion for a lavish celebration (if not bread, at least circuses), the following passage captures the ambiguous, problematic response to the spectacle that many people felt:

> In modern societies few activities can be as dangerous as unexamined public rites such as rallies, demonstrations, or festivals. If our head is lost, we risk being duped into complicity with commercial or political values we do not really hold. Yet if our head is not lost, celebration does not transpire. The dilemma of celebration in our time is how, in a segmented, individualistic, self-conscious culture, to integrate critical reflection and festive communality (p. 251).

Research in Ritual Studies successfully plots out different avenues whereby ritual is saved from being boring repetition. Grimes argues that our imagination and all our senses (not just seeing) need to be developed both for enacting and understanding ritual. When expressing oneself in ritual, "One does not imitate, which would be the ritual equivalent of selling oneself as a scholarly whore to whatever one observes; nor does one violate by voyeuristic staring" (p. 13). Rather one discovers a new way of making sense through moving and doing. Few books have such power to change our way of living.

GOOD GRIEF

Susan Letzler Cole, **The Absent One: Mourning Ritual, Tragedy, and the Performance of Ambivalence**, University Park: The Pennsylvania State University Press, 1986. 192 pp. $18.95. Reviewed by Elaine L. Kleiner, Indiana State University.

The author of this new theory of the origins of tragedy has drawn on her experience teaching tragedy for many years at Albertus Magnus College, together with her work as a professional observer at Lee Strasberg Actor's Studio and as an invited observer at Joseph Chaikin's rehearsals for his play **Trespassing**. From such a rich background, we are presented with a highly original study of elements common to both tragedy and mourning rituals embodied in funerary rites. Because Cole's book reflects a convergence of historical scholarship, literary criticism, and performance observation, she cuts across traditional generic boundaries and analyzes forms as diverse as Chinese, African, and Greek funerary rites, tragedies by Aeschylus, Sophocles, Shakespeare, Racine, Ibsen, O'Neill, Miller, Beckett, and Ionesco, and her first hand accounts of explorations of the tragedy-mourning connection in the rehearsal process of the great experimental theater director, Joseph Chaikin.

Funerary ritual, according to Cole, enacts mourner's "ambivalent" or contradictory responses to death and the dead through theatrical means. By bringing phantoms to life on stage, such rituals produce the Aristotelian catharsis, the evoking and purging of pity and fear or expression and release of ambivalent feelings that are the hallmark of tragedy. From her detailed study of the symbolic journey to the spirit world performed in three interrelated Chinese villages, symbolic burial as enacted in the Benin Kingdom of Southern Nigeria, funeral ceremonies described in the **Iliad**, the lament for the dead in Greek tradition, modern survivals of women's ritual lament poetry in Crete and Epiros, and Athenian funeral iconography, Cole draws terms and concepts useful "for understanding essential but often disturbing, and otherwise unintelligible, aspects of tragic drama" (p. 12). In a chapter entitled "The Grave of Origins" Cole shows that Aeschylus's play **The Persians** is "the earliest and strongest possible example of the performance of ambivalence which links funerary ritual and tragic drama" (p. 29). At the center of this tragedy lies the ambivalent relationship between a son-inheritor and a father-ghost who pities and punishes the son who dares to supplant him. Cole finds similar links between funerary ritual and tragic drama present in Shakespeare's **Hamlet** where not one deceased father but three (the elder Hamlet, the elder Fortinbras, and Polonius) are placed in conflict with inheriting sons or son-surrogates (Clausius and Hamlet; Polonius and Hamlet; Claudius and Laertes; "old Norway" and his nephew Fortibbras). Finding **Hamlet** "a tragedy of a mourner in a world which provides no context for mourning" (p. 41), Cole convincingly explains the play as a complex study of ambivalent emotions rising from repressed grief.

In her discussion of Racine's **Phedre**, Cole shows how major elements which link mourning ritual to tragedy can be first introduced and then inverted to create the unique history of a father who returns from the dead to become the chief mourner-inheritor of his son. Ibsen's **Ghosts** illustrates a similar inversion in that Mrs. Alving precipitates the tragedy by attempting to deny her son his "inheritance," his ambivalent relationship with his dead father. In Ionesco's **Exit the King**, Cole finds a tragic drama which, like the death rituals it recalls, forces us to confront our own desire never to exit life. As Ionesco's protagonist Berenger learns to accept the journey from life to death, he recreates the ambivalent stuff of tragedy itself, leaving behind his audience as chief mourners and surviving inheritors of his legacy.

The most fascinating evidence Cole offers for tragedy as the performance of ambivalence, however, lies in her chapter describing the rehearsal process of Joseph Chaikin's Winter Project, a group of actors, musicians, and a highly gifted director who together prepared in 1982 a collaborative theater piece about dying. Chaikin's play **Trespassing** forced audience and actors alike to confront the silent body of a dying woman present on stage throughout the performance. Cole found that in devising a means of theatrical expression toward this body, actors were forced to rediscover the same archaic language of gesture, sound, and ceremony regarding death she noted as characteristic of funerary ritual and early tragedy.

Cole rightly anticipates that once one has grasped her thesis, one would wish it applied to a wider range of plays. Her book concludes with a discussion on nine plays (three classical, three Renaissance, three modern) which fit her theory of tragedy with varying degrees of resistance.

To summarize, Cole has written successfully about tragic drama as "a kind of artistic transformation of the impulse to mourn, a continuation by other means of the contradictory desires embedded in our response to death" (p. 165). One can, however, finally approach a complete appreciation of her work only by applying its insights to one's own favorite tragedies.

SCRAMBLED EGOS

Robert N. Bellah, Richard Madsen, William M. Sullivan, Ann Swidler, Steven M. Tipton. **Habits of the Heart: Individualism and Commitment in American Life** Berkeley: University of California Press, 1985. xiii + 355pp. $16.95 Cloth. Reviewed by Phil Mullins, Missouri Western State College.

Habits of the Heart has already proved to be a popular and controversial book. It very quickly went through several printings and its authors, four sociologists and a philosopher, are in demand on the lecture circuit. Bellah is the senior scholar of this group; he wrote the final draft of the text while his junior colleagues gathered data by interviewing about 200 contemporary Americans about a set of issues. The "Preface" states the general concern of the book: "how to preserve or create a morally coherent life" (vii). The same question has produced reflections by contemporary thinkers such as Alasdair MacIntyre. **Habits of the Heart** as a mediation on values is thus a worthy text with which to introduce, in humanities classes, a broader discussion of problems in contemporary Western culture.

Bellah's colleagues undertook individual research projects focusing on love and marriage, therapy, local politics and voluntary organizations as a way to assess the ambience of contemporary public and private life. The field work concentrated on attitudes of white middle class individuals or groups in urban centers and on both coasts. Although recognizing the limits of this interview sample, the authors contend that the attitudes uncovered are in important ways representative of current cultural patterns in America.

Bellah's colleagues are all capable scholars who have done earlier research on matters treated in **Habits of the Heart**. Bellah himself, as the integrating author, is the galvanizing force in the book. He has written brilliantly about Japanese religion and culture but certainly his fame comes from his work spanning the last twenty years on American religion and culture and its contemporary dilemmas. Bellah was one of the early students of "civil religion" in America; this term is now a commonplace in discussions in ethics, sociology and American studies. His book from the mid-seventies, **The Broken Covenant**, in several ways resembles **Habits of the Heart**. There is in **The Broken Covenant** a sense of loss and a yearning for change.

These motifs are overt in **Habits of the Heart**. Bellah and his co-authors intend not merely to summarize contemporary attitudes about private and public life but to question the adequacy of these attitudes and to suggest alternatives. They view their analysis as an historically informed conversation with those they interviewed. Further, they argue that social scientific research itself, like their book, can and should serve as a vehicle for a broader public conversation about values and policy.

The critical argument of **Habits of the Heart** can be succinctly stated: contemporary American culture is in a precarious position because most Americans interpret both private and public life with the impoverished moral language of modern individualism. Individualism has always been important in North American culture. Social scientists such as Tocqueville noticed this and commented on both the positive and negative potential of this element of American culture. Historically, American character modes and vocabularies for describing the self were at least partially shaped by biblical and republican traditions, but these traditions have been largely eclipsed by utilitarian and expressive values, values which are likewise long-standing in American culture. Modern individualism, which the authors later in the book somewhat hyperbolically dub "ontological individualism," implies that the individual is the only firm reality. Contemporary images of success, freedom and justice strikingly bear the imprint of utilitarian and expressive perspectives; such images are sharply in contrast with images more communitarian in aspect, as can be found in the biblical and republican strands of the American tradition. Modern individualism ultimately leaves us with the notion that all of our ideals and values are merely a matter of individual preference. In an environment of radical individualism, all normative commitments become only alternative strategies for self-fulfillment. Freedom becomes an empty notion: there are alternative strategies for self-fulfillment but there is no common expectation about the content and character of such fulfillment. In sum, the critical analysis in this new book focuses upon the limitations of the contemporary North American ethos, upon what Tocqueville termed the "habits of the heart."

What antidotes does **Habits of the Heart** propose for a culture dominated by the values of modern individualism? To be truthful, Bellah and his colleagues are better at spiritual diagnosis than spiritual prescription. **Habits of the Heart** offers a reasonably cogent, although not captivatingly original, analysis of the problematic aspects of American private and public life. Its constructive thrust chiefly emerges somewhat indirectly by inference from the critique. Love and marriage, the argument runs, are increasingly viewed as sources of psychic gratification; even many in the mainstream are smitten with the "therapeutic attitude" which overemphasizes self-knowledge and self-realization through direct communication. The therapeutic model for personal identity leads toward a shallow, individualistic contractual orientation. We need to recover appreciation for earlier conceptions of friendship and marriage; such conceptions emphasize stable relationships and linking persons with the larger social order. Deepening family life and participation in voluntary associations, religious and non-religious, also appears to the authors as potentially important. But the groups which can reshape the American ethos must not be mere aggregates of individuals but true communities of memory; a community of memory provides a context of meaning which links individual aspirations and those of the social group. Americans must overcome the notion that politics is unsavory; this will require envisioning the political process anew, for many of our historical experiences are now unusable. It will also require grappling with institutionalized power and the complexity of modern society; it will mean redefining the meaning of work and the relationship between work and reward. We must develop the sensitivities of a people attuned to our social ecology.

The constructive vision of **Habits of the Heart** is not really programmatic; Bellah and his colleagues do, however, identify focal points for reforming the cultural patterns of meaning used to discern identity and purpose, both individual and collective. In the final analysis, **Habits of the Heart** is a quite readable book about our images of ourselves as Americans in the late twentieth century. This book should be especially appropriate to stimulate serious thought in interdisciplinary humanities courses focusing on American culture.

HOLY GRAILS, ETC.

"Medieval Church Treasuries," by Margaret English Frazer in **The Metropolitan Museum of Art Bulletin**, Winter 1985-1986. Metropolitan Museum of Art, Fifth Avenue and 52nd Street, New York 10028. $18/year, single issues $4.75

Church treasuries of ritual objects and other precious artifacts are much older than Christianity. There is a major school of thought that the back room (Opisthodanos) in Greek temples such as the Parthenon was used as a **thesaurus**, or treasury, and the tradition seems to be almost universal. Few Christian churches have maintained their treasuries intact, but we shouldn't lament unduly, for one of the functions of the treasury was to serve as a bank of more or less negotiable items for times of stress and poverty. The large number of these artifacts that have found their ways into museums (the Metropolitan and its medieval satellite, The Cloisters, have over three hundred) should attest to the fact that not all have been "priceless" treasures. Unfortunately, many precious objects were plundered by thieves and armies. Most of the treasures of San Marco which toured United States museums in 1985 and 1986 were trophies pillaged by good Christian Venetian knights from Christian churches of the East.

Many of the objects in the treasuries were functional ritual objects necessary for carrying on the business of worship; others were apocryphal ornaments to the rituals, and still others were tourist attractions, acquired for just that very profitable purpose, although it would be impossible to designate which objects were acquired for such crass purposes, since all were objects of veneration. "Such yearning for tangible evidence of the Christian faith was related to the phenomenon of pilgrimage," writes Frazer in her historical introduction. "The church of the tomb of the apostle James at Santiago de Compostela... drew numerous pilgrims, bringing prosperity not only to Spain but also to the communities along the route, like Sainte-Foy of Conques, France"--which got **its** saint's body and relics by theft from a neighboring town.

The organization of this magnificently illustrated magazine issue is useful to teachers of the humanities who want to interconnect museum artifacts with medieval life--and with a good deal of Roman Catholic life today. Frazer deals first with primary liturgical objects, then secondary liturgical objects, followed by service books and reliquaries. It is surprising how few are the primary liturgical objects, that is, those that were regarded as sacred, and necessarily connected with the rite of communion that was initiated by Jesus at the Last Supper. In the primitive church, this was a communal supper, but by the second century, it had moved to a morning service in a sanctified house. It is unknown when special cups for the sacramental wine and plates for the sacramental bread were set aside (nothing survives from before the sixth century), but as the centuries moved on, the act became more and more sacred, it became increasingly a rite in which the priest **represented** the people, and the functional cups and plates became richly decorated chalices and patens. Thus, Frazer notes two beautiful chalices from the

Cloisters treasury where the capacity of the sixth century Byzantine example is greater than the thirteenth century German vessel, indicating a shift from large group to priestly imbibing.

Other changes can be read from the artifacts. As the church became more secure, more popular and more populous, the community ritual developed into ritual theater. "In the Late Middle Ages a new form called a **monstrance** was introduced... in response to a change in the liturgy in which the priest elevated the Host for the congregation to see and adore." The other primary liturgical items are the rare tabernacles, which appear to have been kept on the altar table to hold the chalices, patens, the ewers in which the wine and water were kept and the pyxes, or box to hold the bread (now reduced to thin wafers), and the sacred books of Christ, the gospels, which were often enclosed in jewel-studded gold and ivory book covers.

The list of secondary liturgical objects is long, including such obsolete forms as liturgical combs (presumably used in the investiture ceremony of the priest) and the **flabellum**, which was a fan for keeping flies from the sacred body and blood of the Savior. Other objects are still with us, such as censers, holy-water sprinklers, candlesticks and portable altars for the priest to take on sickcalls. One of the most familiar and essential objects of Christian church altars--Catholic and Protestant alike, the cross, was a relatively late addition to the sacred table. Most early crosses were either large architectural pieces or were intended for carrying in processions. The Cloisters owns a twelfth century English crucifix of ivory that seems to have been designed for an altar.

While the gospel books were considered sacred embodiments of the word of God, service books were directly functional as guides to the priests for properly conducting the services. Frazer explains how these developed into the **missal** in the latter thirteenth century and the **gradual**, a service book for musical rites. Both missals and graduals were often elaborately illuminated, and although the Metropolitan does not collect medieval books (the Pierpont Morgan Library some dozen blocks south manages quite well), some fine service book illuminations have found their way into the museum exhibits.

Reliquaries are the objects that were made to hold sacred relics. Not having practical functions such as being used for drinking, holding candles or combing hair, their forms have no everyday counterparts, and often have an "element of surrealism" which was "probably cultivated because of its emotional effect upon the faithful." Two such surreal reliquaries that are illustrated are an arm and sleeve of gold that contained a fragment of a saint's arm bone and a realistic bust of Saint Juliana that holds a fragment of her skull. Reliquaries for pieces of the cross on which Jesus was crucified abound-- "over eleven hundred reliquaries of the True Cross are known"; and one can understand their wide distribution from the experience of a pilgrim named Egreria, who learned that one pilgrim under cover of reverent kissing of a fragment of the True Cross, bit off a hunk to take home as a souvenir.

SALIGIA

"Seven (and more) Deadly Sins" by Paul Jordan-Smith in **Parabola**, X:1, November 1985. Parabola, 150 Fifth Avenue, New York NY 10011. $18/year; $5.50/issue

SALIGIA is an acronym made popular in the Middle Ages for remembering the Seven Deadly Sins in a regressive order of deadliness. Decoding the acronym gives us Superbia (pride), Avaritia (greed, covetousness), Luxoria (lust), Invidia (envy), Gula (gluttony), and Acedia (sloth). Why pride is least deadly and sloth most deadly is illuminating in more ways than one, for we learn not only the archaeology of the seven deadly sins, but how much we have trivialized and stereotyped the formula, insulating our spirits against the self-examination that the seven-fold formula provided.

The number seven appears first in Christian literature of sins in the Sixth Century AD in a treatise by St Gregory the Great. Prior to that the "desert father" Evagrios listed "Eight Kinds of Evil Thoughts," while earlier St Augustine had listed fifteen sins, including all of the classic seven except gluttony. Curiously, the seven had appeared together in pagan writings: the Epicurean Horace in his first epistle, circa 20 B.C., listed seven **vices** that in excess would detract from the serenity of a balanced life. Which of course is not the same thing as sin. It is in St. Thomas Aquinas' **Summa Theologia** that a systematic analysis of the seven sins was set forth, to dominate Roman Catholic thinking all the way to the beginning of our century. The Thomist thought no longer obtains, however. Jordan-Smith, a freelance writer, compared the 1912 edition of the **Catholic Encyclopedia** with the current edition, which "treats the subject in psychological terms, almost as if sins were little more than quirks of the personality, to be treated by the modern pastor by psychotherapeutic methods."

Has sin merely fallen out of fashion, or has modern humanity managed to bury it deep, with all the other artifacts of long-gone religions? As a regular contributor to **Parabola**, a magazine that espouses profound faith in the spiritual value of myth and ritual, Jordan-Smith believes in the importance of contemplating sins and sinfulness, but he says that "case could be made that each of the Seven Deadly Sins has come to be looked on almost as a virtue largely because in our mistrust of systematic religion we have lost the knowledge of distinctions. We can no longer discriminate when one of our appetites, carnal or spiritual, has become an end in itself.... Since each sin has its virtuous counterpart, we are apt to mistake one for the other."

Take **pride** for example. Church fathers were well aware that on the one hand, pride is the least deadly because its counteragent, **humility**, is an exercise within human capability for action; yet, on the other hand, pride is one of the most devilishly insidious sins, for if the sinner works aggressively to root out all other six sins, pride in the form of the vainglorious self-assurance that now one is qualified to preach of virtuousness to others is likely to creep in. Even the effective practice of humility can convert into smug holier-than-thouism: "I'm the number one humble one!" Today, says Jordan-Smith, prideful ambition has become a virtue in self-help books. Looking out for "number one" is the word of the day, advertising presents beautiful egoists who praise products because 'I'm worth it,'" and we assert "Black pride," "gay pride" without thoughtful contemplation about distinguishing between "the true and the false among the forces that move us."

The examples of the modern virtue of pride indicate the degree to which we think in material terms, wearing brand-name badges of pride in goods on our shoes, our teeshirts, our bumpers and our rumps. Sts. Gregory and Thomas both recognized how pride and its public form of vainglory lead to all the other sins: avarice, lust, gluttony and so on. Each of the sins, in its traditional form and its modern stereotyping is examined in similar manner by the author.

But why is **sloth** the most deadly? It is not because of the modern stereotyped slothfulness of lying about in a hammock, gluttonously imbibing in Chivas Regal (because you deserve it) and lustfully paging through **Cosmopolitan** or covetously wishing your way through **New Yorker** ads, envying all who are better off than you. No, not these. Sloth is most deadly, because the slothful human makes no effort to contemplate or to counteract his or her own sinfulness. Thus, the proud person can try to learn humility, but only by self-effort, which sloth prevents.

CHRESOMATHIA

"From 'Polite Learning' to 'Useful Knowledge,' by James Burns in **History Today**, April 1986. 83-84 Berwick Street, London WIV 3PJ. U.S. $3.50/issue.

The quarrel between the camps of liberal education/humanities and vocational training is so familiar to us that its bouts seem like scheduled rounds in a ritual contest. The quarrel has been going on much longer than some might suspect, and in England of the first half of the nineteenth century the issues had important political significance. It should be understood that both terms, **polite learning** and **useful knowledge**, share implications of broadening education among a larger group than those of the universities. Polite learning, says Burns, who is a professor of political history at University College in London, "was clearly an extension of the learning that was supposed to be 'reborn' in the Renaissance. It was also a dilution of that learning, a popularization if not a vulgarization of it." Underlying polite learning was the idea that although it was pursued for its own sake, it was a civilizing force as well.

Polite learning, therefore, was exclusively for gentlemen, but we should bear in mind that outside of Oxford, Cambridge and possibly the Inns of Court, the majority of English gentlemen were agriculturists, widely scattered throughout the island. For their degree of politeness, literature provides us with such models as Sir Toby Belch, Squire Western, Heathcliff and others. But with the publication of the famous periodicals **The Tatler** and **The Spectator** in the early 18th century, gentlemen in various backwater towns gathered to discuss the magazines, and "members were encouraged, even required to submit communications of their own; and a library was gradually built up, to which each new member was expected on his admission to present at least one volume." Through these various "Literary and Scientific" or "Philosophical and Archaeological" societies young men, whether home educated or mentally stultified by the anarchical public schools of the time, acquired the rudiments of classical learning. Moreover, many libraries and museums were started from these polite and dilletantish beginnings.

Enter Jeremy Bentham and Chresomathia. The term, Bentham said, meant "conducive to useful learning," and what he was proposing was schools for persons of all classes (but especially the middle classes). Unlike Count Rumford's 1799 Royal Institution which Bentham thought too elevated and only for "superior and extraordinary minds," Bentham's school was to take young men and equip them with useful rather than "ornamental" knowledge. What came of it eventually was the University of London, whose 1826 Prospectus broadened liberal learning to include modern languages, natural sciences and political economy. Further, it would offer training in civil engineering.

Meanwhile, other approaches to democratizing useful knowledge were being pursued, such as Henry Brougham's Mechanics' Institutes, which were "primarily concerned with the teaching of elementary science as the basis of trades in which members were engaged." Starting in Scotland in 1823, augmented by the concurrent **Mechanics' Magazine**, there were close to a hundred institutes by the end of 1825. The following year Brougham launched the SDUK--the Society for the Diffusion of Useful Knowledge--which published books, maps, pamphlets, at first in technology and science, but soon broadening into "entertaining knowledge."

But all these efforts, however successful, were viewed as politically dangerous. The elevating of lower classes through education endangered the English class system. Most particularly, the teaching of political economy to the lower classes was viewed as potentially inflammatory, and even the most liberal-thinking surveyors of useful knowledge for the masses were distressed by Harriet Martineau's bestselling books that put economic theory into forms that any could understand.

FEELING NUMBERS

"Counting Your Blessings: Sacred Numbers and the Structure of Reality" by William K. Powers in **Zygon: Journal of Religion and Science**, March 1986. Rollins College, Winter Park FL 32789. $20/yr.

All religions have sacred numbers: the Christian trinity and seven deadly sins, for example, or the Hebrew seven candles and ten commandments. Ordinarily we note these sacred numbers rather glibly, neither inquiring into why it is **these** numbers rather than others, nor how they originate for different cultures and religions. Moreover, our tendency is to regard a sacred number as a fixed mythological element, or "static models of a society's symbolic representations."

All this is hasty and simplistic to Powers, who is a Rutgers University anthropologist. Far from being static, sacred numbers are dynamic and belong to the area of ritual behavior rather than verbal myth. The origins of sacred numbers are concrete, relating to using parts of the body for counting. Counting one to five can be done on a single hand, which oftentimes then serves as a mnemonic for counting to higher numbers. In a number of pre-literate societies, the word for five is **all**, so that thirteen might be rendered or two alls plus three. This theory of origins produces several cultural effects: first, there is a degree of **handedness** to the expression and values of sacred and mystical numbers. The right hand is active, the left passive in finger enumeration as it is in making the sign of the cross or of blessing.

Another product of the bodily origins of sacred numbers is that they are **felt** by the members of the culture. This sounds mystically vague, until one realizes how much we of the European cultural heritage don't feel "right" when groups of words, of illustrations, of ideas are not expressed in trinities. What were the three main causes of the Revolutionary War? Who are the three B's in classical music? What are the three Aristotlean tragic unities? The three divisions of government? The elements of art are what? Line, form and color. Of music? Rhythm, melody, harmony. How many bears, pigs, musketeers or stooges are there?

The answer is three, not because three **is** right, but because it **feels** right. Powers goes beyond this: the sacred numbers precede reality. That is, a given reality "out there" might "naturally" fall into two categories, or five, or eleven, but "the numerical system takes precedence over the objects which it seeks to classify and therefore explain."

But, Powers says, following insights provided by the much maligned early twentieth-century sociologist Lucien Levy-Bruhl, "all numbers are the same;" that is, it is of no significance which numbers become the predominant structures for a culture. What is important is that once certain numbers evolve into importance, the numbers will model and structure experiences, arts, rituals, institutions. The sacred numbers are plural in many--possibly all--societies, though it is rare to find integers beyond one to ten, simply because the ten fingers constitute a limit for handy enumeration. Despite our western trinitarianism, other numbers provide ritual structures for things (2, 7, 4, 9, 10 are common, but 6 seems neglected).

The Oglala Lakota (popularly known as "Sioux") of South Dakota have been Powers' particular people for field study. Four is the dominant sacred number for the Lakota, but seven is also important and the numbers often complement one another. "Four...generally relates to what is perceptually all persons, places and objects in nature--the four directions, the four seasons, the four stages of life, four kinds of living things, four phases of a plant...[while]...the Lakota divide most of their social and political divisions into sevens." In the ritual ceremony of the Sweat Lodge, both numbers operated, and seven is seen as the sum of four (directions), two (sky and earth), plus one (a symbolic eagle). But we must be cautious about over-analyzing the elements, because within this ceremony, the numerical systems co-exist much as in baseball the nine players are four infielders, three outfielders and a balanced **dyad** of pitcher-catcher. Furthermore, we must be cautious about viewing the numerology of the Sweat Lodge ceremony as having fixed associations. "The quadratic structure can symbolize any natural category..., the dyadic structure can serve to symbolize any contrasting set that is significant in Lakota culture..." and the monadic element can stand for unity or for the individual person. In a similar way, the Christian cross has four parts, yet relates to the trinity and the individual Jesus and individual worshipper.

One more dynamic aspect of sacred numbers is that they can symbolize a development, evolution or process in which (for the Lakota) fourness, the arrival at the fourth, produces a feeling of completion, satisfaction and fulfillment. Because of this kind of feeling, Powers quite rightly concludes that there is safety in numbers.

A Special Issue

edited by

David H. Stringer

PREFACE

It has been argued in the popular press that the invention of the computer ranks as a watershed human achievement, matching in significance the invention of telecommunications, the printing press, written language, and speech itself. That is a large claim for many of us in humanities education who, like me, think of a computer as a typewriter with a few magic buttons.

It is with some skepticism, then, that this issue of **HUMANITIES EDUCATION** addresses the question of the role of the computer, and of technology itself, in the art which we practice. Several of the articles included in this issue argue that the computer is merely a tool. Rudolf Arnheim, Steven Schaffer and I all urge us to remember the primacy of human imagination, ideas and intentions. A second group of articles introduce readers to what computers can do. Bernard Galler provides historical perspective, while Loren Lomasky explains how the computer becomes an integral part of an ethics course that is required for engineering students, and Jennifer Williams and Nancy Reding describe some specific applications of computer programs for humanities education. Jeremiah Reedy steps back to reconsider the relationship between the scientific community and the traditional culture which constitutes the humanities, and he advocates priority to education in the humanities. As in the Rites and Rituals issue, here the review essays also relate to our thematic focus: Susan Hockey's examination of the use of computers in textual research, Albert Bergman's more general study of the role of technology in contemporary life, and Kathryn Mohrman's statistical analysis of adult education.

While our previous thematic issue on Rites, Rituals and Humanities Education reaches to a deep core of human experience, this issue on Computers and Humanities Education has perhaps a more tenuous claim on our attention as humanists. It holds, however, a direct relevance for us as educators. Will computers give shape to our cultural lives and to how we open the cultural lives of our students? If the computer is in fact the new medium, and if Marshall McLuhan is right that the medium is the message, then what are the implications of this medium for our humanistic "message" about the human spirit and imagination?

THE TOOLS OF ART-- OLD & NEW

It is sensible and practically useful to call the most recent centuries of our history the age of technology. We assign the beginning of this age to the period in which tools, in the order meaning of the term, were being supplemented by machines. Machines are tools that no longer rely on a human operator for the power of action and the steering of the production process, but themselves supply all of the power and much of the control. There can be no doubt that the psychological, economical, and political changes brought about by industrialization are fundamental. The age of technology has given us mass production, rapid transportation, and the electrical generation of light, heat, and cold. It has replaced large amounts of human labor with faster and more accurate factory work, and it has severed our intimate ties to the work of our hands and to the elementary resources of nature. For all these reasons the age of technology certainly is distinguishable in principle from earlier periods. For these reasons, too, one is fully justified in looking for the particular cultural traits that characterize life with modern technology and for the specific benefits and threats it has in store for cherished human values.

But no novelty can be entirely new. Made by people and for people, the new must rely on the same basic principles, resources, and needs as the old. We are bound to misinterpret the nature of a novelty if we give it exclusive credit for qualities it shares with much more general conditions. Take, for example, the once fashionable assertion that the invention of the printing press converted our culture to linear thinking. As it happens, linearity of thought did not have to wait for Gutenberg. Written speech was linear from the beginning. But even this extension of our view does not suffice; we must realize that sequential speaking and writing are not the cause but only a manifestation of sequential thinking. The ability to think in sequences must have emerged at a primordial stage of human development, and only when we consider this ancient acquisition of the mind can we hope to approach the root of a psychological phenomenon that may have been bolstered since the Renaissance by the mass production of printed language but certainly did not originate as a specific symptom of so recent a cultural period.

Once we see technology in the more general context of people relation to their tools, we also react less one-sidedly to the suspicions that have been voiced against the machine--a fear expressed most

---

1986 The Regents of the University of California. Reprinted from New Essays in the Psychology of Art by Rudolph Arnheim by special arrangement with the University of California Press.

movingly in one of Rainer Maria Rilke's **Sonnets to Orpheus**, which begins with the assertion: "Alles Erworbene bedroht die Maschine." The machine, says Rilke, threatens everything humans have acquired, as it insolently claims to be "the inspiring lead" rather than limit itself to obedience. Unhesitatingly it "orders, creates, and destroys." We acknowledge the complaint, but we also realize that in Western history the onset of modern technology coincided with the age of Romanticism, and that the one-sidedness of Romantic thought is no less to blame for the conflict than the one-sided character of the machine.

The problem has become particularly poignant in the arts. Here again it is not sufficient to point out the ways in which the new instruments created by technology--say, photography or computer graphics--differ from the manual arts. It is equally necessary to know how these new devices handle the timeless invariants of artistic creation. There exist certain indispensable conditions without which art is not art, and we must find out what becomes of them when new techniques tackle the old job.

Looking back to the origin of people's relation to their tools, we are reminded that all willful human activity is generated by the mind for the mind, and that the first instrument to serve all that activity is the human body. No mental conception can generate material action of shape directly. The task must be entrusted to the body, which is not necessarily a very satisfactory piece of technology. For example, even if one excludes the hand and creates a drawing of an object by recording the draftsman's eye movements with the help of electro-oculography, one if far from producing a faithfully direct materialization of a mental image. In a sense, the whole problem is already there. The physical instrument, the human body, offers the means of giving tangible presence to the images conceived by the mind, but like every other tool, acting as an intermediary and translator, it has its own idiosyncrasies. Inevitably the special traits of the tool influence the product.

Certain formal qualities suit the instrument so well that they flow from it almost spontaneously. Others require special efforts, lead to painfully artificial results, or are not obtainable at all. For example, since the human arm is a pivoted instrument, it takes naturally to curved movements and curved shapes. A straight line movement requires special control, not only in drawing but also in the handling of a violin bow or in a dance gesture. The opposite bias distinguishes, for example, the loom. The weaver has no trouble with straight shapes when they run parallel to the woof, but the loom has its own rules: to produce a diagonal or a curve, it is necessary to coerce the weave's structure. Good craftsmen know how to reconcile the freedom of their conceptions with the character traits of their tools.

Most tools have an affinity to geometrically definable shapes, especially to straightness and rectangularity. Organic shapes, however, tend to be biomorphic. They eschew the straight line and the right angle and defy mathematical formulae. Human life in what is sometimes called a "carpentered" environment is largely an interplay between the flexibility of the organism and the configurations of cubic shapes, which facilitate work and orientation but may frighten us by their stern impersonality. The city dweller's escape to the inexhaustible multiformity of nature is a response to this contrast, and the recent rebellion of architects against the neatly regular skyscrapers of the so-called international style is equally symptomatic of the unsteady relationship between humans and their technological products.

These same examples, however, warn us not to view the situation too simply. After all, it was humans themselves who opted for all those cubic shapes and made machines to help build them. In architecture, the international style came about in response to a desire for clarity, simplicity, and efficiency. Mathematically precise slabs, cubes, cylinders, and pyramids are the embodiment of one of the extremes on the scale on which every organic and inorganic thing finds its particular kind of shape. The five regular stereometric bodies described by Plato in his **Timaeus** (4, sec. 55,56) as the elementary building blocks of all existing things are a pleasant reminder of our willingness to accept geometrical shapes as the manifestation of the fundamentally simple laws of nature, to which all complexity can be reduced.

In the history of art we note a give and take between simple shapes simply combined and complexities that tax the most refined organizational powers of the human nervous system. It looks as though the mind, in the course of its history, feels impelled to explore the many positions on the scale that lead from elementary constituents to their richest combinations. Thus, when in the arts of recent generations we observe a tendency toward mathematically definable shapes, it is not sufficient to explain such works as responses to, or products of, all the technology we happen to have around. Technology itself must be understood as a swing of the human mind toward a way of life that happens to be congenial to some of our present attitudes.

Note here also that not all technical devices affect the style of their products in the same direction. For example, photography, the first technological artform in the more specific sense of the term, does more nearly the opposite. It keeps picture-making away from the simple elements of shape and leads it toward the other extreme, the full complexity of the world in its actual appearance. The idiosyncrasy of the camera did not find the Western mind unprepared. By no means can one assert that photography came about in the nineteenth century simply because at that time the optics of the camera obscura happened to be joined by the discovery of photosensitive substances. Rather, it took a civilization inclined toward mechanically faithful recording to give the new invention its opening. Photography, as Peter Galassi argues in **Before Photography**, was a welcome ally in the quest for a realistic style of picture-making, which Western art had been seeking for centuries.

The example of photography can also help us to refine our notion of the role played by technological hardware in the artist's dealings with the environment. What is decisive for the character of the photographic product is not the technical equipment as such, but what it brings about--namely, the mechanical imposition of the physical world's projective image. This imposition, however, is only the most radical step in a long evolution that started when organisms developed eyes to obtain information about the environment beyond the reach of their bodies. In vision, the optical information is the raw material shaped by the nervous system. The eyes receive retinal images, and the brain processes them. Even more indirect is the relation of the painter to the visual images offered by the nervous system. Painters respond to images by inventing images of their own. But in the photographic camera, the visual world itself may be said to impose its projection directly upon the pictorial surface. The environment itself becomes a decisive component of the picture, and this is like saying that the tool, halfway between the world and the human being, is a part of the environment as much as it is an extension of the person.

I am influenced here by a striking remark I found in an article by a California computer artist, Christopher William Tyler in Ruth Levitt's **Artist and Computer**. He observes that "one of the trends of recent art has been the tendency to operate by selecting from an environment entities that have significance to the artist rather than creating from scratch on a tabula rasa." And he continues: "The instruments which are thought of as tools at the disposal of the artist become part of the environment in which the art is produced." In a more general sense we arrive at the insight that our problem is not so much the relation of the artist to his tools as the relation of the mind's conceptions to the opportunities and constraints presented by the environment. To invent a new tool is to change that environment. If we identify the human being with the mind, the body is not only the primary tool of a person, but also the closest neighbor in the world that surrounds that person. The boundary line can be traced either way.

In the arts the question arises to what extent the direct contribution of environmental factors must be acknowledged by viewers if they are to perceive certain types of art appropriately. This is certainly relevant in photography. A photograph can be understood and appreciated only when the viewer acknowledges the contribution of the optical projection (see in **New Essays in the Psychology of Art** "On the Nature of Photography"). Photography displays its particular value only when it is understood as a collaboration between the projected optical environment and the shaping mind of the artist. The artistic value of a photograph depends on the success of this collaboration. The same is true for other recording techniques, such as photocopying or the casting of molds in plaster or plastic. While we respect the documentary value of a mechanical reproduction, say, the imprint of a person's face preserved in a mask that was made after death, we have reason to object to the casting of a body when it is presented as sculpture.

To a lesser extent this is true for the geometric fundamentals to which I referred earlier. Although they can be conveniently supplied by tools, they are also essential creations of the mind itself and as such can, but need not, rely upon the help of tools. The potter's wheel or the lathe, for example, imposes upon the object a mathematically strict circularity in the rotational plane, while along the axis the craftsman creates "free" forms that need not obey any geometrical formula. For the appreciation of a typical ceramic vase it is necessary to realize, at least intuitively, the interplay between rigid circularity in the horizontal dimension and freedom of shape in the vertical. But it is not necessary, although perhaps helpful, to attribute the former to the technological tool, the latter to the free judgment of eye and hand. In principle, the same ceramic pot could be made without the wheel, although the skill would really be wasted and the result would hardly match the perfection of the "thrown" product.

Moreover, the use of the mechanical tool and the realization on the part of the viewer that the tool has been used sharpen the distinction between mathematical regularity and free invention. The mathematical condition of circularity is a constraint imposed by artists upon their visual imaginations, and the potter's wheel is the technological device that introduces the constraint with the utmost precision.

It is useful to realize that the imposition of rational, i.e., intellectually definable, shapes by the lathe, the wheel, the plane, the saw, the straight-edge, or the draftsman's compass, is similar in principle to the intellectual constraints adopted without the aid of such tools by painters or architects when they rely on modular proportions, the golden section, or other ratios. In literature one can refer to the rules for the form of sonnets or haiku or to Dante's use of the number three in the composition of the **Divine Comedy.** The same poet's funnel-shaped hole of the Inferno and the conic mountain of Purgatory as well as his concentric galleries of sins and virtues were built without the help of engineers. The case of music is too obvious to mention. Everywhere the mind craves the rationalization of shapes and, if necessary, produces tools to achieve it.

In this connection it is instructive to look at computer graphics. A computer is a steering device and as such has been compared, misleadingly, to the human brain. It differs from the brain in at least two fundamental aspects. A computer cannot invent but only execute instructions. To be sure, it can deliver combinations that no brain ever conceived of, and it can produce random patterns that might enchant and aid artists. But neither combinations nor random behavior amounts to invention, or even thinking.

Computers differ from brains also by being incapable of organizing data in field or gestalt processes, which are the privilege of perception and as such a decisive resource of the artist. Computers, as we know them today, produce only combinations of fixed elements. They receive information in the form of bits, and they dictate only patterns whose shapes and spatial relations are reducible to the formulae by which they were constructed. Therefore the technique of computer graphics is particularly suited to geometrical ornament. It is a godsend for weavers and for the designers of fabrics and wallpapers because not only does it execute tediously repetitious work with supreme accuracy and speed, it also can deliver all possible variations of a given set of elements and thereby supply the designer with an inexhaustible choice of themes. By the same token, however, certain types of computer graphics presented as works of art remind us all too often painfully of Christmas tree decorations or grandma's cross-stitch embroideries. In such works there is frequently a pathetic discrepancy between the sophistication of the program fed into the computer and the simplism of the visual results.

Such disappointment is to be expected when the work is entirely determined by a computer program. Elsewhere in the arts the same aridity distinguishes certain works of so-called minimal or conceptual art that are derived entirely from intellectual measurements. In the search for proportions that would reveal the secret of beauty, there has been a similar belief that once the happy formula was found, it would deliver the perfect composition. This, however, is an illusion. Wherever such measurements are used, they serve only to give simple accuracy to relations prescribed by intuition. This is true, for example, of symmetry. And it took Le Corbusier's ingenious sense of design to make the **modulor** a useful aid.

The good sense of good artists make them realize that the unchallenged dominance of particular mental powers leads to poverty and boredom. In successful products of computer graphics all elements, whatever their origin, fit a visual pattern whose compositional order and originality reveal themselves to the eye but are not reducible to the sum of the elements that may have given rise to them.

When intuition controls the design, technologically created shapes can exercise a particular charm and enrich the artistic statement. This effect is evident elsewhere in the arts when geometrically simple shapes such as squares, circles, or even simple straight lines appear in pictorial compositions. Modern nonfigurative painting offers examples; so do sculpture and, of course, furniture design and architecture. The antagonistic interplay of rationally defined elements and the elusive freedom of intuitive conception reflects symbolically the dual character of the mind. It also symbolizes people's productive dealings with nature and with their own rationalized environment.

A good example is the use of typographic elements in so-called concrete poetry (see "Language, Image, and Concrete Poetry," in **New Essays in the Psychology of Art**). In this recent branch of graphic art, letters and numbers are combined to form visually meaningful compositions. Here again the results are most successful when the printed shapes are arranged with intuitive imagination. The patterns often lack interest when they are confined to the standard horizontal and vertical rows and columns or to a few regular distances. The technique also fails, however, when the letters or numbers look handdrawn. It takes the crisp precision and perfection of printed type to make the contrast compelling. In this connection it may also be mentioned that the reflections of the technological age in modern painting and sculpture are most convincing when actual samples of machine production are used in collages, assemblages, or constructions of **objets trouves**, whereas the pictorial imitation of technological shapes, for example, in the stovepipe figures of Fernand Leger's paintings, rarely go beyond ingenuous make-believe.

As long as we are dealing with art, perceptual experience remains the final objective and the final judge. A sobering admonition to this effect came half a century ago from one of the most influential pioneers of technological art, Laszlo Moholy-Nagy. In his book **From Material to Architecture** he wrote:

> Since ancient times people have labored to discover formulae for laws that would decompose the intuitive quality of human expression into scientifically manipulable elements. One tried repeatedly to establish canons that would guarantee harmonious results in some particular medium. We have become skeptical about this sort of doctrine of harmony. We do not believe that works of art can be produced mechanically. We know by now that harmony does not reside in an aesthetic formula, but in the organic, unhampered functioning of any one being. Therefore the knowledge of some kind of cannon is much less important than the existence of a true human equilibrium. To approach a piece of work in this

6!7

> way is almost tantamount to giving it balanced, harmonious shape and true meaning. When this is done, the work attains its lawfulness by itself, organically. (p. 188)

I will conclude with one more reference to the so-called applied arts, for which technological means of production are most frequently and most happily employed. The applied arts make constant use of geometrically simple, intellectually definable shapes, which appear in the fine arts only exceptionally. Of course, this is so for practical reasons. A building reposes most safely on right-angled relations. A table, a chair, or a vase uses symmetry to stand up. The cylinder and its piston will not fit each other unless they are perfectly smooth and regular. Easy cleaning, measuring, stacking call for simple shapes. And precisely those simple shapes are most readily produced by tools and machines, because tools and machines themselves function best when they are designed of simple shapes. Tools and machines make objects of their own kind, and what suits the functioning and efficiency of the producing mechanism suits the functioning of the product.

Not only do all organic or manufactured things fulfill certain functions, they all participate in artistic expression. It has often been observed that well-designed machines are beautiful. Why do we welcome geometrically simple, intellectually definable shapes in the applied arts, whereas we reject such a preponderance in the fine arts? The reason seems to be that a painting or a piece of sculpture--and the same is true for musical compositions--is expected to represent and interpret the various aspects of human experience in all their fullness. If the image they offer is one-sided, they fall short of their task. Each of the works of painting or sculpture we see in our museums and each musical composition we hear at a concert is, one might say, a complete and closed world of its own. These works are either detached from the broader context of the environment they represent, in which they and we dwell, or they occupy within that environment a central place that calls for such completeness of representation.

Most objects, however, serve a more limited function. A wine glass, for instance, is shaped to facilitate drinking. Therefore artistically also it should express the limited functions of containing and dispensing and should do so in a manner that benefits a festive occasion. If such an implement goes beyond its limited program, if it pretends to be painting or sculpture, we are puzzled and suspect bad taste. Benvenuto Cellini's exuberant saltcellar can embarrass. There is, then, a meaningful correspondence between the range of an object's function and the range of its expression. Modesty of expression suits a pocketknife or a pair of scissors. When a hunting gun or a telephone is enriched beyond practical necessity, we diagnose a tendency to glorify its function.

Although the so-called applied arts rely so rightly on simple, rational shapes, even they are seldom reducible to such elementary geometry. Even a beer bottle supplements its straight cylinders with curved transitions and endings that may follow no simple formula. An elementary tool like a hammer or pair of pliers has angles, proportions, and curves whose aesthetic rightness in relation to their function can be judged only intuitively. But the machines and tools that fabricate these objects cannot make free forms. They can only cast or stamp them out from models created by designers.

The conclusion seems to be that the outcome of the encounter between people and machines will be determined more by the former than the latter. It is true that in many ways an airplane is more coercive than a buggy, and an electronic word processor more than pen and paper. But whether or not we get carried off by the waters that swept away the sorcerer's apprentice will depend more on the swimmers than on the flood.

THE COMPUTER IS A TOOL, NOT A SUBJECT

Has the introduction of computers into education somehow dehumanized it? This is a question that is often on the minds of teachers. It is a valid question and a valid concern. But is it true that computers will somehow replace the teacher-student relationship that is so vital under our present method of teaching and learning? I believe that the answer to this is a resounding NO.

Ann Arbor Public Schools has had computers as part of the curriculum for over 20 years. That has given us a great deal of time to explore their uses and observe their impacts and problems. To gather together this wealth of experience, a "Computer Council" was formed, consisting of many people who have had a great deal of time to evaluate the role of computers in education. As one of two Computer Coordinators in the district and a member of that council, I would like to share some of my philosophical conclusions along with some of the experiences upon which these conclusions are based.

There is no question that computers will change our world in ways that are hard to imagine. Computers will add new possibilities, new dimensions to enrich our lives. This includes enriching our educational techniques as well. For example, this summer a new wrist watch was put on the market. Its cost is around $150. With the watch comes a cable that can be connected to an Apple II computer. Through this cable approximately five pages of text can be sent from the Apple to the watch. This text can then be viewed on the liquid crystal display of the watch using two buttons to scroll backwards and forwards through the text. I have described this device to several teachers and observed their reactions. Some were horrified by the potential for cheating. They immediately feared that students would somehow misuse this device. Others became excited, first considering what it could do for them personally, and then realizing what it could do for their classes. Along with this second group, I view this watch as a useful tool, allowing people to carry information in a compact and readily accessible way. It does not replace the higher level thought process, but rather enhances them by allowing us to free our minds from details. And what is this watch but a wrist computer?

Our students have had a great deal of exposure to computers in education. This year's graduating seniors in Ann Arbor have had computers in their classrooms from kindergarten through the 12th grade. They have seen computers used to teach programming and to teach science, math, and reading. They have used computers to word process, to learn accounting, and to simulate nature. In short, they have used computers enough that the novelty has worn off. This novelty factor is extremely important. When computers were new and novel, the Ann Arbor School's faculty and counseling staff found that students would take a class that used computers, even if somewhat irrelevant to their education, just to play with them. Over the last several years, as more and more of the novelty has worn off, the students have become far more selective in their use of computers. This does not mean that they avoid them. Quite to the contrary, they seek them out and demand them, but in a form that is useful and meaningful to them.

This leads me to the present philosophical position that computers are not a subject, but rather are a tool. Like any other tool, certain obligations are implied. Looking at some of the other tools of education, we can see how computers fit into this scheme. The typewriter is another tool, along with the projector, tape recorder, ditto machine, xerox machine, and VCR. Other tools include the chalk board, calculator, overhead projector, globes, maps, etc. More removed, but still a tool, we have the printing press. Nearly all teachers will find themselves using several of these tools nearly every day that they teach.

Try to imagine teaching without ever having a chalk board, projector of any kind, or any form of print. Socrates taught effectively using such a technique, but few have been successful since. We have accepted these tools and use them to our advantage when we see fit. We should likewise use computers as tools, choosing them when it is to our advantage and when we see fit.

Instead of a curriculum with no tools, imagine a curriculum that requires specific tools. It might require to use a chalk board for two weeks in the first unit, or require that the slide projector be used to teach driver education. Such demands are absurd. Likewise, a social studies curriculum which requires a two week unit on computers is equally absurd. Somewhere we must find a happy middle ground. We don't ban or require the computer either.

Where are the "experts" to guide us, to help us determine whether a use is appropriate or not, and to decide just what should be required? Teachers often consider themselves to be the experts in their own specialty, teaching. Yet where did they acquire this expertise? In many cases, the skills are learned through experience, training, and observation of other experts. With computers being so new, there are no previous experts from whom to learn. There is little or no knowledge base to build upon. Even a few short years ago no one knew how to use this tool. This is changing rapidly. Once no one knew how to use a ditto machine or movie projector, yet now both have found appropriate places in education. With time and experimentation, effective methodology for computers will be developed as well.

A different part of this concern is knowing how to operate this technology. A social studies teacher might fully understand the concept of using computer-based data to study parallel developments throughout history, but may have no idea of how to actually turn on the computer and press the appropriate keys. Too often, this second concern gets mixed up with the first. Discussions on how to best use a computer as a tool often become discussions on how to train a teacher on a specific computer and computer program. We must be careful not to confuse the tool with the concept that is being taught by using the tool.

Our educational system must accept some responsibility for dealing with the issue of training. The technology of the tool is changing too rapidly for the traditional methods of learning to occur. Merely hoping that knowledge will informally trickle down through the faculty from a few trained teachers is not effective. Long before even half of the faculty has begun to use the technology, the technology itself will have to be put into place.

Several highly effective training programs have already been implemented in a few districts. One of the most effective that I have seen has four full-time district trainers and a training center. Teachers may train after school for overtime pay or credit towards steps up the pay scale, or during the day for release time. A minimum set of courses must be completed every three years, with new required courses being added and outdated courses being dropped regularly.

The emphasis in these professional development courses must be on using the computer as a tool. Teachers should be taught to do word processing, store and retrieve data, manipulate numbers, telecommunicate, build simulations and models, and evaluate and use commercial educational software. Examples of successful teaching strategies and effective uses of the tool may be taught, but teachers should **not** be told how they **must** teach their subject. The computer is a tool. It is perhaps the most powerful tool we will ever encounter, but it is only a tool, and we must be its master.

In a recent visit to a university research laboratory, I noted that nearly every room in the building had at least one computer and often several. These computers were being used to take notes, draft papers, analyze data, monitor equipment, and communicate with colleagues around the world. Like pencils, paper, and calculators, these machines were shown no special reverence. They were not carefully placed or expensively accessorized. They were just there, where they were serving a useful purpose. No one gave them a second thought, yet they were able to accomplish in minutes what might have taken a lifetime even twenty years ago. It struck me that this is the attitude educators must adopt with computers as well. If a computer is not the best way, then use whatever is the best, and forget the computer.

To the curriculum designers I say, "Ignore the computer, pretend that it doesn't exist." Because the computer is a tool, it belongs in whatever parts of the curriculum that require that tool. It does not belong in a course of its own. For example, districts are right now struggling with the question of whether or not word processing belongs in the curriculum, and where it belongs. One large group wants word processing taught in the elementary schools. Another wants it in the junior high grades. I feel that both are wrong. Word processing should be taught as part of the coursework for those classes that use the written word.

Our high school is presently offering a pilot course in word processing. It is offered by one of our typing teachers. Originally, the idea was to offer a one-semester course to college bound students. The course was to give the students the basic skills needed to use the tool called a word processor. Most importantly, the tool was intended to help them become better writers. What has happened in fact is that the course has become a business typing course. Without any creative ideas being developed and discussed, the teacher quickly found that she needed something to type into the computer as practice. With a background in typing, her logical choice of material was business, letters and forms. The course is not producing better writers; it is producing better typists.

Far greater success is possible when word processing is used as a tool by an existing curriculum. In another example from our school, we have several sections of basic skills writing. These students spend much of the semester trying to improve their writing skills by writing. Until last year, all of the writing was done with paper and pencil. Last year, the students were given a one day introduction to word processing on the Macintosh computer, and then given a week to produce a specific theme paper. Three different teachers observed that more written work was produced in that one week than in the entire previous eight weeks. The tool accomplished its purpose: it freed the students from the lower level tasks of corrections and producing legible handwriting, and it allowed them to exercise the higher level skill of creative writing. Revision lost its sting, and teacher suggestions were much more readily accepted and applied.

The difference between these two examples is that the second uses the computer to enhance the existing curriculum, while the first creates a new and sometimes undesirable curriculum by accident. Do we want students to write? If so, give them the best tools we have. Once it was chalk and a slate. Later came pencil and paper. Still later came the typewriter, erasable paper, correcting typewriters, erasable ink, and presently, the computer screen. To my knowledge, no one ever offered a course called "White-Out I". Likewise, let's not make the mistake of offering a course called "Word Processing". English classes use the written word; let them teach word processing. Likewise social studies, science, foreign language, and other disciplines all use different facets of the written word, so let them teach the relevant word processing as well. For example, science classes could teach multiple tab columns, social studies could show how to footnote, while foreign language could teach the various diacritical marks. This way, a student learns the tool for its purpose, not for the sake of the tool.

Here again, the question of teacher training arises. How can teachers be expected to teach a tool that they don't know how to use themselves? Equally, how can they be expected to teach a tool when there are not enough of them to go around? The answer to both questions boils down to cost. Perhaps for some districts the cost of technology is too great. If so, they must recognize this fact, and admit that they are not going to be able to include computers as tools within their curriculum. This should not be a problem. Education existed long before computers. Shakespeare managed to write **Macbeth** without a typewriter, Sir Isaac Newton discovered gravity with only a **real** apple, today's students can manage to get along without computers. On the other hand, let's not try to fool ourselves into believing that introducing computers costs only as much as the computers themselves. Training, software, and computer specialists all must be included in the cost analysis.

With all of this, why should we bother to incorporate computers into the curriculum at all? If they are to be used as tools of the curriculum at a time when there is already too much squeezed into the

613

curriculum, why not just ignore them? The reasons are many, with some of greater importance than others. Perhaps one of the most important is that computers have already become one of the major tools of the "real world". Everything is becoming computerized, from cash registers to bank tellers to home stereos to microwave ovens. Computers are a part of our world, and cannot be ignored.

It has been said that all that separates human beings from the apes is our ability to use tools. The master craftsman often makes his own tools, the virtuoso pianist tunes her own piano, the great artist makes necessary pigments or other media. Likewise, we must teach our students how to use and master the tools of our trade, not so that they become toolmakers, but so that they become masters of our art.

David H. Stringer

COMPUTERS
vs.
HUMAN VALUES?

As a high school English teacher, I am alarmed by the heralded Computer Age. Should we wait for yet another fad to blow over--like language labs and transformational grammar--or should we leap to embrace a New Order as profound as the printing press and talking pictures? Several years ago, "learning kits" made up of tapes, filmstrips and ready-made discussion questions were going to revolutionize education in the form of teacher-proof lesson plans, and they largely lie unused on the shelves of media centers. My own experience suggests we move cautiously and skeptically into the Computer Age so that we do not neglect the human values which should be central in education.

A salesperson unwittingly raised the important questions while I was shopping for a home computer. When I said I was not sure what I wanted my computer to do, he replied with a confident chuckle that once you start playing with a computer you find all kinds of uses you never thought of before.

What struck me then, and strikes me now as our schools buy computers and think about how to use them, is that something is backwards. I imagine my children putting in hours at the computer, finding out all the things it can do and then doing them. The technology determines the objectives. If you buy a machine that can do something, then that is what you do; the danger, as opponents of the arms race insist, is that what you **can** do becomes what you **should** do. I think of new filmmaking students who, when they use a camera with a zoom lens, feel obliged to zoom in and out on every shot, or of the teen-age boy with his new car and license who decides what he should do is go for a drive. Shouldn't we decide, first, what we want to do, what we want children to learn, and then find the best ways to help them?

That may mean using computers. My own children are frustrated when they write letters or school papers by hand or on my manual typewriter because erasing and rewriting are such a pain. Word processing makes good sense because it makes revision easy. When students in the Basic Skills classes in our high school get a chance to use the computers, they similarly find they can compose and do the kind of rethinking that accompanies revision.

The best ways to help students may also mean using more effectively some conventional teaching and learning methods such as lecturing and Socratic questioning. My ten-year-old, echoing an advertisement, pushed me to buy a computer so I could do the family budget. But I find a pencil, paper and calculator perfectly sufficient. We see a similar point in the story of the Vermont farmer asked if he were going to take some courses over at the Agricultural College.

"Nope," he replied. "I already know more than I can do." We need to keep our objectives in focus without indulging in novel technology for its own sake. What kinds of learning does Socratic questioning best encourage? What is the role of lecture and recitation in accomplishing our educational objectives?

What, then, are some objectives we in the schools should keep in mind? I feel that one of the valid functions of a school is to deliver students from electronic media. Many of them live with radios, televisions, walkpersons, or other such devices in the background or foreground of their lives, or they may even experience what they call "life" through these media. Some records are called "live," and for many a televised event is more rather than less real: How many of us think we saw the **Challenger** explode because we saw it on television? How "unreal" was the attempt to rescue the Iranian hostages because it was untelevised? For a few hours a day in school, however, students can experience direct personal communication. An English teacher's earnest interrogation of a poem shows that he finds it important. A student complains that democracy is inefficient, and the teacher asks other students for their opinions. Students exchange knowing glances as they lead a teacher into her pet digression about sailing so the quiz will be postponed. Two students at lunch try to figure out what is going to be on the biology test, and they joke a friend out of anxiety. These interactions have no electronic component: they are purely human. Their value lies in the quality of the learning. Ideas are experienced as human products. Questions are human. Poems, paintings, guesses, theories, and even technologies, come from human minds, and the classroom, with a teacher engaged with students, reinforces that fact. This humanizing of knowledge and learning is essential to the self-respect of our students. We need them to feel confident that human ideas set the direction of human civilization.

The admittedly oversimplified scenario which I imagine when I see the High School in the Computer Age is that the students will be interfacing with their computers, perhaps from the privacy of their own homes, and ideas will be too often perceived as products of the monitor or the print-out. For most students the human connections in school, however imperfect, would be diminished and remote.

Remoteness may take another form. We may be able to do more efficient biology by simulating the growth of an organism on a computer, thus saving the time of having to wait for the damn thing to grow. But do we imagine that computer-simulated earthworm dissection is an adequate substitute for the smells and textures of the real thing? One thinks of the mousetrap baited with a picture of cheese which catches a picture of a mouse.

Though mastery of the computer can itself be a valid subject matter, we need to keep in mind that the crucial interactions among students, teachers and subject matter are **where** and **how** education happens. We need to evaluate the changes already under way. For example, would the computer become the medium in which French, history, and music theory exist? It is important to remember that **how** a student learns is tightly intertwined with **what** a student learns. In a world which is certainly going to be more saturated with technology, it is time to re-emphasize the human element in education.

THE HISTORY OF THE COMPUTER, PART ONE...

Discussions of technology often make us realize that "technology" is that which is new. Yesterday's technology is taken for granted. Newspaper and magazine articles now refer to computers casually, treating as commonplace the hardware and software which was "blue sky" only a few years ago.

It all began a long time ago.... Actually, it was not that long ago. Although a number of remarkable calculating devices were invented during the seventeenth century by such well-known people as Leibnitz and Pascal, most historians credit the invention of the modern computer to Charles Babbage. It was Babbage who first suggested, designed, built, and almost completed some very ingenious computing devices early in the nineteenth century. Unfortunately, since he was not entirely successful in demonstrating much actual computation, and since modern machine tools and electronics were not available at the time, computers did not make much headway for many decades.

The real impetus came with the imperatives and resources of World War II, and with the converging technologies of electronics, logic, and communications. Partly because of wartime needs, and partly because of the mathematical backgrounds of the people involved, computers were seen as useful primarily to solve mathematical problems. The first large-scale general-purpose electronic computer, the ENIAC, developed at the University of Pennsylvania by J. Presper Eckert and John Mauchly in the late 1940's was in fact intended to solve such problems as computing the path of a projectile fired at a moving target. Because of this specialized mathematical emphasis, respected mathematicians such as John von Neumann wrongly predicted that a half dozen computers would satisfy this country's computational needs for years to come.

Computers were applied to a wider range of problems with the delivery of the UNIVAC I to the Bureau of the Census for use in processing the 1950 census. This computer was recognized--even by the general public--as processing **information**, rather than just numbers. By 1952, the UNIVAC I was used to predict election-night results in the presidential election. (When it predicted a landslide win for Eisenhower early in the evening, however, the broadcasters changed the results manually because they did not believe the computer!) Even with a growing commercial use, such as applications to payrolls, inventories, and accounting, computers remained large and expensive. They were accessible only to the largest corporations, universities, and government laboratories.

Part of the fallout from the race to the moon in the 1960's was the miniaturization of computer technology. In order for computers to move information inside the computer rapidly enough, the distances involved--and therefore the whole computer--had to become very small. As computers became smaller and faster, they were found to be useful in solving an even wider variety of problems. In particular, computers were applied to "real-time" applications, in which the computer senses incoming information and responds rapidly enough to control an ongoing process, such as controlling the timing and ignition in an automobile engine, or sensing and regulating the temperature in a furnace or nuclear reactor.

In the late 1960's and early 1970's, support for research and development became abundantly available, for example, through the space projects of the National Aeronautics and Space Administration (NASA). The size and cost of computers continued to go down, while the speed increased dramatically. The IBM 650, a widely-used computer in the middle 1950's, for instance, could execute 500 instructions (add, subtract, etc.) per second. The typical microcomputer today can execute a million instructions per second. A whole new terminology had to be invented for computers: **mainframes**, very large machines costing millions of dollars, **minicomputers**, medium-sized machines priced at about $50,000 to $300,000, and **microcomputers**, much smaller computers, at around $1,000 to $5,000. Recently vendors have begun to distinguish between the **home computer**, costing around $100 and used so far primarily for games, and the **personal computer**, which costs about $4,000 and is intended to be used primarily in the office. Of course, with these price differences (which are changing as we read this) come differences in speed, storage capacity, and capability.

As a result of such changes, **entire new industries** have been able to take advantage of computers, causing a tremendous increase in the demand for faster and more powerful minicomputers, on the one hand, and small and more portable microcomputers, on the other. In recent years, for example, we have seen the explosive growth of hand-held calculators, automatic scanning devices in supermarket check-out counters, 24-hour automatic tellers for banks, and so on. The video games that we now see everywhere typically contain a couple of microprocessors which are each as powerful as the large room-filling mainframes of just a few years ago.

The rapid development of software has been almost as remarkable as the changes in the hardware. **Software** refers to the sequences of instructions called "programs" that cause the computer system to do things: compute, display, print, ring a bell, or send a message. In the early days instructions were written as sequences of digits, filling entire unreadable pages with numbers. Occasionally such pages were even filled with the proverbial "one's and zero's." As one might expect, programmers soon found ways to avoid such error-prone detail by using symbols, such as "ADD", to represent the digit-sequence that instructed the hardware to add a pair of numbers. Of course, the programmers then had to manually replace "ADD" with the correct sequence of digits, but they quickly realized that this second step was so routine that a program could be written to instruct the computer to make that substitution. Thus a tool, called an "assembler," was created which has simplified the programmer's work since then.

Such programming tools as those described above begat other tools. Around 1960 we began to see very large collections of programs, called "operating systems," consisting entirely of utility (i.e., useful) programs, with powerful commands to invoke the right programs at the right times, in the right combinations. An operating system contains, in part, programs which bring information into and out of the computer, programs which provide accounting services for the owner of the computer, programs capable of generating sophisticated graphics, and many others.

In particular, the operating system contains programs called "translators," or "compilers," which translate instructions, or entire programs, written in **high-level languages**, into the digit-sequences referred to above. The "ADD" instruction that we saw earlier, for example, would now be written **directly** in mathematical notation:

$$Z = X + Y$$

which would then be translated into digit-sequences representing machine (hardware) instructions to carry out an addition and store the result as the new value of z. Only after this translation process has been completed will the actual computation for which the original program was written take place.

The example of a simple computation in the preceding paragraph illustrates the use of a high-level language. There are many high-level languages, some of them designed with particular applications in mind, such as controlling machine tools in factories, composing music, creating the graphics for television commercials, authoring documents and manuscripts, creating video games, and so on. Among the early languages of this kind were APT and COMPASS II, which allowed operators of numerically-controlled machine tools (used for drilling holes in automobile engine blocks, for example) to write instructions for the tools such as:

```
TURN COOLANT ON
```

Then such instructions would be processed into digit-sequences that would be punched on paper tape and used to control the actual machine tools on the factory floor.

Other high-level languages are more general in nature. They provide for the usual sequence of calculations that one might encounter in a scientific or business application of the computer: a payroll computation, an inventory control program, an airline reservation system, or a baseball score-card report. The more well-known of these general-purpose languages are FORTRAN (the oldest in general use, introduced in 1956), COLBOL, PASCAL, BASIC, and PL/I.

As computers became easier and less expensive to use, programmers no longer had to submit programs to an operator to be run on the computer and then wait for the result to come back several hours later. It became economical to allow--even encourage--users to stay right there and **interact** with the computer.

The most important ingredient in the move toward interactive use in the 1970's was the merging of computing capabilities with communications. At first, only one individual could access a central computer remotely using a "terminal." Then several people could do so simultaneously, with each person served by the central computer for a very short "time-slice" (perhaps 4-6 milliseconds), so rapidly and so often that the computer would appear to be totally available to each person. In this mode, called "time-sharing," large modern computers can serve hundreds of users doing independent tasks, all at the same time. Eventually, people began to send messages and documents to each other over the same communication lines with which they were interacting with the computer. With an "intelligent" computer to intervene, these documents could be processed and stored as they went back and forth. Elaborate "store-and-forward" message systems followed. We now see telephone systems that provide so many services that it is hard to recognize the old telephone switchboard. We can expect further dramatic changes in this area in the next few years.

To illustrate some of the changes that have just been described, one need only look at the way word processing and computer graphics have evolved. In the beginning, we had typewriters. (Remember that years ago even the typewriter was new technology!). Then typewriters began to get "smarter." Texts stored on magnetic cards or tapes could be run through the typewriter and be corrected on the way. An entire line could be stored in a buffer within the typewriter so that changes could be made before actually typing the line. In the late 1970's, as computers became less expensive and smaller, marketing people in the computer industry started looking at the office as a relatively untouched and potentially profitable market for computers. Eventually computers programmed to be "word processors" became cheap enough to be justified for secretarial use. What was missing--and to a great extent may still be missing--was a real understanding of the more subtle communication paths and social structures of the office. Some professionals, for example, love to compose and send documents and messages to colleagues directly through the computer. Their secretaries may now find it difficult to know what information, such as appointments and meeting commitments, has been transmitted. Other professionals regard it as inappropriate for a manager, for example, to be seen at a keyboard. Computer vendors have been experimenting with "professional" (or "executive") workstations to try to break down the resistance exhibited by managers and executives to working at a keyboard.

The original "word-processing" workstations in offices were "stand-alone" systems. They performed like typewriters with some additional capabilities. Later it became more economical to **share** some of the more expensive components, such as printers and the disk storage where documents and records are stored. In the early 1980's we began to see clusters of workstations communicating with a central processor which controlled such shared components. With the recent growth of networks--especially "local area networks," which connect a number of computers and other devices in a small number of adjacent buildings--the communication aspects of word-processing stations have become more important. Very general message and document-sharing systems are now quite prevalent.

Meanwhile, the word processing and editing capabilities of small computer systems have become more elaborate. Even the smallest personal computers are capable of displaying different parts of one or more documents simultaneously on the workstation screen in "windows", allowing the user to edit documents in terms of words, sentences, paragraphs, and chapters, checking spelling, attaching annotations and questions to various parts of a document, and even analyzing style. The implications for the classroom are only dimly perceived at the present time, but the tools are improving rapidly. If these computer advances are appreciated as **educational opportunities** by teachers and students, exciting times are ahead.

For example, it is already possible to use a computer in front of a large auditorium and have the image on the computer screen projected onto a gigantic front-wall-filling screen so the entire class can observe it. Given the current advances in graphics which are described below, the possible combinations of computer-generated images and video images, and already available capabilities for generating voices and musical sounds, one can imagine the teacher and the class experimenting with dance sequences, role playing in psychology classes, and simulating chemistry and physics experiments.

The electronic mail and computer conferencing facilities that are now quite generally available make it possible for students and their instructors to communicate and discuss assignments and urgent questions at any time, not just during class hours or office hours. Groups of students can work together on group assignments, even though they may live in widely separated parts of a large city. The advent of very large data bases makes it quite feasible to provide on-line the entire collection of "great books" needed for advanced literature courses, allowing undreamed-of ways of browsing through such books and analyzing style, organization, and the choice of words and phrases by the great writers of our time and of the past.

Computer graphics is another area of rapid development. In the 1950's, Ivan Sutherland, then a graduate student at MIT, was the first to create line drawings on a screen and manipulate them. He could, for example, move a point at the corner of a box around to change the shape of the box. What he did then for his doctoral thesis is about as simple--with today's tools--as a good exercise in a computer graphics course for college seniors, but at that time it was a remarkable breakthrough. The movie demonstrating Sutherland's graphics facility was shown at universities and conferences everywhere. Now we see extremely sophisticated graphics used routinely to design automobiles, airplanes, and buildings, in training films, in movies (such as **Star Wars** and **Tron**), in television commercials, and especially in video games. Our ability to create subtle shading, perspective, motion, and other special effects foreshadows a new and amazing world of visual effects.

Now we must use our imaginations to merge these mind-stretching technologies and capabilities into educational opportunities for ourselves and our students, opportunities to create "literature" in forms that can only be regarded as "blue sky" today, but which will soon be yesterday's technology!

LOW TECH IS BETTER THAN NO TECH

My first indication that professorial life was to lurch some decades into the future came during the 1983 cocktail party season. Previously, my colleagues at the university were wont to discuss the Great Books and their Great Ideas. Well, we would do so in between musings on real estate as an inflation hedge and reflections on the best killers of crabgrass. But then a new topic came to the fore. The first brave users of personal computers undertook to become missionaries to those of us who still languished in a world of typewriters and ballpoint pens. The new talk of "ROMS" and "RAMS" and "64K" was foreign and intimidating but, somehow, also enticing. For what it held out was the prospect of easing the world's most agonizing task, putting one sentence after another. I won't say that my conversion was as sudden or riveting as Paul's move into Christianity or Ronald Reagan's into Republican politics. But conversion it was. By the end of the year I had put away once and for all my yellow legal pads; I too was the fledgling owner of a computer.

Sitting now at the keyboard and watching my ideas turn into little green characters on the monitor, I wouldn't have it any other way. Writing really is better with a computer. That was my first electronic insight and, for quite some time, my only one. I knew that some university colleagues utilized computers for instruction, but that information meant little to me. I understood why scientists would send students with numbers to crunch to the computer center or how foreign language teachers were able to preserve sanity through reliance on programs that automated repetitious syntax drills. I, though, am a philosopher. I don't believe that there exists an algorithm for determining whether or not the unexamined life is worth living. Even if I knew how to write a canned philosophy program, I wouldn't do it. My lecture notes were now word processed; that was the extent of technology's impact on my teaching.

That too has begun to change. In the Spring of 1985 I was scheduled to teach the inaugural section of our "Values and Technology" offering. The class was drawn up at the request of the university's new Computer Engineering department, for whose students it would be required. The combination of subject matter and clientele led me to rethink instructional methods. I wanted to design the class so that form would reinforce substance. Technical practice is, overwhelmingly, cooperative activity in which individuals combine to generate a product. It never proceeds **de novo** but rather builds on prior efforts (not unlike the philosophical enterprise). It seemed natural, then, to center the class around major group projects that would both **examine** the new technology and **utilize** it. Teams of five or six students would spend half the term building from the ground up policy reports on normative concerns raised by the application of technology. These ranged from the alleged threat of an emerging technocratic elite to gene splicing to assessing responsibility for the Space Shuttle Challenger disaster. Report preparation was to be incremental, beginning with formulation of a precise topic statement and proceeding through a bibliographical search, abstracting sources, outlining, preliminary draft, and final copy. During the final week of the course, each group orally presented its product to the class.

Without any straining or artificiality, the computer was introduced into each stage of the curriculum. Obviously, it enhanced the efficiency of writing. Because each stage of the project development process built on the preceding one, students were required to incorporate preliminary work into successive stages. With data on magnetic media rather than far less tractable paper, much rekeying was avoided. This was good for students, even better for me. Like almost all other teachers in the humanities, I firmly believe that students should be given more occasions for writing--and fewer for filling in little rectangles with a Number 2 pencil. So I assign a fair quota of papers and ask for essay responses on exams. My conscience is thereby assuaged, but only partially. For an even more gaping hole in the average college curriculum than **writing** is **rewriting**. My courses, unfortunately, have been no exception. It has been a continuing frustration to receive written work manifesting severe deficiencies of both form and substance while having distinctly limited opportunity to address those deficiencies. I **could**, of course, adopt a policy of open-ended rewriting and resubmission until acceptable quality is achieved. Dissuading me have been fears of lynch parties and nervous breakdown. It is simply unrealistic to require labored rewritings of complete drafts while the rest of the class is moving on to other matters. Those frustrations are not adequately assuaged by the spilling of a sea of red ink urging the need for corrections that will never be made.

Computers **do** make a difference. No longer is it a major imposition to call for selective rewriting of a flawed essay. Second and even third drafts roll off the printer suitably emended and, mercifully, without a new parade of typos to offend the eye. Students receive the lesson that the point of writing isn't simply to get something or other down on paper but rather to do it **well**. The dividend is pride in achievement, and the cost is denominated in the coin of effort. The difference that computers make is that the effort goes into prose construction rather than laborious recopying. Consequently, I am now able to prescribe a higher standard of minimum acceptability for written work. It also becomes possible to accommodate "Values and Technology"'s multi-stage project development within a ten-week quarter.

It was no surprise to me that, as the course developed, word processing proved to be a more efficient means of writing for my students; I had already made that discovery with my own work. I discovered, though, that computerization afforded another bonus: enhanced student/student and student/instructor communication. Is there a teacher anywhere who has not been greeted by some version of the plaint, "I tried to get in touch with you, but you weren't in/someone else was talking with you, and I didn't want to interrupt/I couldn't find your office"? I withhold comment on the general level of veridicality concealed therein; the point is that these annoyances **do** periodically pop up and **do** disrupt smooth transmission of information. And when instructors utilize a small group strategy, all too often there arises the dilemma of the hard-to-locate group member. When A and B swear that they tried but failed to contact the elusive C and D, while the latter just as insistently maintain the opposite, it is the rare teacher who relishes being pushed into the Seat of Judgment to play Solomon.

I am not so starry-eyed a technophile as to suggest that computers obviate all such embarrassments. But they can help considerably. Microcomputers are lovely accoutrements to instruction all by themselves. But when they are linked to each other and to the campus mainframe through a network, serendipity multiplies. In the "Values and Technology" class, all student work was either directly entered into the University's central computer or else produced on a microcomputer and then uploaded to it. Once there, it became instantly accessible to me. So too were student inquiries addressed to me through the computer's "Mail" facility. From the comfort of my office I would regularly check for dispatches and respond to them immediately. I could also address communiques to an individual student, a project group, or the entire class. Similarly, students were able to leave work-in-progress for fellow group members to examine and critique. Engineering students, even more, perhaps, than others, have remarkably full schedules. It can prove difficult to the point of impossibility for them to find a time during which an entire group can meet. But computers have wonderfully good memories, are accessible from afar, and are infinitely patient. They will preserve and share data to whatever extent is required. When face-to-face contact is too difficult or too slow, conferencing via computer is a good alternative.

Practice seemed to bear out the above theory. Students got the hang of the system quickly, their instructor a bit less so. During the learning process some communications went awry, but no vital data were lost. Next time around I expect I'll be able to avert even these minor annoyances. Blessedly, traditional excuses for missed connections were conspicuous by their absence. To be sure, a couple of new ones emerged: e.g., "Gee, I'm sorry for missing the assignment; my modem was misbehaving." On balance, though, group efforts proceeded more smoothly than I had ever experienced in pre-silicon days. And receiving electronic mail was fun! (No bills or junk mail.)

Quality of the final products exceeded by a large measure my optimistic expectations. Two of the project reports, in particular, compared well with treatments I encountered in the professional literature. It would be naive to credit these results exclusively or even primarily to computerization. I was the beneficiary of bright students accustomed to hard work and motivated to excel. The technology was merely the instrument through which these favorable conditions were successfully channelled. On second thought, the preceding sentence's 'merely' may be out of place. It is no mean achievement to work out procedures which actualize the potential latent in a class. I am now convinced that computers, in the twin modes of writing device and communication device, can notably help an instructor toward that end.

There is, perhaps, a respect in which the computer becomes more than an instrument toward a product and transforms the nature of the product itself. One difficulty shared by virtually all humanities instructors is that of getting students to take their essays seriously, as something more than a peg on which a grade will be hung. Contributing to this perception is the transitory nature of most student writing. Once the piece is submitted and graded, it vanishes down the memory hole, nevermore to be seen. Does it not ask too much of students to expect them to attach importance to ephemera? I recognize that when I write for the sort of permanence that publication affords, I invest more attention and energy than I do for an interdepartmental memo or a chatty letter to a friend. Bromides about the sanctity of student writing aside, why should it be any different for them?

Items on disk or tape can, under suitable circumstances, become invested with greater weight. My students were informed that their project reports should be understood as making a significant contribution to an important normative debate. To underline this message, they were told that their analyses and associated data were to be preserved on the mainframe computer, serving as a base on which other student researchers could build. To my engineers, especially, this procedure resonated with familiar professional overtones: collaborative work building on and, in turn, supporting the further efforts of others. Although I can only speculate concerning the contribution this perception made to quality of output, it does not seem unreasonable to hypothesize that it was both positive and considerable.

I said above that I was a computer convert; I fear, though, that I am now presenting myself more as a missionary. And perhaps I am. Still, this particular gospel is rather modest in its message. The mysteries of innovative instructional programming continue to elude me. I don't doubt that gains are attainable along those lines, even in a discipline as venerable and beholden to tradition as philosophy. One of these days I might even make the plunge into Pascal (the name appeals!) or C. Then, surely, I **shall** make myself thoroughly unfit company for social occasions. In the meantime, I suggest only that low tech computer applications can probably benefit any teacher who places much stock in student writing or who desires to render group projects more productive.

ART WARE:
Computers in the Art Museum

The Education Department of the Detroit Institute of Arts recently developed **ART WARE**, three games for use on Apple II computers. The software is used with 41 postcard reproductions of art works from the collection of the Detroit Institute of Arts ("DIA") to teach universal concepts of art appreciation. The games are designed to be used in schools by fifth grade through adult students with no previous computer or art experience. The games may be used as a classroom adjunct to art, humanities or social studies courses and to prepare students for a visit to the DIA or their local museum.

ART WARE was developed with funds from the W. K. Kellogg Foundation. In a new direction for the foundation, twelve Michigan arts organizations were awarded three-year grants in 1984 in an effort to bring high quality arts experiences to students throughout the state. The objectives of this Kellogg Foundation grant program dovetail with those of the Detroit Institute of Arts. Established in 1885, the DIA is the fifth largest art museum in the United States with a permanent collection of over 70,000 objects representing world art from ancient times to the present. Since 1975, the DIA has received much of its funding directly from the state government and increasingly functions as a statewide institution with many existing outreach programs.

The use of computer technology seems an excellent way to meet Kellogg Foundation and museum objectives and to reach a statewide audience. With expensive computer equipment in place in virtually every school district in Michigan, administrators are anxious for "cross-curricular" computer use beyond traditional math and science applications. Yet there is a dearth of humanities software on the market.

This void is particularly evident in the fine arts. While several programs exist which use the computer as a tool to create visual images, none (with the exception of ART WARE) teach about the cognitive content of art. At the same time, educators are experiencing a nationwide push for scholastic excellence, and reports such as the Getty Foundation's "Beyond Creating" (1985), serve to increase awareness of the need for materials which incorporate the teaching of art history, criticism and aesthetics into the art curriculum (so-called discipline-based art education).

ART WARE is the first software developed by the DIA to meet these needs. Crucial to the success of the project was a team approach which utilized both the art historical communication skills of the Education Department staff members Jennifer Williams and Helen Shannon and the technical skills of software consultant Marcia Burrows. In addition, our software developer had a special empathy for the project as she had also been a teacher and museum teaching volunteer.

From the beginning, we worked to design games that would reach the widest audience. Games were designed for the Apple II series computer, rather than more advanced systems, since most schools use Apple equipment. Every effort was made to make ART WARE "user-friendly" with easy-to-understand directions. For example, directions at the bottom of the screen in each game let the player use the escape key to go back one screen at a time, as well as using the return key to go forward.

The computer and postcard text are brief to allow students to concentrate on the visual material. The games are designed to teach an awareness of visual elements and concepts rather than the memorization of names and dates, with much learning coming from informal comparisons between cards as students play each of the games. All the games are designed to be non-competitive, without time limits or penalties for wrong answers. The games can be played under a variety of conditions: in the computer lab or classroom, by students working alone, or as part of a classroom activity.

Computer graphics were seen from the beginning as essential to ART WARE's success. We contracted with an additional consultant to produce the more complex graphic designs that enliven every game. After unsuccessful early attempts to reproduce works of art as computer images, we decided simply to include postcard reproductions as part of the package. This option required much less programming and used less space on the increasingly crowded computer disk. Most importantly, the color and detail of these "Art Cards" far surpassed Apple computer graphics. Inclusion of art reproductions proved costly, and accounted for one third of our budget.

The Art Cards come in an accordion-fold plastic sleeve for easy retrieval and storage. Credit lines and brief paragraphs about each work appear on the back of the Art Cards. Additional written material includes a teaching handbook of suggested activities and supplementary information. Two Quick Play cards which reproduce charts found on the screen are also included for optional use. A full-color poster of the "100 Masterworks" of our collection completes the package. All materials are contained in a bright red plastic box which is a commercially available eight-inch software diskette file.

In developing ART WARE, we sought the advice of a cross-section of teachers, administrators and students who contributed ideas and tested and evaluated the software in the classroom. Changes and improvements to the software could continue until the last minute, as reproduction of the computer disk was the last part of the ART WARE package to be completed.

While testing the software, we realized that some teachers were copying our disks. We feel that without the Art Card reproductions, such "boot-legged" copies will be inferior and misleading. Since complete copies are available either as free loans or at a nominal cost, we are making every effort to insure that unauthorized duplication of ART WARE does not occur.

A description of each of the three activities included in the ART WARE disk follows.

THE GALLERY GAME

This game simulates a tour of the Detroit Institute of Arts. The player chooses one of four increasingly difficult roles: Visitor, Docent, Conservator, or Curator. Each role reflects the different needs of real people inside the museum and also requires a student to look at the same work of art in a variety of ways. The Visitor and Docent levels don't require that students read any written information. The Conservator and Curator levels require the student to read information on the back of the card as well as to study the work of art on the front of the card.

The 41 Art Cards are arranged in a simplified version of the DIA floor plan. Players move through the museum in search of just six of the works selectively assigned by the computer. The Art Cards may be found in any of 11 galleries according to their culture of origin or function. An additional Special Exhibition gallery is filled with works selected to fit an assigned theme such a "Creatures Great and Small" (animals in art). This organization of works reflects situations students are likely to encounter when visiting an art museum.

As each player enters the museum he or she can ask for a "Gallery Guide" which always shows the player's current position. As they enter each gallery, a list of clues appears. Students must carefully look at their assigned postcards and, on the Conservator and Curator levels, read the information on the back of the card to correctly identify each work and complete the game.

THE THINKER'S GUESSING GAME

In this game, the student may pick any one of the 41 Art Cards and challenge Rodin's statue of **The Thinker** to identify it. **The Thinker** will ask yes or no questions. The student will need to study both the front and the back of the card to answer these questions. If the student answers all the questions correctly, **The Thinker** should be able to identify the work after a few questions. Each game will take place quickly, and the students may play again with the same card or choose another.

This game was designed to be flexible, allowing students to choose both the work of art and the number of times they wish to play. The questions are objective, and ask for specific information, such as dimensions or media. These questions are not intended as an end in themselves, but to encourage students to look more closely at each work. When **The Thinker** identifies the work, he adds a subjective statement about the work that is intended to spark discussion and re-examination of the work.

THE SCRIBE

The Scribe game has two parts. The first part is a tutorial about hieroglyphs and life in ancient Egypt. The second part uses a printer to translate and print out names in hieroglyphics.

In the tutorial game at the beginning of this activity, students will learn about ancient hieroglypics by following an imaginary ancient

Egyptian scribe to work. Information about this system of writing, everyday life in the ancient world, and the variety of symbols used by Egyptians will be available to students.

Hieroglyphs are very complex, and only those which correspond to the sounds of our alphabet, and the symbols for a man and a woman, are included in this activity. Using just these symbols, however, names of people and places can be written in a variety of ways selected by the student.

Names can be copied by hand from the hieroglyphic chart on the Scribe Quick Play Card whether or not students have access to a printer. If the computer has a printer, they can use the second part of The Scribe game to print-out names in hieroglyphs.

Copies of ART WARE are available for purchase from the DIA or for loan to schools within Michigan from the statewide system of Regional Educational Media Centers. We are currently producing an expanded version of the Thinker's Guessing Game for general public use within the museum. With additional funding from the Kellogg Foundation, we look forward to producing more art appreciation activities for the classroom and galleries of the Detroit Institute of Arts in the future, all using computer software as a learning tool.

COMPUTERS & HUMANITIES EDUCATION:

Observations & Some Resources

For some--perhaps for many--of us, the words **Humanities** and **Computers** are incompatible. Computers do things to numbers and formulae and to the telephone bill and the credit card bill that then take many human hours to set right. For some, computers simply do not relate to that which represents humanity's uniquely creative abilities. For computers in their pure form, with their ability to "crunch" numbers, to zap rows and columns of numbers into projections and bottom lines--in other words, to **compute**--this is certainly true. In the broader interpretation of the concept "personal computer," however, that of applications and communication, the relationship is less negative.

With the ever increasing level of access to microcomputers, i.e., the personal computer, and the ever changing capabilities of the technology upon which such equipment is based, humanities education is being impacted in new and interesting ways. More and more colleges and universities are installing student-use computer labs and are encouraging students to come to school equipped with a personal microcomputer. Word processing is the most frequent application used on these computers. The freedom to edit and rewrite at will, without frequent and liberal application of "white-out" and a mountain of crumpled up sheets accumulating by the typewriter, has demonstrably improved the quality and quantity of the written work of many students. For teachers, the ability to produce flawless handouts, alone, has been worth the cost of a computer! In my consulting experience in junior and senior high school the evaluations have universally indicated that students exhibit a better control of the language when they regularly use word processing. This better control is exhibited in two specific types of students: those who have a grasp of grammar and writing technique are more willing to correct their mistakes before they get to the teacher and, more importantly, those students for whom writing is tedious, odious and terrible, are also more willing to make the corrections either before or after the fact, thus raising their awareness of syntax. The use of much maligned spelling checkers and, more recently, of grammar checkers, can further raise the awareness of errors, but leave the determination of what the error is and what the correction should be up to the student. Many teachers object to the use of such programs, feeling that students should proof their own papers and what they miss, they miss. Others feel that such checkers raise the awareness of users, ultimately making them more conscious of their mistakes. Programs such as **Sensible Speller** and **Sensible Grammar** by Sensible Software for use by high school and college students and a complete writing program called **The Writing Workshop** by Milliken Publishing Company for use with junior high and younger students on microcomputers emphasize syntax and spelling.

Another common application for computers in the humanities is that of music synthesis. Keyboards and music digitizers and synthesizers are plugged into large "main-frame" computers, and students can compose, arrange and play music. The applications for the teaching of music theory are obvious, and the ability to create "new" instruments and sounds are exciting. Until recently--as recently as last year--the quality of the synthesized music on personal microcomputers was somewhat weak. The introduction of Commodore's **Amiga** and Apple Computer's new **Apple II GS,** however, bring quality sound to the personal computer, and programs like **The Music Construction Set** by Electronic Arts helps introduce music theory and composition to a broad range of people, from serious music students to those who just want to explore. Computer art has been an accepted art form for quite a long time. As with music, it was first created on large, "main-frame" computers, but with the advent of the high quality graphics of Apple Computer's **Macintosh**, and the excellent color graphics of the Commodore **Amiga** and Apple's **Apple II GS,** this art form is now more readily available to a wide range of people.

Thus far, we have spoken of the obvious. There are, however, new and exciting ways for computers to be used in humanities education. Research of a higher order is now available with telecommunication. Modems allow researchers to connect with much larger research libraries than are locally available to them. Researchers can read rare and often otherwise inaccessible documents via modem connection with personal microcomputers. This increases the options for students in high schools and colleges to do research. That, in and of itself, has major impact. It also highlights an area of frequent weakness: the knowledge of **how** to do research. Educators will need to teach research techniques and the writing of research papers at earlier levels and will need to be ready for classroom management that emphasizes independent study and individualized course work. A supplemental package to Milliken's **The Writing Workshop** offers computerized instruction in how to write a research paper.

Research via telecommunication with microcomputers brings to the fore the need for students to understand the concept of a database. In essence, a database is a special library of information on a specific subject which can be electronically created, accessed, added to, and deleted from. This is one of the most rapidly growing areas of development in the computer industry today. People who shop or bank over the telephone are using a data base. Consumers who have their credit card number called in when making a purchase are being checked on a data base that is constantly being updated and changed as purchases are approved. The possibilities in education are limitless. The increased data for research, the ability to recognize key components of a subject and to arrange those components so that others can make use of the new information, enhance the learning process in ways that reading, writing and discussion alone do not provide.

An immediate leap into research via the above means is not likely, nor is it wise. Preparation for such a leap, however, is mandatory. Programs are now readily available for microcomputers that have application in humanities education which introduce data bases and teach the manipulation of them. On one level there are programs such as **The Scarlet Letter** -- a mini data base of Hawthorne's book -- by Hartley Courseware, that permits the reading of the novel and guides the user through a series of questions to arrive at the major themes of the work. Characters are analyzed, settings are explored and the social importance of the book is defined. A second level of preparation is the actual development of a data base using programs such as **The Friendly Filer** by Grolier which teaches the user how to set up a data base and then how to use it. This then prepares students to move into larger, more sophisticated programs such as **Apple Works** by Apple Computer or, for very large projects, something like one of the **DBase** programs that allow very large amounts of information to be handled in a large number of ways.

The above changes also require changes in the training of teachers. Teachers will need to be taught by universities how to do all of the above things: word processing needs to be the norm for papers and electronic databases need to be searched at the upper levels of research --in fact, that will be where many of the required databases will be created. Music and art students will need to have courses in electronic composition and creation. As these graduates enter into public school teaching, they will bring the technology with them, and in turn, their students will continue to press the colleges and universities to continue to add to their courses, and the cycle becomes self perpetuating. The introduction of personal microcomputers into all phases of education is both thrilling and threatening--usually threatening until personal experience makes it thrilling. For teachers in math and the sciences, and for teachers of basic skills at any level, the computer is an essential component of the teaching-learning experience. For teachers who lead students into the creative process and who teach them to explore their own and others' creativity, the computer is a tool of exploration, organization and refinement. We would never think of sending math and science students off to colleges and the universities without computer experience--nor would colleges and universities send graduates of such fields into the greater world without such knowledge. Not to give students in the humanities the same basic computer education, at least as it relates to their areas of interest, is to limit the potential of their education.

"TWO CULTURES" ONCE MORE

Various issues raised by the National Endowment for the Humanities' report "To Reclaim a Legacy" and the Association of American Colleges' study "Integrity in the Curriculum" have got me thinking about the place of the humanities in the curriculum and about the "two cultures." Mature readers will recall that in 1959 C. P. Snow, an English scientist, novelist and civil servant, delivered the Rede Lecture at Cambridge which was subsequently published under the title **The Two Cultures and the Scientific Revolution.** In his lecture Snow argued that there are two cultures--that of the scientific community and that of literary intellectuals (also referred to as "non-scientists" and "the whole traditional culture")--which have become so polarized that they are no longer able to communicate with each other.

It seems to me, however, that it is simply wrong to say that there are two coequal cultures, as Snow argued; nor are there three cultures, nor 2002 cultures, as others have claimed. There is in the West **one culture,** what Snow called the "traditional culture", and hundreds, in fact thousands, of **subcultures** of which the scientific community is one, along with the subcultures of technology, the legal community, religious subcultures and many others. Every member of a subculture such as the scientific one is **ipso facto** a member of the larger traditional culture. Those who do not want to be simply technicians will want to know the "tales of the tribe" as found in its great books and works of art for whatever identity, coherence and continuity the dominant culture has derived from its "mythology," i.e. the great narratives that are passed down from generation to generation by the literary tradition.

Ninety-five percent of the members of the larger culture, however, are not members of the scientific subculture and are not expected to know its laws, rites and rituals any more than they are expected to know the arcana and practices of other subcultures. In other words, members of the scientific subculture who want to be considered well educated will have read a play by Shakespeare (plus a lot of other things too), but members of the traditional culture are not expected to know the second law of thermodynamics and should not be, nor should they be expected to be able to define mass and acceleration if challenged by the likes of C. P. Snow at a cocktail party.

As Snow's challenger F. R. Leavis said, "There is no scientific equivalent of that question ("Have you read a work of Shakespeare's?"). Equations between orders so disparate are meaningless...." Between an aesthetic experience, in other words, and the ability to state a scientific law there is no comparison. Snow himself, in fact, in his "A Second Look" regretted that he had used "What do you know of the Second Law of Thermodynamics?" as a "test question about scientific literacy."

The narratives which have come down to us through the literary tradition and the arts have the capacity to engage people on all levels of their being, to move and inspire them, to deepen and to enrich their lives, and, we hope, to make them more humane and more human. The humanities were called **Humanities** by the Romans because they believed that the study of poetry, literature, religion, history, art, music and philosophy could and would make people more humane, i.e. more caring, more compassionate, more tolerant, more generous. As George Steiner says, "The study of literature was assumed to carry an almost necessary implication of moral force. It was thought self-evident that the teaching and reading of the great poets and prose writers would enrich not only taste and style but moral feeling, that it would cultivate human judgment and act against barbarism." (**Language and Silence**, p. 57)

I believe that throughout history, liberal arts education has been seen as primarily an education in the humanities. Men and women who were engaged in it have felt that they were doing something more than trying to earn a living for themselves while preparing students for jobs.

James Jarrett put it this way: "...the great achievements in the humanities...invite a **feeling** response that is often both sensuous and emotional. One may get excited by a mathematical theorem or a chemical formula but the excitement is, so to speak, gravy, and gravy, notoriously spots the purity of the cloth.... In the humanities, then, we involve a large portion of ourselves responding as valuing, feeling, personal beings, as well as inquirers and knowers." (The Humanities and **Humanistic Education**, p. 111) Because the sciences tend toward generalization and abstraction, because their ideal is to be objective, impersonal, detached and unemotional, and because their mode of explanation is not normally narrative, they lack the capacity of the humanities and the arts to move students profoundly; hence they also lack the humanizing potentiality of the humanities.

This does not mean that scientists are not humane, but it does mean that their humaneness has come from the family, from religion, from the study of literature, history, art, music, and/or philosophy. As I say this I realize that I will be called insensitive and ignorant, but I am fully aware of what Bronowski and others have done to defend science against the charge of being "austerely cognitive" and even dehumanizing. I am simply not convinced.

Bronowski's claim that the creative act is the "same act in original science and original art" is neither original nor new (nor even relevant) (quoted by Jarrett, p.64). He seems to be talking about what Shelley called the creative imagination and a contemporary French philosopher calls "knowledge by connaturality" which comes into play in "science or imposture." (J. Maritain, quoted by Otto Bird, **Cultures in Conflict**, p. 76.)

A liberal arts college should graduate students who have learned to think critically from the study of grammar, logic, literature, history, philosophy and other subjects and who have what one American philosopher calls a "sapiential overview", a larger vision which is infused with wisdom. We need such people so that they can assess the impact of science on society and, if necessary, shape and control it. To achieve this I believe that courses in the history of science and technology and the philosophy of science are of the utmost importance, more important in fact for the general student of the liberal arts than a course in a "lab science," if the student has had a "lab science" in high school.

I like the idea that liberal arts education is a conversation (see Robert Hutchins' **The Great Conversation**), but the crucial questions are **who sets the agenda** and **whose vocabulary do we use?** I believe that the overwhelming influence of positivism and scientism during the past decades has impoverished and trivialized our "conversation" with the result that, as Bennett said, many of our students have been "short-changed in the Humanities;" they have not participated in discussions of the larger issues the humanities alone raise. I believe that questions such as "What is truth?" "What are the foundations of morality?" "Do the humanities humanize?" are not only rarely raised (outside of a few classes), but if raised are ridiculed, and anyone who proposes to discuss such questions is considered crazy. When was the last time we heard mention of **wisdom?** John Naisbitt is quoted in ads to the effect that "We are drowning in information but starved for knowledge." I would add to this "and we have forgotten completely about wisdom!"

It is time we humanists find our lost faith, recuperate from our "failure of nerve" and exert some leadership in curricular matters so that, working together, we might restore the humanities to the heart of American education.

HUMANITIES EDUCATION ABSTRACTS & REVIEWS

Summaries of significant reports about interdisciplinary humanities education.

(Editor's note: Contributors who would like to submit abstracts of magazine articles should send them directly to the editor, using the style and format that follow. Reviews of books and educational materials should be sent to the Book Review Editor, Dr. James Mehl, Missouri Western State College, St. Joseph, MO 64507)

TINKERING WITH TEXTS

A Guide to Computer Applications in the Humanities by Susan Hockey (John Hopkins University Press, London, 1980). Review by Sharon Scholl, Jacksonville University

It is easier to begin by stating what the book is not about. It is not a manual for running a classroom, grading written exercises, establishing an evaluation curve, or any of the mundane things one thinks of in the daily push and haul of academic life. It is also not an instructional manual for any of the common computer languages. Nor is it an outline of the structure of computers and their component interactive systems. It is, succinctly, about words in contexts and how to index, collate, translate, catalog, retrieve, and textually criticise them.

British activities and interest predominate, providing insight as to how some awfully clever scholars have been tinkering with texts for the past twenty years. The chapter on "Stylistic Analysis and Authorship Studies" is my favorite, as it gives a thorough analysis of the schemes by which computer-generated validations of authorship have been derived. The nature of appropriate text samples, the critical element of habitual word usage, and such statistical manipulations as the chi square test are deftly explained. Ms. Hockey lays out the methodology of well known examples of authorship studies such as Milic with Swift, Oakman with Carlyle, and Ellegard with the Junius Letters. Her aim is to illustrate how the computer process has been misused as well as resourcefully employed in the analysis of style.

The chapter on "Textual Criticism" defines five stages of preparing a critical edition of a text and describes the advantages of using a computer for two of them: collation of manuscripts and finding the relationships between various manuscripts. For example, a program by Dearing claims to be able to handle up to fifty manuscripts at one time. The OCCULT (Ordered Computer Collation of Unprepared Literary Text) and COLLATE programs for collating prose are detailed down to their very print-outs. There are programs to reconstruct manuscript stemmata and their eventual genealogical connections. Much of the extended computer time that used to be needed for such processes can be short cut by use of algorithms, a number of which are outlined.

Though few readers may undertake the kind of literary analysis outlined above, the chapter on "Word Indexes, Concordances and Dictionaries" could prove to be useful to anyone who keeps even a systematic set of course notes. The COCOA program can be used simply to reassemble all the words in a text in alphabetical order with number of occurrences, whereas the KWIC format cuts down on the indiscriminate choice of context so apparent in a mechanical listing. Howard-Hill's work on **The Oxford Shakespeare Concordances** is one demonstration, as are the concordances for Indus Valley inscriptions and Minoan hieroglyphs. The computer as beast of burden for entirely mechanical procedures is the theme of the chapter, leaving the judgment on inclusions to the human lexicographer.

A chapter on "Sound Patterns" introduces procedures for the analysis of meter in poetry and rhythm in prose, as well as alliteration and assonance. As long as there is pattern, the computer can take account of the feature, as does Packard's program for analysis of Homer's works. Should you ever pine to scan Latin hexameters or Middle High German dactyls, there is a computer program available.

Not the least of the features of the book are the extensive references after each chapter and the bibliography of books, periodicals, and newsletters at the end. It is surprising to discover how long substantive computer resources for the humanities have been available. For example, the journal **Computers and the Humanities** was founded in 1966 and includes such areas as language, literature, history, archaeology, music, and education. The book performs stellar service in describing the many models of computer processing open to scholars in the humanities and indicating a variety of sources for further information.

HUMAN FOCUS

Technology and the Character of Contemporary Life by Albert Borgmann (Chicago: The University of Chicago Press, 1984). Review by Walter Gulick, Eastern Montana College

Albert Borgmann in **Technology and the Character of Contemporary Life** attempts to peel away our assumptions and practices regarding technology until he uncovers the hidden ways in which technology shapes our life. His concern is not to tinker with various specific technological practices, but to illuminate the vastly important place technology and technological assumptions have in contemporary existence. His analysis is comprehensive, penetrating and compelling. But this book is powerfully suggestive not only because of its interpretive insight into our technological malaise; it sets forth a cogent antidote to negative impacts of technology. Through his notion of focal practices Borgmann succeeds in showing how technology can be returned to its rightful role as servant to humans.

643

The paradigm of technology, Borgmann argues, is the technological device. Devices rely upon "machinery" to procure a commodity to be consumed. Thus devices secure the promise of technology; they make available safe, reliable, accessibly goods which reduce labor and enrich our lives. Yet there are hidden costs to the apparent satisfactions devices provide. These costs are illustrated by the **contract** between devices and things. A thing "is inseparable from its context, namely, engagement" (p. 41). In contrast, devices do not require us to be engaged with a world. Their commodious satisfactions rely upon machinery about which we need know nothing. Indeed, with the progress of technology, the supporting machinery becomes less and less obvious. Thus in an age of technology we are able almost instantaneously to gratify many desires without being seriously engaged in a larger world, without our skills being tested. The promise of technology is betrayed "when liberation by way of disburdenment yields to disengagement, enrichment by way of diversion is overtaken by distraction, and conquest makes way first to domination and then to loneliness" (p. 76).

It will likely sound as if Borgmann is another in a long line of those disenchanted with modernism in some form or another. But Borgmann's treatment of technology is remarkably evenhanded. He acknowledges that technological advances have, on balance, contributed greatly to the alleviation of suffering and eliminated much meaningless toil. Since the middle of the nineteenth century, however, technology has become yoked not only with science but also with liberal democracy and capitalism to form a cultural force that is as ubiquitous as it is disguised. Borgmann sees his task to be that of unmasking this force and restoring it to a supportive rather than a foreground role in our culture.

Neither technology nor science, Borgmann contends, proceeds according to any consensually based commitment to a vision of the good life. Rather we live in a democracy of individual desires regulated by advertising and voted for in the marketplace. Technology, as a tool in securing the satisfaction of desires, develops according to the pressures of profit maximization and the rhetoric of freedom, equality, and self-realization. Most critiques of technology remain under the hegemony of technological assumptions (the importance of efficiency as a criterion, for instance, or the GNP); what is needed is a critique of the whole paradigm of technology as exemplified by the device.

To this end Borgmann examines focal things and practices. He reverts to the etymology of "focus" to explain his specialized meaning. In Latin the focus meant the hearth; it was the pivot of family activity, the center providing warmth, light and sociability. For the Romans the focus was a sacred place of power and engagement, the place where the lares dwelt. Borgmann notes that the cathedral was a place of focal practices in medieval times. Where are the focal things, the urgent matters of concern, to be found today?

Borgmann's list of candidates for focal things and practices may strike one at first as strangely jumbled, a stew of incompatibles. The wilderness, gardening, running, music, the culture of the table--how can such a motley group of entities promise to aid us in restoring technology to its rightful place in our society? What sort of shoddy excuse for philosophical precision is Borgmann offering us?

Certainly Borgmann's aim is not analytical rigor. He understands philosophy at its best to project a resourceful vision of the world, a vision that can provide the basis for living a richer, fuller life. Focal practices are his candidates for transcending the trivial availability of commodities. Things rather than devices provide for rich engagement of our embodied selves with others and with the world. Focal things "are concrete, tangible, and deep, admitting of no functional equivalents; they have a tradition, structure, and rhythm of their own. They are unprocurable and finally beyond our control. They engage us in the fullness of our capacities. And they thrive in a technological setting" (p. 219). Focal things and the disciplined practices they invite are inevitably disparate; by reason of experience and capability we may be called to some and not others. But by reason of the complexity and challenge of focal practices, those who respond to their call will experience a bracing significance in life not to be found in everyday technologically framed existence.

Albert Borgmann has written a book that has the capacity to change our understanding of the world. If the austere cadence of his prose frightens some potential readers away, they will miss a profound consideration of our culture such as all too rarely comes along. To be sure, I believe his notion of focal things needs much careful elaboration before it will be possible to judge how well it fulfills its promise. While I think he is right in urging the importance of discourse in the public arena so that people begin to recognize the problematic aspects of technology today, the path to the collective political agreements he argues for (see p. 241) seems almost overwhelmingly difficult. I take heart, though, in reflecting that through Borgmann's book we are at least much clearer about the problem than previously. His diagnosis provides the first step toward recovering the promise of technology.

COUNTING UP

Adult Students and the Humanities: an analysis of census data by Kathryn Mohrman, Association of American Colleges, 1818 R Street NW, Washington DC 20024. Abstract by Sharon Scholl

The National Center for Educational Statistics conducted a survey of participation in part-time educational activities by adults of all ages as part of the 1981 census. The resulting data base obtained from 21,000 individuals has been subjected to a variety of analyses. The one involving the humanities was supported in part by NEH and is available from the Association of American Colleges.

The importance of the report is its delineation of a whole body of humanities students other than those post-high school young people conventionally described as the collegiates. We teachers have a variety of audiences which are described in Mohrman's report in both a broader and more detailed fashion than our individual encounters are likely to provide. The socio-economic nature of part-time adult students, the subjects they study, their educational providers, and even the source of their tuition are included.

In extracting humanities-related information from the huge statistical base, the report uses the NEH sub-disciplines definition of the humanities but excludes anything related to the social sciences. It deals with education in these disciplines wherever it is found, which might mean secretarial schools, public service organizations, correspondence courses, government agencies, etc. There was no comparison of level of advancement or length of the course. Some students (14.1%) were taking humanities courses as part of high school equivalency programs. Almost one third of all courses were taken to meet general education requirements for college degrees. Thus it appears that at least half of all enrollment in humanities courses is not for personal enrichment but to meet academic standards. Additionally, the largest enrollment (2.4%) is in areas somewhat marginal to humanities, the basic skills studies in writing and speech. Literature ranked next with 1.8%.

The comparison of humanities study area enrollments with those of other study areas showed it at about the middle of the spectrum. Business related studies claimed 20.2% of all part-time adult students; health related studies 12.8%; mechanics, computer training, and driver-pilot-engineering studies together claimed 12.7%. The humanities collectively drew 7.7%, ahead of education, arts, social and natural sciences, religious education, and professional courses by 2 to 4 percentage points.

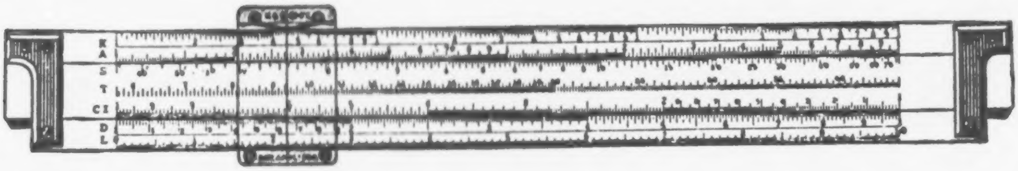
Part-time students, compared to Americans as a whole, were more likely to be young, female, well educated, and economically well to do. Interestingly enough, this profile did not fit the most typical humanities student because of the large numbers of people taking basic skills courses as part of a high school equivalency program. At the other end of the age spectrum, after steady declines in humanities enrollment after age 24, numbers of students rise dramatically after age 65. There is an even greater rise of students studying the arts and religion. The volitional nature of most study at this age is an encouraging factor. The figures for the over-65 group would also explain the statistical oddity that non-working persons participated in humanities courses far more than those in the labor force. The significant drop in humanities studies after formal schooling may suggest nothing more than that people are going to museums, plays, lectures, concerts or reading and traveling on their own. They are, in essence, "doing" the humanities. There is no way to test inferences suggested by these statistics. In general, humanities subjects attracted students involved in degree or certificate programs and those with leisure time, both of these categories a small percentage of the total adult part-time student population.

Education for job-related skills was the dominant reason for most adults (57.5%) to be in classes. Humanities enrollment, as part of a general education pattern, benefitted from this same motivation. People want to advance or keep up to date in their current occupation, move to new jobs, or make other career adjustments, and education is seen as a means to this end. Only 37.7% of humanities enrollment came from this motivation, while 57.3% was for other motivations. Personal and social reasons topped the list (29.3%) with general education following (23.9%). Even speech and communications courses were not as often motivated by job-related reasons. The housewife returning to the job market through educational preparation was a small factor in continuing education, as was minority participation. Interestingly enough, the best educated individuals were most likely to study in humanities disciplines for career objectives; people with five or more years of college took 52% of their humanities courses with some occupational outcome in mind. Do they know something the others don't? Evidently those who have already made a great investment in education are likely to continue to do so, and to regard humanities as a legitimate interest area.

The providers of these educational experiences made an interesting study. For adult education in general there is a diversity of study sources, including vocational schools, business and industry, labor and professional organizations, government agencies, community organizations, and even private tutors. Study in the humanities, by contrast, is predominantly tied to formal schooling obtained through elementary and secondary schools (13.3%) two year colleges (24.3%) or four year colleges (26.3%). This is understandable in light of the fact that almost one-third of humanities courses were taken for college degree credit. Government agencies (6%) and such community organizations as libraries and museums provide other humanities experiences (7.2%). This latter statistic reveals an interesting sexual division, as the proportion of men receiving training from the non-school or college sector was twice as high as for women. Participation by women in educational experiences offered by community organizations was twice as high as for men. Humanities programming in museums and libraries that is especially adapted to the interests of women should do well if this pattern continues.

As to the source of tuition for adult education, humanities students paid for their own courses to a greater extent than did adults as a whole. The largest statistical divergence was the case of educational funding by business or industry, which paid for only 9.8% of education in humanities disciplines, but 22.1% of all other educational categories. Government funding was used predominantly with low income or low education levels, and impacts the humanities with students studying in general education programs for certification at some level. The average payment per course was $117, indicating a dominant dependence upon publically funded institutions for instruction. Minority students were willing to pay more for their education than other groups, and more likely to have access to public funds with which to do so. The reverse was true for women. They were less likely to have financial support from outside sources, and consequently paid less for their educational experiences. There is a consistent relationship between educational level and self-supported educational endeavors; well-educated citizens value education and are willing to pay more for it.

In general, then, the variables that were highly associated with humanities enrollment were education for degree credit or other collegiate motivations and study for personal and social reasons. Other factors were statistically insignificant. Adult part-time humanities students are focussed upon educational credentials of some kind at younger ages. At more advanced ages they are seeking personal and social values and feel freer to pursue non-vocational interests. The report sounds one warning theme. There is a growing gap between most and least educated persons in American society, and our present practices of educational subsidy are widening the gap even further. Colleges and universities need to broaden the definition of job-related education, to demonstrate persuasively that history, literature, philosophy, and foreign languages have occupational value as well as inherent worth. This seems to be the only way to attract larger numbers of adults to these subjects. There is a growing audience of adults enrolling for personal and social reasons, but they are not looking in sufficient numbers to higher education to meet their needs. Humanities topics are well suited to this group and its motivations; more could be done to attract their enrollment. At the other end of the spectrum there is a large body of educationally disadvantaged persons, many of them funded by public sources, that colleges have undertaken to serve. They are likely to be left behind in an increasingly technological and well educated society. What are the responsibilities of humanities instructors toward these people? Can we create the necessary forms and shapes of our disciplines to serve them adequately? Kathryn Mohrman and her assistant Shelley Yerman have done a very helpful service in analyzing the vast cobweb of responses given to the Current Population Survey forms and sorting out the underlying issues that confront the humanities and their role in American education.



What's a "poster session"?
You prepare a portable
exhibit of a teaching or
learning
device or strategy.

For NAHE members, the Big Event upcoming is our own conference, **Humanities: A National Dialogue** to be held at the St. Paul Hotel and other Twin Cities settings April 10 - 12, 1987. As we go to press, the presentations on pedagogical techniques and issues are still being accepted, so you will have to wait for the program schedule which will be mailed by early March.

However, various special events that are included as part of the ninety-dollar registration fee are pretty well set. We will be guests for a morning performance by the St. Paul Chamber Orchestra. An orchestra principal will conduct a pre-performance lecture-discussion. The tentative program includes Bach's **Suite #3 in D**, Hayden's **Concerto in D** with Anthony Newman, Harpsicord, and haudel's **Dixit de Dominus**. We will also meet with members of the creative and production staff of the Great North American History Theatre, which has won considerable attention for its blending of historical research and professional drama. We will have a reception at the Minneapolis Institute of Arts with a variety of educational programming features.

The entire conference is being planned for a good balance between presentations and participation, both formal and informal. Arrangements are being handled by the University of Minnesota-Duluth's Continuing Education and Extension division of conferences. For further information, write to Deb Piwoshuk at 19 School of Business and Economics, UMD, Duluth, MN 55812 or call her at (218) 716-6142.

Many NAHE members first met our association at meetings of the Southern Humanities Conference. This year's annual meeting will be in Nashville, February 26 - 28th. The conference theme is: "The Humanities: The Possibility of a Renaissance". The revised schedule of sections includes:

1. Authority in the Humanities: Who sets the standards?
2. Values and Relativism in the Humanities: Codifying Culture or Re-defining Tradition
3. The Humanities and Popular Culture
4. Re-inventing the Humanities: The Feminist Challenge
5. Re-inventing the Humanities: The Black Experience
6. Humanities and the Corporations: 20th-Century Patronage?
7. The Humanities and World peace: How do we make a difference?
8. Panel Discussion: Interdisciplinary Faculty Development in the Humanities

For information, please contact:

Marcia A. McDonald or J.H.E. Paine
Southern Humanities Conference
Department of Literature & Language
Belmont College
Nashville, TN 37203

For those of you who are associated with an historical museum or agency, an exciting array of conferences are planned for March through September on such topics as "Collecting and Interpreting the History of

Home and Family" (at the Strong Museum April 26 - May 1), "Collecting and Interpreting the History of Minority Cultures" (at the Smithsonian May 15 - 20), "Collecting and Interpreting the History of Agriculture and Rural Life" (at Living History Farms September 13 - 18). Expenses must be borne by each participant.

For additional information, call or write:

Patricia Hogan
Project Director, NEH Conferences
AASLH
172 Second Avenue North
Suite 102
Nashville, TN 37201

Working with medical ethics?

"The Value of Many Voices" February 11 - 13, sponsored by the Center for Applied Biomedical Ethics and AMI/Presbyterian/Saint Luke's in Denver, Colorado, explores how cultural, religious and social value differences complicate ethical-decision making. Faculty includes: physicians, nurses, mental health specialists, religious and cultural leaders. This conference also presents a practical process for developing ethical solutions to these dilemmas. For information, please contact the Center for Applied Biomedical Ethics, 4567 East Ninth Avenue, Denver, CO 80220 (303) 320-2985.

Looking forward to the summer for your secondary school students, you might recommend this:

> The College of Arts and Sciences at Oklahoma State University and the National Endowment for the Humanities will co-sponsor a two-week summer program in "Ancient Studies: The World of Ancient Greece" this June, 1987. All participants (75 students, grades 7-10, will be admitted) will take Greek history and choose a project from four offered--science (astronomy), mathematics, art, literature/theatre. Students will be housed in university residence halls and advised by an experienced and responsible staff or counselors. Total cost of the program per student is $100. A limited number of scholarships will be available. For more information, write or call

Robert Graalman
College of Arts and Sciences
201 L.S.E., Oklahoma State University
Stillwater, OK 74078
(405) 624-5663

(Incidentally, we'll have a description of earlier OSU summer programs in the Spring issue of **HUMANITIES EDUCATION**.)

Finally, here are shorter notices of upcoming events from this month through May:

January 28-30 **"Literature and Anthropology"**: Symposium on Comparative Literature, Texas Tech University, Lubbock, Tex. Write to Wendall Aycock, Interdepartmental Committee on Comparative Literature, P.O. Box 4530, Texas Tech University, Lubbock, TX 79409.

January 29-31 **"Crosscurrents/Art, History, Politics: Literature and Cinematic Representation,"** conference, Florida State University, Tallahassee, Fla. Contact: Winnie Adolph, Department of Modern Languages, Florida State University, Tallahassee, Fla. 32306.

January 30 **Thinking**: Proposals for possible presentations at a conference on critical thinking, to be held in April in Newport News, VA. Contact: John Hoaglund, Center for Critical Thinking, Christopher Newport College, 50 Shoe Lane, Newport News, VA. 23606-2988; (804) 599-7085.

February 1 is the deadline for proposals for the **American Classical League Institute and Workshop**, Georgetown University, Washington, D.C., June 17-20. Individual papers and presentations in workshop format are solicited in several areas, including Latin authors; aspects of classical culture; and methods of testing and evaluation of Latin students. Proposals are invited from teachers at all levels. Please submit a 100-300 word description with title for a workshop or paper to Judith Lynn Sebesta, ACL Vice President, Dept. of Classics, Univ. of South Dakota, Vermillion, SD 57069.

February 6-8 **"Technology and Imagination,"** national conference on technological literacy, Science Through Science, Technology, and Society Project, Washington. Contact: 409 Keller Building, Pennsylvania State University, University Park, PA. 16802; (814) 863-1743.

February 25-27 **"Literature and the Historical Process,"** Conference on **20th Century Literature,** University of Louisville, KY. Write to Sharon O. Vance, Department of Modern Languages, University of Louisville, Louisville, KY 40292.

Montreal, Quebec is the site for the 1987 annual joint conference of the Popular Culture and American Culture Associations, March 25-29. Along with multi-disciplinary academic papers there will be many sessions relevant to teaching. Contact PCA/ACA Convention, Bowling Green State University, Bowling Green, OH 43403 for information.

April 10-12: **Don't forget NAHE in the Twin Cities!**

April 30-May 2 The International Association for Philosophy and Literature Conference: **"Postmodernism: Texts, Politics, Instruction,"** the University of Kansas. Plenary sessions with lectures by Richard Bernstein, Kenneth Frampton, Fredric Jameson, and Gayatri Spivak, four panels at which papers will be read and ten seminars with papers circulated in advance. Write to Gary Shapiro, Department of Philosophy, Lawrence, KS 66045.

EDITORIAL

(Note from the Editor-in-Chief: Our indefatigable Associate Editor, Sharon Scholl, submitted this article as a review of a report on "Interpreting the Humanities" Institutes sponsored by the Woodrow Wilson National Fellowship Foundation. However, Professor Scholl brings up so many controversial and disturbing issues that we thought it better to highlight her review as an editorial. Not so incidentally, Sharon was one of twenty-six Institute participants selected from over 1000 applicants.)

INTERPRETING THE HUMANITIES

Two "Interpreting the Humanities" multi-week institutes have been held under the financial sponsorship of the Woodrow Wilson National Fellowship Foundation, the first in 1984 and the most recent in 1986, the participants being twenty-six instructors in undergraduate humanities disciplines from throughout the nation. There would be little reason to report on the proceedings had it been a typical NEH-type assemblage of individuals doing their own separate projects along strictly disciplinary lines. However, two items eventuate from the Institute which take on broader interest. The group represented the whole spectrum of fields usually designated collectively as the humanities (the fine arts being notably absent). Their assembled interests and frustrations revealed much of the dynamics of humanities instruction today. In addition, there is available from the first Institute (and shortly from the second) a printed collection of the commissioned papers around which the conversation focussed. Copies may be had for $7.50 from the Foundation at Box 642, Princeton, N.J. 08542.

The most discouraging realization that soon swept over the 1986 group was how diverse and ill-centered the collective humanities seem to be. The historians had precious little in common in terms of interests and working rationale with those in literary studies. Philosophers and representatives of religious studies departments worked to still different ends with other sets of assumptions. Most had not been forced by curricular design to interact with varied disciplinary perspectives along integrative lines. All they had in common was the presence of a text, a traditional body of conceptual material, with which they had to deal. The only compromise seemed to be to concentrate on the textual problem and possibilities of dealing with it, which guaranteed a concentration of Deconstructionist parlance.

One important concern was the nature of the collection of texts itself. Does it have authority? Is it elastic enough to contain the enormity of new influences from ethnic studies, global concerns, and feminist perspectives? The general sense of the group was that though the repertoire of conceptual forms which constitute the standard university fare are sometimes accidents of time, often politically motivated choices, they are not erroneous or expendable. Many agreed with George Steiner's comments in his article "A New Meaning of Meaning" that though we must realize the provisional nature of any truth, we have to teach as if the enterprise had meaning, as exemplars of the values and commitments "the canon" embodies. The final authority is that of rational discourse rather than a particular reference point within it; there is room for expansion but not defection.

The problem of authority loomed large. Granted that in the public mind humanities are marginal to American culture, where does the instructor acquire the purpose and grounding from which to speak with assurance? Part of it comes from membership in a particular institutional setting; the university is the specified place where the value of knowledge, critical inquiry, and imagination is ultimate. Ours is that contradiction, a non-authoritarian authority over a "truth process" which is constantly changing. The canon of texts provides some widely recognizable record of the corners into which intellectual conversation has drifted over time. Much of our authority comes from intellectual allegiance to a discipline which is by nature artificial and open to challenge. We act upon the community at large in several ways: we are delegates from that universe of discourse to which we belong. We are constant interrogators of our own social and intellectual milieu. We are providers of leadership in a quest for life of mental, moral, and social quality. One of our most important roles is as creators of a cultural community, counteracting the cultural fragmentation of modern society. As Bellah and other investigators reporting in **Habits of the Heart** state, we must be concerned with communities of memory which give qualitative meaning to life.

The 1986 group most often failed to agree on anything discussed; in fact, their ad hoc reports often stressed the danger of homogenization. We tended to see the act of teaching as an intensely personal one, giving a kind of paradigm of struggle with fractious traditions of contending ideas. Hence, perhaps, all the concern over some agreeable canon; what else is there to hold all these varied conversations together? Education as an ongoing process of self-creation and social criticism was balanced with the need for ethical decisionmaking which would consider the hidden implications for usually unseen, marginal peoples. The many days of reading and conversation that nourished such ideas proved, above all, how contentious, dynamic, and "messy" (in just the way life itself is messy) the humanities are.

The 1984 group achieved a greater sense of collective will which was codified in a formal "Call to Action on College Education." They identified the purpose of the humanities as education for the ideals and realities of life and the rights and responsibilities of citizenship in a world community. Humanities instruction must engage students' roles as members of a community, as moral agents, as aesthetic beings. Teachers and the consciousness they model are as important as the texts taught. They direct a process of learning that must embody thought, feeling, and action, and include diversity of race, class, and geography. They call upon institutions to affirm in practical, consequential ways teaching as their primary activity, to give scholars the freedom and purpose to be educators.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with **content** that draws upon the human cultural heritage, **methods** that derive from the humanistic disciplines, and a **purpose** that is concerned with human values. Academic courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Seniors Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but not feel constrained to be colloquial. Avoid sexist implications in your diction by referring to **humanities, humans** or **people** rather than **man** or **mankind**. Usually awkward "he/she" constructions can be avoided by recasting pronouns in the plural. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed or word-processed double-spaced on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. Camera-ready line illustrations are very welcome. We can use written material of two lengths: one to three commentaries, etc.; and articles of six to ten pages (3500 work maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions. If you have **word-processed** your article, please specify the program you used (we use **Word Perfect**). If your article is accepted we'd like a copy on disk.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

Other editorial policies? Unsolicited material can only be accepted from paid member-subscribers. The editorial staff is not paid and most editorial work is done as a personal overload. Consequently we are obliged to carry on correspondence by inexpensive form letters and cards. All material submitted is subject to minor editing and rewriting, but we ask all contributors to have their work proofread carefully before mailing. We hope that all contributions will be of publishable quality, but there will necessarily be rejections because of space limitations and need for balance in topics, educational settings and current interests.

HUMANITIES EDUCATION

Dedicated to the teaching of integrated studies among the humanities, arts and related fields in schools, colleges and cultural institutions.

EDITOR: Fred E.H. Schroeder, Professor of Humanities, University of Minnesota-Duluth

ASSOCIATE EDITORS: Sharon Scholl, Professor of Humanities, Jacksonville University; Susan Coultrap-McQuin, Assistant Professor of Humanities and Women's Studies and Director of Women's Studies, University of Minnesota-Duluth

BOOK REVIEW EDITOR: James V. Mehl, Professor of Humanities, Missouri Western State College

CONTRIBUTING EDITORS: Burton Raffel, Professor of English, University of Denver; Jeremiah Reedy, Professor of Classics, Macalester College

WORD PROCESSING: Janet Stanaway, Principal Secretary, University of Minnesota-Duluth

Published by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Subscriptions and renewals are $16 per year. Checks should be made out to NAHE and sent to HUMANITIES EDUCATION, Department of Philosophy and Humanities, UMD, Duluth, MN 55812.
When renewing, please be sure to include your **expiration code** from the mailing label or **enclose the label.**

CONTRIBUTOR INFORMATION

Contributors should consult the Editorial Policies sheet carefully. As will be seen, HE is wide-ranging, quite permissive and has no "party line" in respect to definitions of **humanities, interdisciplinary** and **education**, but the wide boundaries are nonetheless firm. Please do not submit articles over ten pages long unless you are planning to revise.

Literature as Evidence of Social Values

As a teacher of literature, I was intrigued and puzzled when a colleague invited me to give a course in the Sociology department: what information or training could I offer these presumably discipline-oriented students?* But I was interested in the possible gains from such an experiment, and I accepted: at the least, the students and I could learn from each other; at the most, we might discover ways of making literature a tool for the sociologist. I should like, in what follows, to outline both the limitations and the strengths we discovered in such a tool, and to give brief examples of the kind of analysis brought to bear upon our literary texts.

Sociologists and psychologists have often considered literature as one kind of historical evidence useful for understanding the social values and psychological insights of the past; literature is a complicated sort of evidence to use, however, because its purpose, unlike that of the more usual historical document--census tally, legal record or even private letter--is not to report but to structure, order and transform human interaction to arrive at a truth transcending factual accuracy. As Chief Broom says of the events he narrates in **One Flew Over the Cuckoo's Nest,** "but it's the truth, even if it didn't happen" (p.13). Given the ambiguity of material which purports to discover the truth of the human condition by telling lies, I thought it might be well to set out for my students some of the difficulties in utilizing literature as historical evidence, and then to examine briefly a few examples of one possible approach.

Three major difficulties might at the outset discourage the sociologist from using literature as part of his evidence. The first is that the literary work presents no obvious person for the values of the author (and of the author's society); You cannot easily equate the author with one or even several of the literary characters. This is not entirely a self-evident truth; people who wouldn't dream of identifying Shakespeare with Macbeth see him in Hamlet, and one runs across articles which, for instance, discuss "Faulkner's View of Race Relations in the South" and draw, not on interviews with, or public statements by

---

*This essay, in slightly different form, was delivered to a Pacific Sociological Association panel on "The Social Uses of Historical Materials" in 1976. I am grateful to Professor Marilyn Garber for her encouragement of this project since its outset, and to Professor Steve Riskin for inviting me to teach the course I describe here.

Faulkner, but on the words of his fictional characters. You cannot easily select a single character as mouthpiece for the author, I explained: who are we to say speaks for Faulkner? The poor redneck? The decayed aristocrat? The young, resentful black? The older, resigned and submissive black? None of them? How, in this embarrassment of options, is the reader to choose?

The second obvious difficulty is that you can't extrapolate one passage or one set of events from the work and treat it as the "message." This difficulty is related to the first, but has more to do with the fact that critics and authors see literary works as organic wholes, no one part of which represents the sum, extractable like the fortune from a cookie. It would, for instance, be inadequate to see the nihilism of Macbeth's "Tomorrow and tomorrow and tomorrow" speech as representing a broad outlook, either of Shakespeare or of his society; it is in fact the violation of the values of that society, the rending of its social fabric, which has brought Macbeth to the empty and despairing viewpoint of that speech. The more well-wrought a work is, the less one is likely to be able to abstract its meaning; the meaning **is** the entire work. The solution to this difficulty seems unlikely to lie in the direction of using less than well-wrought works as texts; it would hardly be worth importing an English teacher for that purpose.

The third obvious difficulty I pointed out is that one must know the other literature of the time--and other literary works of that particular type--in order to distinguish the original and idiosyncratic idea from the platitude; Polonius' advice in **Hamlet** about being neither borrower nor lender was cliched even in Shakespeare's time, and so to take it as evidence for a rising Protestant thrift ethic is misleading. The words tell us something about the character Polonius, but little about the economic values of the time. Similarly, one needs to distinguish the commonplace from the original; what has come down to us is often the work of great men and women whose very genius may create a gulf between them and the conventional thinkers of their times.

Given these forewarnings, we turned to our literary texts. One way through the morass of difficulties surrounding the placement of a work in its historical and literary context is the use of a theme spanning times and genres; I therefore chose the theme of madness in literature and selected texts accordingly. Madness is useful for describing social values since it implies a norm of sanity against which the reader measures the "mad" behavior. Traditionally, the mad person has been viewed as one who deviates from the established norms; in this way, the theme of madness is often used as a critique of these norms, being here similar to satire, which looks at the discrepancy between what is and what ought to be. We had thus two sets of social values to investigate: the social system of beliefs by which people actually order their lives and the opposing moral voice which criticizes these beliefs. Often the opposing voice uncovers the fact that what people think they **ought** to do is what they **say** they do but don't, and thus social hypocrisy is one of the persistent themes in the literature of satire and madness. Satire often uses the built-in discrepancy/norm system of madness to make its point--from the hallucinatory chivalric folly of Don Quixote to the naive and misanthropic isolation of Gulliver--and thus we have the view of madness as greater insight, or as reflecting the absurdity of the world's values. The study of such deviants provides one path into the study of the norms from which they differ.

Shakespeare's **King Lear**, written in a time of great social dislocation, contrasts two sets of values, what we may for the sake of convenience call the Old Man and the New Man. The Old Man adheres to the hierarchically-ordered society of obedience and love, a society thought to reflect the chain of being which the medieval and renaissance world saw extending from inanimate rocks through the ladder of creation to God, with each link in the chain receiving its validation from its relation to the superior and inferior links surrounding it, and each link possessing its own special excellence and reason for being. This view of human society, with the father or ruler being in their functions analogous to the Creator in His, is represented in the play by those who serve the old king through love and obedience and not through hope of self-advantage: Kent, the Fool, Edgar and Cordelia. The New Man adheres to the notion of self-aggrandizement and individualistic opportunity, seeing society not as an ordered whole but as a chaotic jungle in which each seeks his own end. The economic and social opportunism of the new men of Shakespeare's own time provided the key to the behavior of the villain Edmund. The play's action has the old king dividing his kingdom among his daughters on the basis of a "Who loves me the most?" test, finding that he has erred in his evaluation of his daughters and in expecting the honor without the power, and going mad as a result of the rude awakening. Throughout the play, events contrast the two value systems: when Lear's servant is put in the stocks by one of his daughters, he is outraged beyond our understanding, unless we realize that the affront is one to the hierarchy of the old system: the respect due a king, even one now without authority, would preclude such rudeness to his messenger. To the New Man, such deference is gratuitous. In Lear's madness, he rails at the falsity of his society's system of justice, noting that robes and furred gowns hide a multitude of iniquity, and that the judge who passes sentence may be as much of a thief as the man he hangs. Here, the madness of Lear allows him to see more clearly than he had when sane, and his displacement and suffering focus the contrast of the two belief systems functioning in his society: madness as social criticism. Such a focus can tell us a good deal about the sense of disorder and displacement in Shakespeare's own society in a time when the reordering of the social system, the rising population and the displacement of the farmer in an increasingly cash-based economy exacerbated the unrest stemming from the Reformation and from urbanization itself. The students found that they could talk about the effects of major shifts in values by reading materials they hadn't considered since their required "general education" courses.

To draw on an example some three centuries later, one which deals at least implicitly with the status of women, we turned to Henry James' novella **The Turn of the Screw.** This is territory as foreign as Shakespeare to my sociology students. As you'll recall, it tells of a governess who apparently (that is, indeed, the crucial issue) hallucinates the possession of her two young charges by the evil ghosts of their former servants. A male colleague once pronounced to me that James uses the governess because spinsters are the most likely to suffer such hallucinations; as Freud would have explained, they are prone to hysteria. The social value inference from this point of view is that James, writing in 1898, is reflecting a view of women common in his time. A more feminist reading is possible; from this view, we would see her economic (she is a poor parson's daughter with few avenues of self-support open) and emotional (she has an unrequited attachment to the uncle that is also unrequitable--because of the social gap and the passivity expected of women in romance) dependence on men and its resulting entrapment as contributing to, if not indeed the source of, her "madness." This is a more subtle revelation of social values, since it doesn't depend on our probing the dead author's attitudes, but goes beyond them to discover the relationship of our assumptions to those of James' time. What one society takes for granted--here, the economic and emotional dependence of women--may speak revealingly to another age.

Catch-22 is a marvelous text for examining attitudes to war; it provides a commentary on the discrepancy between the values we say we hold--the sanctity of life, the primacy of the individual--and those values we actually practice in wartime. The arbitrariness and irrationality of death are vivid:

> Clevinger knew everything about the war except why Yossarian had to die while Corporal Snark was allowed to live, or why Corporal Snark had to die while Yossarian was allowed to live. It was a vile and muddy war, and Yossarian could have lived without it--lived forever, perhaps. Only a fraction of his countrymen would give up their lives to win it, and it was not his ambition to be among them....That men would die was a matter of necessity; **which** men would die, though, was a matter of circumstance, and Yossarian was willing to be the victim of anything but circumstance. (p.69)

The novel, by the method of taking the absurd literally, contrasts the needs of the individual and his group; from the point of view of society, being a good soldier and fighting the war is sane; from the point of view of the individual Yossarian, it is madness, a madness underlined by the amorality of the war profiteer who will bomb his own squadron or the self-serving bureaucrat (there is no competent officer in the book) who can devise Catch-22, which specifies that a concern for your own safety in the face of danger is rational. You'd be crazy to fly more missions and sane if you didn't, but if you're sane you have to fly them. If you fly them, you're crazy and don't have to, but if you don't want to you're sane and have to: that's Catch-22 (p.47). By reducing the principles of war to absurdity, Heller has provided us with an insight into the conflict of individual and social values, and has done so by using as a premise the essential insanity of war: the world as asylum.

The world as asylum is also the informing metaphor of **One Flew Over the Cuckoo's Nest**, and the novel (unlike the film) makes this point in part through the character of the narrator, the Indian Chief Broom, who pretends dumbness and whose role as an outsider in American society allows his insight into its workings. The Chief hallucinates a paranoid fantasy concerning what he calls the Combine, a mechanistic conditioning force for destroying individualism. In Broom's view, the mental hospital is the repair shop for the Combine's mistakes and cases of inadequate conditioning. He dreams one night of seeing the old "vegetable" Blastic plastic placed on a meathook and sliced up: rust, ashes, wire, glass and little bits of machinery tumble out (pp. 79-82). Mental illness is here socially defined, and the machinery-innards of the old man suggest the dehumanization resulting from socialization into conformity. Broom's hero McMurphy raises deviance to the level of heroic resistance, which is a frequently attractive but limited view of mental illness, limited because it seems to imply that all mental illness is socially caused.

Through these and similar illustrations, my students and I came to see the utility of literature as evidence for the social values of its time, noting that the values are often implied by the critique of them presented through the madness of the characters. Literature focuses more on the deviant case--one of its goals being to represent the individual human experience--and sociology more on the norm, though the place at which these statements shade into their opposites is the fruitful ground for interdisciplinary investigation. Additionally, literature, in **representing** experience, creates its own world: There is no direct or simple correspondence between literature and life.

Frustrations abounded: the students complained about the difficulty and the amount of material I asked them to read, and grumblings that I was trying to transform them into English majors were muted but heartfelt. I agonized over their tendency to psychoanalyze characters as if they were real persons, or to apply sociological labels to characters and authors alike.

Even given these qualifications, the experiment yielded some useful results: we discovered that a literary work, read differently from other sources, can be valuable to the sociology student discovering a society's central concerns, conflicts, and values: In addition we learned to respect each other's disciplines and their potentials for mutual illumination; the students read some good books, and I experienced the exhilarating pleasures of preaching to the unconverted.

READING LIST

The booklist for the course, studied in chronological order, consisted of these paperback editions:

Cervantes, **Don Quixote**, transl. W. Starkie (New American Library, 1964)
Shakespeare, **King Lear**, ed. Russell Fraser (NAL, 1963)
Conrad, **Heart of Darkness** (NAL, 1950)
Faulkner, **The Sound and the Fury** (Randon House, 1956)
Heller, **Catch-22** (Dell, 1962)
Vonnegut, **Cat's Cradle** (Dell, 1970)
Kesey, **One Flew Over the Cuckoo's nest** (NAL, 1962)
Weiss, **The Persecution and Assassination of Jean-Paul Marat As Performed by the Inmates of the Asylum of Charenton Under the**

Direction of the Marquis de Sade, English version by Geoffrey Skelton (Pocket Books, 1966).

I later became aware of the textbook **The Abnormal Personality through Literature,** ed. Alan A. Stone and Sue Smart Stone (New Jersey, 1966), whose approach is considerably more psychonalytic than mine.

Ten Humanities Views of Cities

Among the various themes that are especially appropriate for integrating the concepts and materials of different disciplines into a coherent humanities course, **The City** is one of the most stimulating and popular. Cities are concrete from subway to penthouse and so the teacher does not have to present a theme such a "justice" or "love" that may seem elusively abstract to the student. The City is really there, and every American has had some personal experience with cities, directly or vicariously through the media.

Another advantageous quality of The City as a theme is that its **complexity** is readily apparent. The teacher does not have to do very much to persuade a student that a city is more than the dot on a map. Ordinarily one cannot comprehend the unity of a city from within it at street level, while an aerial view from an airplane, skyscraper or hill discloses the economic complexities of industrial, commercial, residential and recreational districts as well as the transportation networks. Furthermore, it takes little effort for a student to see within the inanimate physical city the **human** city, the dynamic social community. Not so readily perceived are the **historical** city and the **natural** setting, but once again, these can be discerned directly in physical realities. Thus, The City is one of the most accessible integrating themes we could hope to find, and it is filled with vital humanistic, social, political, economic and personal issues that make it a **genuine** topic for study and not a mere academic exercise. The accessibility of the topic has been borne out for me by the excellent City "units" I have observed in elementary grades, in secondary schools, in colleges and in post-graduate and adult education.

In addition to the advantages of being a theme that possesses physical concreteness and multidisciplinary complexity, The City is (or can be) a topic that is particularly mature, sophisticated and elusive. When we enquire into such subtleties as the **image** of The City, or of the **atmosphere**, the **personality**, the **essence**, the **experience** and the **expression** of a city, the certain concreteness of cities disappears and we are obliged to wrestle with profound humanistic problems of dialectical change, evolution, cause-effect relationships, subject-object, figure-ground, organism-system, symbols and semantics--in short, all the exasperating abstractions of perception, definition and interpretation that show no sign of ending while human beings continue to puzzle out what they are, what they have wrought and what they might become.

My experience from having prepared and taught some four or five courses on cities (and towns) has been that the last-mentioned aspects of cities (and towns), that is the **perception**, **definition** and **interpretation** of cities, of The City and of the "urban experience" requires a quantum leap on the part of the student. Speaking quite honestly, I have not at all been satisfied with the effectiveness of my attempts to assist students in making that leap beyond very simple, almost instinctive responses. (Four simple responses include: 1. the egocentric "this is what I think about my city;" 2. the cartographic "here is a map of this city;" 3. the journalistic "these are the issues facing the city today;" 4. the anachronistic "Rome was destroyed in 476 A.D. and Williamsburg is what towns once were like"). The simple responses are not totally invalid (there is no reason for a teacher to ridicule or deny them) but they represent "cultural provincialism," the naive beliefs that Today is a unique creation, bearing no reference to past or future, and that What I See is all that matters. To express this as a cliche, cultural provincialism is incapacity to perceive the Big Picture.

In addition, there is a persistent tendency to quantify, objectify and professionalize the city, thereby divorcing it from the human experience as well as from the humanities. Personal experiences are replaced by group dynamics, expressive interpretations by statistical information, value issues by political conflicts, history by journalism, beauty by engineering. What I really want to argue for is all of these disciplines, but, especially in urban studies, regional planning and architecture programs, the humanities (and arts) too often are missing.

What follows are ten more or less traditional humanistic ways of perceiving cities. These originated as notes for lectures in a cities course that I thought showed signs of deteriorating into an economic geography course.

1. AESTHETIC OBJECT

The city can be viewed like any other work of art, as something outside of ourselves created for our pleasure. The example **par excellence** is Venice, a city that is now an art object, a museum in itself. It was the premier city to be a subject for painting as a souvenir. True, El Greco and various Little Dutch Masters antedated the famous Venetian artists Canaletto and Guardi, but Venice was the first cityscape to be taken home to be hung on the wall, and on the Grand Tour of the 18th and 19th centuries, Venice was the one stop where the city itself was the goal. Many city planners from the Renaissance on have regarded the city as aesthetic object, and in some cases it appears as if the paper design rather than the city was the aesthetic object, since its totality cannot be perceived from within. Today many historic preservationists seem to regard the city or segment thereof as an aesthetic object, not only legislating against buildings that will disturb "the picture," but even rearranging their home interiors and the furnishings of their minds to harmonize with the outside urban design.

2. EXPRESSIVE IMAGE

Cities can function as symbols or metaphors representing various abstractions. Carl Sandburg's poem "Chicago" is a good example of a poem that views the city as **expressive** of energy, power, excitement. The New York City skyline is used again and again as an expression of America, and if the view is from the harbor including the Statue of Liberty, it can express hope and opportunity. Skyline illustrations abound: Paris with its Eiffel Tower and Notre Dame towers, Moscow's Kremlin, San Francisco's Golden Gate Bridge. Occasionally things are consciously designed to concentrate and express a city's self-image, like St. Louis's Jefferson National Expansion Memorial Arch, and of course, the equally "useless" Eiffel Tower. Gustave Charpentier's opera **Louise** uses the city of Paris as a silent character of overwhelming importance, a panoramic state backdrop forming an image against which the drama is played out, ending with the words "Paris, Paris!" as the city completes its seduction of the innocent.

The differences between these examples and the aesthetic object is that while the aesthetic object stands still for our admiration the expressive city seems to be empowered to articulate a spirit, an idea, a cluster of feelings of a time and place. It is hard to put into objective words (which is why we need metaphors and symbols), but we all know of cities that seem to embody the "spirit of an age", like London in the time of Elizabeth I, or Athens in the time of Socrates and Aristophanes, or even Sinclair Lewis' semifictional zenith in **Babbitt** which expresses the Twenties. Filmmakers revel in the urban imagery of hope and despair, adventure and anomie, corruption and fulfillment in such films as **Naked City**, **Chinatown**, or **Rocky**, while journalists and civic boosters represent cities as expressive of energy, the future or self-fulfillment.

3. DYNAMIC ORGANISM

As an expressive image, the city is a force, but when we view the city as an organism the city becomes a living thing, with its own evolutionary history. As with the view of the city as an aesthetic object, the humanist tends to stand away to take in the totality. Lewis Mumford's great **The City in History** is of this type, discerning signs of animate existence such as birth, youth, death, disease, and organic parts such as nerves, mouths and cloacae. Ecologists point out the "pathetic fallacy" that cities are **systems**, not organisms, and yet in popular language we have the **heart** of the city, main **arteries**, **dying** downtowns, **festering** slums; and in such poems as William Wordsworth's sonnet "Composed on Westminster Bridge September 3, 1892" London becomes a living, breathing person who "doth now like a garment wear the beauty of the morning...."

4. MYTHIC ARCHETYPE

The words "myth" and "archetype" indicate that we have entered the world of the subconscious and of the primitive mind. Modern people no longer think of cities as being founded upon magical ground, or started by the acts of divine beings or of divinely inspired humans, nor do we think of cities as earthly representations of cosmic order, but we still have vestiges in such terms as **metropolis** (mother-city) and founding **fathers**, and in rituals and ceremonies of keys to the city, honorary citizenship and in-**augur**ation. Nearly empty of divine meaning today, these honors yet are not lightly bestowed, nor are the ritual acts forgotten away. Like the installation of Christmas trees in our homes, they **satisfy** deep, inarticulate needs.

In some cities, the mythic remains highly charged with meaning and spiritual significance, as in pueblo towns of the Southwest, in the Salt Lake City of the Latter Day Saints, and in the many communities that started with a church congregation or a parish and with appropriate **invocations**. The flag of the Republic of Mexico contains the symbols of the founding of Mexico City, and we are all familiar with the beginnings of Rome from a wolf suckling Romulus and Remus. The undercurrent idea is that the founding of cities is identical with the process of civilization, which finally humanizes the wild, the animal, the rootless, egocentric wandering of primitive not-quite humans. The first mythic king of Athens was Cecrops, half man, half snake, and to him is attributed the institution of monogamy, the burial of the dead, and the invention of writing. Obviously the tale is not factual, and equally obviously, it was invented after the city existed (as was the alternative Athenian story of Erichthonius and the foundation myths of most ancient cities); but in the Cecropian tale the symbols of pre-urban wildness and of civilized humanity are clear.

Myths and psychoanalytic interpretations are ambiguous and hard to nail down; hence they are easy prey to skeptical analyses. The best demonstration of validity is subjective: if you have ever, in dreams or nightmares, encountered a city with an overwhelming sense of threat, or adventure, or danger, evil or loneliness, you will know that in the hidden depths of your mind, cities and cityscapes have undefinable but nonetheless undeniable power of meaning.

5. HISTORICAL FORCE

Time and again cities have altered the course of the histories of nations and even of larger segments of humanity. Three exemplary illustrations are: Paris of the seventeen-eighties and nineties which made not only the French Revolution, but in a sense, made almost all ensuing people's revolutions; Florence of the latter fifteenth century, which changed our eyes for beauty; and Athens of the fifth century BC which made up our minds. Notice that what is meant by "the city" in each example is not quite the same. Revolutionary Paris seems to be the populace more than leaders; Renaissance Florence is a group of humanist patrons, scholars and artists, while the classical Athens that has changed our minds is a cluster of teachers as much as patrons and artists. The cities need not be large--Concord and Weimar are still sending out reverberations from the past--; the historical force need not be individual--the New York melting pot does not summon up names of leaders--; nor need the influence be associated with a crisis--the imperial force of London on what we now call the Third World has not been so concentrated in time or place as my first three examples.

Equating a city with historical force is clarified by the journalistic shorthand of today: "Moscow has not responded to the statement", "Washington is altering its stand" and so on to neighborhood metonomies like "Wall Street is gloomy." The importance of the concept of the city as historical force is easily demonstrated by examining almost any standard world history: the "progress" of human history leaps from city to city, each city having its moments in the sun. Political capitals invariably exert force upon events, but other cities have similar "built-in" power because of being centers of commerce, arts and education, as with Geneva, Pisa and Baghdad at different points in history. Although historical force is generally associated with the social institutions or persons or events, now and then we can identify a **cityscape** that sets patterns for design. Washington DC is replicated in American state capitols, while New York's skyline is echoed in cities throughout the entire world.

The great moments in a city's history can also leave indelible marks on the cityscape in historic districts and monuments. Springfield, Illinois for example, was the home of Abraham Lincoln in his formative years; to what degree the city of Springfield itself was a force upon American history and values is an open question, but the subsequent life of Lincoln changed the city forever. Here, and in innumerable other cities and towns, the physical city has been shaped by past power and past events that encourage the preservation of places that might otherwise have disappeared.

6. CULTURAL MARKETPLACE

Cities are the places where ideas and art works are bought and bartered. The cities that are the real marketplaces are few: New York, London, Paris and Rome are the cities where reputations in painting, music, writing and other arts are made ultimately and finally, regardless of the importance of such other marketplaces for culture as Rio de Janerio, Sydney, Tokyo, Tel Aviv, Copenhagen, Hollywood, Las Vegas or Nashville. Historically there have been other truly major centers like Vienna, Alexandria and Athens. The lists can go on, as can debates about relative degrees of influence and centrality, about specialties, and even about the rightness or wrongness that such centers should exert so much tastemaking power; but for the humanities and arts, certain cities are key exchange points. The reasons are various, but underlying is the fact that a concentrated population of audiences, artists and brokers are essential to a cultural marketplace. Many other cities have fine concert halls, art museums, and conservatories, but the real power is in the brokers: literary agents, galleries, auction houses, publishers, magazines and critics.

This sounds commercial and crass, but it remains a humanistic view of the city. Cities represent many other kinds of marketplaces to economists, geographers and urban planners who are more likely to look at the markets for money, food, manufactures, trade and technology than for culture, but the humanistic eye singles out the aesthetic-intellectual storefronts, stalls and warehouses.

7. CREATIVE CATALYST

The city as a catalyst for creativity is directly related to its function as a cultural marketplace, and it may be the main contributing factor in a city's becoming an important historical force. Of course creativity, artistry and intellectuality can and do thrive outside of cities in green pastures, and numbers of famous artists and thinkers have railed against the city, but it almost seems as if some urban exposure is needed at a formative time of intellectual growth. Those with rural preferences have included people from Horace and Juvenal to Shakespeare and Montaigne to Frost and Wright, but all benefited from the urban catalysis. Altering the imagery somewhat, cities have been magnets to draw in young minds to a world of challenge, encouragement and opportunity. Some of the most famous catalytic circles are astonishing for their mix of writers, artists and philosophers: Dr. Johnson's London, Bertrand Russell's Bloomsbury, Langston Hughes's Harlem, Alfred Stieglitz's New York, Gertrude Stein's Paris, Harriet Monroe's Chicago are but a few. Some have been very small places, like Urbino, Weimar, Concord or Taos, but most are co-existent with large cultural marketplaces, and for better or for worse continue as meccas for the young humanists who regard residence in Greenwich Village, Bloomsbury or the Left Bank as obligatory rites of passage.

Catalyst, magnet or mecca, cities engage the minds of humanists.

8. HUMAN EXPERIENCE

There is a vast body of literature in which cities are depicted not as places, or as aesthetic objects or systems, but as **experiences** of humans among humans. Aristophanes, Catullus, the authors of **The Arabian Nights**, Francois Villon, Henri Murger, Victor Hugo, Charles Dickens, Walt Whitman, O. Henry, Thomas Wolfe, Saul Bellow constitute a short starting list. The way in which this humanistic view differs from that of the cultural catalyst lies in the experience of the teeming variety of human lives that populate the cities. Some literary artists of the rural landscape have the same sort of sociological sweep--George Eliot, Thomas Hardy and William Faulkner come to mind--but for sheer immersion, this is an urban art.

In a sense, this humanistic view runs counter to that of the aesthetic object. It is marked by a disorder that is only given organization by one human being's self-centered experience, but it tends to take in everything eye-to-eye at eye-level, rarely seeing vistas or designed beauty, much less a plan.

9. UTOPIA

The original Humanists were scholars of the European Renaissance whose rediscovery of ancient Greece and Rome coincided with a discovery of the human potential for improving life on earth. One of the most honored of all Humanists was Sir Thomas More, whose book **Utopia** (1516) was at once an imaginative spinoff from Plato's **Republic**, a fantasy prompted by the adventurous explorations of a New World, and a satirical indictment of current social conditions. Since then utopias have been a regular part of western thought, ranging from barely masked social blueprints like Edward Bellamy's **Looking Backward** to colorful entertainment like the comic-strip **Flash Gordon**. But even in its lightest or most prescriptive forms utopian fiction partakes of More's three humanistic views: uses of the human heritage (if only for costumes and castles), new explorations and discoveries, and criticism of the contemporary world.

Utopian futurism also spills over from fictional speculation to experimental programs, whence B. F. Skinner's Walden Two communes, Paolo Soleri's arcologies, and the tenth and final humanistic viewpoint...

10. LIVING SPACE

Like any other professionals, professional humanists run to specialties. For example, the "human experience" view is most common to professors of literature, literary critics and novelists, while historians will obviously tend toward the "historical force" view and art historians will perceive a city as a "cultural marketplace" or an "aesthetic object."

The city as **living space**, however, is not ordinarily associated with typical humanists, being more often within the professional bailiwick of architects and urban planners. Some names that come immediately to mind are Frederick Law Olmstead, Kevin Lynch, Edmund Bacon and Christopher Alexander and his associates.

Their various emphases run from artistically sculpturing urban space to restructuring urban societies, but their views are best characterized as opposing the idea that a city is merely a container, a map, a construction or a problem: for them the city is a concentrated space in the world in which many different kinds of people live out their lives. Sometimes their urban plans work, often they fail and people choose not to live in the planned living space, or would rather leave it for tourists or card-carrying members of planners' cults.

And that briefly describes ten traditional humanistic viewpoints. We might ask what use they might be. First, like all categorizations, this division tells small lies of oversimplification in the interest of clarifying an unwieldy topic. Cities as totalities are beyond our grasp. Second, each viewpoint can help to temper mechanistic, economic and political views of the city. Temper, not change. Humanists (especially when they are writing a grant proposal to the National Endowment for the Humanities), are fond of saying that their views will be of demonstrable value in facing urgent social issues of the day. Unfortunately, the humanities' stock-in-trade rarely converts to demonstrable units. Reading Hugo's **Notre Dame de Paris**, Sinclair's **The Jungle** or Mumford's **The City in History** will not plan a park, revive a downtown or improve the political process in any direct way. Yet in the most literal sense of the word **perspective**, each and all of these can help people to see through the immediate, the trivial and the narrowminded issues into broader cityscapes of human heritage, cosmic issues and subjective values.

Third, the division of a general humanistic idea of the city into ten specialized viewpoints can help in making choices for practical programs. The "aesthetic object" and "living space" views may be of most interest to designers and to citizens contemplating urban renovation; "human experience" and "mythic archetype" to social service and mental health professionals; "creative catalyst" and "cultural marketplace" to arts alliances, and so on. Bearing in mind that all the humanities can **promise** is perspective (although specific, applicable insights are by no means uncommon), it is then possible to call upon professional humanists as participants with mutual understanding of potential resources and probable limits. Left to themselves, humanists would make cities places where sewers back up, industries are spurned and taxes are uncollected, but in league with technocrats and engineers, they can help to maintain the cityscape as a place of discovery, imagination, magic and life.

HUMANITIES EDUCATION CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

Robert Graalman

Humanities Courses for Pre-College Students

For the past five years, the College of Arts and Sciences at Oklahoma State University has developed innovative, interdisciplinary curricula to offer a successful series of academic summer camps for outstanding junior high and high school students. The approach has led to funding by the National Endowment for the Humanities for a two-week institute in Medieval Studies (1985) and a forthcoming program in Ancient Studies (June, 1987).

Recognizing the need to provide enrichment in the humanities and instruction in problem-solving, and counting on the popularity of on-campus educational experiences for youngsters, a group of Arts and Sciences faculty and administrators designed a three-week program for twenty-two (out of 130 applicants) seventh, eighth, and ninth graders for summer of 1982. The course of study included English, mathematics, and a class in computer graphics which was taught by a university artist who had become intrigued by the potential for computers in her field and by a computer scientist who possessed a solid background of study in the humanities.

Thanks to very positive public and student response to this program, the college continued an expanded version of it in 1983. The faculty involved also expressed a concern for the lamentable ignorance shown by some students (even many of the most capable!) for topics of international significance, and they proposed a camp in International Studies for high school students. But they wished to maintain their humanities focus and so offered three new courses. First, a world geography and culture course dealt with the much publicized failure of students to understand their relative "place" in the world, examined how physical surroundings can affect the development of culture, and characterized the art, literature, music, and religion of selected societies. For a more specific look at culture, a German course included not only rudimentary langauge instruction, but explored the cultural traits of German-speaking countries. Finally, to reveal dramatically the interplay that exists often among seemingly unrelated disciplines, a university mathematician prepared a course in the "Mathematics of World and Public Issues." The students were amazed at the amount of time this scholar spent referring to philosophical texts, historical documents, and artistic masterpieces before focusing on the "mathematics" of such topics as the United States Electoral College, the population explosion, the arms race, world hunger, and ecology--truly an exercise in interdisciplinary education.

A disastrous state financial crisis prevented further development of these expensive programs (an average cost per student was around $1,000, most of which the college had previously been able to bear), and a new approach was in order. A thematic structure evolved, giving the program a more vivid identity while maintaining the important humanities-related goals the faculty originally envisioned. Based on faculty, student, and public interest, the attempt to attract funding for a two-week program in Medieval Studies was made, and the National Endowment for the Humanities (Youth Programs) supplied the assistance ($50,000), allowing Arts and Sciences to offer "Warriors, Priests, and Peasants: The Dynamic Society of the Middle Ages" to fifty-five seventh-through-tenth graders in June, 1985.

The instructional approach included both the traditional and the innovative. Each student was required to take a course in medieval history, taught in a lecture/discussion format. Course planners were pleased to discover that the history class was lively and popular, contradicting some rather dire predictions that the "formal" classroom setting would not be appealing to this caliber of student, the majority of whom would need the stimulation of a more independent, self-directed learning atmosphere. Those particular concerns were addressed in four "project groups," each designed for the students to study in specific areas under the direction of university faculty and their assistants in a so-called "hands-on" learning environment--i.e., projects, productions, extensive individual and small group participation, conducted in less formal surroundings. Each student enrolled in one of the four groups: medieval science (alchemy), mathematics, literature, and art.

As one might have expected, the alchemy class attracted much interest and generated much excitement. As those enrolled had anticipated, time was devoted to the "magical" elements of this topic. But primarily the students worked as beginning young scientists, learning the skills of investigation while being informed of the philosophical concerns of medieval alchemists and the interdisciplinary nature of responsible scientific study, both then and now.

Those choosing the mathematics project group learned a great deal about the history of this discipline and focused on the discoveries and writings of Fibonacci, by exploring the delicate and beautiful relationships between aesthetics and mathematics. The students found their appreciation for mathematics increasing in proportion to their understanding campus architecture, musical performances, and displays of art.

The students enrolled in the literature group read and discussed some important and representative works, such as selections from **Beowulf and Sir Gawain and the Green Knight**. They also produced and performed, with the direction of a visiting theatre instructor, the play **Noah's Flood**, one of the miracle plays of the Chester cycle.

In art, the students viewed slides which led to discussions of the characteristics of medieval art and architecture. For their projects, teams of students worked with an architect-historian to construct scale replicas of a typical medieval castle and grounds, and the Chartres cathedral, complete with "stained Glass" and flying buttresses. Reading Macaulay's **Castle** and **Cathedral** supplemented these activities.

In addition to their regularly-scheduled classes and project groups, the students heard frequent lectures on related topics, such as "Astronomy," "Philosophy," "Music," and "The World of Islam during the European Middle Ages." All final presentations and productions, including a performance of the play by the literature group and some enthusiastic attempts by the alchemists to turn copper pennies into "gold," were made at a medieval fair for friends, relatives, and the university community on the last day of the program.

Thanks to the success of that program and satisfied with its structure, the college moved to a new topic and has again been awarded a significant grant by the National Endowment for the Humanities ($75,000) to present "Ancient Studies: The World of Ancient Greece" in June, 1987. The plan is to require all participants (a maximum number of seventy-five will be admitted) to take a Greek history class and to make four project groups available. The groups are: literature and theatre, mathematics, art, and science (focusing on astronomy). Obviously much potential exists here for faculty not only to introduce the students to important subjects and to guide their creations and productions, but also to illustrate the interdisciplinary foundations for the study of western humanities in its beginnings.

Also fully planned, waiting in the wings for the right funding opportunity, is "Worldview: International Studies," which we hope will be offered in 1988. A class in world geography and culture is the centerpiece of this proposed event, with project groups in Spanish, German, Arabic, Russian, and Japanese. The faculty who are involved hope to stimulate further language study among their students and to enlighten them concerning the artistic and cultural characteristics of other countries as they read, discuss, and complete activities which reveal much about their world and the value of the humanities.

These programs have had numerous positive effects locally, statewide, and nationally (five states other than Oklahoma were represented at the Medieval Studies program). Our faculty have experienced the satisfaction that comes from designing new courses for a unique, capable, and enthusiastic audience. (Most students who have attended these programs are classified as "academically gifted," even though such status has not been a requirement for admission after the first year.) Faculty have been obligated to work more closely together as they prepare their materials and teach their students, and such interaction has confirmed what they had always believed, but rarely, in the current system of higher education, had the opportunity to practice--the invaluable role of **interdisciplinary** scholarship in the humanities for a richer understanding of specific, even sometimes highly technical, **disciplinary** questions. It is not too much to suggest that the university general education program profits from events like these, even though they are not a part of the university curriculum.

As for the students, just as many similar benefits are expected, noted, and reported. For one thing, the social atmosphere of these camps lends itself to the very gratifying notion among participants that it is commendable for them to "go public" with their intelligence and diverse interests. They learn that a respect for the humanities will provide them with valuable tools for their lives in the modern age, even as they later pursue careers in a variety of fields. We know that our students take much of what they have learned back into their school classrooms; a local school won the state Olympics of the Mind contest, based on a computer program generated by one of our students who adapted material from a Medieval Studies project. They will be better college students and citizens, having been exposed to a unique brand of humanities study in a manner that takes advantage of their enormous abilities and the resources of the university.

Leona Hoelting

Bridging the Generational Gap With Humanities

When times were simpler and society had family units that kept grandparents, aunts, uncles, parents and children in fairly close proximity to one another, intergenerational learning was "a given". In these times when family units consist of mom, dad and children in urban settings hundreds of miles from aunts, uncles, and grandparents, intergenerational learning is rare. Oakton Community College's Older Adults program began Humanities Treasures, an experiment intended to promote intergenerational learning. The experiment had one goal: to bring older adults and 11-year-old children together for humanities discussions.

In the Fall of 1984, 10 to 15 older adults began monthly humanities discussion groups in four village libraries in our district. The discussion facilitators were trained volunteers; the anthologies used for discussion were from the National Council on Aging's Humanities series.

In January, 1985 these older-adult discussion participants began meeting once a month with fifteen 10-to 11-year-old elementary students at an elementary school close to their village library. The discussion team for all four intergenerational groups was the same: an elementary teacher and a drama teacher with a particular gift for creativity. In addition they used the drama skills of the older adults' acting troupe, **Acting Up!** They developed a syllabus that drew on movies, drama, poetry, art, literature, music, and intergenerational discussions.

The demanding and fairly complicated role of these intergenerational discussion facilitators is captured in a report to NEH by the elementary teacher/discussion leader, primarily responsible for the curriculum development.

"In its first year as a pilot project, the intergenerational program needed fine tuning at all stages of development. Before the workshops began, meetings were called with principals, librarians and superintendents of participating schools. The project was described in terms of program development and potential difficulties. The challenge to resolve difficulties and convince the board of the program's solidity was met at these meetings. Individual meetings between the librarians and the consultant resulted in a combined effort to develop appropriate bibliographies and choose humanities experts suitable to each workshop theme. During these early stages, much time was devoted to researching and developing workshops which would balance the personal and intellectual needs of both generations and provide opportunities for creativity and learning. Meetings were held with team discussion leaders and **Acting Up!** seniors regularly, to rehearse readings and discuss the format of each workshop. During the execution of the workshops, the discussion leader kept contact with host teachers from each school, librarians and principals who provided feedback for each workshop they attended.

"I evaluate my role as consultant to the intergenerational program and as a discussion leader by the feedback gathered from members of the board and from others who attended the workshops. Besides being moved by the beautiful dynamics which developed between the two generations, observers were very impressed by the format of the workshops. The feedback was highly charged with positive evaluative comments. As consultant I continued to watch for two needs: the need to adapt the program to more fully meet the needs of the participants, and the need to keep the humanities alive in each meeting. I also wrote extensive program descriptions, bibliographies and extended activities for each workshop."

The theme of "Hero" was chosen as the focus for a series of five workshops. These intergenerational discussions lasted one-and-a-half hours. Each discussion had a syllabus for the elementary students, their teachers and their librarians. Each syllabus included a bibliography for older adults readings and elementary students readings. The five intergenerational discussions developed under the following themes are:

1. Each Person Has a Story
2. The Hero/Heroine in My Friend
3. Superhero/Superheroine
4. The Hero/Heroine of My Dreams
5. The Self as Real Hero

The following is a sample of the March intergenerational discussion workshop outline.

THEME 3: "The Superhero"

Mythological characters and superheroes of today will be our focus as we look at questions about what makes these heroes "super": Is it brains or is it brawn? Are other personal powers coming into play? As we share with each other who our super-heroes are and listen to stories of classic super hero figures, we ask ourselves which of these powers do we find in ourselves?

OBJECTIVES AND METHODS:

A. Participants will define a creative image of superhero powers and activities through individual reflection and writing.

B. Participants will pool their individual contributions in a small group activity to create a visual representation of a superhero.

C. Participants will listen to and participate in the storytelling of two superhero figures, the Greek mythological hero, Hercules, and an Eastern heroine, "The Courageous Woman."

D. Small group discussions comparing and contrasting the two stories will provide dialogue among the participants to conclude the workshop.

MATERIALS:

To be provided by hosting school:
- Tables and chairs (project work space)
- Tape recorder

MATERIALS:

To be provided by workshop leaders:

Music:
- Music from movie "2001"
- Beethoven's "Eroica" Symphony

Supplies:
- Paper, glue, scissors, markers, chalk

Stories:
- "Hercules" and "The Courageous Woman"

Workshop Leaders:
- Karol Verson, storyteller
- Sally Ryan
- **Acting Up!** seniors

PROCEDURES:

I. Introductory Activities:

A. Music playing in the background
- Beethoven's Symphony No. 3 in B flat
- "Eroica"; theme from the movie " 2001-A Space Odyssey"

B. Participants are greeted and make nametags

C. General Orientation

Directions are given for individual written superhero reflections
- Explanation of music choices
- Individual work is begun

II. Small Group Creative Activity:

Individual work is pooled in small group project

Each small group creates a visual representation of a superhero figure using multi-media

Representatives from each group will present their superhero image to the whole group

III. Storytelling-Listening and participation

Storyteller involves the whole group in retelling two classic tales of superheroes

IV. Comparison/Contrast discussion

Discussions in small groups will process the responses of the participants to the two stories

V. Workshop Closes-Participants leave each other with the words "I wish you the power of ______"

SAMPLE STORY DISCUSSION QUESTIONS:

AFTER "HERCULES"

1. How does Hercules match up to the classic definition of a superhero? (Self-confidence, strength, equality to gods)
2. Where does he fall short in your estimation of a super-hero? (intelligence, emotional qualities)
3. How do you feel about Hercules' guilt concerning his misdeeds?
4. In your estimation, did Hercules use his gifts well? Do you use your gifts well?

AFTER "THE COURAGEOUS WOMAN"

1. How does this eastern heroine measure up superhero?
2. How do you feel about her need to pose as a man in order to succeed in her quest? Do women have to do anything like that to be successful today?
3. What was this woman's heroic strength? How does it compare with that of Hercules?
4. What do these two stories suggest about the strength of males and that of females? Do you agree with these assumptions?

EXTENDED ACTIVITIES:

SENIORS: Look over the list of related selections developed by librarians in your area. Read a classic superhero mythological selection and a piece of modern superhero literature. Compare the works in terms of qualities of the characters as developed by the authors. How do these qualities meet the needs of the times?

JUNIORS: Do you like Greek mythology but sometimes confuse who's who? Construct a family tree to clear up confusions about the Greek superheroes. Choose your favorite god or goddess and make up an interview with responses to portray him/her to others. Draw, sculpt, or paint a representation of the divine character. Compose your own myth to explain a natural phenomenon. Create a superhero to execute the necessary feats. Enjoy reading a selection from the list. As you read, reflect upon traces of the powers you are enjoying in the books characters. How do they compare with the powers which are developed in the superhero character?

BIBLIOGRAPHIES AND EXTENDED ACTIVITIES FOR SUPERHERO WORKSHOP

SUGGESTIONS FOR SENIORS:

Books

Daniel, Martin Buber
Don Quixote, Cervantes
Dr. Who and the Loch Ness Monster, Terrance Dicks
Dune, Frank Herbert
Moonraker, Ian Fleming
Moses, Martin Buber
Slaughterhouse-Five, Kurt Vonnegut (anti-hero)
Stranger in a Strange Land, Robert Heinlein
Tarzan and the Golden Lion, Edgar Rice Burroughs
The Dispossessed: An Ambiguous Utopia, Ursula K. LeGuin
The Glass Bead Game, Herman Hesse
The Nibelungenlied, translated from the German
The Odyssey of Homer (Ulysses), Homer

SUGGESTIONS FOR YOUNG PEOPLE:

Books

Lord of the Sky, Zeus, Doris Gates
Mightiest of Mortals: Hercules, Doris Gates
Houdini, Master of Escape, Lace Kendall
Star Wars, George Lucas
Robin Hood, Bernard Miles
Mr. Yowder and the Train Robbers, Glen Rounds
The Heroic Deeds of Beowulf, Gladys Schmitt
The Prince who Gave Up a Throne; A Story of the Buddha, Nancy Serage
The Gorgon's Head, The Story of Perseus, Ian Serraillier
Paul Bunyan, Esther Shephard
The Superman Book of Superhuman Achievements, Shep Steneman
Gulliver's Travels, Jonathan Swift

Films

Albert Einstein
Babe Ruth
Flash Gordon Conquers the Universe
Houdini Never Died
The Journey of Robert F. Kennedy
Lincoln Speaks at Gettysburg
Teddy Roosevelt
The Titan - Story of Michael Angelo

Evaluating this experiment was unusually difficult. The mechanics of the project were far too complicated. Getting the older adults discussion groups in libraries, getting elementary school staff and library staff members free and able to participate, keeping everyone involved at a meaningful level, required twice the staff involved in the project. Evaluating the experiment on a human level, we saw something meaningful going on. This evaluation from a young elementary student describes it best: "I thought it was fun because it broke a gap that now enables me to be able to smile instead of stare at older people that are waiting for a bus."

The National Endowment for the Humanities enabled us to begin this program in 1984-85. Because we did not get funded by NEH in 1985-86, we were unable to refine and develop the program. Yet as an unusual and inspiring experiment for humanities teachers trying to bridge the gap between young and old with reinvigorated humanities, it was well worth doing.

Mannly Prose

One of the great writers of our time, Thomas Mann is also one of the great stylists--but very much in his own fashion. Virtually always sure-footed, Mann is never what one could call light-footed. Not even in his late and unfortunately unfinished comic masterpiece, **Die Betrogene** (translated as **Felix Krull, Confidence Man**), does he write what could reasonably be called a delicate, airy prose.

One of his greatest novels, **Der Zauberberg** (translated as **The Magic Mountain**), Mann tackles an immensely ambitious canvas. He deals with social, political, cultural, psychological, and philosophical issues, as well as with a vast array of characters. There are long complex dreams, and there is a vast quantity of some of the most dazzling talk ever penned. In addition to a long, sexually-oriented passage which was written in French rather than in German, Mann also delves into a variety of distinctly technical matters, some scientific. And all of this requires heroic efforts from a translator.

The novel's first paragraph, from a preliminary section called **Vorsatz** (Foreword), is typical of the whole book's complex, even convoluted prose. It is in fact a single sentence:

> Die Geschichte Hans Castorps, die wir erzählen wollen,--nicht um seinetwillen (denn der Leser wird einen einfachen, wenn auch ansprechenden jungen Menchsen in ihm kennenlernen), sondern um der Geschichte willen, die uns in hohem Grade erzählenswert scheint (wobei zu Hans Castorps Gunsten denn doch erinnert werden solte, dass es **seine** Geschichte ist, und dass nicht jedem jede Geschichte passiert): diese Geschichte ist sehr lange her, sie is sozusangen schon ganz mit historischem Edelrost überzogen und unbedingt in der Zeitform der tiefsen Vergangenheit vorzutragen.

Without even considering the difficulties of the prose itself, one can readily see that this paragraph-sentence is a mouthful. There are two fairly long parentheses, an interpolated and parenthetical-like dash, a full colonic stop, as well as no less than eight commas. The translator has, generally speaking, two possible approaches: (1) to break this complex German prose into simpler English units (translators of the philosopher Immanuel Kant have been forced to choose this expedient), or (2) to try to make English accommodate the dense, rich movement of Mann's German. The first approach is the easier and, in general, is to be favored. But Mann almost always writes as he has written here--and to give a truly satisfactory account of his novels, the translator must somehow tackle, or try to tackle, the Mount Everest of alternative #2.

H.T. Lowe-Porter has gallantly and it seems to me very successfully climbed Mann's Everest:

> The story of Hans Castorp, which we would here set forth, not on his own account, for in him the reader will make acquaintance with a simple-minded though pleasing young man, but for the sake of the story itself, which seems to us highly worth telling--though it must needs be borne in mind, in Hans Castorp's behalf, that it is his story, and not every story happens to everybody--this story, we say, belongs to the long ago; is already, so to speak, covered with historical mould, and unquestionably to be presented in the tense best suited to a narrative out of the depth of the past.

It is at once obvious that, although the feel of the German has certainly been captured, some structural changes have had to be made. There is only one parenthesis, not two, and the parenthetical-like dash is replaced by a more conventional comma. The full colon, so comfortably German, is replaced by a semicolon. And instead of eight commas we are given no less than thirteen commas.

What has Ms. Lowe-Porter had in mind? Clearly, she has stepped back into our own literary past, and adapted (as well as adopted) the eighteenth-century English novelistic style. It is a brilliant choice--for Fielding and Sterne are far more like Mann, and in more than simply stylistics, than are the likes of Hemingway and Joyce. That is, there is a fundamentally conservative, even backward-looking stance in Mann's work which makes it logical to choose a stylistic model almost two centuries old--in English. (The English novel matured a very great deal sooner than did the German novel.) Indeed, toward the end of his foreword to a later work, the tetrology **Joseph and His Brothers,** Mann gives a clear endorsement not only to what Ms. Lowe-Porter has done with the later book, but to what she has done with the earlier one as well. "As the son of a tradesman, I have a fundamental faith in quality... [This] is good, solid work [and] a measure of durability is, I think, inherent in it." Could anything sound--and be--more like eighteenth-century England?

The Color Purple

(When Americans see purple, the French see red)

In previous issues of **Humanities Education** interesting and informative articles have dealt with literary translations from a foreign language into English. In contrast, this article will deal with the challenging task of translating into French an American novel written in Southern black dialect.

Alice Walker's Pulitzer Prize winning novel, **The Color Purple**, was first published in French in 1984 as **Cher Bon Dieu**, then in 1986 as **La Couleur Pourpre.*** The initial major hurdle to overcome was the translation of a title seemingly very simple. How could three words as clear as **the color purple** create a misunderstanding? The movie producers translated it literally **la couleur pourpre** and consequently the publishers of the book had to follow suit--or color--when the movie appeared in Europe in 1986. The problem is that in this title, Americans see **purple** and the French see **red**.

The unabridged **Larousse** English-French dictionary gives **pourpre** as the first equivalent of **purple**. Further verification of the word **pourpre** in an all French dictionary, **Le Petit Robert**, reveals that **la pourpre,** as a feminine noun, means a dark red dye, as a masculine noun, **le pourpre** means a red-violet color, and as an adjective, **pourpre** means crimson red or deep red. Therefore, the most accurate French title would have been the masculine noun all by itself, **Le Pourpre**, or otherwise **La Couleur Violette** or **La Couleur Mauve**, instead of **La Couleur Pourpre** which unequivocally suggests **red**.

In the 1984 edition the translator, Mimi Perrin, avoided the color problem by drastically changing the title to **Cher Bon Dieu** (Dear God). She evidenced discernment in selecting the endearing term **Bon Dieu** (Good God) which refers to the fatherly image of God, rather than simply **Dieu** which refers to a more abstract concept of God. This original title reflected the fact that a major portion of the novel consists of Celie's letters addressed to God.

With the 1986 title, **La Couleur Pourpre,** several problems arise pertaining to the significance and symbolism of the color purple throughout the book. Purple is Celie's favorite color, contrasted to Shug Avery's favorite red color, symbolic of love and also of fallen women. However, in French, one might associate the title with Shug Avery's predilection for red instead of associating it with Celie's predilection for purple.

Another problem surfaces in a passage on the concept of God which includes a clue to the title of the book:

688

> God love admiration
> You saying God vain? I ast.
> Naw, she say. Not vain, just wanting to share a good thing. I think it pisses God off if you walk by **the color purple** in a field somewhere and don't notice it.

> Ce qui lui plaît c'est ton admiration.
> -Tu veux dire que c'est un prétentieux?
> -Mais non. C'est pas de la prétention. Il aime partager avec nous tous les belles choses, que c'est lui qui les a faites en plus! Ça doit le faire râler si tu remarques pas un beau **carré de violet** dans un champ par exemple.

The French reader is unlikely to notice the connection between the **pourpre** in the title and the **violet** in this key sentence. Further confusion is added by the translator who has somewhat overemphasized the interest in purple by adding a **mauve** where there is no **purple** in English. "Je vais faire des robes **mauves**"..."Gonna make me an my girl **new** dresses... "So the French reader is confronted with three colors, **mauve, violet** and **pourpre,** for the single color **purple.**

Celie's fondness for her own color (purple) and the color of her friend Shug (red) is illustrated in the very end of the book when she paints her room **purple** and **red,** in French **violet et rouge.** Based on earlier definitions and uses of **pourpre,** one could substitute **pourpre** for either **violet** or **rouge** and end up with a room painted red and red. An utter nonsense. Concerning colors, one may add a last detail, namely that on the book cover the American title is printed in purple and the French title in crimson red.

Burton Raffel, in the May issue of **Humanities Education,** pointed out that a good translation is not a literal word for word, "mechanical transmutation." In fact, the most important goal is to achieve a consistent, coherent literary tone. The French publisher of the novel is aware of this and has clearly printed on the first page of the book "adapté de l'américain", i.e. adapted (not translated) from American.

Mimi Perrin, in her rather free translation, has captured well the writing style of unschooled Celie, with all its misspellings. She uses the French speech pattern and slang of unschooled whites and blacks or Arabs of the former French colonies. The translator never uses the full negation, **ne pas,** she always leaves out the **ne.** Furthermore, verbs which should be conjugated with the auxiliary **être** are conjugated with **avoir.** "Je suis resté" always becomes "j'ai resté" an error very familiar to American teachers of French. However, one inconsistency is evident in that the complex rules of agreement of past participles are precisely followed. Such competency on the part of an uneducated person like Celie proves totally unrealistic. For example: "On s'est tombées dans les bras." **Tombées** is in the feminine plural because it agrees with the subject **on,** which represents two women. Such grammatical subtlety occasionally escapes even educated writers.

On the other hand, the translator accomplished a tour de force in creating French misspellings such as **Sion** for **sinon** and **sales cris lèges** for **sacrilèges,** which echo Celie's phonetic spellings such as **sure nuff** or

none of my bidness. The unity of tone is maintained in Celie's speech as well as in Nettie's much more educated speech. Nettie's letters evidence perfect spelling, the inclusion of both parts of the negative **ne pas**, and above all, the appropriate and frequent use of the subjunctive tense.

A last example of the manner in which the translator adapted the book for a different culture, with different surroundings, can be seen in a passage involving flowers. "Then more lilies and jonquils and roses clamming everything"...."et encore des pâquerettes, des coucous, et des roses plein partout." **Pâquerette** is a common European miniature daisy rarely seen in the U. S., and **coucou** is a cowslip.

In conclusion, Mimi Perrin appears as a master of the French language, who maintains a coherence and unity of tone throughout the novel, conveys a feel for the dialect and even adds a touch of humor in the various misspellings she invents. As a teaching tool, this French translation can serve to provide a contrastive analysis of literary and linguistic styles as well as an introduction to French dialect and slang for American students.

AACJC STATEMENT ON THE HUMANITIES

The American Association of Community and Junior Colleges, funded by NEH, convened a two-day conference in May 1985 to review the whole philosophy of humanities instruction and recommended appropriate procedures and requirements for associate degree programs. A draft document was circulated by late fall, and the final document was prepared in the winter of 1986. The recommendations are addressed to faculty, administration, and governing boards of community colleges, charging presidents in particular with mobilizing activities in their behalf.

The policy statement accepts the disciplinary listing which defines the humanities from the perspective of NEH, but insists that an approach which emphasizes the value aspects of the intellectual life is equally important. "...Study in the humanities always has as its fundamental object to reveal that which is significant about human life..." The natural arena of humanities is formed about fundamental questions of justice, allegiance, evil, and other enduring concepts.

The reasons that study of the humanities is important for all students are cogently presented. They are for the discovery of relationships between life and ideas, for understanding the multiplicity of cultural values and the reasons for an individual's orientations. They raise the important value questions about the present and future, while considering the answers derived from past experience. Enhancement of private pleasure, disciplined habits of mind, and ability to make defensible value judgements are potential personal gains. Increased social cohesion through shared understanding are potential rewards for society.

Specific recommendations made by the study group are as follows:

1. The humanities belong within the framework of liberal or general education; policy should be derived from that frame.
2. Study in the humanities should be part of every degree program.
3. Study in the humanities should be required beyond the service courses such as writing and public speaking.
4. Specifically, six semester hours of humanities should be required for the Associate in Applied Science degree; nine for the Associate in Science; twelve for the Associate in Arts.
5. Humanities classes must include extensive reading, writing, speaking, and critical analysis of perspectives, cultures, and traditions.
6. The faculty of each institution should develop a comprehensive plan for humanities instruction with sequences, prerequisites, and recommendations for students with various educational goals.
7. Good teaching should be an explicit criterion for professional advancement, demanding measurement of effectiveness.
8. Faculty should be encouraged to join and support professional organizations in the humanities through the use of faculty development resources.
9. Funding for library materials and learning resource centers should be provided.
10. The demands of vocational programs should not curtail the humanities component of a student's program; as an alternative, the entire educational program should be lengthened.
11. The entire primary, secondary, and collegiate school program in a defined population area should be planned together so that there is a coherent humanities curriculum throughout the educational experience of the individual.

The report closes with the directive that it be distributed widely through all public and private information sources.

As one more offspring of the **To Claim a Legacy** report widely discussed since its release by NEH, the AACJC effort adds little of groundbreaking significance. Its moderate statements are no more than what faculty have been telling boards of trustees for several generations. However, if they will listen to any such source, it will likely be an outside one. The recommendations are specific enough to serve as excellent ammunition in the next curriculum battle. The separation of humanities courses from utilitarian service courses is especially heartening. For those of you who require the full text, it may be obtained from the AACJC at One Dupont Circle, N.W., Suite 410, Washington, D.C. 20036. (Sharon Scholl)

PRIVATE VINTAGE HUMANITIES TEXTS (CONT'D)

A continuing project of this publication is to call to your attention texts for classroom use which grew out of teaching situations, went into book form, and may be of value to a wider audience than originally anticipated. **A Humanities Approach to Ancient Ways of Thinking** is a collection of readings edited by Un-chol Shin and Anne Page Brooks of Eastern Kentucky University. Introductions to each section were written by specialists in their respective study areas. It is available from Kendall/Hunt Publishing Company, Dubuque, Iowa, for $12.95.

The book is a survey, through quite readable English translations of literary works from the major world religions: Hinduism, Buddhism, Confucianism, Taoism, Judaism, Christianity, and Islam. Between twenty-five and thirty pages are given to each way of thinking. There is always an introduction which recreates the time and circumstances of the original prophet(s) and traces the effect of the message. The bent is less theological and more personal than other approaches, emphasizing the way in which the religious perspective considers the persistent human questions. The great variety of thought patterns within each tradition is represented so as not to give a false notion of consistency. The selections from the **Upanishads**, for example, include folk tale, metaphysical speculation, and moral analogies. While the choices are made to reflect the worldview accurately, they are often not what one would expect. Instead of choosing selections from the Koran, the editors turned instead to the **Hadith** and **The Life of Mohammed**. These give a much better sense of the working out of the religious perspective in daily life and the believed interpretations of the events of Mohammed's life. The section on Christianity, which uses **The New English Bible** translation of the New Testament, traces the life and teachings of Jesus from the baptism through interpretations of his ministry by Paul. The Gospels and the letters are combined in a single narrative stream.

Each section of the book is prefaced by a black and white reproduction of a work of art related to the religious perspective to be considered. There is a short multiple choice exercise after each section to check for grasp of content. There is also a brief but solid bibliography of books for further reading and films helpful to instruction. These latter fall into the "oldies but goodies" category. This would be a very useful book for religious studies or global education formats. The prefaces give students a reliable clue to what is essential in the world view of each alternative of belief and the character of the major founders and interpreters. The selections are comparable from unit to unit, giving ample room for considering consistent issues from very different perspectives. It would be a fine addition to a collection of outline materials an instructor might want to make use of in combination with, for example, artistic traditions. Interesting and unpretentious, the book is nicely formatted with pleasant spacing and page layout.

Quite a different book with a decidedly different rationale is the **Humanities Handbook**, edited by Walter Evans and published for use at Augusta College, Georgia. It is actually a wonderful set of notes, featuring the odds and ends that one would most like to place in the hands of students of historical survey courses. To illustrate: there is a detailed floor plan for the typical urban Roman domus, an analysis of Gothic vaulting, an extensive glossary of artistic and literary terms, and chronologies of each era. Seventeen writers contributed to the volume, and portions came from handbooks published by two other universities. The final product is intended for use in a sequence of three Humanities courses.

The **Handbook** begins with a very useful introduction to the nature and purpose of the humanities and a rationale for its study by modern students. It then considers the nature and function of the fine arts, explaining terms and defining the basic elements and style factors. Following sections accumulate a fifty page outline of the arts of Western culture from the Greeks through the early Twentieth Century. For some unexplained reason this material is separate from the bulk of the book, which is a literary collection and commentary repeating this same historic outline. The result is two competing streams rather than integration.

While the artistic section is quite even-handed in the amount of space devoted to each era, the literary section does a much more detailed job on the earlier eras. The modern world consists of a two page cultural portrait without the detailed outline of creators, movements, and stylistic features so prominent in the fine arts section. The literary section includes representative selections of writing (concluding with Dostoevsky) as the bulk of the material. With the exception of some black and white reproductions of paintings and scores of music from the Renaissance, the fine arts section does not deal with specific examples. It should be remembered that the **Handbook** is a companion, a kind of second voice accompanying reading, listening, and looking experiences which are longer and more detailed, the existence of which is simply assumed.

At its best the book has a useful and informative diversity, as in the case of the Greek section. There is a chronology of fifth-century Athens, and an explanation and identification of the Classical gods and the meaning of myth. There is a good background and thematic material for **The Odyssey**, poems by Sappho, a sociological outline of Athenian society, a diagram of the classic theater, an outline of the nature of tragedy, and analysis of Aristotle's **Poetics**. The section concludes with an outline of Greek philosophical speculation and the teachings of Plato. Items such as these and, for example, an overview of the geography and inhabitants in Dante's **Inferno** are just the sort of things that would take hours of tedium to write on a blackboard and just moments to turn to on a printed page.

The literary inclusions are not the unexpected, but are sensible and expensive to purchase as separate items. They run from poetry by Michelangelo through Pope's **Essay on Man,** a letter by Benjamin Franklin, excerpts from Kant's **The Categorical Imperative,** and an introduction to Dostoevsky's **The Grand Inquisitor.** The whole book runs to about 300 photocopied pages crammed with small, useful items and is available from the Augusta College bookstore.

HUMANITIES EDUCATION ABSTRACTS & REVIEWS

Summaries of significant reports about interdisciplinary humanities education.

Integrated Programs

Interdisciplinary Undergraduate Programs: A Directory, Association for Integrative Studies, Oxford, Ohio. Reviewed by Sharon Scholl

The Association for Integrative Studies has issued a most useful and diverse directory of many types of interdisciplinary programs found all over the nation in institutions of varied size and character. The directory is the culmination of several years of labor by William H. Newell, Professor in the School of Interdisciplinary Studies at Miami University, Oxford, Ohio, 45056. A copy may be obtained for $30 at that address.

The Association for Integrative Studies includes faculty involved in a wide array of interdisciplinary instruction in all conceivable combinations of subject areas, and the directory reflects this diversity. Yet far away the largest number (32) of programs are in the Humanities, and the detailing of these inclusions makes them valuable to our readers. Furthermore, Professor Newell's generalizations about the nature and function of interdisciplinary studies within higher education are most useful indicators of national trends.

Interdisciplinary studies are well represented throughout the nation. Because of a state mandate California has the most, followed by New York and Massachusetts. State universities have the most, followed by community colleges and small private colleges. Today the educational reform movement has revitalized interdisciplinary models for general, institution-wide basic learning. Such studies are no longer seen as experimental or on the radical fringe of education. Honors programs and women's studies are well represented variants of the species. Many of the programs described in the directory have been formed since 1970. Yet historical lineage is still traceable; the Great Books Movement is alive and well.

The body of the book contains one-page descriptions of programs derived from questionnaires completed by the director of each program. Each description includes such information as: type of program, students for which it was designed, type and derivation of faculty, course titles and nature, administration and evaluation of the program, teaching strategies employed, and history of the program. This data is synthesized under five headings throughout the book: type, size, courses, administration, and narrative. It is fascinating reading, if only as a "teaser". Names, addresses, and telephone numbers of contact representatives are listed for further inquiry.

Everyone who serves on a Curriculum Committee should have a copy of this book. It would be a helpful addition to any college library where people from many disciplines could have access to it. The questionnaire alone is a potential model for information gathering on curricular practices.

Carnegie Report

College: The Undergraduate Experience in America A Review of the Carnegie Foundation for the Advancement of Teaching Report, edited by Ernest Boyer, Reviewed by Sharon Scholl. Harper & Row, 1987, $22.00

You read the headlines when it was released back in November. Now the entire report is out in a 322-page book of worthwhile reading. Yes, it tells us a lot about what we already know:

a third of undergraduates are in college only for a job-training program,
business does a lot better at new employee orientation than colleges do at new student orientation,
faculty are caught in a Catch-22 between publishing and teaching,
the university curriculum is a result of political infighting rather than conviction about the nature of education,
the mismatch between secondary schools and colleges has resulted in students unprepared for college studies.

No, it does not have a large body of new, creative ideas about solving these problems. It calls for widespread public debate on these and many other, matters: "The American college is, we believe, ready for renewal, and there is an urgency to the task." (p.7) The great enemies of education, as the Foundation defines it, are the fragmentation of knowledge, narrow departmentalization, and intense vocationalism. The commitment to community and the establishment of connections for the student to all parts of college life are the primary tasks outlined.

The staff of sixteen men and women who gathered the information for the report includes nary a Ph.D.; their academic affiliations (if any) are not given. Perhaps their lack of departmental regimentation accounts for the broad range of collegiate phenomena which attracted their attention. Chapters detail student motivation for college study and how colleges scramble for students in a dwindling market. It details ranges of choices available, orientation processes, academic programs of many types, instructional situations and pitfalls, library and other resource use, campus living conditions, college governance, and evaluation of learning. It even includes a guide to selecting a good college.

The one section with particular relevance for us in interdisciplinary humanities details the nature and need for general education around an integrated core. It is here that the Foundation believes we have the

BEST COPY AVAILABLE

best opportunity for alleviating the fragmentation and narrow specialization that turn the university into an intellectual cafeteria. The basic problem with the achievement of an integrated core is that in our society the claims of the community are weak; the very "major-oriented" nature of the university exacerbates the tendency toward self-preoccupation and social isolation. Students are not enthusiastic about this sort of education, regarding it as something to be gotten out of the way early on. Roughly 72% of students queried agreed that more computer science courses should be required; 45% could stand more English, defined as writing skills. Mathematics and science could be enlarged, according to about 32%, but only about 25% would stand for additional arts, literature, or history requirements.

Yet undergraduates long for personal fulfillment beyond the career boundaries immediately ahead and are eager to define their personal commitments. The Carnegie investigators attribute this personal factor to the popularity of courses which are thematic and linked to contemporary issues. Students who have been part of a general education program believe overwhelmingly that such studies enrich their narrower major and prepare one for lifelong learning. Yet only English, mathematics, and fine arts are required by 60% of the nation's universities, and those which abandoned a general education core in the Sixties are having one devil of a time reconstructing it.

The major difficulty the researchers found with most so-called general education programs is their incoherence. To be sure, all students must take English, mathematics, the arts, etc., but may choose from a bewildering array of options that produce a crazy-quilt college record. "There is a need for students to go beyond their separate interests and gain a more integrated view of knowledge and a more authentic view of life." (p. 90) The Report urges the adoption of an "integrated core" which introduces students to essential knowledge and to connections across disciplines. As things stand, college education too often denies our communal relationships to one another and to the earth, our home. What we need is "a way to link the humanities directly to the concerns of humanity."

What are some common themes that cut across disciplines? The report suggests seven areas of inquiry that are believed to relate academic materials to common human experience:

Language: The Crucial Connection

Origins, symbol systems, nature and uses of literature, the information revolution, power and proficiency of expression. The Cornell University course "Signs and Communication" and the Brown University course "Language and Man" are cited as models.

Art: The Aesthetic Experience

Symbol systems of the arts, arts as revelations of personal expression and social development. Northeastern University's "Art and Society," and Wake Forest's "What the Arts Have Been Saying Since 1800" are cited.

Heritage: The Living Past

Awareness of the origins of tradition, the role of the past in shaping the present. The University of Southern Maine's "Three Crises in Western Culture" is used as a model.

Institutions: The Social Web

The family, church, legislative and judicial bodies, the nature of the collective. The University of Chicago's "Presidential Government in America" and Skidmore's "The City" are examples.

Nature: Ecology of the Planet

The underlying patterns of the natural world and the interconnections between life forms. Harvard's "History of the Earth and of Life" and Carleton College's "The Rise of Modern Science" are landmarks.

Work: The Value of Vocation

The nature of work and use of leisure, producing and consuming, value and reward. Hamline University's "The Workplace: Experience and Reflection" and Central Connecticut State University's "Work and Culture" are prototypes.

Identity: The Search for Meaning

The large, speculative questions of selfhood, relationship, and moral values. Princeton's "Psychology and Religion" and Randolph-Macon College's treatment of an ethics course are potential models.

The Report would have us examine the way courses are taught, and even the course format. Seminars meeting in residence halls, visiting lecturers, or student projects are possible sources of integration. Those colleges which have the 4-1-4 calendar have an especially good opportunity to use the one month period for integrative activities. The Report also urges that general education not be limited to the lower division, but continue in planned sequence throughout the college career.

The Carnegie Foundation Report lays before a wider audience than academia those issues with which we are daily engaged. Its recommendations share so much of the spirit of interdisciplinary humanities instruction that, if implemented, they would provide an auspicious ground upon which to construct suitable humanities courses. The resulting book is terrific ammunition for Curriculum Committee deadlocks, and ought at least to be in every college library.

Business Classics

"The Classics: Management's New Literature" by John K. Clemens and Douglas F. Mayer in Business Weeks Careers, September 1986, 5615 W. Cermak Road, Cicero IL 60650-2290. $2.95.

Sure, we all think business and management training programs should acknowledge the relevance of the humanities, but in most cases "the humanities" are reduced to advanced composition of business reports and public speaking for salesmanship. The core of meaning, the heritage of thought and the perspective of history rarely make the grade.

Not so at Hartwick College in upstate New York where Clemens and Mayer teach in the Humanities in Management Institute. If this article is an indication of how they have succeeded in introducing managers to The Odyssey, King Lear, Mutiny on the Bounty, Walden and the Origin of the Species, the key is to know and to sympathize with modern management literature and its jargon. "Today's urgent management challenges--motivating, inspiring, communicating and leading--are the same as those faced by...Alexander when he created his empire...," and what Alexander knew about was how to engineer a multinational merger. However, the main thing that the classics have to contribute is not technical and procedural dynamics, but the continuous "presence of people" in what the ordinary B.B.A. or M.B.A. program teaches as problems in cost sheets, organization charts and objective arguments.

The aging executive is not unlikely to behave like Lear, the crackerjack salesperson who is rewarded with money without respect or responsibility, like Achilles. How can one build a team out of a motley of misfits? Captain Ahab did it. What are the dangers of too much discipline? Look to Captain Bligh. Blind adherence to the letter of the law? Creon in *Antigone*. Job assignments devoid of personal enrichment? Marx's *Economic and Philosophical Manuscripts* are persuasive warnings.

And where did "management by wandering" originate? With Plato, the authors say, and they provide many more examples of the relevance of Plato to management learning. Plato has lasted longer than the Sophists who preceded him. Perhaps it will work again, for Clemens and Mayer say that the Sophists would be authoring "slick how-to books on managing" if they were alive today.

Core Troubles

"Squaring the Circle: Observations on Core Curriculum and the Plight of the Humanities" by Jeffrey L. Sammons in Profession 86, Modern Language Association, 14-21

The horns of the dilemma presented by the current enthusiasm for core curricula are these: if we prepare a new comprehensive, global core that pays appropriate attention to non-western cultures, minority voices and newer arts and ideas, we are likely to be superficial and even inaccurate; but if we don't attempt a new synthesis, we will be restoring the Great Books core that appears to reinforce a western "old boy" establishment.

Sammons, a Professor of German at Yale, is skeptical. He is skeptical that a global core can simply be willed into being by trying harder, he is skeptical about the enthusiasm for humanities, and he is skeptical about increased public support for humanities education as a core. In assuming this attitude, he is also exercising one of the virtues of the humanities, for unlike almost all other fields of study, the humanities include "skepticism, paradox and ambiguity," three intellectual attitudes that "do not seem to be qualities most stressed in the current discussion." The current discussion stresses a crisis in public ethics, a crisis in shared values, a crisis in literacy, and so on. We've been there before, says Sammons, in the post-Sputnik days which produced the National Defense Education Act of 1958, a law that tied reform to political crisis and responded with a major infusion of funds into teachers' institutes, materials, language labs and the like. But "national defense is not a safe flag for the humanities in particular to sail under." Too many strictures and erroneous assumptions can creep in, and among disciplines that are (or should be) committed to skepticism, paradox and ambiguity, conflict and disillusion are inevitable on both sides.

The humanities may be defined as "disciplines of the imagination" which are inherently "subversive." And the imagination is often "anarchic, vicious, bloodthirsty, pathological. All these qualities turn up in art and literature, and not just in the modern age." Political systems that are wise enough to recognize the subversiveness of the humanities have developed at least two strategies for containing the humanities, which Sammons labels as "the reactionary" and "the Communist." The reactionary strategy, common to western regimes, is to determine what is the minimum of education that can be risked for the common people, and to provide just enough to make them into efficient cogs in the economic and social machinery. Communists, on the other hand, "embrace the cultural tradition in order to immobilize it in plaster," but "with constant vigilance toward the subversiveness of the imagination." Applying the strategy of reactionaryism to the current enthusiasm for supporting humanities, one can discern humanities as writing skills, and writing skills as word processing. Applying the Communist strategy, we may discern "core curricula," which encase the subversive humanities in the plaster of required courses.

Icarus

"Constructing the Icarus Myth: Brueghel, Brecht and Auden" by John E. Combes in **Word & Image** 2:1 (January-March 1986) 24-26.

The myth of Daedelus and Icarus has inspired numbers of artistic interpretations, but Pieter Brueghel's painting **Paysage avec le Vol d'Icare** has further inspired interpretations of Brueghel's interpretation. Berthold Brecht prepared some notes on "Alienation Effects in the Narrative Pictures of the Elder Brueghel" while W. H. Anden's poem "Musee des Beaux Arts" refers directly to this painting and allusively to others. Both writers distort Brueghel, says Coombes, because they do not pay close enough attention to the famous painting.

Semiologically, it is two paintings, divided diagonally from the upper left to the lower right. The left hand painting is a Flemish landscape with a ploughsman, a shepherd and fisherman. This Brecht interprets as "idyllic," curiously at variance with the usual Brechtian attitude toward sentimentalizing peasant labor, while Auden suggests an almost willful indifference to both the miracle of a man flying and the disaster of his fall from the sky. The right hand picture, Coombes says, is "a seascape of classical/Mediterranean elegance." The legs of Icarus are visible as he plunges to final oblivion, and a ship with billowing sails heads out to sea, neatly skirting potentially dangerous rock outcrops. Something not noticed by most observers is that the wave whitecaps suggest that the wind is blowing the other way. Or two ways at once.

But either way, it would seem, everyone recognizes that as Brecht says, Breughel "deals in contradictions," and in those contradictions, each can read a different meaning that relates to ones life and times: Brecht, as an exile from Nazism, identifying with the laboring classes; Auden, equally anti-facist, and yet finding the labor in the painting dull and impervious to miracles at hand. Coombes, as a critic of the day, doesn't seem to take sides.

Free Space

"State Councils as Free Spaces for the Humanities Disciplines," by Marjorie Bingham. **Federation Review** July/August 1986. 1012 14th St. N.W. Suite 1207 Washington, D.C. 20005

It is not often that NAHE finds itself mentioned in other publications but this issue of the Journal of the State Humanities Councils does so on two occasions. Thomas McDaniel's article on the "Excellence Movement" which appeared in our September 1985 issue is reprinted, and Marjorie Bingham, who is a high school teacher, a Ph.D. in American Studies, a co-director of the Women in World Area Studies curriculum publication project, and chair of the Minnesota Humanities Commission speaks of NAHE as one of the groups that has tried "often valiantly against bureaucratic odds, to keep dialogues alive between levels of humanities educators."

Bingham's article is a proposal that state humanities councils-those fifty-three regrant agencies largely funded by the National Endowment of the Humanities - can and should function as "Free Spaces" where the "Balkanized" pockets of specialized pieces of American education can come together. The specialization is no longer only specialized levels, such as what used to be Elementary, Secondary, Higher, but now is splintered into "early childhood, preschool, primary grades, upper-elementary, middle school, high school, junior college, four year college, graduate school and [holy of holies] **research institution**." No, the specialization further separates people at each "level"; Bingham, whose particular metier is history, notes that even research historians have no Free Spaces, meeting with others who subgroup by century of half-century, nation or region, or "field," such as social history, or sub-field, such as labor history, social welfare history or sub-sub field, such as women's social welfare history in early twentieth-century United States midwest. Her point is not merely lamentation at this shattering of the mirror of history; each shard is separated without any table space available for reassembling the pieces. And reassembling is necessary, if for no other reason than to see where we used to fit in.

NEH has made some provisions for at least bringing back together the college and high school teachers in their summer seminar series. Well, it is **some** attempt, but first of all, college teachers can't join secondary seminars; second, secondary seminars bring the two together by making the research professor the teacher rather than an equal partner, and finally, secondary teachers are **verboten** to attend college seminars; this, Bingham says, despite the fact that many high school teachers teach Advanced Placement courses in which they not only "keep up with their fields," but consistently produce higher ranking students than their compatriots (or **counter-parts**) in colleges.

Free Spaces are needed. The term is borrowed from a recent book of that name, referring to "gatherings of diverse people who came together to discuss issues that could not be dealt with in current bureaucratic or political structure." State Humanities Councils can do this, and Bingham suggest five possible methods: (1) including classroom teachers (as Bingham is) on state councils; (2) encouraging collaborative efforts among the various "levels"; (3) more broadly identifying the humanities educational community; (4) initiating humanities education projects from the Council itself; (5) sharing the resources developed through regrant projects.

This issue of **Federation Review** is devoted to "The State Humanities Councils, Education, and the Schools." Another of the articles is abstracted below.

Virtuous Schools

"Should Public Schools Teach Virtue?" by Amy Gutmann in **Federation Review**. (See previous abstract for publication information)

Even if we decide that the answer to the question is "no, public schools should not teach virtue," the schools will be teaching virtue in many ways, both consciously and unconsciously. We punish cheating, reward fair play, teach that neatness counts as does promptness, and we may insist upon school loyalty as much as upon personal excellence. However Gutmann's answer to the question is yes, because our public schools must be interested in the moral education of future citizens.

How this is to be done is another question. Gutmann, who teaches philosophy at Princeton identifies two popular positions, "Liberal neutrality" and "Moralist positions." An example of the former is the **values clarification** movement according to which students are encouraged to understanding and developing their own values, whereupon, we teach them to tolerate and respect the values of others. Aside from the individualistic approach and the idea of tolerance, the "liberal neutrality" teacher neither codifies nor imposes a set of values on the student. Gutmann finds this view too indiscriminate, since its tolerant attitude may allow intolerant values to persist, e.g., I understand my racist views, I can live with your being non-racist, and I ask only that you not try to persuade me to alter my position.

Moralists divide into conservatives and liberals. A conservative tries to shape the students to a particular kind of moral character, beginning with respect for authority. Liberal moralists resemble the liberal neutrality teachers in that they don't want to indoctrinate a moral system, but they do want to produce students who will be capable of figuring out moral choices on their own, based on "generalizable principles." A middle way is best, the author says, basing her views in part on the work of Lawrence Kohlberg and of John Rawls. At the bottom of the scale of morality is "the anarchy of desire." Authoritarian morality is a step above that. Higher than this is "morality of association." In this morality we accept rules not only on authority, but became the rules "seem appropriate to fulfilling the roles that individuals play within various cooperative associations." There's a higher morality too, the "morality of principle," but no one knows how to teach that.

Nevertheless the middle stage of the morality of association may not only be teachable, but adequate for responsible citizenship. Children so trained should be able to "distinguish between fair and unfair, trustworthy and untrustworthy authorities...; fulfilling one's obligations, respecting and making good use of the rights of citizenship, criticizing unjust and untrustworthy authorities". These and other traditional virtues are not authoritarian doctrines to be feared. They are individual acts that require thoughtful, judicious and constant reference to community values as well as our own roles within that community.

HUMANITIES EDUCATION

HumaNews

Official Newsletter of the National Association for Humanities Education

EDITOR'S NOTE: Member-subscribers are invited to submit personal newsbriefs about their activities, publications, awards. We will be pleased to print announcements of upcoming conferences, calls for papers, fellowship and seminar opportunities relating to humanities and arts education. Such announcements should be submitted at least three months in advance of events or deadlines to ensure properly timed publicity.

NOTE: The Summer Issue of **HumaNews** will include reports on the NAHE Conference Humanities: A National Dialogue, held in St. Paul, Minnesota in mid-April.

UPCOMING

Two conferences are taking place at the University of Minnesota in Minneapolis during the week of May 12. The first on **The Medieval Mediterranean: Cross-Cultural Contacts** will include formal presentations on topics such as Spanish Art, Mediterranean Architecture, Science and Technology, among others. The Keynote Address, by Oleg Grabar, Professor of Islamic Studies at Harvard is on "The Significance of the Dome of the Rock in Jerusalem."

This conference overlaps a few hours with **The Future of the Past - New Roles for the Classics in American life and Learning**. The purpose of the conference is to provide an opportunity for teachers and students, scholars and the public to reflect on and to discuss the history, status and future of classical studies. As the four main themes suggest, the disciplines of the humanities will be used to address major social and cultural questions via exemplary scholarship in classical studies. A special feature of the conference is the keynote address by Dr. Brunilde Ridgway, noted classical scholar and author. She will discuss the "Doryphoros," a Graeco-Roman marble figure recently acquired by The Minneapolis Institute of arts.

The four main themes are:"The Alleys/Avenues of Connection Between Classics and Theatre," "University Presidents' Roundtable on the Future of the Classics," "Culture: Universal and/or Pluralistic" and "Oedipus and His Children." Both conferences are funded in part by the Minnesota Humanities Commission. For further information, contact:

Department of Professional Development
220 Nolte Center
University of Minnesota
Minneapolis, Minnesota 55455
(612) 625-0727

CALLS FOR PAPERS. You might still make the May 1 deadline for **Interface '87, The Eleventh Annual Humanities & Technology Conference.** A one page abstract is all that's needed. Send to

Joan McCoy
Department of Humanities & Social Sciences
Southern College of Technology
Marietta, GA 30060
(404) 424-7202

Interface conferences are always good. This one will take place October 22-23, 1987.

The **Association for Integrative Studies** has a **June 1** deadline for proposals for presentations at Penn State University, November 6-8. The theme is "Interdisciplinarity in Public Life: The University and Its Communities".

Appropriate topics include strategies for effective interdisciplinary instruction; issues in interdisciplinary research; social and political contexts of interdisciplinarity and professional education and practice; models of collaboration and analyses of curricular design; interdisciplinary general education; problem-focused research in applied areas.

Proposal submission and conference info:

Dr. Beth A. Casey, Dir.
Center for Academic Options
Bowling Green State University
Bowling Green, OH 43403
(419) 372-8202

Do you work with liberal arts for art students? If so, you may be interested in the **call for papers** (June 15 deadline) School of Visual Arts' First Annual **NATIONAL CONFERENCE ON LIBERAL ARTS AND THE EDUCATION OF ARTISTS** to be held November 6 & 7 at the Golden Tulip Barbizon Hotel in New York City.

This conference will provide a national forum for the exchange of ideas and information on the role of liberal arts in the education of artists. Participants are invited from art colleges and other institutions that have an interest in this area. A wide variety of topics are welcomed including the role of liberal arts in the education of artists; art students and their educational needs; teachers and teaching; science, technology and the education of artists; liberal arts and art careers. Topics of interest to administrators such as curriculum planning, budget issues and human resources are also encouraged.

Please forward a 200 word proposal as well as a 50 word abstract by June 15, 1987 to:

Dr. Mark Salmon
Department of Humanities and Sciences
School of Visual Arts
209 East 23rd Street
New York, NY 10010
(212) 679-7350

Looking toward the season when conferences drop like autumn leaves, on October 5-8 there will be a **National Videodisc Symposium for Education: Discoveries & Decisions** at the University of Nebraska at Lincoln. Among seven concurrent sessions are those on Fine Arts/Music and Social Sciences.

The purpose of the program is to provide an interdisciplinary forum where educators, videodisc producers and exhibitors can come together to share ideas, expertise and state-of-the-art videodisc programs.

The joint Symposium of educators and producers is designed for K-12 central office or building administrators; curriculum directors; media and technology coordinators and teachers; state departments of education personnel; representatives from professional organizations and associations; college and university administrators, teacher educators and technology faculty; videodisc software producers and publishers; and videodisc hardware manufacturers. Designers, producers, developers and users of videodiscs will be attending the Symposium at the same time in a coordinated, joint program.

For general registration materials or more information, contact:

Nebraska Videodisc
Design/Production Group
University of Nebraska-Lincoln
1800 North 33rd Street
Lincoln, Nebraska 68583
(402) 472-3611

The Association for General & Liberal Studies will meet in Cincinnati October 29-31 with the theme **Breaking the Boundaries: Expanding Conceptions of Liberal Education.** Write to

Karl Schilling, Associate Dean
School of Interdisciplinary Studies
Miami University
Oxford, OH 45056
(513) 529-2233

THE CAROL BELK PROFESSORSHIP IN THE HUMANITIES

The University of North Carolina at Asheville invites nominations and applications for the Carol Belk Professorship in the Humanities. Nominees must be scholars of eminent stature in one of the disciplines associated with the Humanities at UNCA:

Classics
Foreign Languages
History
Literature and Language
Mass Communications
Philosophy

Significant published scholarship and clear prospects of future scholarship are required. Nominees shall show demonstrable evidence of interest in undergraduate education and shall be committed to participation in UNCA's interdisciplinary Humanities Program.

Address nominations and inquiries to:

Chairman, Search Committee
Humanities Program
UNCA
One University Heights
Asheville, North Carolina 28804
(704) 251-6419

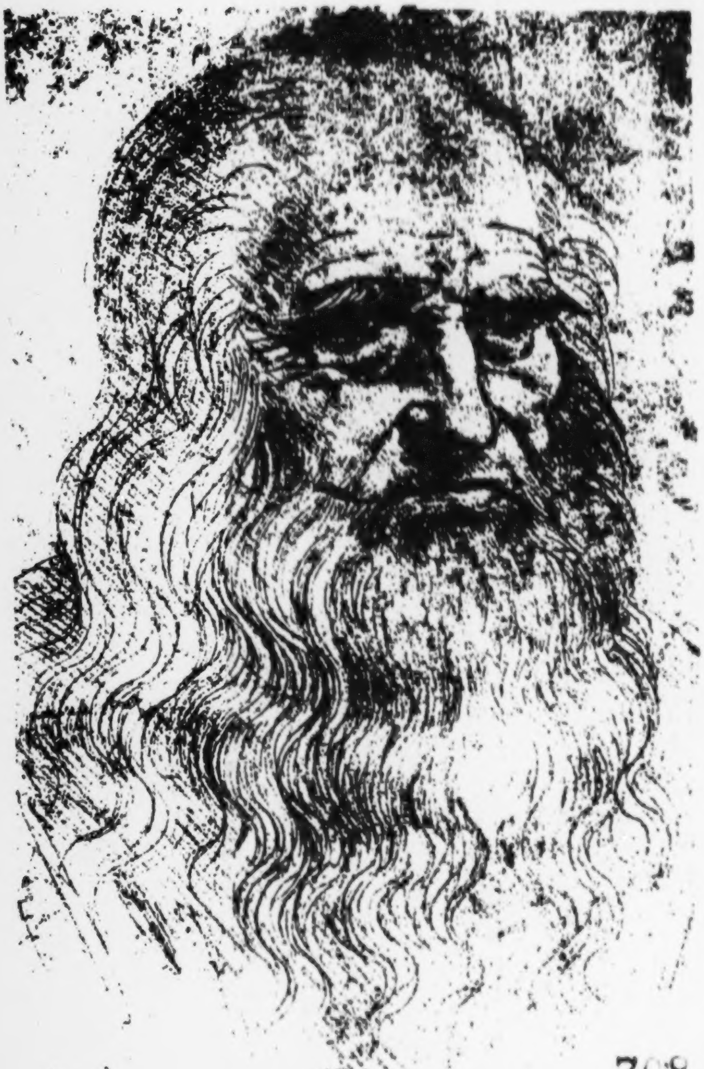
Preliminary Call for Articles

EXPRESSIONS OF THE SELF

The Winter 1989 issue of HUMANITIES EDUCATION will be devoted to the theme of Self-Expression, including such things as autobiography, self-portraits, self-expression in music, poetry, architecture, crafts--whatever. This issue will also include selected color slides from the collections of the Minneapolis Institute of Arts with informational notes and ideas for teaching.

As always, articles should relate to interdisciplinary humanities learning. In addition to longer articles (see Editorial Policies page), we like to have relevant reviews, abstracts of journal articles and short pieces describing classroom activities, favorite documents and artifacts, etc. Selection of articles will be influenced by the need for balance among our many constituencies as well as the usual factors in accepting articles for HUMANITIES EDUCATION. The final deadline for acceptance of completed submission is November 1, 1987.

Fred E.H. Schroeder, Editor
HUMANITIES EDUCATION
Department of Philosophy &
Humanities
University of Minnesota Duluth
Duluth MN 55812-2496



A self portrait, the only known likeness of Leonardo.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values. Academic courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Seniors Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but not feel constrained to be colloquial. Avoid sexist implications in your diction by referring to humanities, humans or people rather than man or mankind. Usually awkward "he/she" constructions can be avoided by recasting pronouns in the plural. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed or word-processed double-spaced on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. Camera-ready line illustrations are very welcome. We can use written material of two lengths: one to three commentaries, etc.; and articles of six to ten pages (3500 work maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions. If you have word-processed your article, please specify the program you used (we use Word Perfect). If your article is accepted we'd like a copy on disk.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

- THEORY "Piaget and Theories of Integrated Study"
- ADMINISTRATION "Crediting Departments for Team Teaching"
- HISTORY "Nineteenth-Century Multi-Media at Chautauqua"
- RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

- "What you should know about teaching novels in a philosophy course"
- "Pre-teaching history students for an art museum field trip"
- "How to help non-musicians to follow a score"
- "A designer speaks of humanities bulletin boards"
- "Getting adults to role-play in public humanities programs"
- "Understanding Oedipus: An Actor's View"

What we don't want:

- Creative writing by teachers or students (it doesn't relate to our purpose)
- Syllabus outlines (curricula should be explained, not listed)
- "The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)
- "Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)
- "Humanistic counselling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

When renewing, please be sure to include your **expiration code** from the mailing label or **enclose the label.**

CONTRIBUTOR INFORMATION

Contributors should consult the Editorial Policies sheet carefully. As will be seen, HE is wide-ranging, quite permissive and has no "party line" in respect to definitions of **humanities, interdisciplinary** and **education**, but the wide boundaries are nonetheless firm. Please do not submit articles over ten pages long unless you are planning to revise.

IMPORTANT INFORMATION FOR MEMBERS

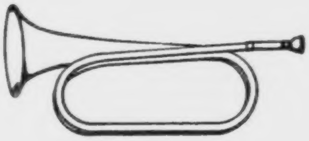
This issue of HUMANITIES EDUCATION reflects several ways that the National Association for Humanities Education is changing. Most important, this is our very first summer issue. So **HE** is now a quarterly journal. Secondly, this issue does not contain our newsletter section, **HUMANEWS.** This is a reflection of a period of transition which is very welcome to your Editor-in-chief. Beginning this fall, **HUMANEWS** will have its own editors. We will also be investigating the comparative costs of issuing **HUMANEWS** as a separate mailing (non-profit bulk mailing costs continue to rise).

Elsewhere in this issue you will find a call for articles for our third thematic issue - the second with a guest editor. This fall you will also be receiving a ballot for the offices of Vice-President/President-Elect and At-Large Members of the Executive Committee of NAHE. And you will soon be reading the preliminary announcement for our 1989 national conference tentatively planned for Kansas City.

All of the above is partly an outgrowth of the NAHE conference in St. Paul. But even more it is the product of members who have recognized that NAHE and **HUMANITIES EDUCATION** are arenas that deserve time, effort, expertise and enthusiasm. Obviously, not everyone is prepared to offer so much to our organization, but we can ask each and everyone of you to contribute to our continued improvement.

1. Talk up NAHE. Our greatest need is members.
2. Think of **HUMANITIES EDUCATION** when you encounter good ideas and presentations that fit our interests.
3. Respond to articles in **HUMANITIES EDUCATION**
4. Send notices of meetings, conference, opportunities, etc. to:

Vaughn Baker & Darrell Bourque, Editors
HumaNews
University of Southwestern Louisiana
Lafayette, LA 70504-4691



Call for Articles

EXPRESSIONS OF THE SELF

The Fall 1988 issue of HUMANITIES EDUCATION will be devoted to the theme of Self-Expression, including such topics as autobiography, self-portraits, self-expression in music, poetry, architecture, crafts-- whatever. This issue will also include selected color slides from the collections of the Minneapolis Institute of Arts with informational notes and ideas for teaching.

As always, articles should relate to interdisciplinary humanities learning. In addition to longer articles (see Editorial Policies back page), we like to have relevant reviews, abstracts of journal articles and short pieces describing classroom activities, museum exhibits, favorite documents and artifacts, etc. Selection of articles will be influenced by the need for balance among our many constituencies as well as the usual factors in accepting articles for HUMANITIES EDUCATION. The final deadline for acceptance of completed submissions is May 1, 1988. Send to the Special Issue Guest Editor:

AMERICA ON TRIAL:
Studies in Values in Conflict

I.

INTRODUCTION

One of the primary goals in all my courses is to help students think more critically about their lives, to become "anthropologists," as it were, of their own culture, to develop a critical mind about what should concern them the most. I see my courses--in American literature and American Studies--as my opportunity to challenge my students' thinking, their values, before they ride off into the sunset with an M.B.A., a BMW, and a Michelob! I want my students to explore the implications of a culture which seems to "know the cost of everything but the value of nothing" (to borrow from Oscar Wilde).

After teaching an American Studies course on the American Dream for a number of years, I began thinking about some other ways to get at the study of American culture. Throughout the course of my teaching, I have had occasion to refer to significant trials and court decisions. It occurred to me that such cases might form the nucleus of an interdisciplinary American Studies course. Key trials throughout American history often serve as a forum for the clash of diverse ideas and values. In so many instances, the issue is not merely the guilt or innocence of one or more defendants or plaintiffs, but rather cultural values with significant political and moral implications--in short, "America" goes on trial.

Attending the Modern Language Association convention a few years ago, I heard Professor Robert A. Ferguson of the University of Chicago speak on the influence of the legal tradition upon our writers and culture. His analysis is developed in his fine 1984 book Law and Letters in American Culture. His research was one other spur to my own consideration of the study of trials as the content for an introductory course in American Studies. A summer grant enabled me to begin collecting materials for the course, which I hope to offer for the first time next year.

II

DESCRIPTION OF COURSE

The course is entitled "America on Trial: Studies in Values in Conflict." The purpose of my preparatory research was to identify and collect information on key trials in American history as material for an American Studies course for undergraduates. The working hypothesis of the course is that trials that created considerable public reaction can be studies as reflections of our culture's prevailing and changing moral, political, and social values. Sensational trials provide opportunities to study social, cultural and moral values in conflict, and, hence, also provide an important way into the study of American social and intellectual history.

The trials I am interested in are ones that do not usually or necessarily have significance in terms of setting precedents for constitutional law or are necessarily significant to legal history as such, though there is some overlap, of course. There are already courses in departments of history, political science and even business which cover such material. The trials I am interested in are those which captured often enormous popular attention, usually on a national, and often international, level. Such trials encompass a variety of issues and crimes.

Before exploring further the content of the course and some of the pedagogical dimensions, I want to consider briefly some theoretical and methodological issues.

III

EPISTEMOLOGICAL AND METHODOLOGICAL CONSIDERATIONS

Every course implies or presupposes an epistemology. How we organize our material and how we teach it implies our assumptions about how we know or go about knowing the material, i.e., what we consider to be **"real"**, a word Nabokov felt should always be set off with quotation marks. Sometimes we are quite explicit about what these assumptions are. Perhaps too often they go unexamined. Today, epistemological and methodological considerations are very much in the forefront of serious intellectual discussion, as for example the challenges of the new theories of literary criticism. The pedagogical implications of these discussions are slow to be felt, though we can already see some of the results of these debates in recent textbooks and anthologies.

Some of the epistemological issues of my course are concerned with the definition(s) we give to culture and how we come to know about it, so I would want to be quite self-conscious about these questions while I taught the course so that students themselves would begin to think about these issues.

I continue to find R.W.B. Lewis's notion of **culture as dialogue or debate** (which he develops in his seminal book **The American Adam**) to be quite helpful. He says, "a culture achieves its identity not so much through the ascendancy of one particular set of convictions as through the emergence of its peculiar and distinctive dialogue." Intellectual history should explore "the dominant clashes over ideas." The development of the culture "resembles a protracted and broadly ranging conversation: at best a dialogue--a dialogue which at times moves very close to drama." Such a conception of culture is a dynamic one and lends itself quite readily to the study of major trials as a way into the cultural dialogue. An excellent recent attempt to build an interpretive model based on the notions of conversation and argument is seen in David Tracy's book **Plurality and Ambiguity** (1987).

Another, more recent, conception of culture I find intriguing is that developed by James M. Curtis in his fine book **Culture as Polyphony: An**

Essay on the Nature of Paradigms (1978), essentially a synthesis of a number of recent conceptions of culture and language. He argues, as do a growing number of others, for **a non-linear paradigm**, à la Marshall McLuhan, among others, for conceiving our post-modern culture. A decisive concept in the non-linear paradigm is **binarism**--the resolving of dichotomies into binary pairs which interact, each term of which is equally necessary. This conception is richly useful to a study of diverse cultural materials in general, and to key trials in particular. Seeing sensational trials as dramatic "moments" when cultural values collide and become particularly visible gains support from a Whiteheadian view that certain historical occasions possess illuminating qualities which shed light on other occasions.

In any event, the course can and should provide the opportunity to explore various models and conceptions of culture.

IV

TEACHING "AMERICA ON TRIAL"

One standard and obvious way to present the course is to organize the material chronologically, beginning in the seventeenth century with key Puritan trials, and then coming up to the present. Such an approach is essentially linear and stresses development and continuity. While there are certain advantages to a chronological/historical approach, I would prefer an approach which combines a diachronic and synchronic approach, one that can see changes over time as well as one that sees relationships and connections among diverse objects and events within the same time. Thus, in terms of studying major trials, one could cluster the material thematically or in terms of the issues in conflict, such as cases concerning the status and role of women, labor, race relations, free speech or religion. Of course, a number of trials overlap upon more than one theme or issue.

The course could readily follow the various formats often employed in interdisciplinary approaches: a period course, such as 1865-1914; a decade course, such as the 1920s or 1930s; a major figures course, such as Webster, Darrow, or other key lawyers and judges; a regional course, such as New England or the South; a black studies, women's studies, and religious studies course, or combinations of these. Perhaps also the course could focus on one type of crime, such as famous murder trials.

One of the goals of the course is to enable students to see and make **connections** and **link-ups** between trials in various periods and how and why certain cultural values repeatedly come into conflict. For example, the Puritan expulsion of Anne Hutchinson in the 1630s can link up with more modern trials with women defendants--Lizzie Borden, Margaret Sanger, and Emma Goldman. Another interesting link-up can be made between John Adams' 1770 defense of the British officers and soldiers on trial for the so-called "Boston Massacre" and the more recent ACLU defense of Nazi demonstrators at Skokie, Illinois in 1977.

A unit on race relations could study such trials as Dred Scott (1857), Plessy v. Ferguson (1896), Guinn v. U.S. (1915), where the NAACP successfully challenged Oklahoma's grandfather clause, the trial of the Scotsboro Boys in the early 1930s, Brown v. Board of Education (1954),

718

and the Alan Bakke case in 1977.

Often decisions reflect great social changes. One interesting example is the cases involving the Mormons and polygamy. In 1862, Congress passed the Morrill Act, aimed explicitly at the Mormons, which made polygamy a federal crime in the territories, which included Utah. In Reynolds v. U.S. (1878) the Supreme Court reaffirmed Reynold's conviction on the polygamy charge, supporting the right of Congress to declare it an "odious" crime. This case seemed to demonstrate the limits of national tolerance toward religious freedom. But in 1961, in Wisconsin v. Yoder, we can sense a significant change in values. The Amish defendants refused to allow their children to go to public schools past the eighth grade on religious grounds. The Supreme Court supported their claim that the First Amendment guaranteed the right to live outside the "conventional 'mainstream.'" The state had no power to impose its will on a religion and a way of life "that is odd or even erratic but interferes with no rights or interests of others." Yet this issue is hardly solved, for recent trials involving the Unification Church (Moonies) and "Deprogramming" cases, as well as the flack over the Bhagwan cult in Oregon, suggest some new limitations on the freedom of religion.

Pornography has become a controversial issue on trial in many local communities. For instance, in a small city in Ohio a video tape store was put on trial for allegedly pandering obscenity by renting/selling X-rated tapes for home video use, a case which raises questions about the line between the public and private realms. In addition, pornography has been put on trial by some feminist groups who seek some form of censorship.

There are many trials which possess significant cultural and historical import. The Salem Witch Trials of 1692 could link up with such trials as the Rosenbergs in the 1950s, the McCarthy hearings, the Chicago Seven in 1968. Arthur Miller's play **The Crucible** would be useful in this connection. The Haymarket anarchists trial of 1886 ff. has important ramifications culturally and politically. Issues of racism and anti-semitism emerge vividly in the Leo Frank case in 1913. The Scopes Trial (1925) pitted fundamentalism and modernism in a battle that is still being waged, as evidenced by such recent cases in Arkansas and most recently in an Alabama case involving the demon "secular humanism." Sacco-Vanzetti (1927) became a cause célèbre with international dimensions. The trials over the Ponzi Schemes of the 1920s can link up with the recent indictments of Wall Street brokers involved in insider trading. The 1984 trial of Westmoreland v. CBS was a reprise of the Vietnam war as well as a trial on the limits of journalism.

A recent case showing the changing relations among men and women was Marvin v. Marvin (1976 f.), the infamous "palimony" trial in California (of course), which spawned about 100 similar lawsuits around the country. The **New York Times** ran 17 articles on the case between 1976 and 1979. **Time** magazine featured it and so did **Playboy**; comedians joked about it on T.V.; cartoons appeared in magazines. The case provoked lots of fall-out, reflecting changes in social values.

Studying such popular trials offers a way for students to **burrow into** some of the shaping forces of their culture. Sometimes link-ups can be made with literary treatments of trials, for example, **Inherit the Wind, An American Tragedy, Native Son,** among many others.

One of the problems for the teacher is in the locating and compiling of the appropriate material to use for class reading. Using trial transcripts, where available, could be cumbersome and costly. Most of the material can be gathered from daily newspaper accounts as well as editorial commentary. A number of trials have been the objects of book-length treatments over the years--a number of books on Lizzie Borden, the Rosenbergs, the Manson case, and many others.

The course can afford many opportunities for cross-disciplinary team teaching; for example, two or three faculty from the humanities and the social sciences could cooperate effectively.

There are a number of ways to get students involved. The course could focus upon 10 or 12 trials in a term. Students could be assigned into research teams to investigate the trial and then make an in-class presentation, perhaps even recreating part of the trial in the classroom. The class could benefit from the visits of lawyers, judges and law professors speaking on various issues and trials. Students could also be assigned interviews with lawyers and judges, and perhaps even defendants. There are lots of possibilities actually--we are limited only by our imaginations, if not our budgets.

V

CONCLUDING UNSCIENTIFIC POSTSCRIPT

It is my hope that such a course can be an exciting and stimulating way to learn what "liberal learning" is all about, an exciting way to do humanities--to synthesize, seek link-ups, make connections, and perhaps develop a critical but compassionate intelligence, which to me is the goal of all true learning.

It is no secret that the humanities have been on the defensive and floundering in this "bottom-line era," whose heroes are Lee Iacoca and the "one-minute managers." (After all, it has been said, the problem of King Lear is only worth 25 points on the midterm. . .).

Soren Kierkegaard wrote in his book **Fear and Trembling**: "Our age goes beyond the miracle of turning water into wine. It turns wine into water." We must seek to resist the reductionist tendencies of our age which reduces everything meaningful to a lowest common denominator of banality and insignificance, an age which has replaced valuation with measurement. And what better place to start this than in the classroom!

APPENDIX

Working List of American Trials of Cultural Significance

I. Seventeenth Century

1627	Thomas Morton deported from Plymouth Colony
1636	Roger Williams
1637	Anne Hutchinson
	Quakers
1692	Witch trials

II. Eighteenth Century

1701	Captain Kidd
1735	John Peter Zenger libel trial
1763	Patrick Henry v. "The Parson's Cause"
1770	John Adams defends British troops in "Boston Massacre"
1778	Benedict Arnold
1786-87	Shays' Rebellion

III. Nineteenth Century

1800	J. Thompson Callender
1803	Marbury v. Madison
1807	Aaron Burr
1833	Barron v. Mayor of Baltimore
1847-57	Dred Scott
1859	Daniel E. Sickles
1859	John Brown
1865	The Lincoln conspirators
1865-66	Ex Parte Milligan
1868	Andrew Johnson
1869	Texas v. White
1870	Bradwell v. Illinois
1871	KKK
1873	William M. Tweed
1875	Henry Ward Beecher adultery trial
1886	Haymarket Rioters
1886-91	Tilden Will Contest
1892	Lizzie Borden
1896	Plessy v. Ferguson
1893-99	Laidlow v. Sage
1899-1902	Roland B. Molineux

IV. Twentieth Century

1902-06	Albert T. Patrick
1905	Lochner v. N.Y.
1907-08	Harry K. Thaw
1908	Muller v. Oregon
1911	Triangle Fire case

1912-15	Charles Becker
1913	Leo Frank
1914 f.	Margaret Sanger
1916-17	Billings-Mooney case
1918-19	Emma Goldman
1918-19	Eugene Debs
1919	Schenk v. U.S.
1920	Black Sox scandal
1920s	Ponzi scheme trials
1921-27	Sacco-Vanzetti
1922 f.	Hall-Mills
1924	Leopold and Loeb
1925	Scopes trial
1925	Court Martial of Billy Mitchell
1932	Massie-Fortescue
1932	Powell v. Alabama (Scotsboro Boys)
1935	Bruno Richard Hauptmann
1940s	Jehovahs' Witnesses cases over saluting flag
1949 f.	Alger Hiss
1950 f.	Rosenbergs
1954	Brown v. Board of Education
1954 f.	Dr. Sam Sheppard
1961	McGowan v. Maryland
	Wisconsin v. Yoder
1962-63	Prayer cases: Engel v. Vitale
	Abingdon v. Schempp (Madelein Murray)
1967	Tijerina case in New Mexico
1968	O'Brien v. U.S. (draft card & flag burning)
1968	Tinker v. DesMoines, Indiana School District--arm bands
1968	Chicago Seven
1970	Captain Calley
1971	Harrisburg Conspiracy trial
1973	Roe v. Wade
1976 f.	Marvin v. Marvin (palimony)
1977	Skokie Nazi march
1977	Bakke case
1980s	Scarsdale Diet doctor murder case; Mrs. Harris gang rape trial in Massachusetts
1984	Westmoreland v. CBS
1985	Walker Spy trials
1987	Alabama text book case; Judge W. Brevard Hand and "secular humanism"
1987	Baby M
1987	Bernhard Goetz

Darrel Bourque

THE MODERN PERIOD:

Making Sense of a Fragmented World

"Fragments, are the only form I trust," declares a character in Donald Barthleme's story "See the Moon?." In "Scary Monsters," (1980), David Bowie sings, "I am barred from the event/I really don't understand the situation." In Paul Simon's "The Boy in the Bubble," (1986) the persona wonders if the technologically advanced world we live in is not itself a scary monster where we are bombarded by information from distant constellations so fragmenting and disorienting that we can only be somewhat soothed by the song's intimate but ineffectual refrain, "don't cry, baby, don't cry"; only **somewhat** soothed because we must wonder whether the huge advancements in the fields of science, psychology, art, or technology actually bind us or further separate us, whether telecommunications help us communicate in the case of the song. Upon being introduced in class to the contemporary modern world (c 1900-), very few of my students are as comfortable as the Barthleme character with what they see as a shattered, broken-up world; some are intrigued with it, mystified by it, but also disturbed or alienated by the artifacts they encounter from that world in the form of its visual arts, literary arts, musical arts, and various ideologies. When they are introduced to the works of Pound, Eliot, Luigi Pirandello, Maeterlinck, Strindberg, or Brecht, any of the monumental and definitive works and artists of the modernist period, they echo the sentiments of the voices in Bowie's and Simon's songs: they are barred from the event; the satellite's images obscure their world rather than illuminate it. Even though their own troubadours sing to them of a fragmented world, even though their own experiences bring them everyday into a world wherein the pieces simply do not fit, many of them keep wanting to invalidate such a way of knowing. On one level they will admit that their hours, their days, the very minutes they spend in a class session, are so constructed, but they will not believe so of the construct of their history, their realities, their lives. They do not want to validate the value of the fragment, the piece, as a way of experiencing the world around them even when they will admit that they see resemblances therein in the very way they think, take in a movie, listen to the cuts on a compact disc, visit a museum, or fall in love.

We teachers can be for those students in our classes the telecommunicator (**TELE**, Greek, from far away); the artists, musicians, philosophers, writers, too, are telecommunicators (from farther away). We can bring a clearer signal in for our students, and the process is a relatively simple one. David Perkins in **A History of Modern Poetry** cites a method of composition in modern literature that goes a long way in making much more understandable the monumental literary works that were difficult for readers from their first publications. He calls this method **discontinuous composition** (p. 308). I believe that this compositional principle is one that affected nearly all the definitive exponents in the various expressions of arts and ideas, and I further believe that the compositional principle is so much a part of my students' lives that they cannot see how large a part it plays in their perceptions because they quite simply cannot get the proper distance from the idea to see its validity.

That is where we as telecommunicators come in. We can show them how the principle of discontinuous composition shaped the world of the first part of the twentieth century, and we can show them that the principle shapes the very world they live in. This structural principle is characterized by a disjointedness from one line, phrase, image, allusion, emotion, topic, or speaker to the next; it is more precisely, the absence of transition, the placing of separate, often disparate units of meaning one immediately after the other. It relies on juxtaposition for progression, not transition. At the vanguard of the movement in poetry is Ezra Pound who foregoes a mimetic poetry, not "representing" reality but constructing one in "planes of relation" that forces the reader to construct the reality along with the poet, a reality, emotion or meaning that is variable rather than strictly intended. Pound found support for his "planes in relation" structuring in his belief that nature was without grammar and in his study of the elliptical or lapsed grammar of Chinese poetry and of French **symboliste** poetry. This approach to the rendering of realities is in sharp contrast to the world view of the nineteenth century and what T. E. Hulme calls one of the main achievements of the century: "the elaboration and universal application of the principle of continuity" (Perkins, p. 308). The major and various poetic voices of the century support that statement. The developmental modes of the period are the short lyric, the integrally related descriptive and meditative piece, and the narrative. Wordsworth's wandering lonely as a cloud brings him to a heart with pleasure filled and dancing with the daffodils, his days being bound "each to each by natural piety." His long poem **The Prelude** begins "Oh there is a blessing in this gentle breeze/ A visitant that while it fans my cheek/ Doth seem half-conscious of the joy it brings/ From the green fields and from yon azure sky." This is no nature without grammar. The world view and the poem are conciliatory, not disorienting. Humankind, the earth, and the transcendent sphere are all part of an organic whole. In America, the same is true. Walt Whitman, the poet of the century, can take the reader on a fifty-two section soul-tramp and the voice is consistent; the transitions the reader is prepared for in the very numbering of sections. The attempt in "Song of Myself" as well as in all of **Leaves of Grass** is to enfranchise the readers who are spoken directly to by the poet; to free them for movement into a world of which they are an organic part. The poet here does not jar, surprise, disorient. Whitman says he is the arbiter of the diverse and the key ("Preface," **Leaves of Grass**).

PRUFROCK & BERGSON

Hulme says that the continuity concept of the nineteenth century is no longer a valid one for the twentieth century. In fact, he says the destruction of the conception is an "urgent necessity of the present," urgent, because in the twentieth century continuity is suspected to be an illusion. Such a lack of continuity can be clearly illustrated in the compositional technique used by Eliot in so many of his poems, and for our purposes, in "The Lovesong of J. Alfred Prufrock." The poem opens with what might initially be interpreted as an epigraph. The lines are from Dante's **Inferno**, "**S'io credessi che mia risposta fosse/ a persona che mai tornasse al mondo** (If I believed my answer were made to one who could ever return to the world). The next plane or fragment is initially seen as the beginning of the poem proper, "Let us go then you and I,/ When the evening is spread out against the sky/ Like a patient etherized upon a table." We are brought into a devivified world further devivified by the streets of the first fragment proper which "follow like a tedious argument/ Of insidious intent....". It is possible at this early point in the poem to see that the juxtaposition makes those first Italian words of the poem more than epigraph. Prufrock and Guido da Montefeltro are figures condemned to similar hells. The clues and standards to continuous reading are violated. Epigraph does not function purely as epigraph. The reader is initially addressed in a language not his own and is forced to leave the poem temporarily to seek meaning. Incidentally, the other language technique of forcing the reader in and out of the poem proper is much more extensively used in what may be the quintessential modernist poem "The Wasteland." In the third fragment of "Prufrock," "Women come and go/ Talking of Michelangelo," a fragment twice repeated then dropped. This early in the poem readers do not know clearly what this fragment means. They may associate it with the visit referred to in what could now be either the first fragment or now the second fragment if the epigraph is seen as first fragment. They may also detect some link between Dante and Michelangelo as great religious humanists.

The next fragment finally addresses a major theme that is latent in the first fragments: time. But this is not time as the student is used to encountering, so once again the continuity is broken. This time element in the poem can be greatly clarified by consideration of two kinds of time as put forth by Henri Bergson, the French evolutionary philosopher (1859-1941) who had marked influence on the thought, art, and literature of Europe during the modernist period. Using the biological (from Darwin) and psychological (from Freud) ideas of his time and bringing most of these ideas to print from 1890 to 1910, he distinguishes between time of natural science and time that we directly experience. He sees the first as a mathematical conception measured by clocks, composed of standard units and dominating our practical lives. This time is linear. Durational time, on the other hand, is flowing, an irreversible succession of states forming an indivisible process. What progress Prufrock makes in getting to the party of tea, and cakes and ices, if any, is marked by linear time and is the lesser focus in the poem. What is really going on in the poem is experienced as durational time. What Bergson says is "pure time" or "real duration": something immediately experienced as active and ongoing and not governed by time lines, hence discontinuous but synthetic. This time is synchronic. Because we sense the flow of life as an inner experience primarily, the messy artifact that relies on juxtaposition rather than transition as a means of developmental progression is a truer representation of the nature of nature, of the nature of humanity, of the nature of reality. In fact, Bergson concludes that the great weakness of the linear mode of time and thought is that it considers the illusion of the mathematical conception to be reality when indeed it is not (**The Encyclopedia of Philosophy**).

As we return to the poem, we see more clearly that the progressive movement finally relies more on durational/synchronic time than on linear time. We are not sure if Prufrock continues on his way to the gathering when at the end he says "human voices wake us and we drown," or if the end of the poem marks the arrival at the party with the party-goers' human voices drowning a durational reality. We cannot know for sure, but certainly making sense of the ending has to account for the fact that it is not the linear progression from the very beginning which is predominant. It is the movement in and out of pasts, presents, and futures that focuses on the "flow as inner experience" which makes him crab, insect, measurer with coffee spoons, a dapper dresser, not like Lazarus or John or Hamlet, but a fool, a lover, a loner, a projection of nerves upon a screen, at once all opened and all closed. He is given to us whole, but piece by piece. He is given to us as, according to the discontinuous compositors, all our fellow humans are: piece by piece. There is no more whole picture than what you are getting moment by moment, and when you have the whole, you have but a fragment. Such is the nature of reality and such is the nature of art as it most faithfully represents whatever it chooses to represent.

STEIN & NON-LITERARY ARTS

Another writer of the modernist period who may turn out to be more important as an influence on other artists than as artist in her own right is Gertrude Stein. She uses this same technique of discontinuous composition as many of the other artists and writers, nearly all of whom were reading each other's works, helping each other get into print, helping each other get sold, putting each other on the stage, literally or figuratively. This teeming group brought together luminaries like Pound, Joyce, Eliot, Anderson, Faulkner, Lawrence, Hemingway, Picasso, Diaghilev, Stravinsky, Nijinsky, Matisse, Stieglitz and others.

Of her own technique which resembled cinematic montage and Eliot's (even though he did not learn his technique from cinema), Stein says, "I was doing what the cinema was doing, I was making a continuous succession of the statement of what that person was until I had not many things but one thing" ("Lectures in America"). What we have in her approach is the running of separate or disconnected units to force another image. We note here a parallel in the thinking of another great mind of the period, Einstein, who was publishing his findings on the effects of speed on mass and the subsequent effects on the relative nature of reality.

Alfred Steiglitz, who was himself a pioneer of a new art in the field of photography, was interested in contemporary art and sculpture, and was put off by the sentimental, the staged, and the artificial in late nineteenth century photography saw in these prose poems of Gertrude Stein something that he did not understand but something that he knew to be of value. Perhaps he did not understand as Chagall does not understand his own art: "I don't understand all my pictures," Chagall says. "They are merely a pictorial arrangement of images that obsess me. I was looking for another kind of realism, psychic not rational (**"Homage to Chagall,"** PBS TV). The first and last parts of Stein's psychic-not-rational portrait of Picasso are:

> One whom some were certainly following was one who was completely charming. One whom some were certainly following was one who was charming. One whom some were following was one who was completely charming. One whom some were following was one who was certainly completely charming.
>
> Some were certainly following and were certain that the one they were then following was one working and was one bringing out of himself then something.
>
> . . . . .
>
> This one was not one completely working. This one was not one working to have anything come out of him. He always did have something having meaning that did come out of him. He always did have something come out of him. He was working, he was not ever completely working. He did have some following. They were always following him. Some were certainly following him. He was one who was working. He was one having something coming out of him, something having meaning. He was not ever completely working.

This man who was working, who was having something, something coming out of him, something having meaning produces one of the pivotal paintings of the early twentieth century that has affinities with Stein's cubistic work-portrait of him. The work is **Les Demoiselles D'Avignon**. The poet and the painter are both working with discontinuous structure to create spatial form. All parts are present in the same moment, coexisting in space.

Lee Jacobus says of the painting that the very "distortions of form force us to look at it differently" from the way we would examine any painting before its time. He also comments that the very positioning of the figures creates a visual "discovery." The two central figures with profile noses in a full-face view are familiar to us in other Picasso paintings and the other three figures reveal the influence of the African masks on his work. All five illustrate fragmentation and the creation of spatial form through discontinuous structuring; the "planes in relation" constitute content and technique.

Dennis Sporre in his discussion of cubism uses this same painting to illustrate what he calls "an entirely new approach to pictorial space". He notes that artists like Picasso and Braque were experimenting with various ways of describing form. The concerns of the visual artists of the period and the literary artists are strikingly the same. Sporre also posits a notion that cannot be overlooked as we observe the artistic expression of the time: that the "newly evolving notions of time-space continuum were being proposed by Albert Einstein at this time." He says we cannot be sure whether the Theory of Relativity influenced these artists (and others of the period), but we do know that it made their works more acceptable. We might also remember that Bergson's writings had been published in Europe since around 1890, fifteen years before the

Relativity publication.

This nontraditionalism in the art of the early century is embodied musically in the early works of Igor Stravinsky in general and in his **The Rite of Spring** in 1913 in particular. He was first brought to the public's attention by Diaghilev, and the great Nijinsky choreographed and danced major performances to Stravinsky's music. Stravinsky's close friendship and professional ties with George Balanchine would keep his music on the dance stage throughout the century. At Balanchine's death his heir became Peter Martins whose fame is in part due to the now classic **Apollo** set to Stravinsky's music. Martins, too, continues to choreograph to that musical giant's compositions as director of the New York City Ballet. But none of Stravinsky's work after **Rite** would be greeted with the response of the 1913 work. Characterized by rapidity, fragmentation, silences, dramatic shifts, themes denied, dramatic fulfillment and musical elements treated experimentally, the premiere brought popular outrage. **The Rite of Spring** is not unique in that regard, when we consider the popular responses to Gertrude Stein, James Joyce, D. H. Lawrence, Marcel Duchamp, Picasso's **Demoiselles**, as well as the wholesale ignoring for decades of Faulkner's work in his own country, work by a man who critics said seemed to be reinventing fiction each time he published a work.

Some years after the ballet's premiere, T. S. Eliot attended a production of **The Rite of Spring**, and in the music he heard contemporary reality. He writes that it transformed "the rhythm of the [Russian] steppes into the scream of the motor horn, the rattle of machinery, the grind of wheels, the beating of iron and steel, the roar of the underground railway and the other barbaric cries of modern life into music. The year was 1921, four years after "Prufrock" and the year he got **The Wasteland** on paper. The poem would be published in 1922 and would become the classic poem of the movement; **The Rite of Spring** would become a signature piece for the musician who is generally regarded as the most important composer of the twentieth century.

The need to shift to a new expression in the arts is at the very heart of the creations of the man who himself "never hesitated to claim the single-handed invention of modern architecture" (**New York Times Book Review**, February 15, 1987, p. 39), and who is generally regarded as the major architect of the modernist movement. Frank Lloyd Wright was an associate of Louis Sullivan whose works are characterized by consistency, integration, rhythm, proportion, and harmony. The split between the two was bitter and complex, and they were not reconciled until a few months before Sullivan's death in 1924. It is generally agreed, even though he would not admit to sources and influences on his work, that Wright was "interested in, aware of and influenced by the well-publicized new art and ideas of his time." Like the literature, music, and visual arts of the period, his work, as Jacobus describes, is "not only a piece of architecture, but also a piece of sculpture." Even though Wright's basic architectural principle involved placing his structures in landscapes harmonious with the structures, and even though he believed so strongly in using the materials of the environment that the buildings are placed in, the structures themselves are made of striking, startling juxtapositions of materials and planes. In the case of the Guggenheim Museum, the building and the environment illustrate the principle of effect by juxtaposition rather than by transition. His Anne Pfeiffer Chapel, his "Falling Waters," his "Hollyhock House," and his Guggenheim Museum can all be described with the very words used by David Perkins to describe other artists who use discontinuous composition as a structuring principle: "the lapsed grammar brings the quite different 'planes' or perspectives into relationship with utmost speed" and "the method of presentation is for the most part 'planes in relation,' the juxtaposition of concrete particulars." The influence of this giant can be clearly seen in the work of Richard Meier, Luis Barragan and the Chinese American architect, I. M. Pei, who in the late 1980's gave the nation's Capitol area its own piece of discontinuous composition in the east wing of the National Gallery of Art and who at the present is setting Paris on its ear with his glass pyramid in the Cour Napoleon as part of his renovation project for the Louvre.

In the making of poems, stories, pictures, houses, musical composition, dances, philosophies, psychological theories in contemporary modern times, the "planes or relations" or juxtaposition seem to be the major informing principle and a major structuring principle. What does that tell us about the early twentieth century and about ourselves? The "new art" of the early century suggests that human nature renders ambiguity, ambivalence, surprise. It tells us that the fragmented, the disjointed, and the discontinuous is the human condition or at least a large part of it. It affirms that beneath the logical, rational progression of a human moment or a human lifetime or a human epoch moves powerful, flowing spheres from which images, feelings, and knowledge can well up, perhaps with deep signification. With the knowledge that the ordered, the clear, and the understandable is only a part of the human condition, so much more is available to us. We are then closer to the magic and the mystery of human existence. We are closer to all peoples of all times. We begin to see that these pioneers are contemporary and of all times. And if we see what they have opened up for us in the way of possibilities, we might be able to smile at the sixty second play Becket makes us spend good bucks for as well as at the four and a half hour and nine hour works of Philip Glass and Robert Wilson. We might smile at the sound of foghorns in musical compositions. We might smile even at the sight of a glass pyramid in the courtyard of the Louvre. And that smile will not be from any highground; it will be because we enjoy participation in our brief but magical and mysterious human moment.

INTEGRATED LIBERAL STUDIES:

An Experimental Multidisciplinary Course

ORIGINS

"Integrated Liberal Studies" (ILS), a multidisciplinary course instituted in 1985 at Rocky Mountain College (Billings, Montana), began in a series of conversations among colleagues. My colleague in sociology complained to some of us that he had too many students who apparently could not read a text or write coherently. More fundamentally, we and two other colleagues--one in religious studies and a second in English--shared a frustration with the lack of critical thinking skills among our students.

Like many other private, four-year, liberal arts colleges, Rocky attempted to teach all students writing and critical thinking skills by requiring courses in writing, philosophy, introduction to religion, etc. But this only added to our woes. Rocky is a small college, with a student body of about 400 FTE. But because these courses were required, they became stuffed with students. Though we struggled mightily in these courses, the sheer number of students quietly forced the classes away from the intended focus on individual attention, discussion, and extensive homework involving writing and thinking skills to a more standard lecture-and-test course.

Still more broadly, we all shared the academician's passion for the humanities: and we were shaken by our students' ignorance. They had little, if any, knowledge of "the classics," of those landmark artifacts of culture that retain their power to shape the worldview of individuals and nations. We thought that liberal arts education was to be an education in these classics, beginning with the **Odyssey** and extending through Greek tragedy and philosophy to medieval art to modern music and literature. At the same time, as instructors at an institution affiliated with liberal protestant denominations, we thought it important that our students develop an understanding of the Bible as a text. Likewise, we thought it crucial for an educated human being in the late 20th century to have a basic understanding of the sciences and especially the dramatic changes resulting from relativity theories and quantum mechanics. Finally, as inheritors of the Enlightenment, we thought it crucial that our students understand the political theory of modern democracies.

Again, the College attempted to provide this sort of education--in the traditional, "shotgun" fashion of requiring a scattering of courses in history, literature, political science, religion, etc. Most of these courses, to my knowledge, were excellently organized and taught. But none of these courses alone was capable of conveying to the students our sense of how **all** these dimensions of their college education fitted togethe, nor how this whole of liberal arts was further tied to the ability to write and think critically.

In short, we wanted to educate our students in a high sense: we wanted them to become **literate**--primarily, but not exclusively, in Western culture. This would mean that they, like us, would become familiar with "landmark artifacts," **critically** think and write about them, and develop an understanding of the ways in which all these many pieces fit together.

By doing so, finally, we hoped that they would achieve that ever-critical, ever-elusive sense of **community** - first of all, through a shared experience of education within the College, and, secondly, as students who shared literacy in the humanities with all students of the humanities.

As instructors, we also wanted to have fun teaching this stuff.

INITIAL PLANS

What to do? While it is somewhat laughable in hindsight, we invented another required course. Eventually titled "Integrated Liberal Studies" and required of all entering freshmen, the course was to accomplish our several goals. In an integrated rather than shotgun fashion, it would introduce students to Western culture by focusing on major philosophical, religious, and literary texts, as well as on some of the methods and consequences of the natural sciences. It would train students in a variety of "college survival" skills, including discussion, note-taking, and exam-writing skills. Most importantly, the students were to learn critical thinking and writing skills, especially by analyzing individual works to uncover the basic worldview of each text, and comparing these worldviews from one text to the next.

We hoped for integration on two levels. On the first level, we attempted to hold together texts and topics from a wide variety of disciplines by organizing the content thematically. So, for example, in the first semester of the course, the themes of "origins" and "creation" allowed us to relate materials from Hebrew myth and Greek mythopoetry, Greek philosophy, quantum mechanics, art and literature. Further, instructors from art, philosophy, religious studies, and physics lectured to the freshman class as a whole, typically on Mondays. On Wednesdays and Fridays, instructors (and tutors) met with individual discussion sections of no more than 18 students. The lecturers were primarily responsible for presenting material they thought pertinent to assigned readings from the perspective of their discipline. Instructors in discussion sections were then responsible for insuring the continuity of the course for the students, by attempting to show how the material in the current unit and discipline fitted in with and related to other material and disciplines studied in the course.

We also wanted our students as a group to have a common experience on a second level, and so the class is required of all entering freshmen and all freshmen attend (in theory at least) the lectures as a group. We hoped in this way to avoid one of the nagging problems of allowing students to simply choose, smorgasbord fashion, from a variety of courses that meet core requirements. By lumping the freshmen together into one course, we were able to make sure that each of them received the same message and set of expectations regarding writing and other skills. We hoped that this level of integration would result in a freshman class uniformly equipped with reasonably adequate college skills, especially writing skills.

More broadly, we thought that having all freshmen take the same class would help accomplish a special sort of community, as it would give each of them a shared experience and a uniform universe of discourse based in Western culture. We wanted the shared universe of discourse as a basis of intellectual materials upon which we could build in our upper level courses. Most broadly, we wanted our students to have a sense of belonging to a community of learners, a community that encompassed all students of the Western tradition.

As occurs with any such project, we met with unexpected problems and failed to achieve all of our - admittedly grandiose - goals. But we also achieved some of our goals and generated some pleasant, though unexpected spin-offs.

PROBLEMS EXPECTED AND UNEXPECTED

1) As we began developing the course, we anticipated a number of simply political obstacles. First of all, for many of our colleagues, any potential change in curriculum, and especially as it touches the core curriculum, looms like the four horsemen of the apocalypse on the horizon. But, to the credit of our colleagues and our Dean, a course that was conceived in February, 1985, was on the books and initiated by Fall semester, 1985. In part, we managed to get the course approved as a requirement by agreeing that the course would meet the core requirement for philosophy and Christian Thought. This made pedagogical sense, insofar as these two departments were heavily represented in the course. It was also politically expeditious, in that we thereby did not introduce an additional requirement to the core, nor threaten any other departments whose courses met core requirements. None of this means that our colleagues universally acclaimed the course. But those who told us "it's been done before and it doesn't work" did not see fit to try to stop the course.

2) We further expected that it might be difficult for instructors from different disciplines to all handle discussion sections with equal competence as we moved through each topic. But we thought that this would actually serve a pedagogical purpose. Part of what we wanted to teach the students is that all of us are learning, and in this way, the course was in some measure a matter of learning how to learn. We thought that if the students could see, say, the economics professor struggle with Plato, they would receive the object lessons (a) that it's important for the economics professor to struggle with Plato, and (b) the economics professor, as a liberally educated human being, can successfully and (no pun intended) profitably struggle with Plato. How far we succeeded in teaching these object lessons is unclear. What we did learn is that the students tend to translate the instructor's struggle with new materials as a sign of incompetence. This led to some unhappiness at some points, as some students in one section felt "unfaired against" because their instructor, they thought, was not as good at teaching a given unit as instructor X in their friends' section.

3) We also thought there might be some difficulty with ensuring that grading from one section to the next was uniform. Perhaps our greatest flaw was failing to anticipate how difficult it would in fact turn out to be to accomplish uniform grading. And, even when, after much time and effort, we arrived at a grading system we thought wonderfully uniform and fair, we were still faced with the students' insurmountable perception that, no matter what, the grading from one section to another simply was not uniform or fair.

4) Overall, no one anticipated the enormous amount of time and effort the course would cost us. We knew, of course, that this was not going to be easy: in particular, in order to have as much practice in writing as possible, we had planned to use journals and other writing exercises in addition to extensive formal writing assignments. For the instructors this meant, of course, an extraordinary amount of reading: of journals, of first drafts, of revisions, of final versions, etc. At the same time, though, we also wanted to give students as much individual attention as possible, whether in coaching writing or in explaining and discussing difficult material.

To reduce the load on the faculty, we came up with the idea of using junior- and senior-level students as "mentors" in each discussion session. Part of the function of the mentor was to provide students with additional individual attention, especially regarding writing. We also hoped that the mentor would be perceived as less threatening than the instructor, as something of an elder colleague, with whom the students would feel freer to discuss puzzling ideas. While the mentors were helpful in these ways, we quickly encountered two problems. One, the mentors required as much attention as another student in order to insure that they understood the material well enough, and to make sure that they were available at times convenient for the students. Two, freshmen students apparently operate with a simple friend/enemy category. Since the mentors did work that resembled teaching, the mentors were almost as intimidating to the students as the instructors themselves.

The director of the course also found himself burdened with considerably more work than we had anticipated. In effect, he had to become a sort of mini-dean, with responsibility for organizing planning meetings with faculty and tutors, producing course materials (syllabi, exams, etc.), organizing individual discussion sections (including the administrative concommitants, e.g., class lists, grade reports, drop/add slips, book ordering, evaluations, etc.), and ensuring that lecturers would appear as scheduled. While the director received various sorts of help in at least some of these tasks, and while 1/4-release time was granted to him, it still was not enough. More generally, faculty teaching the class were faced with the equivalent of a new preparation, but one that had to be worked out in concert with six other faculty and six student tutors. This meant weekly meetings on a regular basis and evening meetings to discuss and grade assignments, to consider discussion approaches, and to make evaluations.

5) Finally, none of us was prepared for what happens when all students, not just those who self-select into the reputedly difficult philosophy and Christian Thought classes, are forced in their first semester in college to think critically about conceptually difficult material, including the Bible as text; to write extensively about

everything from Hesiod to quantum mechanics to art; and, ultimately, to articulate and argue for their own basic beliefs. I'm curious to know which was hardest for our students: having our physics professor demolish Newtonian time and space, only to replace it with quarks, relativity in spacetime, and science as probabilistic knowledge; or hearing our Christian Thought professor suggest that there are two creation stories in Genesis, and that the serpent in the second creation is not obviously identifiable as Satan. Admittedly, many students found all of this just as we had hoped they would: they were excited with new ideas and perspectives, and they learned how to write and think better. But a lot of students simply hated the whole thing, and individual discussion sections were generally not as fun or lively as our other classes.

SUCCESSES

Despite these many and serious problems, the course has succeeded in at least two ways and provided us with at least two positive, though unexpected spin-offs.

First of all, the course seems to have worked reasonably well in establishing uniform expectations and, more importantly, skills in writing. One old hand was simply astonished that all of her students turned in their papers on time and typed. While these are ancillary to writing itself, the point seems to be that when all students are faced with the same requirements and expectations, they seem less tempted to excuse themselves, or ask to be excused, from those expectations.

Secondly, the course worked to build community. While not all of the students like the course while they are in it, they seem to value the fact that "they are all doing one thing together, and it is academic and hard." (Letter from Jay Cassel, ILS Director, 2-27-87) Generally, ILS seems to have been a factor in improving the academic culture at Rocky Mountain College. In the first few weeks, for example, everyone - including upper-level students, commented on how much studying was going on. In any case, the course now stands as an accepted, if not always loved, academic rite of passage which distinguishes the educational experience at RMC from what one might find elsewhere.

Unexpectedly, the course also taught us instructors a great deal about teaching. We got to watch our colleagues lecture to a large group of students, and we spent a lot of time discussing how to deal with problematic material, how to grade particular essays, and so forth. In particular, I was surprised, but pleased to discover that we all graded quite consistently with each other. In addition, though I had always stressed writing, I learned a great deal from our English faculty as we struggled to incorporate writing into the course structure.

Equally unexpectedly, the course turned out to be a major factor in the College's receiving a large grant ($250,000) from the Burlington-Northern Foundation. Our admissions people also make use of the course as a way of pointing out how education in a private institution can differ from education in public institutions, and to demonstrate our stress both on academic quality and teaching important skills.

736

FINAL COMMENTS

While the course has worked well in teaching especially writing skills and enhancing academic community at RMC, a number of concerns should be noted.

1. There is a problem with confronting first-semester freshmen with both challenging academic material and a focus on acquiring "college survival" skills. In particular, while the course works well in teaching writing, we are still faced with students who have trouble **reading**. In the second year, for example, we used **Habits of the Heart** which, I am told, mostly generated enormous flak.

The temptation here would be to shift the emphasis away from solid academic material and more towards skills. This would mean, however, giving up almost entirely on the original impetus of the course: to expose students to important, if difficult landmarks in Western culture. In order to retain this original impetus, while recognizing the necessity for a strong focus on skills, the strategy for next year is to begin the first semester with Dashiel Hammett's **The Maltese Falcon**: the intention is to use the critical thinking skills involved in solving mysteries as a basis for teaching how to read and interpret texts. The course then moves to "the real stuff"--**Oedipus Rex**, Freud and Jung, Plato and Aristotle, and modern physics--with the intention of teaching the students how to apply these reading and thinking skills in a variety of disciplines. They will then move in the second semester to a multidisciplinary course on the nineteenth century.

2. As enthusiastic young turks in an institution faced with serious financial limitations, the originators of ILS were inclined to do what they had to do; namely, just take on the considerable overload the course entailed, and insist that the course could be accomplished with no additional staff and minimal additional expenditures. This might be what is needed to initiate any large-scale change in an institution, but it is not viable in the long run.

If the course is to continue, it will require a substantial commitment on the part of the institution, first of all, in the form of a budget. To work well, the course requires pre-course training for the instructors, planning retreats, tutor salaries, support for the director to attend appropriate conferences, library acquisitions, outside lecturers, as well as such basics as films, xeroxing, and blue books. Without the institution's support for the class, represented by a budget commitment, even highly motivated faculty will have little reason to continue to overload themselves, trying to do on a shoestring what really requires considerable resources. While motivated faculty will provide **gratis** the overtime required for developing and initiating such a course, the workload in the long run will burn out the old hands and make it impossible to recruit new faculty. (In fact, by the beginning of the second year, only one of the four originators still taught in the class: two of the four had left RMC entirely.) The point is simply that you can begin such a course on a shoestring - but it will require substantial institutional commitment if it is to survive and flourish in the long run.

HUMANITIES EDUCATION
CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

Diana C.J. Matthias

Object Oriented Education: Teaching the Humanities in an Art Museum

I am pleased to have been invited to write a series of articles for **HUMANITIES EDUCATION** on the program of Curriculum Structured Tours at Notre Dame's Snite Museum of Art, because I feel that even though this program was created specifically for the Notre Dame community, the method involved could easily be adapted to the needs of other groups with different interests who could also learn about the humanities in a museum context.

First, a few words about education in a museum. Obviously the type of instruction and learning in a museum is going to be different from that which occurs in a classroom. I suspect that some teachers may fear that they will lose control over students who may wander away and not listen to the presentation in a museum. This can be avoided by inviting the students to sit down in front of each group of objects to be discussed. There are many advantages to teaching the humanities in a museum, and perhaps the most important is that the students confront an actual object made by the people being studied, rather than a reproduction in a book. I find that American students have a great deal of difficulty understanding history, probably because there is so little evidence of it in their own environments. In a museum you can surround the students with the environment of history, and after they have looked carefully at several objects and discussed them in detail, I find that an understanding of the ideas and lives of people from the past and from other cultures really does develop and is remembered, because it is tied to a visual image.

The key to the success of the program of Curriculum Structured Tours is that each lecture tour is individually arranged to fit into the curriculum of each particular group. This ensures that the presentation is relevant to the interests of the group. It also means that the students approach the study of the unfamiliar objects in the museum through their own familiarity with the subject under discussion, which they already know about from their previous classroom experience. This method ensures that the students do not feel in completely alien territory in the museum, as they are asked to approach the unfamiliar through the familiar.

SURVEY OF FRENCH HISTORY

One type of lecture tour which is popular with high school language teachers is our survey of French history. This is usually given in English to high school students who are studying French, but other versions of it are given in French to Notre Dame students, and in English to Notre Dame students of particular historical periods, such as the Middle Ages or the eighteenth century. We begin this lecture tour with the Roman period. We invite the students to sit down so that they are surrounded by French objects, because we spend at least fifteen minutes talking about the first section. We introduce a discussion of the Romans in France by mentioning the dates concerned, and by showing the students photographs of such Roman buildings in the south of France as the Pont du Gard and the theater in Orange. Then we go on to discuss some pieces of a Roman mosaic which I brought back from Toulouse two years ago. When I was in Toulouse I was shown around the large workshop where damaged works of art from the surrounding area are repaired. The biggest job was the restoration of a Roman mosaic, which had been removed from its original site under a cornfield and was being reconstructed piece by piece in the workshop. One of the restorers was so interested in my work at the Snite Museum, that he gave me some very useful objects to use in the museum with the students. He gave me a piece of the jute sacking which is used as a base for adhering the tesserae of the mosaic, when you are going to lift it from its original site. When the portions of the mosaic are being repaired back in the workshop, they are removed from the jute and set in a type of concrete. This leaves the jute with the pattern of the original mosaic printed on it. I was given such a piece of jute, so I can explain to the students the process of moving and resetting the Roman mosaic, and the students can see and touch the coloring and design of the mosaic itself on the piece of jute. I was also given some of the real tesserae from this mosaic, so I pass these around among the students as well, so that they can touch some objects actually made by the Romans in Gaul. I find that this hands-on experience at the beginning of the museum visit usually catches the interest of the students.

We continue our discussion of the Romans by pointing out the objects in the permanent collection of the Snite Museum, the head of a young boy and a stone mask, and we mention how they would probably have been used. Throughout this lecture tour we give many of the important words in French as well as English in order to encourage the students to learn the new vocabulary and to match word with object. For the next period, the Middle Ages, the students remain seated and we look first at a reliquary chasse made of gilded copper and decorated with enamels in Limoges in the twelfth century. We encourage the students to look carefully at all the objects by asking questions about what they see, and linking the questions and answers to their classroom studies, which we have discussed in advance with the teacher. Many of the university and high school students in the South Bend area are Catholics, and many of them do not realize how important relics were to the church in the Middle Ages; no altar could be consecrated without relics. The reliquary chasse is a container for relics, the sort of object that pilgrims would have travelled hundreds or even thousands of miles to see. We show the students a map of Europe at this moment, and point out the three most popular pilgrimage routes; to Jerusalem, to Rome, and to Santiago de Compostela. In this way the students can understand why it was that some of these pilgrimages took years to complete, for people travelled great distances on foot. We mention the name of Aymery Picaud, a French monk who wrote a guidebook in the twelfth century for the pilgrims who were going to Santiago de Compostela. Often we read one or two of the amusing remarks which constitute his advice to the faithful. Next we ask the students to consider two pairs of columns which are covered with carvings of animals and birds. We ask the students to identify as many of these as they can in English and in French. We then show the students a photograph of a cloister such as The Cloisters in New York, so that they can see how these columns were probably originally used. We discuss monasteries and abbeys briefly, where you find cloisters, and the medicinal herbs which the monks would grow in the garden in the middle of the cloister. The monks' role as the doctors and nurses of the Middle Ages would therefore be stressed.

There are other objects in the medieval collection which we discuss, but which I have no space here to describe. Moving on to the seventeenth century, we look at baroque paintings, and discuss in particular the reign of Louis XIV. This is a period taught in many schools so the students are usually familiar with some of the important personalities, facts and ideas of seventeenth-century France. We show the students reproductions of portraits of some of the key figures they have studied such as, the king himself, Mazarin, Colbert, Racine, Corneille, Moliere and Descartes. We stress to the students that Louis XIV believed that one of the most effective ways to demonstrate his power and grandeur was to commission works of art for such buildings as the palace of Versailles and its gardens, pictures of which we show to the students.

Next we discuss the reaction to the grandeur of Louis XIV which developed in France under Louis XV. The luxury and frivolity of the Rococo court style is captured in **The Offering of a Rose** by Boucher. This painting is full of domestic objects which are excellent for learning useful French vocabulary, such as: wheelbarrow, basket, cage, wheat, rosebuds, walking stick, straw hat, bare feet. The French Revolution seems to interest many students, and we can discuss it in some detail by using first a painting in the Neo-classical style painted in 1796, which shows a scene from a play acted in Paris in 1791, and secondly we look at a large canvas painted in 1850 which depicts revolutionaries and prisoners in a Paris prison during the Terror of 1793-94. In this painting, **The Last Rollcall of the Condemned**, by Muller, we point out the uniform of the revolutionaries and explain the expressions "sans culottes" and "bonnets rouges," both articles of clothing which can be clearly seen. We name some of the different prisons used in Paris during the Revolution, and make sure that the students understand why the Bastille could not be the prison depicted in our painting. We stress here the painter's interest in showing the horror and fear of the victims, and how this interest in extreme emotions is in fact an ingredient of Romanticism, the next style of art which we look at. We discuss French colonialism in North Africa when looking at a woman painted as an **odalisque** in the Orientalist style, made famous by such painters as Ingres, and we show a reproduction of one of his **odalisque** at this point. Next we discuss a sculpture which was made to glorify the French who fell in the Franco-Prussian war 1870-71. The subject of this sculpture is in fact Joan of Arc, so we retell her rather complicated story, and show the students how she is being used as a national emblem for the French nation in the nineteenth century. We encourage the students to go to see the full-size version of our sculpture of Joan of Arc when they are in Paris, which they will find in the center of the Place Vendome. We continue our journey through the nineteenth century looking at paintings in the realist style, and mention the writing of Flaubert with which some of the students are familiar. We complete the nineteenth century with an Impressionist painting by Boudin, Monet's teacher, where we discuss the breakdown of form, the rise of interest in scientific laws which Darwin's **Origins of the Species** caused, the rise of interest in photography, and the wish to depict one single moment in time in paint.

We finish this lecture tour by looking at works from the twentieth century. We discuss Surrealism with two paintings by Masson. The first one shows his interest in portraying a dream world, and here we show a reproduction of a painting by Salvador Dali, the Spanish Surrealist painter whose work is perhaps most widely known. The second painting by Masson shows his interest in tapping the subconscious, and trying in art to make images and designs which are not censored by the conscious mind. Here we also mention the influence of Freud and the enormous impact his ideas and writings have had on most artists of the twentieth century.

Picasso's **Le Miroir**, 1932 is a portrait of Marie-Therese Walter, whom Picasso painted repeatedly throughout the 1930s. Picasso probably used her face for the profile of the figure who carries the lamp of hope in his **Guernica**, 1937. This face can therefore provide the way into a discussion of **Guernica**, one of the most important visual icons of the twentieth century. We finish this lecture tour by looking at Chagall's **The Great Circus**, 1956. We mention how France, like the United States, became a haven for many political refugees in the twentieth century. We name some of the creatures and birds depicted in this wonderful painting, in which a great affirmation of animal and human life is expressed in movement and color. In our concluding remarks we reiterate the main historic periods which we have covered, and encourage the students to return to the museum outside school hours.

Naturally in this article I have had to cut short sections which we discuss at greater length in a lecture tour usually lasting one-and-a-half hours. I hope however, that readers will be able to see how the discipline of history can be tied to the objects made by French artists. Americans are very visually oriented, and I find that students often remember points made several years before in a previous museum visit, when they return to the Snite Museum for another lecture tour. The students' obvious ability to remember what they have learned in the museum encourages me to believe that the teaching of history with objects can be a useful addition to the regular classroom experience of most teachers and students.

In order to be able to present a worthwhile lecture tour on French history, obviously a museum with a comprehensive collection of French art is needed. In my next article I will describe the lecture tours given to two management classes, in which an historical approach was not used, so a quite different kind of museum collection could be very adequately substituted.

Best Translations

DIFFERENT ROADS

Since no translation is ever the original which it translates, there are necessary different translation roads--not to the same central, unchanging truth, but to inevitably different places. Only the original is unchanging, though time and different perspectives tend to make even that sameness illusory. Do we read Shakespeare as the eighteenth century read him? Can we possibly read Victor Hugo, especially his poetry, as the nineteenth century read him? But from time to time there occur two different, equally valid--though differently valid--renderings of the same poem. And a comparison of those differences can be wonderfully illuminating.

I have said "of the same poem," because I am dealing with two volumes of translations from Guillevic, one by Denise Levertov (Guillevic/Levertov, **Selected Poems**), one by Teo Savory (**Guillevic**). And in the two books, published in 1968 and 1969 respectively, there is only one overlap, a fine, Rilke-like poem without a title:

Il y aura toujours dans l'automne
Une pomme sur le point de tomber.

Il y aura toujours dans l'hiver
Une fontaine sur le point de geler.

Que les corbeaux
S'enfuient de peur à notre approche,
C'est leur droit. Nous pouvons aller.

De l'espoir il y en aura
Sur les rameaux.

Et puis, nous ne sommes pas malades
De la terre.

L'enemi,
nous le connaissons.

Both poet-translators work hard to keep the basic movement of the French. Levertov is a touch more literal, not always completely felicitously: she is perhaps too close to the necessarily very different syntax and phrase ordering of the French. On the other hand, Levertov makes more of the litany "il y aura toujours" (there will always be); in the next-to-last strophe she perhaps more successfully re-interprets a French phrase that cannot be literally rendered. Savory perhaps catches more of the terse lyricism, the tough-minded core that, in the last two lines of the original, she beautifully compresses into one glowing English line. Consider the two renderings side-by-side:

Levertov	**Savory**
There shall always be, in autumn, apple about to drop.	In autumn there will always be an An apple on the point of falling.
There shall always be, in winter, a fountain about to freeze.	In winter there will always be A fountain on the point of freezing.
If the crows fly in fear at our approach, it's their right. We can walk on.	Let the crows Fly away in fear at our approach, It's their right. We can always go.
There shall be some hope among the branches.	There will always be hope On the branches.
And besides, it's not from the earth our sickness comes	Besides, we are not made sick By the earth.
We know who the enemy is.	We know our enemy.

I cannot choose between these two renderings of the same poem. Note: they are of the same poem. In English, just as clearly, they are not the same poem.

But then, Guillevic did not write in English, and we have no right to assume--and certainly no right to demand--that every fine translation be identical to every other fine translation. Multitudes of translations usually occur because no translation does the job properly; very rarely are competing versions of equal merit. We should rejoice, not complain, that two wonderfully competent poets have tackled this poem. And we should use their differing versions to help show our students the plain and important truth that I started with: no translation is ever the original which it translates.

Developing a Musical "Ism" for Future Historians

Historians and critics love "Isms". Isms help to group the creators of the different periods according to their contributions and how they relate to the contemporary society around them. In music there have been the obvious **Romanticism**, **Classicism**, or **Impressionism**, as well as the "isms" that by any other name are still such species, like **Ars Nova**, or **Baroque**. As the twentieth century began accelerating change beyond the power to assimilate for critics of the old school, there came a bombardment of yearly, weekly, even simultaneous groupings. Emerging rapidly are such phyla as **Primitivism**, **Surrealism**, **Expressionism**, **Serialism**, and if it is not so totally different that it hints of something familiar, there is always **Neo-Classicism** or **Neo-Romanticism**. Reporters of these new-era events had to be as creative in their critical language as the artists creating their new language. Are these "isms" necessary? I think so. We need perspective. The easier the past is to grasp, the easier it becomes to move ahead with an instinctive eye on the pitfalls. It is amazing that with the advent of this century the plethora of "isms" seemed inexhaustible, yet with an unparalleled expansion of the language over the past thirty-five years, "isms" have been cautiously avoided. This, in my opinion, stems from a well-founded confusion and perhaps even fear of what is actually happening at this juncture of musical development. The confusion and fear are not only evident among critics and observers but most prevalent, I would say, among the participants. Let us look at some possible reasons why.

Those who create the language of music must weigh what is being said and its impact on the listener. What a composer chooses to say comes from the world around, from the experiences within, and from the capacity of the listener to comprehend. To this last factor, a composer certainly may choose a narrow field of listener. It is not within my understanding of the art, however, that music should ever be created for no potential listener. Music, by its nature, by the kind of language it is, must speak in some way to an emotional process. To some degree it must, no matter how intellectual in its conception or construction, speak to feeling rather than to thought. This realization created the revolution that for this art was Beethoven and the birth of romanticism. From that time music took on new powers and found its **raison d'etre**. With the emotional emancipation of the nineteenth century, music finally was able to take its place along side of poetry, painting, and sculpture as a permanent and vital form of cultural expression. Previously, in most cases, it was not much more than a craft. Even our renewed interest in the older forms is shaded by the entire musical approach given to us from the last century. We look back with nostalgia for our roots and beginnings. A romantic notion.

746

From these wonderful beginnings barely a century-and-a-half ago (our total knowledge of what existed as music spans not much more than a thousand years compared to the four or more millenia of extant literature and visual arts available to study), imagine my astonishment at reading at an impressionable age Henry Pleasants' **The Agony of Modern Music** and subjecting myself to most convincing polemics that contended modern concert music as little more than a dilettante vestige of a dying European tradition! Then, to take my first sketches of symphonic writing to my composition teacher, (a well-respected conductor and composer), and being told it was a waste of time, not because of any lack of musical merit; no, he flatly stated to me, as a matter of fact "the orchestra is dead." In the face of these obstacles, the fact that I went on to become a practicing composer made me very keen to understand why one must write music, in whatever form, and to develop an awareness as to where these negative philosophies were rooted. To the latter I began to search for a possible source.

The unbridled advancements of this century taught us that if we wanted something, anything, even composers, Science would Provide. Individuals in their egotistic Adam Smithian new capitalism knew that if they wanted it, Society was obligated to provide it. The universities became the creators. They not only disseminated the technical knowledge that is the basic tool of the biologist, doctor, and engineer, but also of the composer, artist, and poet. Rather than confine the data being taught to tools for departure, these university courses took on form and technique as arts in themselves, too often, to degrees that would have amazed the most conservative classicist. When the forms of the previous generation were exhausted in analysis, tentacles were sent creeping back farther and farther to the point where figured bass and seventeenth century harmony became necessary curriculum for the modern composer. This process led to many detriments, but also promoted the "ism" which I will shortly give to the second half of this century. This same "ism" may also denote the saving grace of what were mistakes in theoretical approach.

Soon to be lost was the very reason new forms were explored by the heroes of romanticism--a better method of subjective communication. I believe that, in part, this certainly contributed to the schism that now exists between popular and concert music. A music creator who had the desire to communicate, but had neither the desire nor ability to master the intellectual overload that was placed on the concert composer, turned to simpler more direct forms. In recent years the composers following this fork have synthesized the two approaches with some of the best effects. The audience of the concert composer was too often being lost in a maze of jargon and not being "spoken to." Composers of this technical age, not finding a ready audience in the community, turned back on the comfort of the womb--the University. They tried to create through propaganda, even intimidation, the audience they were never trained to cultivate. These composers would go so far as to create "for the paper only" works that were perhaps more suited to a graphic arts class than a music class. One professor bragged to me that he never listened to music anymore: he only read scores!

We have, for whatever reasons, a greatly expanded language of music. Explorations in improvisation that have synthesized concert music with the phenomenon of Jazz, breakdowns of tonality to supercilious degrees, new concepts of timbre that with electronics will continue to amaze, and even a breakdown of our old titan, **form**, are now in our vocabulary. Add to this the marvelous repertoire that the popular artists, through their successful revolutions, have created: Rock and Roll, Fusion, Folk-Rock, Country-Rock, Country-Folk, New Wave, Old Wave, and Punk. They also have their corresponding dramatic literature from Alice Cooper to Friday Night Videos. We cannot stop there! We look to the past and find the romantics still alive in recital halls and symphony orchestra concerts. The **Amadeus**/Mozart fad has even brought a revival of Salieri. Christopher Hogwood has breathed life into ancient instruments and many churches are reviving medieval chant for liturgical usage. This music is not only available via an unprecedented volume of concerts, but with the aid of radio, stereo, and T.V. we could listen to them all simultaneously if we so desired. How can we categorize this myriad musical life? The only word that comes to my mind is **Eclecticism**. If we truly look at our time and its musical climate we really do have it all. The avant-garde, or experimental concert music, is a very small part of musical life. There is no more dominating force akin to romanticism or classicism, there is instead a wondrous "all-ism." The excitement of our times, in being a musician of our times, seems to me to rest in appreciating this kaleidoscope. For the composer, taking all the shapes and colors of glass and turning them to a pattern that heightens the sentient ear of the listener has horizons of incredible variety.

We are locked, for a time I feel sure, in this eclectic whirlwind. Change that once came so frighteningly fast, with too many mistakes, has had to be slowed. We must first look at how to gently correct a **faux pas** or two before moving on to...what? Who can say. Obviously none of us is in the future yet. We must first admit that music is **subjective** to the creator, the performer, and to the listener. We must take a look at **what** creative musicians are trying to say first, then turn to evaluate how he has chosen to say it. We need to look at our new language with the above criteria in mind, realizing that the more we alienate, the more difficult will be our end--**direct emotional communication**. Advocacy toward this approach will be difficult for the present as the powers in support organizations are entrenched in the guidelines of the 50's, 60's and 70's **academe**. Audiences and performers have become distrustful, even disdainful of a club that has promoted their exclusion. Composers must first and foremost regain much lost trust to take society into whatever may follow. For my own part, my career as a composer has only been possible through performers, most of them **not** 20th-century music enthusiasts, who have provided means to bring my work into existence by their own resources and reputations. The Philharmonic orchestra of Indianapolis, whose commission brought not only my concerto into existence, but these words as well, over an active period of 43 years had never before considered a recently composed piece, let alone a premiere.

My hope is that as enlightened human beings we can recognize the truth of a situation no matter from what politics it springs. Like any other past, present, or future endeavor of our race, we can only work to improve as our powers of observation improve.

A 1980's Vision of the Humanities in Community Colleges

Alexander Pope, commenting on the subject of the humanities, pronounced that "The proper study of mankind is man." The need for reflection upon the nature of humanity has been a source of intrigue from the beginning of intellectual activity. And the Greek philosopher, Socrates, over 2,000 years ago, admonished that the ". . . unexamined life is not worth living." A more contemporary explanation for validating the study of humanity through the humanities suggests that ". . .man has entered a new era of soul-searching, and in such a period the instrument [for such study] is the humanties."

Humanities education has placed great importance on artistic expression as a means of unveiling the secrets of being human. In creative manifestations, the uniquely human stamp is revealed. By the study of the humanities, we are persuaded to find meaning in our existence. If this is so, what better way to get to know and understand ourselves? Thus, it certainly seems that the study of the humanities is both necessary and appropriate. The National Endowment for the Humanities stated in 1970 that "It is through our humanistic studies and activities that we can re-explore--or explore in greater depth and with more meaning--what we are, and decide with more assurance what we wish to become."

An appropriate means of assuring a more meaningful and humane educational experience for students can be realized by having a clearer understanding of the role of humanities study at the community college level. The community college of the 1980's must renew its collegiate function. In an effort to again achieve educational validity within the walls of higher learning, a National Assembly of the American Association of Community and Junior Colleges, along with others, convened in November, 1979 to consider and digest the well-publicized problems of declining enrollments in the humanities and the parallel growth of career programs. Various research studies had been conducted earlier, between 1974 and 1977, by Arthur M. Cohen and Florence B. Brawer. All indicated that a shift in the role of the community college from collegiate function to training grounds for workers was painfully apparent.

The two-year college had changed its image. The "new missions"[1] of the 1960's had focused increasingly on the "Three C's." The trend (Career, Compensatory, and Community education) is reflected by figures complied by Cohen and Brawer, which showed that one out of every two students were in some type of occupational program in the two-year college. The concept of transfer preparation was waning. Furthermore, the emphasis on career-oriented programs, which served the terminal students (those who do not go on to a university) had, and continues to have, limited potential for encouraging critical thought.

---

[1] When the AACJA instituted the "new missions" of the 1960's, its purpose was to "open" institutions of higher learning to the masses. The traditional Liberal Arts curriculum, it was felt, unjustly and/or undemocratically favored the few, i.e., the elite. However, the development of a more "just" curriculum for the targeted population, increasingly, reflected a general trend which was referred to as the

The desire to reach larger numbers (particularly the minorities) by offering courses other than those for transfer students, has actually become a double-edged sword. As Career, Compensatory, and Community education draws more and more students, the humanities continue to lose ground. The demise of the role of the humanities, which began with the "new missions" in the 1960's, is today in the 1980's nearly complete. It is not unusual to find colleges, even entire state systems, where occupational enrollment exceeds transfer enrollments. This poses very serious implications for the place of the liberal arts in two-year institutions, and especially for the humanities. But the real danger is to the student whose personal and cultural growth will be stunted.

The National Assembly report of 1980 shows that, increasingly, the humanities are seen as an "endangered species" and strong action is needed to revitalize an area which vocational (and often transfer) students view as a "necessary evil." In spite of the importance, both to the institution and the individual, it does appear that the humanities have few friends. If, however, educators begin to recognize that the arts enable students to make some determination about the quality of their lives, then program planners must conclude that "bringing that portion of the curriculum which is centered on higher learning" to both terminal and transfer students is vital. We need to change our vision.

Charles C. Tillinghast, Jr., past Chairman of Transworld Airlines, has perceived that the number of people prepared to lead intellectually interesting lives is considerably less than those adequately trained to be economically useful. The troubles of this nation "all have humanistic factors and aspects that cannot be treated simply by pouring in money or drugs or gadgets, but only by recovering the humanistic view of man."

"Three C's:" Career, Compensatory, and Community education.

This trend had the cumulative result of a double-edged sword. And, although, the "new missions" curricula did open opportunities for those previously overlooked, the new philosophy generated the unwanted side-effect of rapidly vanishing Liberal Arts studies. As the perceived role of the community college changed (from transfer to vocational), the course offerings which would allow students to explore vital issues, and which would provide stimulating intellectual growth, as well as thinking, speaking, and writing skills were severely curtailed.

In the process of this curtailment, those courses dealing with values and questions of what was, what is, and what continues to be significant about human life (such as the humanities could provide) saw a dramatic decline in enrollment. Thus, in an effort to give "equal opportunity" to all, the "new missions" created a milieu which neglected the humanistic view of the individual, while perpetuating the unimportance of such study.

In 1964, the newly formed Commission on the Humanities cautioned against the imbalance in curricula which might be created by the launch of Sputnik and the ensuing age of technology and science. They called the humanities "not merely academic disciplines confined to schools and colleges, but functioning components of society which affect the lives and well-being of all the population." The humanities were viewed as that segment of education which points to how humans answer questions concerning such values as justice, freedom, beauty, and truth. "The humanities presume to study the works of man from any age, any area, for they wish to study the best."

We continue to applaud the Greek philosophy of "educating people for participation in the polity," but consistently turn out students who have been denied access to the arts. The decision on the part of higher learning to de-emphasize the humanities projects a message to the student population. "It says... that the humanities are for the elite. . . . not for the masses. . . ."

These attitudes towards the humanities are, according to Cohen, part of the problem. When the idea of "terminal general education" took hold in the 1930's, the concept began to foster an image of a "student who would never go on to higher learning." General education was to lead the student to a "satisfactory vocational adjustment." In this context, general education has done well. However, the terminal student has been left out when it comes to " . . .understanding relationships between themselves and society, [and gaining] a sense of values, and an appreciation for cultural diversity. . . ." Occupational education has prepared a compartmentalized, fragmented student, rather than one who can enjoy full "participation in the polity."

Historically, the function of the community college was as transfer courses in the liberal arts. This emphasis, which began in the early 1920's, had continued well into the 1960's. As late as 1966, community colleges were reported to be "evaluated to a major degree upon the success of their transfer students." The 1970's, however, saw many two-year institutions, in response to the "new mission," abandon their humanities programs, or reduce them to introductory courses for students who would transfer to the universities. The career-driven students of the 1970's were less academically prepared, and this lack was reinforced when the community colleges began to offer fewer courses which centered on reading and writing. Declining student literacy, cries of individualism, and waning interest in the liberal arts had the cumulative effect of changing the concept of the collegiate function of the two-year institution.

Is there a solution to the imbalance which the Commission warned us about in 1964? Paradoxically, while the decline in humanities programs is being lamented, they are also being hailed as "fundamental to the freedom and fulfillment of the human spirit." So, it is the curriculum makers' collective responsibility to create and foster a change in direction, to re-create their vision. However, concrete recommendations do not come easily.

The 1980 report of the National Assembly had outlined creative ways to strengthen the humanities in the community colleges, and thereby "increase the intellectual and critical skills of citizens." Those suggestions concerning the direction the faculty might take in order to effect changes in the changing role of the community college, and the parallel decline in the humanities enrollment were perhaps the most important. In May, 1985, the AACJC met again, under the auspices of the National Endowment for the Humanities, to implement the 1980's vision of the role of the humanities, particularly at the community college level. Recommendations were made by NEH and the AACJC drafted a document resulting from that conference. In the document, AACJA articulates the necessity of why the humanities "belong within the framework of liberal or general education."

In addition, it was stated that the function of the community college must be perceived as that of transfer, as well as a vocational institution. Underscoring that view, an extremely important recommendation asserts that vocational programs should not be the curtailment of courses that are designed to lead students to discover their own humanity. (This, of course, is precisely what has taken place as a result of the "new missions" of the 1960's.) Another item of concern for all educators, which has been specifically addressed by the conference, is the apparent lack of critical thinking, speaking, and writing skills. Thus, the AACJC study group advocates that humanities classes **must** include all of these areas. Obviously, enough time has passed in which to assess the rippling effect of the 1960's mission. The present directives tell us, once more, that study of the humanities is both necessary and humane. This is promising. And those of us in humanities education can look forward with hope to a time when the curriculum planners insist that **all** students (from primary to collegiate) study the humanities. Of course, any lasting change in the role the two-year institution (or any institution for that matter) may take will have to be generated by educators who envision the community college as serving academically oriented individuals who are "ordinary people" striving to be extraordinary.

It is true that democracy demands wisdom of the ordinary person. A culturally pluralistic society, also, demands that we understand that heritage which may be different than our own. The humanities may well provide the instrument to accomplish this, since they have the "unparalleled capability for crossing national barriers imposed by language and contrasting customs." The humanities lead beyond "functional" literacy and basic skills to critical judgment and discrimination. They help direct the average individual to civic activity and a fuller life. The "rise to new levels" for the average person is articulated by K. Patricia Cross. But, she hastens to warn of the "educational faddism and swinging-pendulum solutions" of the 1980's school reform, explaining that the perspectives of the 1980's are "on a different plane from those of the 1960's. . . ." We must not allow, she concludes, educational history to repeat itself.

Educational reforms are often generated by misperception of human beings' intellectual and personal needs. For instance, in the present 1980's information society, there is again concern for the individual. Alvin Toffler envisions our modern civilization as a "third wave" which has as its "capital asset" human beings. But even in this information society, if as has been suggested, we have entered a "new era of soul-searching," then as educators we should be able to transmit the subject matter of our chosen field joyously, while stimulating "ordinary people to unusual effort." When all is said and done, however, our greatest service to students may well be to insist on their studying the humanities. Thus, they may be persuaded to transcend the ordinary, ultimately gaining a clearer vision of their own being.

HUMANITIES EDUCATION

ABSTRACTS & REVIEWS

Summaries of significant reports about interdisciplinary humanities education.

CHANGING HYMNS

Lional Adey, **Hymns and the Christian Myth**, Vancouver: University of British Columbia Press, 1986. 269 pp. $24.95. Reviewed by Elaine L. Kleiner, Indiana State University.

Song lyrics, considered as an index to cultural history, can contribute to our understanding of currents of ideas and impulses at work in a society. In **Hymns and the Christian Myth**, English professor Lionel Adey uses insights drawn from literary criticism, theology, psychology, musicology, history, and sociology to probe the development of Christian thought in England as it is revealed in that nation's popular devotional music.

Adey charts the evolution of Christian consciousness first by tracing central elements of the Christian myth (the creation, fall, incarnation, crucifixion, resurrection, descent of the spirit, and last judgment) through Old Testament psalms, the **Odes of Solomon**, and Byzantine hymns. Contrasting these early Christian hymns with those of medieval Christendom, Adey demonstrates that over the centuries hymn lyrics shifted from an emphasis on dogma, mystery, and paradox to a sense of personal response to the Incarnation and Passion of Christ and intense identification with redemptive work.

This movement from objective to subjective religion as expressed through English hymns was, according to Adey, redirected during the Reformation and the Evangelical Revival. Luther and Calvin recharged the Christian faith by rejecting hymn-singing in favor of psalmody. Calvin's liturgy, based upon the vernacular psalter, directed his follower's devotions to God the Creator, Father, and Lord of Battles. But as English Calvinism began its long decline, Isaac Watts produced the first successful English hymn book from Psalms reinterpreted in a Christian sense. As attention reverted to the Son, the use of Watts' finest hymns on the Father's power and majesty slowly declined, while that of "When I survey the wondrous Cross" grew steadily. Adey traces this change in consciousness through early narrative-based nativity songs to the great Christmas hymns "Joy to the World," "Hark, the Herald Angels Sing," "Adeste Fideles" and others in a compelling way. He then contrasts the stirring hymns of the Reformation with those of the Victorians such as "O Little Town of Bethlehem," with their new emphasis on ancient texts in translation, idealized projections of family life, and adaptations for children of apocalyptic imagery.

Adey finds that the church and its hymnody never truly adjusted to modern concerns engendered by the enclosure of common lands and the

Industrial Revolution. Most English hymns written about Christ in the twentieth century ignore the mysteries of His birth, crucifixion, rising, and second coming. Rather, there is a tendency to perceive God in national destiny, nature, and in the psyche. "Popular hymns no longer spell out the unambiguous message of 'Guide Me O Thou Great Jehovah' or 'Rock of Ages' (196)." The older texts remain entrenched in hymnals and in popular consciousness but they have been joined by hymns portraying God in simpler, more general terms, and the spiritual life in secular images of home, harvest, work, and conquest. Adey finds that in modern times, the Christian myth has retreated to the margins of hymnody, while in England at least, obsessive concern with the Atonement and personal longing have taken its place. And he wonders, finally, whether the ancient images and expectations of Christianity can "inspire poets and musicians to compose the only songs post-atomic man can afford to sing, those that envision universal brotherhood and unconditional love." (188)

As a stimulating contribution to the history of ideas, Adey's work should be of interest to a wide spectrum of scholars and readers in the humanities and social sciences. His study has extended literary criticism to a new context where it becomes possible to understand more clearly the moods and emotions that connect music and poetry to the broader movements of society and in this sense it represents a significant and welcome addition to the field.

SACRED TEXTS

James K. Kugel and Rowan A. Greer, **Early Biblical Interpretation** Philadelphia: Westminister Press, 1986. 216 pp. $18.95. Reviewed by Phil Mullins, Missouri Western State College.

Those who teach a broad based humanities course on the ancient world frequently are perplexed about how to include the literature of Judaism and early Christianity. The standard anthologies often complicate the problem: because they are primarily focused on Greek and Roman society, they simply incorporate an incoherent patchwork of snippets representing Judaism and early Christianity. What is needed is a vehicle that can be used to present the early phase of the Western religious heritage in a way at once concise and coherent. Kugel and Greer's new book outlines such a vehicle. As its title implies, their book conceptualizes Judaism and Christianity as text-centered traditions with an evolving pattern of response to the Sacred word. Historical reactions to the enduring question of how to interpret the sacred word shape both later religious texts and the religious context within which life is understood by Jews and early Christians. With Kugel and Greer's help to focus the foundational phase of the Western religious heritage as a developing response to sacred text, humanities teachers can present with some unity and integrity early Western religious traditions and their place in the context of Greece and Rome.

Early Biblical Interpretation is a sophisticated, scholarly analysis of early interpretative issues but it doesn't presuppose that every reader already has biblical language skills and complex knowledge of biblical and patristic sources. It is an accessible book, chronologically organized. Kugel's essay, which comprises the first hundred pages, reviews the major events of Jewish history from the sixth century B.C.E. to the period of the early church, and attempts "to reconstruct from within them some of the elements that might have shaped Jewish interest in, and approaches to, sacred texts" (11). Kugel argues that by the time of the Exile or shortly thereafter, the "word of God" is imaged in Judaism as a scroll or text. This may not have been the only relevant image for "word of God" but, as Zachariah 5:1-4 indicates, "flying scroll" is one image and is "a symbol of the presence of texts in the minds of restored Judea as well as of the texts' growing independence and power" (20). Exactly what "torah" meant in early Judaism is unclear, but by the Exile or shortly thereafter the "Torah of Moses" had "an honored place as **the** text of Judea, sanctified by its provenance, its antiquity, and its function within the community" (26). Additionally, from this period forward or perhaps somewhat earlier, there were also respected historical, prophetic and wisdom texts used in connection with practical piety. In the postexilic period, the notion that sacred texts can speak to a new context--and thus must be ever reinterpreted--becomes firmly rooted. Typological readings of Israel's history, as, for example, in Second Isaiah's vision of the return from Babylon as a new Exodus, reflect the way in which old texts are recast. Both apocalyptic and wisdom writing are also often concerned to interpret earlier texts in a way that makes direct connections with the present:

> . . . in postexilic times the sage who interpreted sacred words was something like an adjunct to the prophets; the spokesman of God who was 'in thy midst' was supplemented by men who **interpreted** or found the hidden meaning in oracles delivered of old by God's chosen spokesmen (58).

Finally, it is the successors of the Pharisees in rabbinic Judaism who established definitively in Judaism a dynamic tradition of textual study and interpretation and text-based piety.

Apparently, Christians, soon after the initiation of the Christian movement, began to generate or claim as their own a sacred literature. Yet it is dangerous, from the perspective of the modern world, to underestimate the diversity of this literature and the level at which first-century culture, including the early Christian movement, was carried in a vibrant oral tradition. Greer, in the second half of **Early Biblical Interpretation**, argues that it is really not until almost the end of the second century that there was a good deal of unanimity about what counted as scripture and about how to interpret such sacred texts. Much (perhaps all) of the later canonical literature was written by the end of the first century of the common era; at least some of this literature was broadly known reasonably early. Mark served as a framework for Matthew and Luke and thus must have circulated as a text. Some of Paul's occasional letters, according to 2 Peter 3:15f, were collected and seem to have been highly regarded. Although the early Christian movement may have been oriented toward acquiring its own literature, Greer cautions that it is important not to misconstrue, as a modern book culture is apt to do, the use of such literature. He argues that the Gospels (which were written texts used in Rome in worship by 155 according to Justin) and Paul's letters may have been broadly known but were treated largely as a witness to Christian preaching rather than as singular authorities. On the whole, in the early period, Greer concludes "Christian attitudes toward Scripture remain obscure and confused until the time of Irenaeus" (116).

What is clear is that the early church made ample use of the Hebrew scriptures which were relatively fixed by the first century of the common era. The texts of Judaism thus became the first sacred texts of Christianity, but only when read in a peculiarly Christian way, in a way Christians undoubtedly saw as revealing their true significance. Greer suggests such texts were used as proof texts to demonstrate the validity of Christian moral injunctions and that Christ was the fulfillment of Jewish hope. The authority of Hebrew texts thus was asserted but only as unlocked by the rosetta stone of the Christian message.

Greer argues that there was no articulate definition of a New Testament canon before Irenaeus and that there was no clear framework for interpreting a Christian Bible until Irenaeus. What he means in the latter claim is that Irenaeus is the first early Christian thinker (late second century C.E.) with a well developed theology who, in his conflict with the Gnostics, squarely faces up to the hermeneutical problems of a new community with its own literature. Irenaeus appeals to the "Rule of faith" in his arguments with the Gnostics about how the text is to be construed. The Rule was "thought to be derived from Scripture" (155) and yet, most importantly, supplied the key to scripture's meaning. The Rule was a "canon within the canon" (125), a kind of creed which "outlines the basic theological story that finds its focus in the incarnate Lord" (112). Philosophically described, the Rule was a valent foundational metaphor, accessible in communal practice, which tacitly shaped the Christian's sense of the appropriate. At a general level, Greer contends, the concept of a Rule of faith was supported by the church after Irenaeus and this meant the church "remains committed to what we should call theological exegesis by regarding the church's faith as the key to unlocking the meaning of Scripture" (176).

Discussions of patristic exegesis in the period after Irenaeus often focus on differences in the methods of Alexandrians and Antiochenes. Green contends, while two distinct methods do emerge, issues of exegetical method should be viewed as linked intimately with theological positions. It is really theological differences which undergird differences in method. As in the case of Irenaeus' appeal to the Rule of faith, scriptural interpretation in the early church was always directly or indirectly theological.

In sum, **Early Biblical Interpretation** is an interesting and helpful account of the formative centuries shaping the Western religious heritage. It successfully unites a treatment of so broad a period by following through the issue of understanding the sacred word. By carefully examining Jewish and early Christian approaches to the sacred text, Greer and Kugel raise significant contemporary questions about the validity of post-Enlightenment historical critical approaches to the sacred text.

SMELLING BELLS

"Blossom Scents Take Up the Ringing: Synaesthesia in Japanese and Western Aesthetics: by Steve Odin in **Soundings** LXIX:3 (Fall 1986), University of Tennessee Knoxville 37996-0530. $12/yr, $4/copy.

For many, making interdisciplinary connections requires painful efforts to wrench naturally discrete phenomena into artificial union. Yet in both the arts and psychological theories of Japan and of the West there is a strong case for the naturalness of totally unified experiences. Indeed, it is possible that the separation of the five senses (six, to the Japanese who include consciousness with the five outside receptors) is the artificial invention. Ultimately, what the arts may strive toward is a **fusion** of sense-impressions, which represents an even greater degree of integration than the multisensory **mosaics** we occasionally attempt in the classroom or in student projects.

The keyword is **synaesthesia**, which could be interpreted as unified (syn) feeling (aesthesia). At a casual level of experience, most of us have known of music to summon up pictures or colors, or of a picture that evokes feelings of smell, taste, thermal or tactile sensations. Any good magazine advertisement should produce some synaesthesia. But in fine arts synaesthesia can be a purpose in itself. Two older art forms of Japan, **chanoyu**, the "tea ceremony," and **haiku**, the 17 syllable verse form, are exemplary. Odin, who specializes in comparative east-west philosophy at the University of Hawaii quotes a haiku of the seventeenth-century master Basho:

As the bell tone fades
Blossom scents take up the ringing
Evening shade

as "an intensely synaesthetic experience of nature" merging the reverberating bell into fragrance and shadowy darkness.

The intercultural exchange among artists is quite surprising. After the Meiji Restoration of 1868, Japanese literature was strongly influenced by the French symbolist poets Baudelaire, Rimbaud and others as well as the Pre-Raphaelite Rossetti. The Japanese philosopher Nishida Kitaro in the early twentieth century drew upon Baudelaire, Brentano and upon Rimbaud's "color-sound correspondences" in which the vowels correspond to colors **"A noir, E blanc, I rouge, U vert, O bleu."** Western "synaesthetes" include such names as Charles Peirce, Charles Hartshorne and Maurice Merleau-Ponty. This last saw relations to Gestalt Psychology, and was particularly perceptive in his essays on Cezanne, who "does not portray a world of discrete, substantial objects...but captures the **impression of the moment** as a perceptual whole."

Finally, Odin documents how the great Russian theorist and practitioner of cinema, Sergei Eisenstein was affected by experiencing the first performances of Kabuki drama outside of Japan in Moscow and Leningrad in 1928. He wrote, "As distinctly as Impressionism owes a debt to the Japanese print...so the sound-film will be no less obliged to the Japanese."

SITE-TEACHING

"Assessing the Interpretive Effectiveness of Historic Sites" by William Woodward in **Journal of Interpretation** 10:2 (1985). College of Forestry, Wildlife and Range Sciences, University of Idaho, Moscow, ID. $15/year

What makes history come alive is lively teachers. Some of the most effective teachers, however, are not in classrooms. Indeed some of these "teachers" are not people or even books. They are historical "monuments, memorials, museums, sites and shrines." Like classroom teachers of history, these historic sties vary widely in their effectiveness as accurate, knowledgeable, thought-provoking enliveners of history. At the bottom of the scale is what Woodward calls the **snare**, like Front Street in Ogallala, Nebraska where "authentic vintage posters in the authentic vintage dance hall advertise authentic vintage flapjacks and, inauthentically, Chevrolets." Somewhat more effective in purpose or intent is the **setting** like Fort Boonsborough, Kentucky. The site is authentic and potentially evocative, but it is a "warehouse" for a collection of Americana. **Shrines** embody meaningful interpretation in their intent. Some are mere civic boasts; others, like many Mormon interpretations, are "holyground." As a religious shrine this is okay, but as an interpretation of human history it is limited. Interpretation of a **site** is the most prevalent purpose (of course most shrines, settings and even snares are historic sites, but Woodward is categorizing the predominant interpretive **intent**--you cannot assess effectiveness if you don't know what the interpretation is trying to do!). It is a question of whether the site "comes alive." The most sophisticated interpretive intent is reconstructing a **society**, "capturing the totality of the natural and human environment."

Another set of criteria that Woodward proposes is the **comprehensiveness of coverage**. Obviously the location limits the intent, and it likewise sets some limitations on comprehensiveness. A site on the Oregon Trail in Wyoming does not lend itself to interpreting New England colonial history, just as Williamsburg, Virginia would be strained to interpret the history of transportation technology. But it could be possible to use a single site to interpret a state's political, military or ethnic history. Likewise, a region, state, country or city could develop a comprehensive program of sites, as Woodward reports of the National Park Service. This has been done with Lincoln history in Springfield, Illinois and in states such as Wisconsin which have a comprehensive program of interpretive highway markers. More specifically, comprehensiveness should be assessed for: (1) Breadth of human activity; (2) Sense of change through time; (3) Integration of natural and human landscapes.

Woodward, who teaches history at Seattle Pacific University, closes his article with seven criteria for assessment. Given understanding of the intent and comprehensiveness, the evaluator should look at Total Setting, Faithfulness, Realism, Orderly Storyline, Integration in Larger Historical Contexts, Variety of Interpretive Media, and Appeal to Varied Audiences.

Could these also be relevant to the humanities classroom?

NATURAL TRINITY

"The Natural God: A God Even an Atheist Can Believe In" by Joel I. Friedman in **Zygon** 21:3 (September 1986) 369-388. Rollins College, Winter Park FL 32789. $25/year.

"May The Force be with you" was a quasi-religious and pseudo-scientific tag from the 1977 film **Starwars**. Yet the idea of a Force as the final reality has a venerable history in the great conversations of philosophy, science and mysticism. Final things are the subject of this essay, for it was first developed as one of the "your last lecture" series at the University of California Davis, where Friedman teaches philosophy. Friedman's god is a god of nature, by which Friedman means scientifically knowable: "every concrete reality has a law-governed physical basis." Thus, the Natural God is simply the Force of Nature. The qualities of this god are understandably different from those of what Friedman calls supernatural gods which we generally characterize as all-knowing, all-powerful, infinite and beyond the laws of nature.

The natural god is not absolute, but evolves, indeed, is now **evolving**. But whether the Force of Nature is conscious of its evolution we do not know. Possibly consciousness is not a characteristic of god. Furthermore, the evolution of god may end in total annihilation. The best scientific evidence today points either toward a Big Bang finish of unordered, heatless still molecules, or the universal collapse of a final gravitational crush. One or the other seems inevitable, and while one can speculate on an endlessly pulsating universe, banging and collapsing forever, there's no such evidence. So now we have a god that evolves mindlessly but will inevitably end.

However, the Natural God is also **unifying**: "the natural world can be treated as a single being.... The Natural Force manifests itself through each part of nature, through each product of interacting forces in evolution." Gravity, DNA, galaxies, electromagneticism--and such products of biochemical laws as you and I--are unified in the Natural God. This leads to the third quality. In addition to evolving and unifying, the Natural God is **"maximizing,"** that is, it contains everything, which is not the same thing as being infinite. This, says Friedman, is "a modest God!"

What does this image of a god do to us as humans? Friedman admits that you can't pray to it, but you can meditate upon this maximizing force, for, since it is totally rational, operating by natural laws, you can, through knowledge see the unity of existence. From such knowledge and understanding, better human relations can result. We are too much governed by our inheritance of the past twenty-thousand years of human evolution which has provided us with "civilized" ways of living together: warfare, diplomacy and power politics, none of which is founded upon the maximum unity of reality. Which begins to sound very oriental. Friedman's sources are indeed varied, ranging from Lao Tzu to Einstein with a heavy salting from Spinoza and Nietsche, and he does not recommend either exclusive rationalism of "college knowledge," or exclusive intuitive knowledge of the natural force. Rather "the two kinds of cognition mutually reinforce each other in dialectical relation."

Personally, Friedman says in this "last lecture" that what each human should strive for is to become "more like the Natural God. We can strive for more self-development by focusing more on the Evolutionary Force; we can strive for more unity in our life, internally and externally, by focusing more on the Unifying Force; and finally, we can strive for more fulfillment in life by focusing more on the Maximizing Force."

COMING OF ICE-AGE

Reindeer Moon by Elizabeth Marshall Thomas. Houghton Mifflin, 1987 $17.95. Reviewed by Fred E.H. Schroeder

Alley Oop, Fred and Wilma Flintstone, **B.C.** are some of the satirical popularizations of life in prehistory that have engaged the western imagination since Neanderthals were discovered in mid-nineteenth century and pre-edenic humankind was presented as a possibility. Prehistoric ethnology has come a long way since, and, in the past decade the popular imagination has also taken a serious turn. The films **Planet of the Apes** and **2001** showed the mythmaking drive that may underlie religion and the arts as well as bringing into the force our basic humanities question, what is it to be human?

The latest enthusiasm is "ice age fiction," a creation of Jean M. Auel whose **The Clan of the Cave Bear**, **The Valley of the Horses** and **The Mammoth Hunters** are at all supermarket checkouts. Auel's hero Ayla, shows prehistoric men what a liberated woman can do as the first horse wrangler and purveyor of contraceptives. **Reindeer Moon**, however, is much more of an ethnological novel than a prehistoric romance. Like Auel's works, it can be related to feminist concerns and interests. The narrator is Yanan, a thirteen-year old who struggles into womanhood partly alone, for she is left by her clan to tend her fatally injured father, and partly within the family, for in a heroic journey of survival she brings herself and a little sister back to the lodge of her fathers. It is a short life, though. In less than two years Yanan knows her first menstrual period, initiation into womanhood in a bloody rite, union with the husband who had been chosen years before, joyful pleasure in marriage, bitter divorce and self-exile, illicit sex with a kinsman, pregnancy and reunion with the family, near-ostracism because of the uncertain paternity of the unborn child, and death during childbirth. How then can she be narrator? She is a spirit of the dead, subject to recall by shamans of the family, but otherwise she is free to take on the form of a mammoth, a wolf, a raven and taste the adventures of animal life, which is not too far from the life she had known as a woman.

Elizabeth Marshall Thomas has observed hunter-gatherer societies in the arctic, in Africa, in Australia and she has written several non-fiction anthropological studies of societies who live in marginal interdependence with nature. It is that knowledge that makes this novel worthwhile, but it is her choice of the fictional form that causes a reader to think in terms of we rather than they. Because we identify with Yanan it is impossible to dismiss these remote beings as mere subjects for analysis. Because Thomas is an anthropologist, though, we cannot romanticize Yanan (who is not an altogether pleasant person), or primitive society (which is quarrelsome under stress), or life close to nature. These people of 20,000 years ago--about the same time as the agricultural revolution in other parts of the world--are hungry almost always, are frequently reduced to sharing carrion with hyenas, crows and maggots, and know starvation and killing malnourishment as constant neighbors.

Possibly the most antiheroic and unromantic reality in **Reindeer Moon** is Thomas' self-restraint in dealing with human progress. Yanan and her sister live with a she-wolf and her cub, and the reader is aware that they are on the edge of the first reciprocal domestication of animals. When Yanan rejoins her family which has combined with a family of visitors from a hundred miles away, one of the blue-eyed newcomers recognizes the advantage of training wolves to help in hunting, and he knows (or believes) that Yanan may know how to raise a cub. The possibility of incorporation of the Yanan-Swift Kennels and Hunting Club rises in the readers' mind. Unfortunately Yanan dies. Maybe the domestic dog will follow, but maybe it will take another two or three thousand years in this part of Siberia. In the meantime, life and death, lust and hunger, quarrels and intermarriages, births and communion with spiritual forces go on.

For the humanities teacher, **Reindeer Moon** is useful for its presentation of anthropological concepts in a compressed, personal and exciting form. It could be profitably compared with popular depictions of prehistory, or with novels of contemporary cultures in which lineage, clans and spirits play a part, such as Chinua Achebe's **Things Fall Apart** or Elechi Amadi's **The Great Ponds**. And it certainly sheds confused light on questions of community responsibility and individual freedom. Yanan's independence is admirable in modern terms, but in her culture it is a willful subversion of peace diplomacy.

PARADISE FOUND?

"Has the Garden of Eden been located at last?" by Dora Jane Hamblin in **Smithsonian** 127-135. 900 Jefferson Drive, Washington, D.C. 20560 $2.50/issue; $20/year.

Euhemerism is the practice of explaining myths in terms of real prehistorical events, persons and places. In a brilliantly interdisciplinary euhemistic research project, Juris Zarins, an archaeologist at Southwest Missouri State University, believes that he has found the Garden of Eden. Unfortunately, it is underwater in the Persian Gulf as it had been for millenia before the Book of Genesis was written. Biblical study, of course, was the initial disciplinary field of investigation but by the time the pieces were put together, Zarins had called on sciences of geology, hydrology, space photography and linguistics. Linguistics was especially useful to get rid of some nagging problems inherited from earlier euhemerists. Genesis tells of Eden's location in reference to four rivers and the land that they drain. The Tigris and Euphrates are no problem, but Pison and Gihon are. LANDSAT space images show a fossil river in Arabia which explains Pison adequately; Gihon's drainage basin, though, was called in Hebrew **Kush** and the King James Bible translators rendered this as Ethiopia. This was a mistranslation that frustrated Eden-hunters until a few years ago when a Biblical scholar, Ephraim Speiser, proposed that it referred to the Kashshites, a people who controlled Mesopotamia at the same time that the nation of Israel was being formed (ca. 1500-900 B.C.). Their river is the Karun, and thus Zarins got the rivers all where they should be.

The theory is that very old folk history of this region was passed on orally among the various peoples of this region until, with the early Sumerians, the stories became fixed in written form. Sumerian was the first written language, but it included name-words from earlier societies, among them Eden and Adam. In other words, Eden and Adam were part of the Mesopotamian literature before the Hebrews. In Sumerian "Eden" means "fertile plain," "Adam" probably meant "settlement on the plain."

The time of Eden was determined by major climatic fluctuations. During the great glacial period (when modern humans were replacing Neanderthals) the entire Persian Gulf was land, though watered by the four rivers. Zarins feels that it must have been a paradise for hunters and gatherers, but around 15,000 B.C. a long drought began, forcing the foragers away. From about 6000 to 5000 B.C., however, the Neolithic Wet Period turned the region of the four rivers into "again a Paradise on Earth, provided by a bountiful nature--God--and admirably suited to the foraging life." But, Zarins argues, agriculture had been invented: "the hunter-gatherers, flooding in from less hospitable regions, were faced with the more technically accomplished humans who knew how to breed and raise animals, who made distinctive pottery, who seemed inclined to cluster in settled groups." It was, in short, a Paradise Lost to the old ways of life. God's bounty had been replaced by human ingenuity.

BUSINESS FICTION

"Storytellers' Ethics" by Robert Coles in **Harvard Business Review** March - April 1987, 8-12. Boston, MA 02163. $35/year

How much should the books we read in school affect our characters? There is no answer, but for Robert Coles, the influence was profound. He wrote his undergraduate thesis on William Carlos Williams, the New Jersey poet, novelist and pediatrician, and was himself inspired to become a doctor, eventually a child psychologist, and a peripatetic member of the Harvard faculty selling novels and short stores as a means toward moral inquiry for medical students, law students, education students and most recently, business students.

From Dr. Williams, Coles gained the concept that a story has the advantage over "programmatic moral analysis" of exciting the moral imagination. In other words, a moral dilemma must produce an emotional response as well as an intellectual program for ethical decision-making. Coles was challenged by a law student to "cross the river" to the Business School. Remaining true to his mentor, he included in his business curriculum a trilogy of William Carlos Williams' novels--**White Mule, In the Money** and **The Bulldup**--which chronicle the challenges and dilemmas faced by a poor industrial worker who moves into the world of entrepreneurship. Many Harvard students had read the novel previously, but not in the context of their goals as business students. Other novels included Saul Bellow's **Seize the Day** and Walker Percy's **The Moviegoer**, with short stories by Flannery O'Connor and John Cheever.

The specific choices are not so important as the recognition of the particular benefits of storytellers' ethics as compared to formal ethics. "Novels don't supply the intellect its prized formulations.... Novels help us shape a general attitude toward living a life--encourage us to think about what we want and at what personal or professional cost."

For humanities teachers who have inveigled themselves, or have been invited, to serve as instructors in professional schools, Coles offers humane advice. The temptation is there to use fiction as polemical attacks upon the students' choice of vocation. "Do you really want to pour rain on a parade...? I try to keep such thoughts in mind when I ask future corporate leaders or financiers to take a sharp and candid look, or a smiling and wry one, at certain moral pitfalls."

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with **content** that draws upon the human cultural heritage, **methods** that derive from the humanistic disciplines, and a **purpose** that is concerned with human values. Academic courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Seniors Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but not feel constrained to be colloquial. Avoid sexist implications in your diction by referring to **humanities, humans** or people rather than **man** or **mankind**. Usually awkward "he/she" constructions can be avoided by recasting pronouns in the plural. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed or word-processed double-spaced on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. Camera-ready line illustrations are very welcome. We can use written material of two lengths: one to three commentaries, etc.; and articles of six to ten pages (3500 work maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions. If you have word-processed your article, please specify the program you used (we use Word Perfect). If your article is accepted we'd like a copy on disk.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

*THEORY "Piaget and Theories of Integrated Study"

*ADMINISTRATION "Crediting Departments for Team Teaching"

*HISTORY "Nineteenth-Century Multi-Media at Chautauqua"

*RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

*"What you should know about teaching novels in a philosophy course"

*"Pre-teaching history students for an art museum field trip"

*"How to help non-musicians to follow a score"

*"A designer speaks of humanities bulletin boards"

*"Getting adults to role-play in public humanities programs"

*"Understanding Oedipus: An Actor's View"

What we don't want:

*Creative writing by teachers or students (it doesn't relate to our purpose)

*Syllabus outlines (curricula should be explained, not listed)

*"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)

*"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)

*"Humanistic counseling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

OPEN FORUM: Towards a Functional Definition of the Humanities

Three Views by

James Mehl, Walter Gulick & Charles Cree

James Mehl: Why Define?

The need continues for a clear and functional definition of the humanities. This need is especially apparent in three broad areas: for educational institutions in determining the appropriate division of faculty and curricula, for agencies such as the National Endowment for the Humanities and the state-based councils in administering equitably their grant programs, and for both public and private organizations in the new effort to employ and utilize the skills of applied humanists. To be sure, these areas are overlapping, with each affecting the other. Humanist teachers in our colleges and universities apply for and participate in the many programs administered by endowments and foundations for the humanities. Staff members overseeing these public and private agencies, as well as applied humanists, receive their training from academic humanists. All of these professional humanists could benefit from a more clearly defined and commonly shared view of the humanities.

I have already attempted to provide such an understanding, especially for teachers of the humanities, in a recent issue of the journal of this association (**Humanities Education**, II, 37-43). The appearance of other essays about that same time, all dealing with the question of definition and purpose of the humanities, has prompted this new consideration. Walter Gulick, in an essay published in the journal of the National Federation of State Humanities Councils (**Federation Review**, IX, 39-45), redefines the humanities as they relate to the fine arts and the social sciences. His purpose is to provide a clearer definition so that state humanities councils will have an easier time in communicating to the public the meaning of the humanities. Such clarification would contribute to a broader base of public support for the humanities. In the spring of 1981, the Hastings Center, an institute in New York state dedicated to the investigation of society, ethics, and the life sciences, began an intensive one and a half year research project, funded by the NEH, to promote the practical application of the humanities. A report of that seminar, **On the Uses of the Humanities** (see rev. by Sharon Scholl in **HE**, II, 29-32), was published in 1984. A year later the papers commissioned for the conference sessions were printed as a collection, **Applying the Humanities**. My comments will be directed principally to the viewpoints stated in those essays. I shall also suggest an alternate definition of the humanities, which is intended primarily to serve as an orientation for the continuing dialogue on this topic.

My own view of the humanities, a view that is also largely shared, I believe, by Professor Gulick and by the participants in the Hastings Center seminar, is that they constitute primarily a form of learning, not just in theory, but also for practical application in human affairs. Professor Nussbaum, a classicist and a contributor to the Hastings proceedings, has shown that the quest for human wisdom (**paideia**) and the attempt to apply that insight through living the life of a virtuous citizen can be traced back at least to the fifth century B.C., to the "Golden Age of Athens." That educational and cultural ideal continued into the Roman period, especially during the late Republic, when Cicero, and later Aulus Gellius, formulated the **studia humanitatis** as specific training in grammar, rhetoric, poetry, history, and moral philosophy. The subject matter was to be learned by reading the great Latin and Greek authors, the "classics." The study of these texts allowed the student insight into the "great issues" (**res magnae**) of truth, goodness, beauty, and justice that give human life its meaning and significance. The study of language in texts would also convey the ability to persuade, through both oral and written communication. For the virtuous and active Roman citizen, persuasion was the ability to sway opinion and to affect public policy, so as to achieve the "good life" of the citizen and justice for the state. As Paul Oskar Kristeller has shown, the **studia humanitatis** were consciously revived by humanists during the Renaissance to counter what they considered a sterile and technical education then offered by the scholastics in the late medieval universities. A return to the humanistic subjects would provide Renaissance Italians, and later northern Europeans, the skills of communication and the insights of human life required to lead an active life in the increasingly complex culture of early modern Europe.

This learned tradition of humanistic education was passed on, as Bruce Kuklick (another Hastings Center participant) has shown, by the Puritans to the first educational institutions in our country. The increasing professionalization of all subjects, including the humanities, which occurred in the universities during the late nineteenth and twentieth centuries, has contributed significantly to the splintering of the humanistic disciplines and has raised the question of their practical application in human affairs. The modern university also divided its faculty and curricula into separate categories for funding and instruction; the humanities now held a position parallel and somewhat equal to the sciences, the social sciences, and the fine arts. The social sciences developed as a group out of the traditional humanities by adopting the methodologies of the physical sciences, the verifiable "scientific method," to investigate the individual (psychology) and social groups, both past and present (archaeology, anthropology, sociology, and political science).

Another important shift within the humanities, further complicating the problem of definition and application, occurred in the eighteenth century. As discussed in my previous article, the new understanding of poetry as a fine art, as developed in Kant's philosophy and the systems which derived from it, led to a new classification of the humanities and the fine arts. The humanities were "purposive," intended to persuade, while the fine arts were "nonpurposive," intended to edify or to entertain. Poetry, drama, the visual arts, music, and dance were the creative or fine arts. Beauty was now judged by the degree of newness, the novelty, or the fresh approach brought by the artist to the subject.

Educational institutions and public and private funding agencies generally accept the definitions and classification of the humanities, the fine arts, and the social sciences as reviewed so far. Professor Gulick has pointed out, properly I think, certain inconsistencies in the National Endowment's definition of the humanities, as well as an increased "blurring" of disciplines, subjects, and methodologies in contemporary culture. I myself have pointed out the continuation of "purposive" examples in the fine arts into the nineteenth and twentieth centuries. Some of the participants at the Hastings Center conference have shown the problems and difficulties that confront applied humanists: the pressures that might be exerted by a governmental office on a public historian (e.g. the Nuclear Regulatory Agency may influence a staff historian to write in a way favorable to the NRC), or the tendency of some medical students to see the philosopher teaching medical ethics as a "frill" to their professional training as physicians. Granted, there are problems in defining and applying the humanities. But that difficulty and frustration does not mean that we should give up and simply swim in a common "stew" with the other disciplines. The tradition of the humanities is too rich and too meaningful to give up so easily.

My recommendation is that we must turn to our own tradition, as complex and changing as it has come down to us, to guide our present and future understanding of the humanities. Using the historical tradition of the humanities as a guide, some comments on the proposals of Professor Gulick and the report of the Hastings Center would now seem appropriate. In general, I am in sympathy with Gulick's effort to define the humanities as "a spirit attuned to questions of human meaning," which primarily seeks "to understand and interpret texts and other humanly created artifacts." According to his definition, the humanistic spirit is reflective and interpretive and is "marked by at least one and sometimes all of the following characteristics: it is (1) critically probing, (2) sensitive to context and continuity, (3) imaginatively, linguistically creative, and (4) ultimately directed toward questions of value and significance."

My major hesitation with the definition is its inclusion of all expressions in language and literature as part of the humanities. Gulick would transfer to the NEH from the NEA funding projects in "writing and presenting poetry, drama, and fictional literature of all sorts so long as the humanistic spirit is manifested in these works." He would thereby restrict the humanities to only expressions in language. He would maintain NEA funding for the creation, production, and performance in painting, sculpture, film, architecture, photography, dance, and music. Interestingly, Gulick's proposal for reclassification would actually return language and literature to their traditional home in the **studia humanitatis**. In the ancient and Renaissance understanding of language and literature, the study of poetry and the Latin and Greek classics was to lead to an eloquence of speech in order to persuade, as well as to insights into the meaning and living of the virtuous life. The purpose of the literary arts was not primarily to edify and to entertain, as they later came to be understood in the post-Kantian systems of modern aesthetics. Is this really what Professor Gulick intends in his redefinition and reclassification? Is the post-Kantian aesthetic, distinguishing as it does between purposive (the humanities) and nonpurposive (the fine arts, including the literary arts), no longer meaningful and applicable? Why should not the other fine arts be considered humanities if they are purposive and "deal with issues...in the humanistic spirit (critical, contextual, imaginative, and value-centered)"? If the poems of Ferlinghetti, the novels of Vonnegut, and the plays of Beckett are humanistic, according to Gulick's criteria, then why should expressions in painting, sculpture, film, architecture, photography, dance, and music, which also deal with issues in the humanistic spirit, be denied humanistic status and NEH funding?

I would recommend the adoption of a more simple and straightforward definition of the humanities--perhaps a modified version of Gulick's statement: **the humanities are those subjects or disciplines which approach human issues in a spirit that is critical, contextual, purposive, imaginative, and value-centered.** This would include the traditional humanistic disciplines of literature, history, and philosophy, but could extend to subjects in other areas, usually classified as fine arts, social sciences, and even the physical sciences, when they are approached primarily from a humanistic point of view. Such a definition would allow the historical study of the fine arts and the social and natural sciences, as well as emerging fields in applied humanities such as public history and medical ethics, to be properly included as part of humanistic inquiry. Disciplines which are primarily creative expressions (the fine arts, including the literary arts), or primarily interpret individual or group behavior by statistical or scientific methodologies (the social sciences), or primarily investigate the natural world, including the human species (the pure or hard sciences) would have an opportunity to show how they relate to, or indeed fulfill, a humanistic purpose. Thus, the history of biology or even of nuclear physics should be considered humanistic subjects, while symbolic logic taught by a philosopher probably should not be.

Moreover, such a definition would allow an appropriate understanding of past cultural periods that may have included one or another subject not presently included in the humanities. The culture of Renaissance Europe cannot be properly understood, for example, without taking into account their inclusion of poetry in the **studia humanitatis.** This approach implies that any definition of the humanities is largely determined by cultural and historical developments. Our attempts to understand and interpret the significance of the humanities for the present and the future will be greatly enhanced by a more thorough understanding of their meaning and development from the past.

Suggested Readings

My previous essay, "Liberal Arts, Fine Arts, Humanities: Towards a Pedagogical Understanding," **Humanities Education**, II (1985), 37-43, discusses at greater length the historical development of the humanities and also includes a list of suggested readings. My approach to the humanities relies heavily on the studies by Paul Oskar Kristeller:

Renaissance Thought: The Classic, Scholastic, and Humanist Strains (paperback ed.; New York-Evanston-London: Harper and Row, 1961); **Renaissance Thought II: Papers on Humanism and the Arts** (paperback ed.; New York-Evanston-London: Harper and Row, 1965), and **Renaissance Thought and its Sources**, ed. Michael Mooney (New York: Columbia University Press, 1979). See also the recent study by Anthony Grafton and Lisa Jardin, **From Humanism to the Humanities** (Cambridge, Mass.: Harvard University Press, 1986), which treats the actual teaching of the humanities in Renaissance Europe, from Guarino to Ramus. For discussions of the changing place of poetry in the humanities see O.B. Hardison, "The Orator and the Poet: The Dilemma of Humanist Literature," **The Journal of Medieval and Renaissance Studies**, I (1971), 33-44, and Walter J. Ong, SJ, "The Province of Rhetoric and Poetic," in Joseph Schwartz and John A. Rycenga, eds., **The Province of Rhetoric** (New York: The Ronald Press, 1965). Extensive reference has also been made to the important essay by Walter B. Gulick, "Redefining the Humanities in Relation to the Arts and Social Sciences," **Federation Review**, IX (1986), 39-45. Publications resulting from the Hastings Center seminar include: **On the Uses of the Humanities: Vision and Application** (Hastings-on-Hudson, New York: The Hastings Center, 1984), and Daniel Callahan, Arthur L. Caplan, and Bruce Jennings, eds., **Applying the Humanities** (Hastings-on-Hudson, New York: The Hastings Center, 1985), which includes especially useful essays by Martha C. Nussbaum and Bruce Kuklick dealing with the historical development of the humanities. For a discussion of the increasing difficulties of distinguishing disciplines in contemporary culture see Clifford Geertz, "Blurred Genres: The Refiguration of Social Thought," **American Scholar**, XLIX (1980), 165-79.

Walter Gulick:
A functional Definition of Humanities

Philosophy, history and literature, disciplines which have traditionally been considered at the core of the humanities, offer approaches and insights essential to wise decision making in our society. But the importance of the humanities to public and private well being has been obscured, I believe, because people in our society don't understand very well what the humanities are. If attempts to bolster the humanities are to be successful, they should not have to suffer from an unclear definition of what is being supported. The fashioning of a clear definition of the humanities must therefore be of great urgency for those of us wishing to increase the impact of the humanities in contemporary society.

Because the National Endowment for the Humanities is the chief representative of the humanities to the public, it might be thought that we could look to the NEH for a useful definition. Alas, as is well known, such is not the case. Here is the NEH's definition as contained in its enabling legislation:

> The term "humanities" includes, but is not limited to, the study of the following: language, both modern and classical; linguistics; literature; history; jurisprudence; philosophy; archaeology; comparative religion; ethics; the history, criticism, and theory of the arts; those aspects of the social sciences which have humanistic methods; and the study and application of the humanities to the human environment with particular attention to the relevance of the humanities to the current conditions of national life.

There are obvious problems with a definition which is circular (it includes the term to be defined in the definition: "social sciences which have **humanistic** content and employ **humanistic** methods") and vague ("includes, but is not limited to"). But I think the greatest problem with the definition is that it merely lists disciplines without showing any sign of the commonality in terms of which these particular disciplines are included rather than some others. It certainly does not communicate successfully to the public what the humanities are.

The difficulty of understanding what we humanists do is perhaps most easily grasped if the humanities are contrasted with two other fundamental categories of human endeavor: the arts and the sciences. Artists create--they paint, compose, choreograph, design, sculpt, and the like. Scientists work according to the scientific method-they theorize, measure, test, and verify. What do humanists do? Well, they write . . . but so do artists and scientists. They teach . . . but so do artists and scientists. They reflect and criticize . . . but so do artists and scientists. Is there nothing distinctive that the humanist does? The humanist will not be clearly understood until people come to understand what is definitive of humanistic activity. Hence the need for a functional definition of the humanities.

If one goes back to the Renaissance definition of the humanities (see "Liberal Arts, Fine Arts, Humanities" by James V. Mehl, **Humanities Education**, 11, 37-43 for a fine historically based survey of the humanities), some underlying commonalities become apparent. Grammar, rhetoric, history, poetry and moral philosophy, which are all linguistic phenomena, are featured in the Renaissance definition. What does a humanist do? A humanist uses languages in thinking, writing, and talking. But don't artists and scientists also think, write and talk? Yes, but the total product of humanistic activity is wrapped up in thinking, writing, and talking, each a mode of language. Science necessarily relies upon extra-linguistic evidence--empirical information and experimentation. Art makes creative use of such non-linguistic elements as paint, musical instruments, film, steel girders, and bodily movement. The humanities need not involve anything other than language.

To be sure, not just any usage of language qualifies one as a humanist. The gossip and the advertiser are not best understood as humanists. Thus, it is necessary to specify what type of language usage qualifies as humanistic in nature. I entitle this appropriate usage the humanistic spirit, and I have sought to give definitional precision to the humanities in the following passage:

> The humanities necessarily involve the use of language, whether in spoken or written form. Humanities usage of language is distinguishable from other usage of language because of a multimodal yet identifiable spirit which accompanies and inspires its articulation. An open, inquiring spirit is characteristic of the humanities, a spirit attuned to questions of human meaning. The humanities primarily seek to understand texts and other humanly created artifacts, but the humanistic spirit is capable of engaging any subject matter whatever. This reflective, interpretive spirit is marked by at least one and sometimes all of the following characteristics: it is (1) critically probing, (2) sensitive to context and continuity, (3) imaginatively, linguistically creative, and (4) ultimately directed toward questions of value and significance ("Redefining the Humanities in Relation to the Arts and Sciences," **Federation Review**, IX, 42).

The humanities, in sum, are an intrinsically linguistic phenomenon carried out under the inspiration of the humanistic spirit. This definition expands on the NEH definition in several ways. The NEH definition excludes creative writing--poetry, drama, fiction--from being within the domain of the humanities, whereas my emphasis on the centrality of language usage to the humanities would make these creative linguistic products, both in their spoken and written forms, central to the humanities. Presumably poetry and fiction are included under the auspices of the National Endowment for the Arts because they are seen to be products of artistic creativity, whereas the writer of humanistic essays is seen to be uncreative, a critic dependent for analysis on some pre-existing events, ideas, texts or works of art. In brief, the artist is seen as the creator, that autonomous hero, while the humanist is the commentator, that sad parasite. In reaction to that caricature, I take comfort in the words of Walter J. Ong, S.J., who claims that "criticism, if authentic, is not secondhand anything, but as real as art itself and as worthy of direct study" (**Rhetoric, Romance, and Technology**, Ithaca: Cornell University Press, 1971, p. 314).

The present NEH-NEA dichotomy carves the cultural world in a way that seems to cut across its actual cleavages. In the process it ignores our tradition, which embraces poetry and other creative uses of language as central to the humanities. It simply will not do to use creativity and criticism as criteria for determining who is the artist, who the humanist. Novelists are creative, yes, but they are also critical, constantly criticizing and rewriting their work to make it conform to their intentions. Humanistic essayists are critical, yes, but they are also creative in fashioning their language so as best to make their points. The type of creativity employed by the novelist and the critic have far more in common than the creativity of the novelist and the composer, or the novelist and the sculptor. The tradition should be relied upon; the humanities should once again encompass the poet and writer of fiction in addition to the essayist. In delineating the humanistic spirit I have expanded the scope of the humanities in another direction. As long as science, sports, or fashions are critically examined in terms of their social and temporal meaning, their study would qualify as humanistic just as surely as would the study of contemporary morality. That is, I would understand the study of any object in the humanistic spirit to belong to the humanities.

Language usage is ubiquitous throughout culture. How then can one tell which language is imbued with the humanistic spirit and which is not? While the proposed definition would like to separate the sheep from the goats, unfortunately much language usage seems to have the status of a hybrid, a shoat or geep. Nevertheless, the emphasis on meaning and values in the humanistic spirit provides some guidance; if the language deals with the significance of something, it's humanistic. Thus, I would claim as a humanist the political observer who raises value questions (a Bill Moyers) or the doctor who reflects on humans' place in the universe (a Lewis Thomas).

Criticisms of the proposed definition can be made from many directions. Some people would ask why the current NEH definition should be tampered with. Hasn't it served to provide unprecedented funding for humanists? I would happily concede that it has, but I would also ask whether the humanities have had the full impact on the public that a clearer, more carefully thought through definition would facilitate. Those who need to explain the humanities to legislators or typical citizens know that the present NEH definition is a great handicap.

My emphasis on a humanistic spirit can also be criticized as being too vague. Does that use of the term "spirit" invite further confusion between humanities and that rumored ogre, secular humanism? Perhaps. I would certainly be open to the substitution of a less ambiguous term. Would humanistic "attitude" or "approach" be an improvement?

Furthermore, some would contend that when I attempt to ground the humanities in language as such and thereby abduct poetry, drama, and fiction from their current sojourn in the arts, I transgress some important boundaries illegitimately. This seems to be the chief criticism of Professor Mehl in his accompanying presentation. He grounds his objection in "the post-Kantian aesthetic, distinguishing as it does between purposive (the humanities) and nonpurposive (the fine arts, including the literary arts)." To be sure, Kant believes that the arts are properly evaluated by an aesthetic judgment which is disinterested and recognizes "purposiveness without purpose." But his aesthetic theory is basically designed to assess the beauty of representational art. An aesthetics of beauty with pretensions of universality seems badly out of place in a century which has seen the advent of such beauty-denying movements as Fauvism, Cubism, Expressionism, Surrealism, Dadaism, Futurism, and in America the Ash Can School, Abstract Expressionism, Pop Art, Conceptual Art, and Performance Art. The revolt against beauty has affected music, dance, sculpture, architecture and photography as well. Many contemporary works of art are purposive in that they are designed to engage our interests or even to outrage us. Such art works may be studied through the humanistic spirit, but I would not classify them within the humanities because they are not essentially linguistic in character. Both elements--linguisticality and the humanistic spirit--need to be present before we are entitled to designate something as humanistic.

Despite our general agreement, then, James Mehl and I seem to differ in two areas. The first difference seems to arise from a simple misunderstanding. Mehl suggests that my definition includes "all expressions in language and literature as part of the humanities." But I emphasize that **only** language and literature manifesting the humanistic spirit would count as humanistic, although I would concede that all language and literature could be seen as potentially humanistic.

The second difference is more substantive. Based on the Kantian distinction, Mehl wants to keep fictional works of literature within the orbit of the arts. He believes that novels tend to be merely entertaining, and poetry tends to be excessively subjective. Neither, therefore, displays the ennobling characteristics found in the humanities at their best. On what basis would I argue that such works of literature should be thought of as humanistic?

Is a sentimental illustration of children and pets, a pretty landscape, or some other sample of living room decor to be excluded from the category of art? Hardly. Similarly, should a Harold Robbins potboiler, a Louis L'Amour western, or a gothic romance be excluded totally from the humanities? Surely not. Mehl correctly recognizes that the purpose of these forms of popular literature is entertainment, but that is no reason to exile them to the arts. They are merely unilluminating forms of the humanities, understood broadly, just as pictures of big eyed children on black velvet are unilluminating forms of art, understood broadly. The reason for my insistence on this point becomes clearer if we look at the other side of the issue. Are **Hamlet, The Divine Comedy, Moby Dick, The Waste Land,** or **The Color Purple**, to name several widely diverse examples of literature, better understood as aesthetic than as humanistic statements? Not to my sense of things. These and other works of literature should officially be returned to their humanistic home, a home long recognized until Kantian categories did their damage.

Finally, and I think most tellingly, there will be a number of objections made to the proposed definition because it upsets the status quo and its vested interests. If the NEH and NEA were to realign their constituencies according to my suggestions, various people would surely resist. The NEA might object because it would perceive that in giving the writers to the NEH it was sacrificing some of its power. However, I suspect the writers would be pleased because they might well receive more funding under the new arrangements. Certainly the other artists should be happy to be able to divide the funding pie into larger pieces. On the other hand, some of those traditionally funded by the NEH might object to having their pie cut into smaller pieces. But all of us in the humanities need the increased public recognition that a definition grounded in language would provide. At stake is something much larger than a jurisdictional or bureaucratic dispute; at stake is how best to help the world understand and appreciate the creative and transformative power of the humanities.

It is time to reflect on the issues raised and adjust accordingly the proposed definition. I am unrepentant concerning my emphasis on the intimate connection between language and the humanities. In the Renaissance definition of the humanities, however, rhetoric is included as a significant element, one that seems relatively unacknowledged in my previously published definition. That suggests that the four characteristics of the humanistic spirit might appropriately be expanded to include "persuasive," a term consonant with the purposive and learning-oriented nature of the humanities emphasized by Mehl. The last sentence of the definition which focuses on the humanistic spirit would then be revised to read as follows:

> This reflective, interpretive spirit is marked by at least one and sometimes all of the following characteristics: it is (1) continually probing, (2) sensitive to context and continuity, (3) imaginatively, linguistically creative, (4) marked by a concern to convince or persuade, and (5) ultimately directed toward questions of value and significance.

The more of these five characteristics a given piece of writing or speech includes, the more fully it is expressive of the humanistic enterprise. The fewer the characteristics involved, or the more weakly each is expressed, the more peripheral it is to the humanities in their full integrity.

What then does the humanist do? The humanist evaluates, interprets and asserts. Immersed in language, the humanist reflects upon ideas from the past or present. The humanist thinks, writes and talks. The humanist explores the world known through language according to an approach that is critical, contextual, imaginative, persuasive, and value-centered.

Charles Cree:

A Public Program Officer Responds

As its linguistic root suggests, **definition** requires that we set boundaries. In some cases those boundaries endure for ages. In others, the boundaries we set begin to confine, or are revealed to be overly broad, or begin to blur because of our inability to articulate important distinctions.

It is notable that these scholars--both of whom have been active in the work of state humanities councils--express a desire to move beyond the bounds of traditional definitions of the humanities. Although they differ on several points, they both insist that the humanities need to be defined in a way that speaks directly to non-specialists about their relationship to the humanities.

Early in his paper, Professor Mehl points to this fundamental point of agreement: "My own view of the humanities, a view that is also largely shared, I believe, by Professor Gulick and by the participants in the Hastings Center seminar, is that they constitute primarily a form of learning, not just in theory, but also for practical application in human affairs."

It is equally significant that both authors invite us to critique the definitions they offer in terms of the way those definitions help non-specialists to recognize the contribution the humanities make to public life. As Professor Gulick reminds us, "at stake is how best to help the world understand the creative and transformative power of the humanities."

The definition the two authors are calling for is a **functional** definition--one that will acknowledge the public's involvement and that will help promote the public understanding and appreciation of the humanities.

While both Professor Gulick and Professor Mehl cite the inadequacy of the definition offered in the enabling legislation that created the National Endowment for the Humanities, their goals are consistent with those of the Congressional authors of that legislation. What Professors Gulick and Mehl are calling for is a definition that will speak effectively to non-specialists about their relationship to the humanities.

As a person who works with non-specialists committed to the public life of the humanities, I can attest to the need for such a definition. Over the last fifteen years there has been an astounding increase in the commitment of public groups to the humanities. In Minnesota, the most prestigious theater in the state offers as part of each new season a series of public humanities programs on the history and criticism of drama. The state association of Friends of the Library sponsors over eighty humanities programs in small towns each year. And churches, social service organizations, and colleges and universities have formed partnerships in the three largest urban centers for the purpose of providing humanities programs for senior citizens.

Although these efforts were initiated with support from their state humanities council, they have been sustained in large part by private funds and would not be flourishing if the sponsoring organizations did not value and appreciate the contribution the humanities make to public life.

These groups were persuaded to implement humanities programs by the example of humanities scholars who ventured off campus and who, by their actions, demonstrated the connection between humanities scholarship and the interests and needs of non-specialists. The scholars who have served on state humanities councils, helped plan humanities projects, made presentations in public programs, and addressed the concerns of the public humanities in their research and publication, have made manifest their conviction that the humanities are concerned with the lives of human beings, a species that is not confined to the classroom and library carrel.

There are a host of non-specialists--among them, public members of state humanities councils, sponsoring organizations who administer humanities programs, elected officials who champion the cause of the humanities at various levels of government, and the many individuals who regularly attend public humanities programs--who share Professors Mehl and Gulick's dissatisfaction with traditional definitions of the humanities. Their commitment attests to the vitality of the public life of the humanities, as well as to the need for a more comprehensive definition of the humanities--a definition that will more adequately represent the breadth and scope of the humanities.

Fred Schroeder: An Editorial Afterthought

As an editorial prerogative I can allow myself the last word. Not the final word, that's for certain, for the **quest** for a definition is, like almost anything within the arts, the sciences and the humanities, the essence of our endeavors. Like Drs. Mehl, Gulick and Cree, I have often worked with public humanities programs and it is in those direct encounters with the non-professional humanists that the need for a simple, understandable and not-too-distorted definition is necessary. However, working in our institutions as teachers and researchers, we rarely need to define our territories or techniques, for we are steeped in the traditions and are aware of the finer controversies. I have observed that this is also true of our friends in the natural sciences who not only rarely define the "Scientific Method," but often prove to be helpless in trying to teach the Method **qua** Method. They just **do** science. But, like performing artists, they also have the advantage that there is a popular perception of their activities; naive, it is true, but not too far off base. The public does not ask "just what do you mean by **science**?" as they do about humanities (although they probably should!).

A year or so ago during discussions about allocation of resources in our university, I thought that I discerned a simple distinction among the workings of sciences, arts and humanities that lay at the foundation of our assumptions and our rivalries. It was a question of what each of us could not do without. Scientists need laboratories, artists need studios, humanists need libraries. Each need can be extended without undue complication. The laboratory or the "field" is a controlled environment for observation, testing and measuring, and measuring shows the essential need for mathematical quantification. The artist's studio is not a sole essential, for artists more than others need audiences. Their products--art works--are incomplete without an audience response. But for the humanist, the past, as preserved in libraries (and by extension, museums) is essential.

Well, it **seemed** a good idea for a simple, jargon-free definition, but alas, it failed at first application! A colleague in the chemistry department bridled at the stereotypical idea that he didn't depend upon the library as a vital part of his research. And yet, as we returned to our battles over resources, only those in the humanities championed library improvement. Most vocal among them were the art historians who are housed with studio arts; they continuously lament the lack of understanding and sympathy from departmental colleagues whose highest priorities are studios, equipment, supplies and gallery exhibit space. And anyone who has worked with performance arts from kindergarten to Cal Arts will know that bitter quarrels rage annually over theater space and calendar scheduling. In truth, the division between NEH and NEA occurred almost immediately after the legislation was introduced to support arts and humanities vis-a-vis the National Science Foundation. The reason for the NEH/NEA division was not conceptual. It was economic.

Labs and calculators, studios and audiences, libraries and history oversimplify deep issues such as Mehl and Gulick have set forth, but it may be that oversimplification is a useful step toward understanding.

EXPRESSIONS OF THE SELF

The Fall 1988 issue of HUMANITIES EDUCATION will be devoted to the theme of Self-Expression, including such topics as autobiography, self-portraits, self-expression in music, poetry, architecture, crafts-- whatever. This issue will also include selected color slides from the collections of the Minneapolis Institute of Arts with informational notes and ideas for teaching.

As always, articles should relate to interdisciplinary humanities learning. In addition to longer articles (see Editorial Policies on reverse), we like to have relevant reviews, abstracts of journal articles and short pieces describing classroom activities, museum exhibits, favorite documents and artifacts, etc. Selection of articles will be influenced by the need for balance among our many constituencies as well as the usual factors in accepting articles for HUMANITIES EDUCATION. The final deadline for acceptance of completed submissions is May 1, 1988. Send to the Special Issue Guest Editor:

Susan Coultrap-McQuin

HUMANITIES EDUCATION
CONNECTIONS

Ideas and materials for better teaching and learning in the humanities.

Robert Waxman

Notes on Humans & Machines in Modern Culture

We live in a technological age which has seen an enormous growth in production, consumption, and in the development of complex transportation and communication networks. How have writers, visual artists, and musicians interpreted this age and made it intelligible? What follows are notes toward an answer. While necessarily incomplete, these notes suggest topics, subtopics, and resources which teachers of interdisciplinary humanities courses might wish to employ.

I

Humanity and Machine: Possibilities and Dangers. Modern culture's fascination with the machine goes back well into the nineteenth century. For example, J.M.W. Turner's **Rain, Steam, and Speed: The Great Wèstern Railway** (1844), Monet's **St. Lazare Railroad Station** (1877), Pissarro's **Station at Penge** (1871). In the twentieth century: Futurism's call for an art appropriate to a fast-moving, machine-propelled age. The Bauhaus's attempt to "breathe life into the dead product of the machine" (Gropius). Diesel locomotive, Konigsberg, 1913.

Utopian Visions: "We work, we think, we dispute, we take risks and suffer--for there seems no end to the difficult and dangerous adventures individual men and women may attempt; and more and more plain does it become to us that it is not our own little selves, but Man the Undying who achieves these things through us" (H.G. Wells).

1-Fernand Leger, a major artist who embraced the machine age. World War I: he was "dazzled by a 75 mm shell opened in full sunlight, a magical light on the white metal. It taught me more. . . than all the museums in the world."

   a) **Soldiers Playing Cards** (1917): industrial artifacts become models for his figures; his men are as precise and efficient as the machines they control. **The City** (1919): post-war world translated into mechanistic terms. Flashing electric lights, machines and buildings, robot-like people = Brave New World of the engineers. "Everyday modern industry creates objects which have an uncontestable plastic value. The spirit of these objects dominates the period" (Leger).

b) Leger's **Ballet mecanique** (film, 1924): literary plot is replaced by manufactured objects--tea kettles, dishpans, tin spoons, knives and forks, machine parts--which spin, march, and dance. "To isolate the object or the fragment of an object and to present it on the screen in close-ups of the largest possible scale. Enormous enlargement of an object or fragments gives it a personality it never had before and in this way it can become a vehicle of entirely new lyric and plastic power" (Leger).

2-Many other late-nineteenth and twentieth-century writers, painters, film makers, and composers have joined Leger in viewing technology in general and the machine in particular as a positive force in the modern world, an aid in the human struggle for a better future.

a) Literature: H.G. Wells' **Shape of Things to Come (1933);** Jules Verne's **20,000 Leagues Under the Sea** (1870); Arthur C. Clarke's **Childhood's End** (1953) and **2001** (based on the Stanley Kubrick film, 1968); the many "robotics" stories by Isaac Asimov, including "The Evitable Conflict" (1950) and "Evidence" (1946); Hart Crane's poem **The Bridge** (1929).

b) Visual Arts: Painting. Joseph Stella's **Coney Island** (1913): "This painting. . . .represents an attempt to express the brilliance and the dynamic energy of modern life so evident in America" (**Century** magazine, 1914). Brooklyn Bridge series: "massive dark towers dominating the surrounding tumult of surging skyscrapers with their gothic majesty sealed in the purity of their arches" (Stella). Precisionism and Charles Sheeler: emphasis on the geometrical patterns of skyscrapers and street patterns, polished surfaces, the beauty of machined forms. **Classic Landscape** (1931) and **City Interior** (1936): cool perspectives, clean lines and solid shadows, the influence of Cubism and photography. **Golden Gate** (1955): the bridge becomes "a gateway, a beckoning into the new" (Sheeler).

c) Visual Arts: Narrative and Documentary Films. William Cameron Menzies' **Things to Come** (1936, based on the H.G. Wells novel cited above). Stanley Kubrick's **2001: A Space Odyssey** (1968) offers a cautiously optimistic view of technology, the famous HAL episode notwithstanding. **The World of Tomorrow** (1984, documentary) uses archival footage and stills to juxtapose rosy predictions of the 1939 New York World's Fair with the dark realities of the day; the film tours major attractions like General Motors' "Futurama." **The Elephant on the Hill** (1987, Smithsonian World) explores the relationship between art and science and "how a rapidly changing technology has changed the face of art". **Artists in the lab** (1982, Nova film) deals with examples of computer and laser art (holography). **Art and the Machine** (1976) documents its thesis that "artistic and scientific innovations are inevitably linked," with a discussion of works by Leonardo Da Vinci, Marcel

Duchamp, Francis Picabia, and Jean Tinguely, among others.

d) Visual Arts: Experimental Films and "Expanded Cinema": computer films (Stan VanDerBeek, John Whitney, John Stehura); video experiments (Nam June Paik, Loren Sears, Philip Makanna); pieces involving films and "real" objects (Robert Whitman and Wolf Vostell); Jordan Belson's "kinetic painting," a blending of painting and film. "Technical developments in programming and hardware will proceed hand in glove with a steady increase in the theoretical knowledge of art, as distinct from the intuitive and pragmatic procedures which have characterized the creative process up to now" (computer scientist and sculptor Robert Mallary).

e) America's love affair with technology. The automobile in American Life. Edward Keinholz's **Back Seat Dodge-38** (1964): environmental sculpture complete with empty beer bottle discarded on a patch of grass. Industrial designers like Norman Bel Geddes, Raymond Loewy and Henry Dreyfuss (the 20th Century Limited locomotive), architect William Van Alen (the Chrysler Building, 1930). The Age of Streamlining: "Speed is the cry of our era" (Bel Geddes). Art Deco, Art Modern. Photography of Stieglitz, Bourke-White, and Strand.

f) Music: George Gershwin's **Rhapsody in Blue** (1924). It was on a train "with its steely rhythms, its rattly-bang that is so often stimulating to a composer" that the piece as a whole took shape in Gershwin's mind. John Alden Carpenter's **Skyscrapers** (1926). Arthur Honegger's **Pacific 231** (1923): evokes the dynamic drive of "three hundred tons hurling itself through the night at 100 miles an hour" (Honegger). Mexican composer Carlos Chavez's ballet **HP** (Horsepower, 1932): "a symphony of sounds around us, a revue of our times" (Chavez). Prokofiev's **Pas d'acier** (Dance of Steel, 1924). The mechanical commotion of Erik Satie's carnival in the ballet **Parade** (1917). George Antheil's **Ballet mecanique** (1924): "streamlined, cold as planetary space, but also hot as a furnace" (Antheil).

3-Modern technology has provided the innovative composer with a whole new world of sounds. Luigi Russolo, Italian futurist composer: "Life in ancient times was silent. In the 19th century, with the invention of machines, noise was born. We must break out of this narrow circle of our pure musical sounds and conquer the infinite variety of noise sounds" (1913).

a) Edgard Varese: fusion of mathematics, science, and music. "Speed and synthesis are characteristic of our era. We need 20th century instruments to help us realize those in music." **Ionisation** (1931): sleighbells, two anvils, Chinese blocks, bongos, two sirens, etc. Not music but "organized sound."

b) The emergence of electronic music in the 1950s: "I have been waiting a long time for electronics to free music from the tempered scale and the limitations of musical instruments. Electronic instruments are the portentous first step toward the liberation of music" (Varese). Varese's **Poeme electronique** (1958), composed to complement Le Corbusier's Philips Pavilion at the Brussels World Fair.

c) Musique concrete: everyday sounds captured and manipulated on a tape recorder. A musical collage. John Cage's **Fontana Mix** (1958). Synthesizer and computer allow the composer to create precise works of great complexity. Milton Babbitt's **Ensembles for Synthesizer** (1962): "I believe in cerebral music--in the application of intellect to relevant matters. I never choose a note unless I know precisely why I want it there" (Babbitt).

d) Varieties of electronic music: Karlheinz Stockhausen's combinations of sung and electronically produced sounds; similar experiments by Jacob Druckman and Luciano Berio; the musique concrete compositions of Luigi Nono; Steve Reich's blending of Western technology and Eastern mysticism; the "happenings" of Morton Subotnik, involving film, lights, taped and live electronic music; Toru Takemitsu's Space Theater of laser beams and thundering speakers; Isao Tomita's electronic reworking of Debussy; Wendy Carlos's **Switched-On Bach** (1968) and **Sonic Seasonings** of 1972 (compare thunderstorm sequence to that of Beethoven in his **Pastoral Symphony**, 1808); contemporary pop music. Summary: "I refuse to submit myself only to sounds that have already been heard" (Varese).

II

Humanity and Machine: The Velocity of Change. "Until this century," writes novelist C.P. Snow, social change was "so slow, that it would pass unnoticed in one person's lifetime. That is no longer so. The rate of change has increased so much that our imagination can't keep up." And the "engine" behind most of this change is modern technology (Alvin Toffler). In view of this rapid change psychologist Abraham Maslow suggests that "we need a different kind of human being. . . a kind of human being who is comfortable with change, who enjoys change, who is able to improvise, who is able to face with confidence, strength, and courage a situation of which he has absolutely no forewarning." How have the modern arts attempted to provide us with a model for this new human being?

1-Filippe Tomasso Marinetti's Manifesto of Futurism, 1909. Goal: to deliver Italy "from its plague of professors, archeologists, tourist guides and antique dealers." Destroy the academies and make way for the dynamism of modern life. "We maintain that the splendors of the world have been enriched by a new beauty: the beauty of speed. . . . A roaring motorcar, which runs like a machine gun, is more beautiful than the winged Victory of Samothrace."

a) Futurist painting: creates the illusion of motion by use of overlapping images. Pioneers and fellow-travelers: photographers Eadweard Muybridge and Thomas Eakins. Duchamp's **Nude Descending a Staircase** #2 (1912): "I completely gave up the naturalistic appearance of the nude, retaining only the abstract lines of some 20 different static positions in the successive descending movement."

b) Giacomo Balla's **Dynamism of a Dog on a Leash** (1912): multiplication of legs and tail (as in a comic strip) creates an illusion of movement. From naturalism to abstraction: **Flight of Swallows** and **Dynamic Successions** (1913).

c) Umberto Boccioni's **The City Rises** (1911): "a great synthesis of labor, light and movement." Impressionist broken-color technique suggests surging energy. **The Farewells** (1911): influence of Cubism. Steam engine, signal towers, bridges, railroad lamps, tunnels all rush in and around, interpenetrate each other. **Unique Forms of Continuity in Space** (sculpture, 1914): striding figure, swirling currents of air around legs and torso.

d) Futurist glorification of speed, energy, machine power + fascism, police state with people as cogs in social machine, glorification of war. Severini's **Armored Train** (1915).

2-Futurist paintings merely create an illusion of movement. To capture real movement, to make of art a living thing has been the dream of artists through the ages. Today, armed with the new technology, the modern artist has returned to this dream, feeling that motion must be a reality for modern art as it has been for modern life. The construction of forms in motion = kinetic art. Pioneers: Marcel Duchamp, Naum Gabo, Laszlo Moholy-Nagy, and Alexander Calder.

a) Marcel Duchamp's **Revolving Glass** (1920): five painted glass plates turn on a metal axis and create a series of colored concentric circles which seem to hang in space. Naum Gabo's **Standing Wave** (1920): a vertical rod is vibrated by an electric motor, creating an illusory geometrical form in space. "The harmonic wave-form pattern which Gabo's construction creates is, in spirit if not in physical principle, a visual echo of then recent theories of wave mechanics as the basis of matter" (Jack Burnham, 1968).

b) Laszlo Moholy-Nagy's **Light-Space Modulator** (1930): a light and motion machine, aluminum and chrome-plated surfaces driven by an electric motor. An attempt to bring together sculpture and technology. "We must . . . put in the place of the static principle of classical art the dynamic principle of universal life" (Moholy-Nagy). Alexander Calder: invention of the mobile (name coined by Duchamp). Rods, wires, sheet-metal forms combine the playfulness and spontaneity of Dada with the amorphic shapes of Surrealism.

c) Kinetic art of the 1960s and 70s: motion, colored light, and sound become the substance of the work of art. Nicolas Schoffer's **Prisme Multiple with Lux II** (1960, mirrors, motors, projectors, colored lights), a lighted sound mobile which changes color, moves, and makes melodies. James Seawright's

791

Searcher (1967): sounds are determined by light patterns produced by the sculpture and by people moving about the room. See also light shows at festivals and pop music concerts.

   d) On a less complex plane Len Lyle focuses on the movement of pieces of metal: a ribbon of steel, thin rods, polished balls, aluminum sheets. **The Loop** (1965): a looped strip of metal caught in a magnetized field. The loop "bounds upwards and lurches from end to end with simultaneous leaping and rocking motions . . . and emitting fanciful musical tones which pulsate in rhythm with the Loop. Occasionally as the bounding Loop reaches its greatest height, it strikes a suspended ball, causing it to emit a different but harmonious musical note, and so it dances to a weird quavering composition of its own making" (Lyle).

   e) Much simpler in conception is Lyle's **Fountain** (1963): thin steel rods which vibrate when set in motion. Or Hans Haacke's **Large Wave** (1965): a plexiglas box in which a wave endlessly breaks back and forth upon itself. Both works are readily available commercially; kinetic art and the marketplace. Art and biotechnology: Haacke's **Weathercube** (1965) contains water which condenses onto the container's walls, creating shifting patterns. Alan Sonfist has ties to the American ecology movement: "My art presents nature. I isolate certain aspects of nature to gain emphasis, to make clear its power to affect us. . . ." To this end Sonfist employs natural mineral crystals, fish, ants, snails, and micro-organisms which create "natural" patterns and designs.

The most successful form of twentieth-century kinetic art in terms of mass appeal is the motion picture. Cinema, choreography = kinesis = movement.

1-Technological history: early motion machines (Phenakistiscope, Stroboscope, the Zoetrope, etc.). The influence of photography: Daguerre, Muybridge, Marey, Eastman, Edison and the Kinetoscope, etc. Early filmmakers: the Lumiere brothers, Melies, early Edison films, etc.

   a) Film Technique: film stock, color vs. black and white, sound (synchronous and asynchronous), lighting, negatives and filters, lenses.

   b) Shots and sequences (long shot, close-up, low and high angle, pan and tilt shot), moving and stationary camera, cuts (simple, contrast, parallel), transitional devices (the fade, the dissolve, the wipe, and the iris).

2-Film Editing: Eisenstein's "Odessa Steps" episode from **The Battleship Potemkin** (1925). Shock editing: "the uniting of pieces of film, or shots, not necessarily related to each other, in such a way that their juxtaposition created a new state of feeling in the viewer" (David Mayer). Influences: Japanese hieroglyphic writing and the experiments of Russian filmmaker L.V. Kuleshov.

   a) Distortion of time: in "Steps" Eisenstein stretches time out of shape, like distorted forms in an Expressionist painting, for emotional effect. Fragmentation of space and cubist overlaps:

young sailor who breaks the plate; throwing the ship's doctor overboard. Overlaps and repetition from different angles heighten the violence and make us vividly feel the emotions of the participants.

b) "Odessa Steps" summary: juxtaposition of lengthy shots and brief ones, close-ups and distant shots, statis and movement, individuals and groups, light and dark, horizontal and diagonal lines, order and confusion. Other films for analysis: chase sequences in **Bullitt** (1968), **The French Connection** (1971), and Godard's **Breathless** (1961).

c) Some films about filmmaking: Chaplin's **Behind the Screen** (1916), Vertov's **Man With a Movie Camera** (1929), Truffaut's **Day for Night** (1973), Richard Rush's **The Stunt Man** (1980). Many experimental films, in which form and **materiel** are content, are in large part films about filmmaking.

III

Dystopian Visions: the power of technology inevitably has provoked a reaction. Sociologist Eric Fromm: "In the process of an ever-increasing division of labor, ever-increasing mechanization of work, and an ever-increasing size of social agglomerations, man himself became part of the machine, rather than its master." The twin dangers facing us today, suggests Fromm, are "war and robotism."

1-How have modern artists dealt with this potential (or actual) threat? Some use wit and humor. Paul Klee's **Twittering Machine** (1922): a bird-mechanism attached to a crankshaft forms an ironic "improvement" on nature. Francis Picabia's **Baby Carburator** (1918): an elaborate diagram for a machine which is meaningless and accomplishes nothing.

a) A contemporary descendent of Klee and Picabia is Jean Tinguely. **Radio Sculpture with Feather** (1962): mechanical arm turns radio tuner (influence of John Cage, perhaps) and waves a feather. Pioneer in "auto-destructive art." **Homage to New York** (1960): a motorized junk sculpture which destroyed itself in the garden of the Museum of Modern Art. Even more ominous is **Study #2 for an End of the World** (1962) which Tinguely exploded in the Nevada desert as "a lunatic end to everything monstrous in the world" (Tinguely).

b) For other artists the problem is not simply the presence of the machine; it is, as Fromm noted, the danger of man taking on the attributes of the machine. Max Ernst's **Piping Man** (1920): collage drawn from illustrations of machinery. A fit companion for Marcel Duchamp's **The Bride** (1912) who has been reduced to pipes and tubes. Duchamp's culminating work in this vein is **The Bride Stripped Bare by Her Bachelors, Even** (1923). The bride is an internal combustion engine which has a reservoir of love gasoline and a "magneto of desire"; the bachelors are infused with sperm gas produced by a chocolate grinder. A satire on twentieth century sexual frustration and the relation between human being and machine.

2-Many visual artists comment critically on the increasingly artificial and sterile environments which modern technology has made possible. Edward Hopper's **Approaching a City** (1946): monumental, immobile, heavy masses of masonry and a buzzsaw of sunlight. **Nighthawks** (1942): old red and green row houses in background give way to skyscrapers, glass, and aluminum. Loss of warmth and human scale.

a) Richard Estes' **Nedicks** (1970): an urban environment in which everything is abnormally clear and well-defined; contrast between the old (turreted row houses) and the new (glass, metal, florescent lights, neon, plastic). Estes works from photographs, another example of technology's influence.

b) Pop Art is very much interested in the mass-produced and the synthetic. An art of non-committal and mechanized uniformity. Andy Warhol: from packaged food stuffs (**100 Soup Cans**, 1962) to packaged pop culture (**Elvis** I and II, 1964) to packaged high culture (**Mona Lisa**, 1963) to packaged people (**Jackie**, 1964)--all stamped out by the commercial machine. "Someday everybody will probably be thinking alike; that is what seems to be happening . . . Everybody looks alike and acts alike, and we're getting more and more that way." Warhol adds: "I think everybody should be a machine."

c) James Rosenquist's huge painting **F-111** (1965) offers a panoramic view of our technological society. Fighter planes, tires, atomic explosions are juxtaposed to examples of domestic technology: light bulbs, a hair dryer, the prosaic details of happy, domestic American life. An indictment of our confusion of values? "Machines are exciting. I'm not anti-machine, but some machines seemingly can't be dealt with, they're so sophisticated. . . .We think we have solved something with the machine and actually we've tripped up human nature" (Rosenquist).

d) The "tripping up" of human nature is well illustrated in the sculptures of Ernest Trova. **Study for Falling Man** (1966): headless and armless, a gleaming human figure forms the chassis of an automobile. Falling or fallen from his basic humanity? **The Wheel Man** (1965): nightmare vision of robot-like man perfectly adjusted to his technological environment. Gone is the robust optimism of Leger.

3-"A highly organized and regimented society, whose members exhibit a minimum of personal peculiarities and whose collective behavior is governed by a single masterplan imposed from above, is felt by the planners . . . to be more 'scientific,' and therefore better, than a society of independent, truly cooperating and self-governing individuals." Aldous Huxley's disapproving view (1947) appears frequently in twentieth-century literature and films.

a) Huxley's **Brave New World** (1932) and George Orwell's **1984** (1949) are the modern era's archetypal dystopian visions. In the same tradition of sociological extrapolation are E.M. Forster's "The Machine Stops" (1912), Eugene Zamiatin's **We** (1922), Elmer Rice's 1923 expressionistic play **The Adding Machine**, Harlan Ellison's story "'Repent, Harlequin!' Said the Tocktockman" (1965), and John Brunner's **The Shockwave Rider**

(1976). "The fatedness of human affairs" is dramatized in H.G. Wells' novella **The Time Machine** (1895) and **A Canticle for Leibowitz** (1959) by Walter M. Miller, Jr.

b) Dystopian visions set in the recent past or fairly near future are to be found in Kurt Vonnegut's **Player Piano** (1962) as well as several of his stories in **Welcome to the Monkey House** (1968, especially "Report on the Barnhouse Effect," "The Euphio Question," "Deer in the Works," and Epicac"); Thomas Pynchon's novels **The Crying of Lot 49** (1967) and **Gravity's Rainbow** (1974).

c) For the destructive use of technology in war see "I Made You" (1954) by Walter M. Miller, Jr., Mordecai Roshwald's **Level 7** (1959), Eugene Burdick and Harvey Wheeler's **Fail-safe** (1962), Donald Barthelme's 1967 "Report" (in his collection **Unspeakable Practices, Unnatural Acts**), and various stories by Philip K. Dick (including "Second Variety," "The Imposter," "The Defenders," and "Autofac"). Dick's interest in cybernetics led to his 1968 novel **Do Androids Dream of Electric Sheep?** the basis for the film **Blade Runner** and reissued under that title. For an excellent recent collection of stories about robots and computers, see **Machines That Think** (1983), edited by Isaac Asimov, Patricia S. Warrick, and Martin H. Greenberg. Meditations on the American space program are offered in Tom Wolfe's **The Right Stuff** (1979) and Norman Mailer's **Of a Fire on the Moon** (1970). Biological disaster is Michael Crichton's theme in **The Andromeda Strain** (1960).

d) Narrative films in the Orwellian tradition include Fritz Lang's **Metropolis** (1926, re-released recently with a surprisingly effective rock music track), Chaplin's last silent film **Modern Times** (1936), Stanley Kubrick's **A Clockwork Orange** (1971), and Terry Gilliam's **Brazil** (1985). Scientific hubris is the theme of James Whale's **Frankenstein** (1931, based on Mary Shelley's 1818 novel) and his even better **Bride of Frankenstein** (1935), Sidney Lumet's **Fail-Safe** (1964, based on the Burdick and Wheeler novel cited above), and Stanley Kubrick's **Dr. Strangelove** (1964).

e) The technology of space travel is examined in Melies' pioneering effort **A Trip to the Moon** (1902), Stanley Kubrick's **2001: A Space Odyssey** (1968), Philip Kaufman's **The Right Stuff** (1983, based on Tom Wolfe's book), and George Lucas's Star Wars trilogy. Francis Ford Coppola makes a compelling statement about modern technology, privacy, and personal responsibility in **The Conversation** (1974). Photography becomes a vehicle for philosophical speculation in **Blowup** (1966), directed by Michelangelo Antonioni. In David Miller's film **lonely Are the Brave** (1962, based on Edward Abbey's novel **Brave Cowboy**) a westerner pits personal integrity against superhighways and the tools of modern law enforcement. **The Day After Trinity: J. Robert Oppenheimer and the Atomic Bomb** (1980 documentary, produced and directed by Jon Else) seeks to understand "why people with kind hearts and human feelings work on weapons of destruction." Another documentary, **The Atomic Cafe**, directed in 1982 by K. Rafferty et al., offers a devastating portrait of America's naivety about the dangers of atomic warfare. Finally, Eugene Corr's 1986 fiction film **Desert Bloom** depicts a sensitive girl's coming of age against the backdrop of atomic testing in Nevada during the early 1950s.

IV

Discussions and examples of music and the visual arts cited above may be found in many standard humanities and fine arts textbooks, including the following:

Lawrence Cunningham & John Reich, **Culture and Values**, v. 2
John Fleming, **Arts & Ideas**
Robert C. Lamm et al., **The Search for Personal Freedom**, v. 2
Mary Ann Frese Witt et al., **The Humanities**, v. 2

Object–Oriented Education:

Zen, Management Training & the Arts of Sioux, Lengola & Chagall

In my first article for **HUMANITIES EDUCATION** I described how we teach history to high school French students on the program of Curriculum Structured Tours at Notre Dame's Snite Museum of Art. This article will describe a lecture tour which was requested in March 1987 by a professor in the Management department at Notre Dame. The assignment this time was to use the current reading in this class, Robert Pirsig's lengthy book **Zen and the Art of Motorcycle Maintenance**, and to attempt to explicate some of its rather complicated ideas by using works of art in the museum. It may sound surprising to try to understand abstract ideas by making comparisons with works of art in a museum, but it does seem to succeed if the students have read the text carefully. The primary aim of the museum visit was to discuss, to understand, and to learn to apply a selection of Pirsig's ideas. The museum context is a relevant one for this particular text because the discussion of the nature of art is one of the central themes of the book.

First it is necessary to give some indication about what the professor of this management class was aiming to teach. In his course description he wrote:

> The course is built around the goal of enhancing a variety of the prospective manager's skills; e.g. conceptual, analytical, communications, team management, time management. The foundation of the course is based on the idea that management is the ability to get oneself, others and whole systems to function both effectively and efficiently. This highlights the point that what gets managed is not only the human resources, but all resources (including information, money, ideas etc.) as well as certain parts of the environment . . . . A large part of the course will focus on applying the theories, observing them in action, and attempting to develop some of the necessary conceptual skills for effective management.

In using such a text as Pirsig's **Zen and the Art of Motorcycle Maintenance**, the teacher of this management class wanted the students to be able to apply experiences and ideas which were written from the point of view of an individual to a far wider context. So I decided that what I could do in the museum was to choose a few of the central ideas, and work on lifting them out of their original context in the novel to see how they could be applied to various works of art, as a way of isolating and understanding those ideas.

In his novel Pirsig sets up an arrangement of dualities, such as classicism versus romanticism, and art versus science. In his "chautauquas" the protagonist tries to resolve the sets of antitheses into which he arranges the world. This intellectual aim of fusion echoes his personal aim to try to heal and unite his schizophrenic self. This idea of the union of opposites works particularly well with visual art, so it is an effective way to explain and apply Pirsig's ideas. We began with the very simple exercise of defining what Pirsig means by the "classical." I asked the students to look carefully at the design on a **Sioux Indian Girl's Dress**. The design is made of blue, white, black and red glass beads. I asked the students to describe the design by means of adjectives, and they listed such terms as economical, linear, controlled, symmetrical, repetitive. Then I asked them if these words defined Pirsig's attitude to the romantic or classical mode. All the students realized that they had described the classical as Pirsig understood it, and some were quite surprised that one could find a classical design made by such a person as a Sioux Indian. Then I asked the class if they could remember one of Pirsig's own definitions of the classical, and when they obviously could not remember the whole quotation, I gave them one with the page reference (page 61), "A classical understanding sees the world primarily as underlying form itself." I then reminded the students of Pirsig's ideas on the purpose and value of the classical mode; its **purpose** is to bring order out of chaos, to make the unknown known; classicism's **value** is measured in terms of the skill with which this control is maintained. The students could see clearly how the Sioux girl's design expressed control over her emotions and over the shapes which she was manipulating. The actual forms used by the Sioux girl to decorate her dress are abstractions of such creatures as turtles and dragonflies, which were regarded as protective symbols in the Sioux culture. I interpret this woman's method of arranging natural phenomena in a regularized and unnatural manner as a wish to exert control over aspects of nature which impinged directly on her life as a woman.

Next we move on to a much more complicated set of ideas: art and science and art and technology. This section took at least fifteen minutes, so I invited the students to sit down in front of the object which we would be discussing, the **Suway Stick Figure, Lengola Group, Zaire**. I began this section by asking what Pirsig considers to be the superstructure of science. One or two students knew the answer, which is that technology is the superstructure of science, and so this was how we began our discussion of art and technology. I asked next what attitude to technology was expressed by the protagonist's companions John and Sylvia. The students remembered that this couple considers technology to be a **death force**, and in order to keep Pirsig's actual words in their minds I quoted the passage they had referred to (page 15), "The 'it' is a kind of force that gives rise to technology, something undefined, but inhuman, mechanical, lifeless, a blind monster, a death force. Something hideous they are running from but know they can never escape." We agreed that John and Sylvia feel that technology dehumanizes, and tries to usurp their control over their own lives. They feel that even thinking about technology is betraying their point of view. Then I asked about the protagonist's attitude toward technology. They answered that his attitude was much more thought out and reasonable, perhaps because he was involved in technology himself, and so could speak from knowledge rather than unknowing fear. I quoted to the students Pirsig's statement on page 137, "It's not the technology that's scary. It's what it does to the relations between people." This shows us that even though the protagonist shares his friends' horror of the ugliness of technology, he feels that it is basically neutral, and if it is thought to have a negative aspect, that is humanity's opinion or fault; it is not the nature of technology itself. I wanted to stress this interest in the aesthetic of technology, so I quoted one of the protagonist's descriptions of its ugliness (page 15):

> You go through a heavy industrial area of a large city and there it all is, the technology. In front of it are high barbed-wire fences, locked gates, signs saying No Trespassing, and beyond through sooty air, you see ugly, strange shapes of metal and brick whose purpose is unknown, and whose masters you will never see.

I asked the students whose writing about the industrial revolution Pirsig might be recalling here, and several of them mentioned Dickens, which is the answer I had hoped for.

In the above discussion we had focused on two attitudes to technology and the importance of aesthetics--ugliness was a major reason for Pirsig's characters' dislike of technology. Now I was ready to refer to Pirsig's discussion of the differences between art and technology, and when we had clarified these ideas I planned to ask the students to apply Pirsig's ideas to the **Suway Stick Figure** which was in front of them.

Before they could apply the ideas I had to explain the function of the sculpture, so that the students could understand the comparison which I was making. This collapsible sculpture is used by a men's association within the Lengola group, as a conduit through which to approach the spirit Suway. The death of a powerful member of the association provides the occasion for assembling the figure, and performing ritual dances and songs. When not in use the sculpture is disassembled and stored until another member's death causes it to be used for the same purpose again, when it is reassembled.

Our next task was to understand Pirsig's distinction between art and technology, and to do this we looked at the discussion which centers around the assembly of the rotisserie (page 145). I asked first why the artist DeWeese is unable to assemble the rotisserie. When the students seemed unsure of the answer I quoted from the protagonist's interpretation of DeWeese's motives:

> He's unable to comprehend things when they appear in the ugly, chopped-up grotesque sentence style common to engineering and technical writing. . . What he really wants me to damn is the lack of artistic continuity, something an engineer couldn't care less about. It hangs up really, on the classic-romantic split, like everything else about technology.

So the ugliness of the instructions so upsets DeWeese that he is unable to follow them. Ugliness seems to be a characteristic of technology and its presence points to the absence of art. Pirsig says that art is produced when there is harmony between artist and material, and peace of mind is needed to feel this harmony. As the students seemed not to be able to remember Pirsig's distinction between art and technology according to the presence or absence of choices, I quoted the relevant passage (page 147),

> Technology presumes there's just one right way to do things, and there never is . . . If you have to choose among an infinite number of ways to put it together then the relation of the machine to you, and the relation of the machine and you to the rest of the world, has to be considered, because of the selection from among many choices, the **art** of the work is just as dependent upon your own mind and spirit as it is upon the material of the machine.

The protagonist then says that DeWeese was making art when he assembled the rotisserie. I asked the class next if Pirsig is using his own categories correctly here, for he has told us that choices are needed to make art, whereas when DeWeese attempted and failed to assemble the rotisserie he was unaware of his choices. The students then saw that according to Pirsig's own argument DeWeese was not making art, even though the protagonist said he was. This kind of inconsistency between the author and his main character, which draws attention to the power of the artist over his creation, is a very important component of all the arts of the twentieth century.

Next I asked the students to apply Pirsig's definitions of art and technology to the sculpture of the **Suway Stick Figure** before which they were sitting. Was it an example of art or technology? Several students were applying Pirsig's categories correctly when they said that art was made only by the sculptor who created the figure in the first place because the sculptor would have made significant choices in creating the work. The subsequent assemblers would have been involved in technology because their choices would have been very few. So we finished this section by feeling that we understood Pirsig's distinction between art and technology, and we also had a good idea of his understanding of the actual constitution of art and technology. It seemed that the comparison of art objects and Pirsig's ideas in the museum had really helped to clarify these ideas for the management students.

I do not have space in this article to describe how I dealt with Pirsig's ideas of romanticism, revolutions, anti-utopias, and quality. I will conclude the article by referring briefly to the way in which I tried to draw together the ideas we had discussed during the lecture tour. In **Zen and the Art of Motorcycle Maintenance** Pirsig echoes in his thought what he tries to do on his journey; he tries to achieve a type of fusion between the pairs of opposites he sees in the world and the duality in himself. The visual image I use to express this fusion of opposites is

Chagall's **The Great Circus** 1956, with which I also concluded the French history lecture tour in my first article. I asked the students to describe the underlying form on which the classical mode is based according to Pirsig, and which is evident in this painting in the repeated use of circles and triangles. Then I asked the students to find the romantic attributes which we had discussed in a previous painting from the nineteenth century Romantic period. They found such attributes as mystery, unreasonable figures and events, strong emotions, and lack of control. I suggested that Chagall's painting depicted the fusion aimed at by Pirsig's protagonist, but not in fact achieved in the novel. This interpretation of the end of the novel was queried by one of the students. She felt that the protagonist had healed himself in the last few pages. I think that the end of this novel is ambiguous, and one could interpret it as wholeness achieved or wholeness lost. This ambiguity, or duality, adds to the richness of this fascinating novel, and lends it even more to a comparison with painting in which one is also frequently unsure of the precise meaning of what one sees.

Pirsig refers repeatedly in his novel to the need for fusing and transcending the opposites which he finds confronting each other in the world. He says that he knows of no group of people which has consciously tried to work out a new way of life in terms of these opposites. I think it is important at this point to mention to the students that many of the French Surrealists in the 1920s and 1930s wanted to introduce a way of life which would include the rational and the irrational, art and technology, and the complete overthrow of the bourgeois power structure. They promoted the establishment of a communist state in which vested interests would no longer be paramount.

As I said at the beginning of this article, I have had to omit much of what we discussed in our lecture tour in the museum, because of lack of space. I hope however, that what I have said is of interest to readers who teach **Zen and the Art of Motorcycle Maintenance**, or to those who are just interested in ways of combining texts with visual images. The students in the Management class for whom I prepared this presentation found that focusing on several of Pirsig's ideas and applying them to visual art did help in clarifying the ideas, so that they could apply them to the management situations dealt with in their class.

In their written responses to this lecture tour the management students wrote that the experience in the museum had been useful, not only for their class project, but also for learning to understand and apply ideas to new situations. Their teacher wrote that "this kind of cross fertilization is a necessary component of the mature mind." In the museum we had compared some of Pirsig's ideas, which are quite difficult to understand, to works of visual art. This comparison and concretization could only succeed in clarifying the ideas if the text was actually quoted and referred to in detail. Many students carried their copies of the text and I encouraged them to find and follow the passages we discussed.

It is to be hoped that readers of **HUMANITIES EDUCATION** will be able to use or adapt some of the pedagogic methods discussed in this article. There is no need for museums to be places in which people speak in hushed voices or feel unwelcome or lost. Museums can be vital places where education of many different kinds, directed at all age groups, can occur. The essential component for a successful museum visit for any group with a particular interest or study, is the prior discussion held between the teacher and the museum educator. It is this discussion which turns the museum visit into a cooperative effort between the teacher and the museum educator, and insures the relevance of the chosen objects, because they are selected by the teacher and museum educator together. In this way the class study becomes the tool which opens the possibility for real learning in the museum. The humanities can thus be taught, explained, compared and contrasted in many new ways, when teachers bring their students to a museum or art gallery for object oriented education.

THE IMPORTANCE OF BEING LACLOS

If there are many who assume that all translations of poetry equal all other translations of poetry, there are more who assume that all translations of prose are not only equal but in fact **are** the originals which they translate. Poetry after all has meter and rhyme, metaphor and alliteration, and a hundred subtle and compressed devices. But what is there to prose? Most of us have been speaking it all our lives, haven't we?

The answer, sadly, is no, we haven't. No person living has yet spoken or ever will speak prose. We speak a language; a writer writes prose. And the two processes, though linguistically related, are also linguistically sharply distinct. In syntax, in vocabulary, and in a variety of basic linguistic signals (punctuation, capitalization, paragraphing, spatial arrangements) prose is quite simply different from speech. And the translator of prose must be aware of, and on guard against, these differences. In sober truth, his problems may not be as obvious as those of the translator of poetry. But they are just as pressing, just as difficult to deal with.

Choderlos de Laclos' 1782 novel, **Les Liasions Dangereuses**, is a fiercely brilliant prose performance--stylized, epigrammatic, at times deadly formal, at times glitteringly colloquial. The author was a military man, and at the end of his life one of Napoleon's generals; this novel is his only work of fiction. It embodies, behind the decorous convention of an exchange of letters, what Harry Levin has nicely called "a critique of pure pleasure, a devastating attack on hedonism as a way of life." To transform such controlled, passionate prose into English is no mean feat. Richard Aldington, himself a fine novelist, does the job magnificently.

Take the very first paragraph of the very first letter, from Cecile Volanges. It reads, in part:

> Maman m'a consultée sur tout; elle me traite beaucoup moins en pensionnaire que par le passé. J'ai une femme de chambre a moi; j'ai une chambre et un cabinet dont je dispose, et je t'écris a un secrétaire très joli, dont on m'a remis la clef, et où je peux

> renfermer tout ce que je veux.

Laclos uses two sentences, strictly speaking. But he further breaks them with two very solidly placed semicolons. Aldington sees at once--and it is both instructive and delightful to see how easily he recognizes and deals with matters of this sort, over which lesser translators constantly trip and fall--that English requires a somewhat different basic syntactical movement:

> Mamma asks my opinion in everything and treats me much less like a schoolgirl than she used to do. I have my own maid; I have a room and a study at my disposal and I am writing this to you at a very pretty writing-table whose key was given to me so that I can shut up anything I want in it.

Note, too, that while Laclos uses two semicolons and three commas, Aldington not only reduces the semicolons to a single usage but totally eliminates all commas. The resultant syntactical movement is both more suited to English and also to the twentieth century--for which century, after all, Aldington is translating.

But Aldington does far more. Where Lacos speaks of the mother "consulting" her daughter, Aldington writes "Mamma **asks my opinion**." The more personalized usage brings a colder French formality closer to prose which the English reader is used to. That too is a translator's job: seamlessly harmonizing the prose of the original with the prose practiced in the translator's own literary tradition.

The mother treats her daughter less **en pensionnaire**, writes Laclos. Less, that is, like a boarding-school girl. Again, Aldington smoothly Anglicizes: the mother "treats me much less like a schoolgirl." The girl writes that she has a **cabinet**, which is a kind of small room (what used to be called in earlier English a "closet"). The word for "study" is **cabinet de travail**--but Aldington knows, as poor translators do not, that his rendering must be all of a piece. Having made the letter-writer a "schoolgirl," he must now give her a "study."

If there were space enough, we could follow Aldington throughout not only this first paragraph but throughout the entire novel. And what we would see, instructively and delightfully, is how neatly and with no apparent effort he turns French ways of writing into English ways--and yet without losing the fundamentally French essence of the novel. This is prose translation as it ought to be practiced but, unfortunately, not often is. Absent such craftsmanlike transformations, what we have are crude and not necessarily accurate reproductions, suitable neither for reading nor for teaching. Teachers too need to be on their guard.

Imperatives for Writing & Thinking Humanities

(The following is given as a handout to our Humanities students at Huron High School. We find it helpful, with discussion among our teachers on the Humanities team, in clarifying for ourselves as teachers what it is we are asking our students to do. Students find it helpful to their understanding, minimally, of the rules of the game we play at school: the shape of the hoop through which we ask them to jump. More importantly, we move to understand one of the key abilities underlying the course: thinking in writing.)

In our writing assignments we usually ask you to demonstrate a thinking process. In doing so we sometimes ask a direct question ("What was Hamlet's tragic flaw?" or "Why did feudalism evolve as it did?"), but more often there is an imperative word which is supposed to direct you to the kind of thinking process we have in mind--a word such as "compare," "explain" or "analyze." Probably the vaguest of these imperatives is the word "discuss," which for most students does not indicate what is to be done with the knowledge the student (supposedly) has.

Sometimes when as essay goes wrong it does so because the student does not understand the kind of thinking-in-writing the teacher had in mind. Thus we feel that it would be helpful for us to be explicit about what we mean when we give these kinds of directions:

ANALYZE: Describe how the parts relate to one another and to the whole. The process suggests a description of how the separate elements make up a compound (how color, line, shape and subject matter make the meaning of a painting; how rhythm, imagery, tone, comparisons, etc., make the meaning of a poem; how a variety of personal, religious, political, economic, geographical forces, etc., led to an historical event). Analysis suggests breaking down into constituent pieces.

INTERPRET: In some ways, the meaning of interpret is opposite that of analyze. The idea is to summarize what the different elements add up to. The thought process is one which involves inference and synthesis, with emphasis on what is meant or implied rather than how that meaning was constituted. Interpretation may involve a sort of concise translation into conventional prose: a paraphrase. Usually, however, analysis and interpretation go hand in hand; we are looking for both.

EVALUATE: The process here involves measurement against a standard, whether objective, personal or somewhere in between. The process may mean judging the truth or falsity or a statement (e.g., Evaluate the following: "Hamlet triumphs at the end of the play," or "Christianity caused the decline of the Roman Empire.") or it may involve assessing the merit of an idea or artifact (e.g., Evaluate the success of the Inquisition; or, evaluate the expressive quality of Jackson Pollack's painting; or, evaluate Phaedra as a tragic hero.). To make this kind of essay successful, the criteria for evaluation must be clear. A good evaluation notes both strengths and weaknesses, and it is supported by evidence and reasoning.

TRACE THE DEVELOPMENT: This implies arranging events in chronological or narrative sequence. "Trace" operates on two levels of sophistication. On the one hand, it means simply placing the events in sequence. On a more sophisticated level, it means explaining **how** one event **caused** the next.

COMPARE/CONTRAST: To compare means to seek both similarities and differences, but with emphasis on similarities; to contrast means to seek differences only. A comparison which mentions only similarities is likely to be simple-minded. Usually when we ask for a comparison, we imply an act of analysis or interpretation first. The analysis or interpretation yields the elements for comparison. For example, a comparison of two paintings of The Last Supper involve such qualities as composition, use of light and color, facial expressions, etc., which must be the result of analysis, and comparison also involves the overall meaning or interpretation of the two works.

PROVE: In the humanities a proof does not involve the strict forms of induction and deduction, since assumptions and variables are often complex and suggestive rather than exactly stated. The degree of certainty is not as great as we find in scientific or mathematical proof. Thus what we mean by prove is to give a persuasive argument. A persuasive argument presents reasons for one's position using specific evidence and logic, and it also includes an evaluation of alternative arguments.

EXPLAIN: Who really knows that **this** means? Its etymology suggests to flatten out, which implies the revealing of something hidden or complex; to make plain. Our assignments might be most helpful if phrased in terms of "explain why" (describe the causes) or "explain how" (describe the process) instead of just "explain" (e.g., Explain the French Revolution.). When arguing in defense of a position, "explain" means "give reasons for your position."

DEFINE: When we ask for writing which defines a term, we are looking for two things. First, we seek the **necessary** conditions--elements which are essential or needed, without which the term would not apply. Second, we seek **sufficient** conditions--elements which, if present, are enough to grant the aptness of the term. While definitions may themselves be very concise, an essay of definition may be developed and clarified by examples, including explanations why some examples do not fit the definition. (Ex., "Define the term 'tragedy' using examples from **Hamlet** and **Oedipus the King** to illustrate your point," or "Define courtly love.")

DISCUSS: This term, when used properly, refers back to the form of Socratic dialogue, where arguments and counter arguments are presented. The implication is that the essay consider (at least) two sides of an issue (e.g., Discuss President Reagan's policy in Nicaragua.).

BULL: Seldom stated in assignments but widely understood by students, BS-ing has several distinctive features. It means, first, to utter generalities, preferably including a few pet phrases from the teacher and some terminology from the course. The tone should be breathless enthusiasm. Specific details and facts may be mentioned, but never to illustrate a clearly defined idea or argument. The purpose of BS-ing is to impress your teacher while concealing your ignorance of the subject at hand.

HUMANITIES EDUCATION ABSTRACTS & REVIEWS

Summaries of significant reports about interdisciplinary humanities education.

Note: Readers are invited to serve as reviewers of books, texts and other resources. Write for guidelines to Dr. James Mehl, Book Review Editor, Humanities, Missouri Western State College, St. Joseph, MO 64507-2294. (Abstracts of articles should be sent to the Editor-in-Chief)

TAXIS! TAXIS!

Classical Architecture: The Poetics of Order by Alexander Tzonis and Liane Lefaivre. Cambridge: The MIT Press 1986. $9.95 paper. Reviewed by Fred E.H. Schroeder

Teachers of humanities often provide students with their only introduction to reading works of architecture. For many, learning to identify the three Orders of Greek architecture by recognizing the features of column capitals is both beginning and end of the architectural vocabulary. This little knowledge is infinitely superior to ignorance, but it barely indicates the profound simplicity and endless complexities of classical order. The authors, who teach architecture in The Netherlands, go well beyond the three-word vocabulary. "Being able to design or see classical architecture is like being able to speak or understand a language," they say; "one joins a cultural tradition, a social universe."

To see how they approach this is an intellectual challenge and an adventure in interdisciplinary methodology. Although the book has 300 pages, only ninety are text, closely packed with ideas that, once grasped, make the text-reader into a reader of architecture. The other 210 pages are illustrations including an anthology of classical floor plans and facades that can be read as works of poetry according to techniques of "architectural scansion." Drawing on Aristotle's **Poetics**, we start with **taxis**, the orderly arrangement of parts according to two general **schemata**, the **grid** and **tripartition**. The former, whether the two-dimensional floor-plan grid or the three-dimensional spatial pattern, possesses an "obsessive consistency" containing "no contradictory ways of partitioning." But even at its simplest, in a square or cube, **tripartition** operates, because, as Aristotle says of drama, the whole contains a beginning, a middle and an end. The side of a square has two edges and a middle between, in short, an ABA partition into three, like the classical music sonata form. But unlike drama and music, architecture's tripartition can be reversible, that is, you can read the building from left to right or right to left and perceive the same order, the same completeness, the same wholeness. This almost imbecile simplicity can soon become very complicated: the first Italian edition (in 1521) of the sole surviving ancient text of Vitruvius introduced this method of notation giving us, for example, a wall whose parts are ABCBBCBA. This reduces, however, to ABA.

So much for taxis. The next principle is the **genera**, a term that Tzonis and Lefaivre prefer to the term **order**, which they feel entraps the architectural fan into thinking that the **Corinthian order**, for instance, contains all one needs to know of classicism. Very well, **genera** let them be, all five of them, the Greek **Doric**, **Ionic** and **Corinthian**, plus the later **Tuscan**, (simpler than Doric, being unfluted with a plain entablature) and the elaborate **Composite**. During the Renaissance, efforts were made to reduce each of these to an unvarying mathematical formulation. The truth is that each is a fairly broad category with considerable latitude for inventiveness. The main subdivision of the genera is the column, which can be described by tripartition: entablature, column and pedestal, which in turn can be further tripartitioned, as the authors explain with some detail. Related to taxis are the modular proportions of the columnar genera: The relative proportions of column thickness, height, spacing are totally self-consistent for each generic system. But the genera extend beyond columns. Windows and doors, niches, chimneys will have a "formal kinship," a "subtle affinity [that] brings to mind the way classical music works are organized." Furthermore, the tiniest of detailing, such as the profile of a column base can take on a multitude of forms by repetition, reduction, amplification of some eight "binary opposites" (e.g., convex, concave, etc. pp. 101-102).

The important points about both taxis and the genera are first, that they are not confining restrictions for architects, and second, that they are more than catalogs of ornaments.

Symmetry is the third element in the poetics of classical composition. The term as used by Vitruvius is both broader and subtler than the ordinary understanding of mirror-image bilateral symmetry. Symmetry is the relationship of all the parts. Tzonis and Lefaivre use two musical terms to describe the kinds of relations among the parts--rhythm and figures. The explanations are too long for this review, but suffice it to say that, as in music and poetry, a simple rhythm of stressed/unstressed is unsatisfactory for anything but a middle: it is how the beginning and end relate to and define the whole that makes the difference.

Finally, the authors present two extensions of these principles that developed during the Renaissance: **parataxis**, which is the linear facade of buildings along a street, and **entaxis**, which has to do with the total interrelationships of a district or city. Although Vitruvius describes the layout of a city, and although the Romans planned colonial cities, it is unclear whether these were as fully rationalized as such Renaissance and post-Renaissance complexes as Versailles or Washington, D.C.

Classical Architecture: The Poetics of Order is an insightful book, pouring old wine into new bottles. The timeliness of old wine is due to

812

the fact that in so many ways, the 20th century is winding down. Abstraction, functionalism and positivism have had their day, and in architecture, a reborn sense of the need for ornament is beginning to paste decorations on buildings. For architects, this short volume teaches the lesson that the variety of classic ornament was never the result of whimsy. It was a logical outcome of transformations of a few guiding principles. For us as humanities teachers, the book can help us to make our students more knowledgeable readers of the built environment.

MUSICAL MAGNETISM

"Mozart, Mesmer and 'Cosi fan tutte'" by Andrew Steptoe in **Music & Letters** 67:3 (July 1986) Oxford University Press, Walton Street OX26DP

Opera makes some people sick, and in two of the most popular of all operas, Verdi's **La Traviata** and Puccini's **La Boheme**, tubercular heroines give casual opera fans the idea that ill-health is the normal state of affairs.

This is quite a distortion, unless, of course, we add love-sickness to the list. Cures of illness are even rarer; they would certainly ruin a tragic climax! In comic opera, however, there are more than a few satires on quack physicians, and in at least two, the satire extends to medical theory. In **Elixir of Love**, the continuous shaking of the potion is a comment on homeopathic medicine which was popular among European and American upper classes well into this century.

In the farcical finale to Act I of Mozart's **Cosi fan tutte** the maid Despina revives two supposedly poisoned young men by means of passing a huge magnet over their bodies. This directly lampoons one of the early techniques of Dr. Franz Anton Mesmer, who is credited with being the pioneer of what would become hypnotism, called by him "animal magnetism," and by the rest of Europe, **mesmerism.** The Mozart-Mesmer connection pre-dates mesmerism by several years, however. Mozart, at age twelve, was something of a cast-off child prodigy, and it was Mesmer who provided the patronage for the boy's first opera **Bastien und Bastienne** in 1768. The Mozarts continued to be frequent visitors at the grand house in Vienna, and young Wolfgang met there Mesmer's first important patient, who, with her "fifteen distinct severe symptoms," plus the standard treatments by means of bloodletting and blistering was reduced to skin and bones. When Mesmer took over her treatment in 1773, he gave her a draught containing iron and then attached magnets to her most affected parts. The pains were relieved for several hours. As he continued the therapy, Mesmer found that the salubrious effects could be produced by mere passing of his hands without benefit of magnets. Some seven years later, Mozart visited Mesmer and found the former patient not only "plump and fat," but married to Mesmer's stepson, and the mother of three, "two young ladies and a young gentleman."

How this friendly patronage of Mozart and the successful therapy

813

turned to the operatic lampoon of 1789 is Andrew Steptoe's story. Partly, Mozart's turn-about is personal. Mesmer's immense success in Vienna prompted him to go to Paris in 1778, which he did, abandoning his family. Somewhat related was Mesmer's apparent failure to cure the blind pianist, Maria Theresia Paradis, for whom Mozart had composed some music. Mesmer said he had cured her blindness, but she could only see in Mesmer's presence. Mesmer was attacked by the Viennese medical community and accused of holding Fraulein Paradis against her will.

But the other reason for the parody in **Cosi fan tutte** is that by 1789, Mesmer was a hissing and a byword. Although he had been successful with group therapy (silent except for Mesmer's playing an ethereal glass harmonica), and he had even "magnetized" a tree in a public park so that poor folks could share in the therapeutic benefit; and despite the patronage of Queen Marie Antoinette and Madame Du Barry, Mesmer's personal arrogance and greed along with the normal life expectancy of Parisian fad led to investigation by a royal commission which included such stellar authorities as Lavoisier, Guillotin and Benjamin Franklin. Their report was damaging, and the final blow to his reputation was a social gaffe. Fraülein Paradis, securely returned to blindness, gave ten concerts in Paris, and the cream of society was profoundly offended by Mesmer's attendance. Within the year a satirical play about Mesmerism was a hit, in spite of attempts to get it banned. Mesmer fled Paris in 1785 (with three other plays in the offing). To Mozart, four years after, Mesmer was fair sport for good box-office. It's a lovely opera.

MORAL LEADERS

"Liberal Arts and Leadership" by Fontain Maury Belford in **Liberal Education** 73:2 (March/April 1987) 1818 R Street NW, Washington, D.C. 20009. $36/yr.

What is the difference between a "leader" and a "manager"? Very much the same thing as the difference between liberal education and vocational training, says Belford, who is one of the leaders in the American Association of Colleges' Leadership Project. Managers, she says, can be morally neutral, for their assignment is to get the job done, as we see Alec Guinness do in the film **The Bridge On the River Kwai**. That the bridge will transport more troops to kill his own soldiers is not a management issue. Completing the job is the job. Leadership, on the other hand, has never been "value-free," nor has a liberal arts education been value-free. It has always reacted to the current values, reciprocated with them, reflected them. What we in the western tradition mean by liberal education has also questioned the current values. But then, that's one of the values: to question.

Leadership is a buzz-word in higher education today, and what with a scandal-of-the-week in government leadership, military leadership,

814

religious leadership, corporate leadership, it has become likewise a buzz-word of popular journalism and activist reformers. It's as if we just now discovered leadership as a field of study and education. This is hardly the case, says Belford; on the contrary, the canon of liberal education classics is nothing if not about leadership studies. Plato's philosopher-king, Machiavelli's Prince, Castiglione's Courtier, Shakespeare's Prince Hal--St. Joan, Moses, Ghandi--all are both models and comments on leadership.

There are several problems in leadership study today that are inheritances from earlier versions of our cultures. In nineteenth-century England, for example, Thomas Arnold, headmaster of Rugby School could say "What we must look for here is first religious and moral principles; second, gentlemanly conduct; thirdly, intellectual ability." What this produced, effectively, was unthinking leaders with a "quality called **character**." This education was right for imperialism, but it is wrong now. In the United States, at the same time, leadership was leadership for manifest destiny. But this "Gary Cooper" model "is as irrelevant, and as dangerous, to our present necessities as is that of the civil servant of the raj." And this brings us back to "value-free education" and "management training," both of which address the problems of outmoded moral education in a changed environment by making believe that they can avoid similar mistakes by not taking a moral stance.

What to do? Belford believes we should do what we've been "doing all along, when we as educators have been doing what we are supposed to be doing," namely educating leaders. More specifically, at "the root of our teaching" are seven foundations: reverence for **facts**; centrality of **words, language, texts**; freedom to ask **questions**; **long-range** thinking, including past and future; respect for **diversity**; **conviction** and commitment--"leaders must be able to take a position, to understand its ramifications, and carry through"; **character** "confidence in one's self--in one's right to fail and to succeed, to explore and to change . . . ."

BORN TO DIE

"The Death Penalty in **Utopia** and in Some Utopian Novels" by Angele Botros Samaan in **Moreana** 23:90 (June 1986)

Sir Thomas More was himself to suffer the death penalty, and when he did, like his own fictional Utopians, he went "cheerfully," with a prayer for his persecutors. Death, of curse, is inevitable, but the death penalty is not. As retribution, we can divide the causes into two types: death as a penalty for what society regards as willful crime, and death as a penalty for what might be called innocent causes, that is, euthanasia. In More's Utopia, euthanasia is used only to release those who are suffering the tortures of incurable disease. Otherwise, Utopians regard death as a natural conclusion to physical life ("almost all" Utopians believe in the immortality of the soul); they pray for an easy death, and if so favored, they are cremated and honored with songs of joy. Those who do not meet death cheerfully have their corpses buried.

The cheerful acceptance of death is possible because of the cheerfulness of utopian life. Without wants, without needs, without overwork or sloth, their comfortable equality is true freedom. Bodies do not imprison souls so long as the bodies are not tortured by disease. Thus, euthanasia is a release into natural and equal freedom.

Nevertheless, there are transgressions punishable by death in Utopia: these are adultery and murder, both of which violate others' freedom. What punishment is meted out to other crimes? None, actually, because there are no other crimes. Fraud, theft, treason, brawls, riots and the like all stem from private property and money, which, being non-existent in Utopia, render the crimes without motive. When such aberrations do occur, banishment is recommended, but certainly not death, the universal penalty of More's Renaissance England.

The Victorian William Morris in his **News from Nowhere** is able to go one better than More by eliminating sex-related crimes, "at the bottom of them was mostly the idea (a man-made idea) of the women being the property of the man . . . . That idea has of course vanished with private property." Other Victorians, however, wrote of other reasons for ending life arbitrarily. In an anonymous novel **Colymbia** all deformed children were killed at birth. Anthony Trollope's **The Fixed Period** chronicles a society's efforts to repeal President Neverbend's "Fixed Period Law," designed to relieve the country of expenses, and the old from tribulations of age, by means of painlessly executing everyone at the age of 68 1/2. Samuel Butler's topsy-turvy **Erewhon** mentions the death penalty (presumably for a crime) briefly, but ultimately in Erewhon, birth is the felonious act, for, in being born, we all receive the death penalty. Aside from the capital crime of birth, other crimes are bellwethers of death: illness, infirmity--especially pregnancy--are hidden from others as we would hide blackmail, rape and murder. (Erewhon's attitude may be here today with AIDS.)

Samaan, who is on the arts faculty at the University of Cairo, Egypt, briefly discusses Huxley's **Brave New World** and Orwell's **1984** from the twentieth century. Death in the former has disappeared for all but Savage. Doped with soma, Muzak and television, witnessed "as a kind of visual aid for the death-conditioning of children," the dying bodies have lost all humanness long before. And in **1984**, beaten, tortured Winston Smith "not literally dead . . . . is no longer really alive." Death, Samaan concludes cannot be without Life, and the contrast between the deaths of Thomas More and Winston Smith reflects the contrast between true life and never living.

SMART KIDS

"Advising the Younger Scholar" by Jarold Ramsey in **Humanities** 8:4 (July/August 1987). NEH, 1100 Pennsylvania Ave NW, Washington, DC 20506. $14/yr.

All of us know that winning grants from the National Endowment for the Humanities is difficult for most and highly competitive for all. The Younger Scholars program is no exception. Open to college and high school students, these are research fellowships for nine weeks in the summer. The University of Rochester has been one of the institutions whose students regularly achieve these fellowships, and Ramsey, who is Director of Undergraduate Studies in English, is definitely a factor in this success. Winning the loot is the primary reward, but Ramsey's advisees agree that the summer's work is the real payoff, and even unsuccessful applicants say that working with faculty members on a grant application is a valuable educational experience.

Ramsey starts early in the academic year by asking colleagues to recommend promising juniors, who are invited to an open meeting where all are informed that while the award is prestigious, preparing an application is time-consuming and necessitates working closely with a faculty member. Also, there is no academic credit and a recipient may not hold any other job during the award period. These kinds of caveats continue, although Ramsey's advice is positive, progressive and encouraging throughout. As an NEH reviewer, he has seen far too many applications fail because of "incomplete applications, garbled statements of purpose, impossibly ambitious schedules of work, or factual and mechanical errors." Close attention by the faculty member is clearly necessary. Most students have difficulty restricting a topic in a way that is manageable and achievable during the grant period (students who allow projects to continue into fall term are inviting an albatross to add to their wardrobe).

On selecting a project, Ramsey suggests three apt approaches: (1) projects that grow out of coursework, (2) projects that "combine two lines of study hitherto unconnected in their coursework," (3) projects that utilize local resources. Examples are provided for each type, but it is worth noting that the third approach may not necessarily imply local topics: one Rochester Younger Scholar worked with original manuscripts of a novel and a film on the Hamlet theme held by the university library.

This article is well worth examining, and this issue of **Humanities** also contains essays by five of the sixty-five recipients of a special competition on the U.S. Constitution. Of these, one was written by a high school senior, and 28 of the awards went to secondary students. It is too late to start working up applications for the Summer of 1988 (deadlines are early November), but it is not too early to start planning for 1989. The NEH Program Officer is Leon Bramson - 1-202-786-0463.

NOTHING DOTH FADE

"Something Rich and Strange," essays by Luca Quattrocchi and Edgar Harvolk in **FMR** 28 (September/October 1987) P.O. Box 906, Farmingdale NY 11737. $66/yr.

"Double-decker tombs" are fairly abundant in medieval churches, the upper deck bearing the image of the deceased in life, the lower, the image of a body in some state of decay or as a skeleton, but we must take this practice into the Baroque period for its most surrealistic expression. The story of how these developed is like the plot of an absurdist drama; the philosophical and cultural implications are equally bizarre.

Let us start with the Council of Trent, as does Harvolk who is scientific director of the Institute for Folklore in Munich. For almost a score of years 1545-1563 Roman Catholic bishops met in council to hammer out doctrines and reforms in response to the protestant reformation. Among these doctrines was one declaring that the "mortal remains of holy martyrs . . . are to be venerated by the faithful." Nothing new here, but in 1578 the accidental discovery in Rome of catacombs containing countless skeletons produced a glut in the market. Whose bodies these were is not so certain (although some 10% had names on epitaphs) much less the manner of their deaths, but sixteenth century reasoning went something like this: primitive Christians met in catacombs and were buried in catacombs; **millions** were martyred for their faith, ergo, these were mortal remains worthy of veneration.

Although the Church was later to regret it, the skeletons were proclaimed as genuine Christian martyrs, and while none were canonized, purchasers were provided with "certificates of authenticity" by the Vicar General, and however much the Congregation of Sacred Rites disapproved, these certificates assigned names to the merchandise. So as far as the buyers were concerned, these skeletons were "christened saints." In 1672, for example, of 428 bodies removed from two Roman cemeteries 394 were christened.

The naming is sometimes a teensy suspect: Abbot Placidus of Einsiedeln received a St. Placid. As late as 1825, two Bavarian rustics returned from a pilgrimage with a complete St. Clement. In their village of Endorf no child had been baptized as Clement for many years but in 1825 six bouncing-baby Clements came into the world. In the sixteenth century, princes, abbots and rich merchants had acquired these saints for the chapels, monasteries and churches, and many were shipped to colonial missionaries. By the nineteenth century sophisticated worshippers were skeptical, but simple country folk and their priests continued the trade, which ended in 1844. Not until 1972 did Endorf move their pseudomartyr Clement from reliquary to simple grave.

But what of Art? The skeletons brilliantly photographed and reproduced in **FMR**, were covered with wax and gauze and thereupon gorgeously arrayed in golden crowns, jewel-bedecked tiaras, beards, tunics and like Ariel's song from **The Tempest** "Of his bones are coral made/Those are pearls that were his eyes/Nothing of him that doth fade/But doth suffer a sea-change/Into something rich and strange."

From the Council's approved veneration of mortal remains, to the popular outfitting in celestial costumes suitable for theatrical processions and rites is an easy step, but the metaphysical gymnastics of the philosopher Leibniz in 1690 gives the crowning touch. "everywhere in the body are found indivisible substances....which have something akin to the soul." And in 1710 "Souls never completely leave their body, and never pass from one body to another body that is not entirely new to them." Again: "As in a theater, every natural machine is never totally destructible....[but] "survives, in the same way that Harlequin, after being stripped of many tunics, still has one left." For the author Quattrocchi, an art historian, both the philosophy and the metamorphosis of anonymous bones into actors in the theatre of community, contain an essence of the Baroque: nothing doth fade; all is change.

FROM THE PRESIDENT'S DESK

The "Humanities: A National Dialogue" conference held in St. Paul in April has put NAHE back in business as an active association. As long-time members will know, we "froze" our Executive Committee a few years ago pending the resumption of national conventions. St. Paul was sunny and warm, so we thawed out the committee and resumed the officers' titles, as follows:

President: Fred E.H. Schroeder, Humanities, University of Minnesota, Duluth
Past-President: Vasant Merchant, Humanities
Northern Arizona University
At-large: Gary D'Lamater, AMP Incorporated, Harrisburg, PA
Bryan Lindsay, Humanities, University of South Carolina, Spartanburg
Sharon Scholl, Humanities, Jacksonville University FL
David Stringer, Humanities, Huron High School, Ann Arbor MI
Inez Wolins, Education-Technology, New York University

The retiring Past-President (who also retired from academe in June) is **Robert Frazier** of Arizona State University. Our great thanks to Bob for many years of great work. **Vasant Merchant** continues to be on a disability leave, but with unflagging energy edits the **Arizona Humanities Association Journal** from her home. This spring Vasant visited friends and relatives in her native India as well as in Paris.

ELECTIONS SCHEDULED

Ballots for the office of Vice President/President-elect and for two at-large positions on the National Board of Directors have been sent to members in good standing as of September, 1987. How about including a check for a renewal or extension with your ballot? (We'll separate the ballots before opening them!)

THEMATIC ROUNDTABLE: "ART POLITICS"

An important product of the St. Paul conference was the establishment of a "thematic roundtable." The idea is to have NAHE members share and swap bibliographies and other resources for themes. We'll provide space in **HUMANITIES EDUCATION** for these as they are assembled by **Sharon Scholl** and **Charles Ess.** Everyone can play at this valuable game, but just for the record, the "founding parents" were Sharon, Charlie and **Ross Brown** (AZ). **Giles Gamble** (MN), **Joel Haak** (OK), **Ellen Hofmann, Carol Maus** (VA) **Juanita Morgan** (MN), **Doris Smith** (Co) and **Loraine Stowe** (WA).

Bob Waxman has written a major resource essay on "Humanities and Technology" which appears in this issue of **Humanities Education.** But to get the roundtable rolling, Sharon provided this on "Art + Politics":

"As we shared our particular thematic needs in St. Paul, **art and politics** seemed particularly pressing to one of you. Perhaps if I start a list the rest of you will be able to think of items, and we can be of some immediate help.

1. Interesting comparison of Machiavelli's "The Prince" with the Arabic "Mirror for Princes" to see how political machinery varies across cultures.

2. What about art as **political propaganda?** Maybe start with the Victory Stele of Naram-Sin from Mesopotamia and all the Ramesside Pharoahs who never lost a battle as artists saw them. The "Pater Patri" statues from Rome, and official portraiture as idealized imagery of reigning monarchs (repeated in the portraits of Louis XIV, and on to present day coins and stamps). "The Battle of Issus," by Altdorfer, as a portrayal of a critical military venture of Alexander the Great and resulting political boundaries between East and West. Maybe the Mexican muralists (Rivera, Orozco, Sequieras) and their role in the origin of the Mexican Republic. What about Tchaikovsky's "1812 Overture" celebrating the defeat of Napoleon, and Shostakovich's "Leningrad Symphony" celebrating the defeat of the Nazis and sparing of Russia several wars later? Oh boy, nearly forgot all the Napoleonic art: Jacques Louis David and his coronation painting, along with "The Death of Marat" and other stuff that documents that era in France. If you can leave the West, look up the art of the communes in China that celebrates the success of the Communist Revolution.

3. Art as **political protest?** There is some good stuff beginning about the Renaissance. The Bruegels have a lot of hidden criticism in, for example, "The Blind Leading the Blind," condemning both sides in the bitter religious wars. I think of two great musical works, the Benjamin Britten "War Requiem" and the Penderecki "Threnody to the Victims of

Hiroshima". Goya is particularly significant here: "The Third of May, 1808" and the many prints under the "Horrors of War" series. More toward this century there is Ben Shahn's "Sacco and Vanzetti" painting protesting the execution of these men. There is some interesting stuff coming out of Central America - Orbis Books has a color print collection with commentary of the paintings of Nicaraguans from Solentiname commenting about the Gospel in Liberation Theology terms. There is always Picasso's "Guernica" protesting the bombing of that Spanish village. Georg Crosz has some really mean stuff ridiculing the Germans as they energize their war machine."

Anything you want to add? Any theme for which you have a want list? Send a card or letter to Professor Sharon Scholl, Humanities, Jacksonville University, Jacksonville, FL 32211.

1989 NAHE Conference

Planning has already begun for the 1989 NAHE National Conference, according to **James Mehl**, recently appointed by President Fred Schroeder as conference chairperson. The tentative dates for the Kansas City conference are April 20-2, 1989. Negotiations are currently under way to locate the conference in a hotel in the Plaza area, near the Nelson Museum and UMKC. The University of Missouri-Kansas City has been directly involved in the early planning for the conference, especially through the offices of the College of Arts and Sciences Continuing Education.

The theme of the conference will be "Teaching the Humanities." A special area will be reserved for conference participants to bring copies of their syllabi and other teaching materials to share with other humanities instructors. Special sessions will also be devoted to teaching the humanities. Supplementary cultural activities, which were a highlight of the St. Paul conference, are being planned. The conference will overlap with the opening of a major retrospective of the works of Thomas Hart Benton at the Nelson. Musical and theatrical events are being investigated, as are special lectures and receptions. There may even be a special tour of Kansas City jazz spots.

Any suggestions for the conference program should be sent to the conference chairperson, Department of Humanities, Missouri Western State College, St. Joseph, MO 64507. There will be a formal call for papers next year.

MATERIALS/WORKS IN PROGRESS

The American Hellenic Alliance announces that it has produced a 13 minute film (VHS $14.95) entitled "The U.S. Constitution: Origins in Classical Greece." Order from American Hellenic Alliance, Suite 927, 1700 N. Moore St., Arlington, VA 22209. Ph. #(703) 525-1717.

Dr. Gloria K. Fiero Professor of History/Art History at the University of

Southwestern Louisiana, has signed a contract with Wm. C. Brown Company Publishers for a two-volume textbook in the integrated humanities. Global in its approach, THE HUMANISTIC TRADITION will offer a cultural overview of human achievements from pre-history to the present time. It will include primary resources in literature, philosophy and the arts. Chronologically oriented, THE HUMANISTIC TRADITION will integrate the primary and secondary materials by means of carefully chosen topics. For more information, contact Gloria K. Fiero, Department of History, P.O. Box 42531, University of SW Louisiana, Lafayette, LA 70504.

Dennis J. Sporre author of **The Creative Impulse, An Introduction to the Arts** is preparing another text entitled **The Literary Spirit**. The book will span writings from **The Epic of Gilgamesh** to the plays of David Mamet. Prentice Hall plans release in January 1988.

NEW PROGRAMS

Roger Johnson Jr. is the director of the newly established interdisciplinary Program in Humanities centered in the Department of Foreign Languages at the University of Southern Mississippi at Hattiesburg. Some fifteen faculty members are actively engaged in work on substance, writing and critical thinking involved in such a program. Johnson is pleased with the direction of the program and the support that it is getting. **Jim Reiss** of E.D. White High School in Thibodaux, LA. is involved in the institution of an interdisciplinary program. He is charged with the music/art components in the program. If you have materials, aids, etc., for young and forming programs, they can be sent to Reiss (zip 70301).

MEMBERSHIP ACTIVITIES

Carol Maus of Mount Vernon is currently working with consultants, researchers, and horticulturists on a new interpretation of the gardens of Mount Vernon. She recently conducted a symposium on Mount Vernon in Raleigh, N.C. for the American Association of State and Local History Conference. **Carolyn Craft** reports that she got great response from NAHE members to her request for materials to set up a humanities program at Jefferson Technical College. The administration is giving serious consideration to her proposal and Carolyn is optimistic about prospects. **Fred Schroeder** will be chairing the Workshop in American Studies section of the American Culture Association National Meeting in March in New Orleans.

DEADLINES/FELLOWSHIPS, INSTITUTES, WORKSHOPS, PAPERS:

The Mid-America American Studies Association Annual Conference will be held at University of Missouri-Columbia on April 15-17, 1988. The conference will celebrate the 100th anniversary of Edward Bellamy's **Looking Backward**. The theme is "Looking Backward: Class, Gender, Technology and the Making of Modern American Culture." Send paper proposals to Steven Watts, Dept. of History, 143 Arts and Science Bldg., Univ. of Missouri Columbia, Columbia, Missouri, 65211. Deadline is Nov. 1, 1987.

The National Conference on Interdisciplinary Baccalaureate Education is calling for papers from practioners involved with interdisciplinary/multidisciplinary studies which deal with philosophical, teaching, and/or operational issues. For further information, write or call Division of Continuing Education, University System Programs, 900 Assembly Street, University of S. Carolina, Columbia, SC 29208, (803) 777-2260. The conference will be on March 7-9, 1988.

Siena College is sponsoring a series of multidisciplinary conferences commemorating the 50th anniversary of World War II. The 1988 conference will be June 2-3 1988 and the focus will be the year 1938 and earlier. Papers on Fascism, Naziism, Literature, Art, Film, Popular Culture, Women's and Jewish studies etc. are welcome. Write Thomas O. Kelly II, Siena College, Loudonville, NY 12211.

November 1st deadline for papers to **The North American Conference on Themes in Drama**, February 12-14, 1988 at University of California, Riverside. Theme: Drama and Philosophy. Submit paper and inquiries to Themes in Drama, Conferences: College of Humanities and Social Sciences, University of Riverside, Riverside, CA 92521.

Send proposals to Manuel Marquez-Sterling, Medieval Studies Council, Plymouth, NH, 03264; (603) 536-5000, ext. 2214 for presentations at a **medieval forum.** Deadline: December 11, 1988.

"Culture and Comfort: The Draped and Upholstered Interior, 1850-1930;" a symposium to be held October 1988 in Rochester, NY. Contact Katherine C. Grier, Strong Museum, One Manhattan Square, Rochester, NY, 14607; (716) 263-2700. Deadline for proposals November 30.

The South Central Renaissance Conference, April 1988, will be held in Hattiesburg, Mississippi. Send proposals to Dale Priest, English Department, Box 10023, Lamar University, Beaumont, TX 77710; deadline December 31, 1987.

The American Studies Association Conference, October 1988, will be held in Miami Beach. Theme: "Creativity in Differences: The Cultures of Gender, Race, Ethnicity, and Class." Contact Am. Studies Association, 309 College Hall, University of Pennsylvania, Philadelphia 19104-6303; (215) 898-5408. Deadline: January 15, 1988.

EDITORIAL POLICIES

How do we define "humanities education"? Any learning activities with content that draws upon the human cultural heritage, methods that derive from the humanistic disciplines, and a purpose that is concerned with human values. Academic courses don't have to be labeled "humanities" to be interdisciplinary. Integrated courses and units are often disguised under such names as World History, Freshman English, Music Appreciation, Beginning Spanish, Introduction to Religion, Seniors Honors, etc. Integration can range from the use of a novel in a history course to team teaching to comprehensive thematic extravaganzas that combine the arts, literatures, philosophy and social sciences.

What "grade levels" do we include? All, from elementary to teacher education, adult public programs, graduate seminars, educational radio and television, museums and historic parks. Humanities education is a lifelong activity.

How about writing style? Write as if you are talking to a group of intelligent professionals who may not have the same background as yours. Treat your audience with respect and your topic with dignity. Feel free to employ first and second person, but not feel constrained to be colloquial. Avoid sexist implications in your diction by referring to **humanities, humans** or **people** rather than **man** or **mankind**. Usually awkward "he/she" constructions can be avoided by recasting pronouns in the plural. Avoid jargon, but if you must use technical language supply a glossary or define as you go along. Rather than using formal footnotes append a brief list of recommended readings and/or resources, providing ordering information where necessary. If your article is applicable to one specific age group or educational setting, make this clear to your readers. In short, make it understandable and useful.

Format? Typed or word-processed double-spaced on standard paper, original or photocopy. Place your name and affiliation as you wish to have it in print in the upper right-hand corner of the first page (no cover sheet) along with your mailing address and telephone number. Camera-ready line illustrations are very welcome. We can use written material of two lengths: one to three commentaries, etc.; and articles of six to ten pages (3500 work maximum). Because of the wide audience it is essential that we print a variety of shorter pieces, although from time to time longer materials may be used such as reports of major surveys of interest to all readers. Always retain a copy for your files and enclose a self-addressed envelope and loose return postage with your submissions. If you have word-processed your article, please specify the program you used (we use Word Perfect). If your article is accepted we'd like a copy on disk.

Copyright? With rare exceptions all material will be available to subscribers for personal non-profit educational uses without permission. Republication in any form, whether or not for profit is the exclusive right of the individual author and the editor.

WHAT KINDS OF ARTICLES WOULD WE LIKE TO PUBLISH?

The statement of purpose on the masthead says it all. The key words are HUMANITIES, EDUCATION and INTERDISCIPLINARY, but we are not necessarily limited to classroom practices and curricula. Thus, for example we are interested in:

- •THEORY "Piaget and Theories of Integrated Study"
- •ADMINISTRATION "Crediting Departments for Team Teaching"
- •HISTORY "Nineteenth-Century Multi-Media at Chautauqua"
- •RESEARCH "A Comparative Study of Writing Skills Development in Freshman Composition and Western Civilization"

Also, things done in a strictly disciplinary mode are valid if they are presented as strategies for use in other settings:

- •"What you should know about teaching novels in a philosophy course"
- •"Pre-teaching history students for an art museum field trip"
- •"How to help non-musicians to follow a score"
- •"A designer speaks of humanities bulletin boards"
- •"Getting adults to role-play in public humanities programs"
- •"Understanding Oedipus: An Actor's View"

What we don't want:

- •Creative writing by teachers or students (it doesn't relate to our purpose)
- •Syllabus outlines (curricula should be explained, not listed)
- •"The Structural Form of Camus' THE STRANGER" (send it to a literary journal or revise to relate it to interdisciplinary classroom teaching)
- •"Influence of Botticelli on the Pre-Raphaelites" (same reasons, for art history)
- •"Humanistic counselling in the admissions office" (this is a behavioral definition of humanism, not a cultural one)

Published by the National Association for Humanities Education at the Department of Philosophy and Humanities, University of Minnesota, Duluth. Subscriptions and renewals are $16 per year. Checks should be made out to NAHE and sent to HUMANITIES EDUCATION, Department of Philosophy and Humanities, UMD, Duluth, MN 55812.
When renewing, please be sure to include your **expiration code** from the mailing label or **enclose the label.**

CONTRIBUTOR INFORMATION

Contributors should consult the Editorial Policies sheet carefully. As will be seen, HE is wide-ranging, quite permissive and has no "party line" in respect to definitions of **humanities, interdisciplinary** and **education**, but the wide boundaries are nonetheless firm. Please do not submit articles over ten pages long unless you are planning to revise.
